It is an even smaller trickle compared with the 1.3 billion gallons generated daily in New York City. The smallness of the operation had led to some skepticism on the part of those on the municipal level who have to deal directly with the sewage problem.

But for the record, hard-pressed pollution-control officials find it hard to dismiss a new idea completely.

Maurice M. Feldman, Commissioner of New York City's Department of Water Resources, says guardedly: "Yes, it's a new process and we're watching its development very closely."

But Mr. Feldman, who is responsible for the city's current billion-dollar program of building biological sewage treatment plants, says the Z-M process still needs testing on a larger scale.

Meanwhile, he says, the city will continue with its existing plans. "You can't wait forever for new ideas to be developed before you start building your plants," he says. "You have to design on existing technology."

New York State is now seeking Federal funds for a full-scale test of the Z-M process at a 1-7 million-gallon-a-day treatment plant planned for Waterford, N.Y.

GRAZING FEES—PART III

Mr. METCALF. Mr. President, on two recent occasions I have discussed the grazing fees on public lands. My remarks appear at pages 38238–38240 and 38415–38420 of the CONGRESSOINAL RECORD.

On November 26, I asked Secretary of the Interior Hickel for the reports and analyses he had before him when, on November 25, 1969, he decided to publish a notice in the Federal Register seeking public comment on his proposal not to increase these fees.

Twenty days have passed, and I have yet to receive a single piece of the material upon which Secretary Hickel based his decision. I have checked with conservation leaders and they tell me they have yet to receive information from the Secretary.

As I have pointed out previously, the Secretary of the Interior did not immediately publish his notice in the Federal Register. He delayed publication until December 4, 9 days later. He also shortened the period for public comment, originally announced as 45 days, to 30 days. Already 40 percent of the legal time for comment has elapsed, and the public is still without knowledge of the basis for the Secretary's proposal. The Secretary gave the public 30 days in which to comment. Since he cannot even provide the evidence within 20 days, I think the people of America are entitled to an extension of time for public comment on this public business.

In contrast, the Department of Agriculture has released a study it made which celarly supports grazing fee increases.

I would hope that by this time the Secretary of the Interior realizes that he has flouted a resolution adopted unanimously by the Senate Committee on Interior and Insular Affairs on August 7, 1969. I hope he also realizes that he had told all who use the public lands—among them, ranchers, miners, lumbermen, fishermen, hunters, and vacationers—that he does not intend to share with them the facts upon which he bases a decision.

All of us have a right to expect that when a public official asks for comments on a proposal having to do with the public business he means to give consideration to the forthcoming views. All of us have a right to the facts upon which a proposal was based, so our comments may be based upon information.

The public's business ought to be conducted in public. Secretary Hickel is well on the way toward creating a serious lack of confidence in him.

THE CONQUEST OF SPACE

Mr. MATHIAS. Mr. President, the Evening Star of December 12, 1969, reported that the General Services Administration has produced a film from motion picture records in its National Archives tracing the 66 years of effort which took man from the earth to the surface of the moon.

Anatomy of a Triumph focuses on the role played by the U.S. Government in aeronautics and space exploration. I want to compliment General Services Administrator Robert L. Kunzig for producing this informative document on our great space effort.

Using the Nation's historic records from the first airplane flight by the Wright brothers at Kitty Hawk, N.C., to film footage of the first walk on the moon by astronauts Neil Armstrong and Mike Aldrin, the film is an important documentation of the American will to achieve.

Administrator Kunzig has produced a film that will be of lasting value and great interest to every American. It is, moreover, an example of the untapped potential of General Services Administration. Mr. Kunzig obviously does not intend to let his agency act as only an office supply warehouse, but clearly wants to offer to the American people the full availability of the vast stock of national treasures, mementoes, facilities and services now held by him in trust for the Nation.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIR, SPACE CONQUEST IS DEPICTED IN EXHIBIT

The National Archives blasted off for the moon last night—all in a documented manner, of course.

The occasion was the black-tie opening of a new exhibit and film tracing the development of U.S. space efforts from Kitty Hawk, N.C., to the Sea of Tranquility, Moon.

The exhibit is built around three historical documents, the National Advisory Committee on Aeronautics Act of 1915, the National Aeronautics and Space Act of 1958 and John Kennedy's "moon" speech of 1961.

The two hundred guests saw, however, that it's not all words. Entry to the show is gained through curved hallways lined with photos of the earth's gradual reduction in size as if seen from a space craft.

The Sputnik model given President Eisenhower by Soviet Premier Khrushchev also is included as is Frank Borman's space suit, borrowed from the Smithsonian.

There were lots of "outer space" music warbling through the hall and a preview of a General Services Administration film, "Anatomy of Triumph," tracing the same period.

The exhibit really begins in the Pennsylvania Avenue side with reproductions of patent drawings of "flying machines."

The caption under a particularly farfetched design of strapped-on wings flapped by oar handles and guided by lines to the feet contains what might be the governmental understatement of the month:

"Technical skill was sadly lacking and the feasibility of many of the inventions was in doubt."

KNOXVILLE JOURNAL ADVOCATES VOTING AGE OF 18

Mr. BAKER. Mr. President, one of the leading newspapers in Tennessee, the Knoxville Journal, has editorially advocated that the voting age be lowered to 18. The editorial makes several points which I believe are of general interest. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET THEM SHOW FITNESS; LOWER VOTING AGE TO 18

Perhaps the most difficult phase of today's American social scene to analyze and assess fairly is the so-called unrest on the campuses of the nation's colleges and universities. So many factors are involved, including the influences of leftish faculty members on students, that the overall picture is grotesquely confused.

We are told that the militants and nihilists are really but a small minority of students, and this is not hard to believe. We are told also that students in the great majority are resolutely concerned about getting a sound education as the foundation for successful lives. This is not so easy to accept without question in view of the seeming obsession of so many with such antisocial elements as drug use, morbid speakers, amorality and rejection of authority. When thousands flock to vast rock music festivals that verge on depravity, one may wonder where the earnest students are.

There are students and their outside associates who want only to destroy. There are student forces which seek to rule or at least have a strong voice in ruling within the academic walls. Many apparently feel they are as competent as their elders to run things, despite the differences in experience.

Also, regrettably, there are those who vehemently protest the war while clinging to their student status in order to resist military service.

For the older generations to tell young people that the only democratic way to determine political matters is at the ballot box is to offer many of them another frustration, since they are not old enough to vote under present laws in most states.

Young people may qualify to vote in Georgia and Kentucky when they pass 18 years of age. In Alaska the minimum is 19 and in Hawaii it is 20. All the other states require a youth to attain 21 before extending to him the right of franchise.

Young persons of college age today are said to be more mature than were their parents at the same years. No doubt they think this to be the case, and it may be so. We would incline to give them the benefit of the doubt in spite of some ugly behavior.

All things considered—as best they can be considered in viewing academes chaotic milieu—The Knoxville Journal advocates amending the constitutions of Tennessee and other states to afford the right to vote to persons 18 years of age and older. Perhaps some of the vociferous ones would be less vocal if they could express themselves silently at the polling place.

Let our young people have the opportunity to demonstrate their fitness as voting citizens.

PRESIDENT NIXON PROCLAIMS DECEMBER 10–17 HUMAN RIGHTS WEEK

Mr. PROXMIRE. Mr. President, President Nixon has called upon the people of the United States to observe December 10–17 as Human Rights Week "to the end that we may rededicate ourselves as a united people to the task of assuring to every person—regardless of his race, sex, creed, color, or place of national origin—the full enjoyment of his basic human rights."

I applaud the President for his stand in this matter. We as a nation should continually rededicate ourselves to the task of assuring human rights for all peoples. Proclaiming one week out of the year Human Rights Week is certainly one means of bringing the importance of this rededication to the attention of the American people.

I ask unanimous consent that the proclamation by the President of the United States declaring December 10–17 to be Human Rights Week be printed in the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

BILL OF RIGHTS DAY—HUMAN RIGHTS DAY

(A proclamation by the President of the United States of America, Dec. 10, 1969)

One hundred seventy-eight years ago, the Bill of Rights was ratified and incorporated as part of the United States Constitution. The founders of our Republic had fought for individual liberty and for representative and responsible government. In the first ten amendments to the Constitution they sought to ensure that the power of the government would not abridge the rights of citizens.

More than twenty years ago, the United Nations General Assembly adopted the Universal Declaration of Human Rights. The founders of the United Nations had endured a world war brought on by those who denied the rights of men to equality and justice and who abrogated the rights of nations to exist in peace.

The two documents—the Bill of Rights and the Universal Declaration of Human Rights—are close in spirit although widely separated in time. The Bill of Rights is the law of the land. The Universal Declaration is a statement of principles, of common standards of achievement for all peoples and all nations. We in the United States are engaged in unremitting efforts to give real meaning to these standards for every American, to assure to every person the full enjoyment of his basic rights.

Now, therefore, I, Richard Nixon, President of the United States of America, do hereby proclaim December 10, 1969, as Human Rights Day and December 15, 1969, as Bill of Rights Day, and call upon the people of the United States of America to observe the week of December 10–17, 1969, as Human Rights Week, to the end that we may rededicate ourselves as a united people to the task of assuring to every person—regardless of his race, sex, creed, color, or place of national origin—the full enjoyment of his basic human rights. Let us act so as to provide an example that will point the way in the struggle to promote respect for human rights throughout the world.

In witness whereof, I have hereunto set my hand this ninth day of December, in the year of our Lord nineteen hundred sixty-nine, and of the Independence of the United States of America the one hundred ninety-fourth.

RICHARD NIXON.

PRESIDENT NIXON'S REPORT OF DECEMBER 15

Mr. DOLE. Mr. President, I have before me the text of the President's report of last night on the status of the war in Vietnam.

I shall ask unanimous consent that the complete text be printed in the RECORD, but before doing so I wish to discuss briefly what the President said, because he continues to be the voice of reason in America.

Mr. President, it is hard to understand how Americans can disagree with the President.

No man has made it plainer that he wants peace.

But no matter how badly a man of honor wants something, he does not seek it at the expense of those he has sworn to help.

And that is true for a nation, too.

That is why no man, no matter how dovish, can expect his President to do that which would dishonor his country.

Certainly President Nixon, has made it clear no dishonor can be expected of him.

Let me repeat his words:

The enemy still insists on a unilateral, precipitate withdrawal of American forces and on a political settlement which would mean the imposition of a Communist government on the people of South Vietnam, against their will, and defeat and humiliation for the United States. This we cannot and will not accept.

The President said:

Anything is negotiable except the right of the people of South Vietnam to determine their own fate.

Surely, no man could be more reasonable.

And yet, despite the President's complete willingness to negotiate, what have been the results?

First of all there has been no progress of any sort on the negotiating front.

Second, the North Vietnamese absolutely refuse to talk about the fate of the American prisoners they hold and refuse even to supply names to ease the anguish and uncertainty of loved ones in the United States.

Third, according to the President, infiltration into the South today is increasing significantly.

Mr. President, while the President announced his decision to bring 50,000 more American troops home, he also wisely and clearly repeated to the North Vietnamese that our troop withdrawals are not a slow surrender.

The North Vietnamese should consider carefully what the President said regarding increased activity on their part:

Hanoi could make no greater mistake than to assume that an increase in violence will be to its advantage. If I conclude that increased enemy action jeopardizes our remaining forces in Vietnam, I shall not hesitate to take strong and effective measures to deal with that situation.

Mr. President, the North Vietnamese should have learned by now that most Americans support the President in his search for a just and honorable peace.

That being the case, it should be clear to them that they cannot win this war from within the United States any more than they can win it in Vietnam.

It is indeed time for them to come to the bargaining table with good faith and willingness to reach a solution. I urge now, that the doves in America unite and call on the North Vietnamese to do just that. It is time that the doves, as well as those in this country who see North Vietnam as the innocent victim of American aggression, help bring this war to an end by telling North Vietnam the truth: as long as Richard Nixon is President, they cannot win. They can have honorable peace, but they cannot have conquest.

As long as Richard Nixon is President, South Vietnam will remain free to choose its own government.

Mr. President, I ask unanimous consent that the text of the President's talk be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"A . . . PEACE . . . WHICH IS FAIR"

(The prepared text of President Nixon's radio-television address)

I have asked for this television time tonight to give you a progress report on our plan to bring a just peace in Vietnam, which I described in my television address on November 3.

As you will recall, I said then that we were proceeding in our pursuit for peace on two fronts—a peace settlement through negotiation, or if that fails, ending the war through Vietnamization, a plan we have developed with the South Vietnamese for the complete withdrawal first of all U.S. combat ground forces and eventually of other forces and their replacement by South Vietnamese forces on an orderly scheduled timetable.

I report with regret tonight that there

has been no progress whatever on the negotiating front since November 3. The enemy still insists on a unilateral, precipitate withdrawal of American forces and on a political settlement which would mean the imposition of a Communist government on the people of South Vietnam against their will, and defeat and humiliation for the United States.

This we cannot and will not accept.

Typical of their attitude is their absolute refusal to talk about the fate of the American prisoners they hold and their refusal even to supply their names so as to ease the anguish of their loved ones in the United States. This cruel, indefensible action is a shocking demonstration of the inflexible attitude they have taken on all issues at the negotiating table in Paris.

Despite their attitude, however, we shall continue to participate in the Paris talks and to seek a negotiated peace—one which is fair to North Vietnam, fair to the United States and, most important, fair to the people of South Vietnam. I have indicated that anything is negotiable except the right of the people of South Vietnam to determine their own fate.

As you know, Ambassador Lodge has had to leave his assignment in Paris because of personal reasons. I have designated Philip Habib, one of our most experienced foreign service officers who has been participating in the negotiations for over 18 months, as the acting head of our delegation with the personal rank of Ambassador. He has been given full authority to discuss any proposal that will contribute to a just peace.

Let me turn now to the progress of our plan for Vietnamization and our troop withdrawal program.

When I announced the troop withdrawal program in June, I said that the rate of withdrawal would depend on three criteria—progress in the Paris negotiations, progress in the training of South Vietnamese forces and the level of enemy activity.

FAVORABLE REPORT

While there has been no progress on the negotiating front I have a much more favorable report to give to you tonight with regard to the training of South Vietnamese forces.

First let me tell you how I reached this conclusion. In making decisions, I believe a President should listen not only to those who tell what he wants to hear but to those who tell him what he ought to hear. It is most important to get independent judgments from individuals who are expert on the factors to be considered but who are not directly involved in the operations themselves. This is particularly essential when the lives of American men are involved.

Several months ago I read a book by Sir Robert Thompson, a British expert who was one of the major architects of the victory over the Communist guerrillas who attempted to take over Malaya in the 1950s. In his book which was published just as this Administration took office he was very pessimistic about the conduct the war. He particularly noted the failure to prepare the South Vietnamese to take over the responsibilities of their own defense.

On October 17 I met with Mr. Thompson and asked him to go to Vietnam and give me a first-hand, candid and completely independent report on the situation there. After five weeks of intensive investigation he gave his report on December 3.

IMPROVEMENT IMPRESSIVE

His full report, which makes several constructive recommendations, must remain confidential since it bears on the security of our men. But let me read to you from his summary of his findings.

"I was very impressed by the improvement in the military and political situation in Vietnam as compared with all previous visits and especially in the security situation, both in Saigon and the rural areas.

"A winning position in the sense of obtaining a just peace (whether negotiated or not) and of maintaining an independent, non-Communist South Vietnam has been achieved but we are not yet through. We are in a psychological period where the greatest need is confidence, a steady application of the 'do it yourself' concept with continuing U.S. support in the background will increase the confidence already shown by many South Vietnam leaders."

Mr. Thompson's report which I would describe as cautiously optimistic, is in line with my own attitude and the reports I have received from other observers and from our own civilian and military leaders in Vietnam.

There is one disturbing new development, however, with regard to enemy activity. Enemy infiltration has increased substantially. It has not yet reached the point where our military leaders believe the enemy has developed the capability to mount a major offensive but we are watching the situation closely to see whether it could develop to that extent.

ANNOUNCES REDUCTION

Taking all these developments into consideration, I am announcing tonight a reduction in our troop ceiling of 50,000 more U.S. troops by April 15 next year. This means that the ceiling which existed when I took office on January 20 has now been reduced by 115,500 men. This reduction has been made with approval of the government of South Vietnam, and in consultation with other nations which have combat troops in Vietnam.

There are some who believe that to continue our withdrawals at a time when enemy infiltration is increasing is a risk we should not take. However, I have consistently said that we must take risks for peace.

And in that connection, let me remind the leaders in Hanoi that if infiltration and the level of enemy activity increase while we are reducing our forces, they also will be running a risk. I repeat the statement I made in my speech on November 3.

"Hanoi could make no greater mistake than to assume that an increase in violence will be to its advantage. If I conclude that increased enemy action jeopardizes our remaining forces in Vietnam, I shall not hesitate to take strong and effective measures to deal with that situation."

EXPRESSES APPRECIATION

This reduction in our forces is another orderly step in our plan for peace in Vietnam.

It marks further progress toward turning over the defense of South Vietnam to the South Vietnamese.

It is another clear sign of our readiness to bring an end of the war and to achieve a just peace.

Before concluding this report, I wish to express my appreciation to the great number of people from all over the nation who have indicated their support for our program for a just peace since my speech on November 3.

This support was particularly underlined by the action of the Congress in which a majority of both Democrats and Republicans voted overwhemingly 334 to 55 for a resolution supporting the plan for peace which I announced on November 3.

HANOI'S DREAM

The leaders in Hanoi have declared on a number of occasions that division in the United States would eventually bring them the victory they cannot win over our fighting men in Vietnam. This demonstration of support by the American people for our plan to bring a just peace dashed those hopes completely.

Hanoi should abandon its dream of military victory.

It is time for them to join us in serious negotiations.

There is nothing to be gained by delay.

If Hanoi is willing to talk seriously they will find us flexible and forthcoming.

I am glad that I was able to report tonight some progress in reaching our goal of a just peace in Vietnam. After five years of increasing the number of Americans in Vietnam, we are bringing men home.

SUPPORT ASKED

Our casualties continue to be at the lowest rate in three years.

But I want you to know that despite this progress, I shall not be satisfied until we achieve the goal we all want—an end to the war on a just and lasting basis.

This is the fifth Christmas when Americans will be fighting in a war far away from home.

I know that there is nothing the American people want more and nothing I want more than to see the day come when the Christmas message of "Peace on Earth, Good Will to Men" will be not just an eloquent ideal but a reality for Americans and all others who cherish peace and freedom throughout the world.

Your continued support of our plan for peace will greatly strengthen our hopes that we can achieve that goal.

PRAISE OF THOMAS W. FLETCHER, FORMER DEPUTY MAYOR OF THE DISTRICT OF COLUMBIA

Mr. CRANSTON. Mr. President, Thomas W. Fletcher, who served with great distinction in the highly demanding job of Deputy Mayor of Washington, D.C., is returning to California to become city manager of San Jose.

His more than 2 years of service as chief assistant to Mayor Walter E. Washington enhanced Mr. Fletcher's already solid reputation as one of the Nation's top city administrators.

Mr. Fletcher was appointed the deputy to Mayor Washington shortly before the current, reorganized city government for the Nation's Capital officially took office November 3, 1967. During that time, the new city administration dealt with a series of crises and issues ranging from the disorders in April 1968, to acute fiscal problems, to the recent antiwar demonstrations.

As with other large urban areas throughout the Nation, the District of Columbia is plagued with a broad range of urban ailments.

Under the leadership of this municipal administration, the city is moving forward to cope with these problems—to help make the Capital City a better community for all.

Mr. Fletcher's greatest contribution was, I believe, to help to strengthen and sharpen the administrative machinery of the city government. This is, of course, the keystone for a more effective, responsive and efficient effort by the government to meet the needs of the community.

Tom Fletcher had the chief responsibility for carrying out the policy decisions of the Mayor. The Deputy played a major role in such key areas as fiscal affairs, the development of specific plans for rebuilding the corridors hardest hit by the civil disorders, and in legislative matters.

Mr. Fletcher began his career as assistant to the city manager of San Leandro, Calif. Later, he moved up to city manager of Davis, Calif., and then accepted

the position of assistant to the city manager of San Diego. In October 1961, he became city manager there. It was in that post that he won a wide reputation as a first-class professional in the field of public administration.

Originally, he had come to Washington to become a Deputy Assistant Secretary in the Department of Housing and Urban Development. But 3 months later Tom Fletcher was tapped by President Johnson for the Deputy Mayor's post.

Mr. Fletcher's successor is Graham Watt, city manager of Dayton, Ohio. Mr. Watt also has a splendid record in the field of public administration.

The decision by Tom Fletcher to accept the post of city manager of San Jose is a severe loss to the District of Columbia. He will be missed. But I am delighted that he has chosen to return to his native California. We look forward to benefiting from his services there once again.

RELIEF AND WORK—DAY CARE CENTERS

Mr. JAVITS. Mr. President, according to the latest data available there are more than 17 million children under 18 in this country who have working mothers. About 4.5 million of these children are under 6, and another 6.4 million are 6 to 11 years of age. Welfare mothers alone have approximately 1.6 million children under 6. It is of vital importance to the welfare of these children and to the health of our Nation that these children spend their days in safe, stimulating, and wholesome environments while their mothers are at work.

But at present we are far from providing adequate day care facilities for them. The latest estimate is that there are only 600,000 places in licensed day care facilities in the entire country, as compared with an estimated need of perhaps 3 or 4 million. Federally aided programs provide about 172,000 of the available places. About 8 percent of children under 14 with working mothers must look after themselves. Many others are cared for in "family day care centers" in which the facilities are substandard and unclean, there are no toys or educational equipment, the children are given little guidance or personal attention, and meals are meager or nonexistent.

One of the key features of the President's recently proposed welfare program is the provision of day care facilities to persons receiving welfare assistance who participate in manpower training or employment programs. The proposal would make available an additional 450,000 quality day care places, at a cost of $386,000,000 to the Federal Government. This provision is a much-needed feature of a long overdue revamping of the welfare program, which for years has acted as a disincentive to work and at the same time has failed to provide benefits which are sufficient to maintain a decent standard of living. If families are to live without accepting welfare, they must work; and if mothers are to work, they must have adequate day care facilities for their children.

I ask unanimous consent to have printed in the RECORD at the close of my remarks a column written by William Raspberry and published in the Washington Post. The article discusses the necessity for Congress to enact the day care provisions of the proposed Family Assistance Act. Mr. Raspberry points out that as well as benefiting the welfare recipients who will be enabled to go to work, the program provides an excellent opportunity to benefit disadvantaged children. If, through day care, we can provide these children with the cultural and educational advantages which they have traditionally lacked, we may find ourselves a long way down the road to solving other problems in such areas as education, juvenile delinquency, and crime.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DAY-CARE KEY IN NIXON PLAN

(By William Raspberry)

What the Congress does about funding the President's Family Assistance Act (hearings on the proposal get under way this morning) will determine whether the program can accomplish anything.

A key feature of the proposal is tha tfamily assistance payments (traditional "welfare" grants would go by the board) would be denied to any otherwise eligible person who refused "suitable" employment or job-training opportunities, provided adequate day-care is available for the children.

If Congress is generous, the day-care provision alone could be one of the best things to happen to poor families in a long time. If it decides to save the taxpayers' money (perhaps for another moon shot), the entire program could come a cropper.

And there can be little doubt there will be strong temptation to cut costs. Mr. Nixon is talking about a lot of money—some $386 million for day-care alone. But it may be among the wisest investments the country could make.

The employment and job-training aspects of the President's proposal may be misleading. The President is talking about reaching some 150,000 pre-school children and twice that many school-age children in the first year of the program. That is encouragingly ambitious.

But there is little reason to suppose that there are worthwhile jobs or realistic training possibilities for the mothers of most of these youngsters. Given the number of welfare mothers who earnestly would prefer to work, I tend to doubt that we can find jobs for them all, even after training.

Indeed, there is the suspicion that the work requirement was nothing more than a sop to make the rest of the proposal palatable to those who think most welfare recipients are lazy freeloaders.

But, day-care is something else again. It is hard to over estimate the amount of good that could result from good, education-oriented day-care programs for hundreds of thousands of financially and culturally impoverished youngsters.

Aside from the health and "socialization" benefits, top-notch day-care could help to give these children their first real chance to succeed in school.

We have grown accustomed to thinking of day-care as little more than a pretty good second choice. The best thing, we tell ourselves would be for the mothers to stay home with their children. But if that is not possible, then high-quality day-care that includes health and educational opportunities is an acceptable second choice.

That presumption may be valid in the case of middle-class mothers who work not to support their families but because they want some of life's extras, or simply because they're bored at home.

But in the case of the poor, we are most often talking about a mother whose family relies on her income—whether a paycheck or a welfare check—for its very survival.

And we are also talking, in the main, about mothers who can provide few cultural, educational or health advantages for their children even if they are able to stay home with them. Thousands of these youngsters may be a good deal better off in a good day-care facility than they would be at home with Mama.

This is true, however, only if the day-care facilities are good. If a significant amount of the day-care turns out to be mere baby-sitting (one of the alternatives provided in the President's proposal) or if we simply build human storage bins for these children, they may well wind up worse off than they are now.

The success of the program depends on the willingness of Congress to provide the necessary money and proper supervision by local officials.

We can take care of the local end. The rest is up to Congress.

THE NEW CONSERVATION

Mr. NELSON. Mr. President, there is a deepening disenchantment with many of our institutions because they do not adjust to or anticipate social change quickly enough. We seem to dash from one crisis to another, sacrificing, at this frenetic pace, vision and purpose for an approach.

Technology is in the saddle and we are too often blindly following technical change for its own sake. The process is more complicated, and yet, as sophisticated a nation as we are, we frequently decide to do something because we can do it and not because we should.

That is the tyranny of technology and nowhere does it show up more blatantly than in the environmental crisis. Only after decades of wanton destruction of our land are we seeing the social cost we paid for progress. In addition, colleges and universities are discovering that quality of environment and quality of life are two of the most urgent but sadly overlooked areas of academic endeavor.

Mr. John Fisher in his article entitled "Survival U: Prospectus for a Really Relevant University," published in Harper's, outlines a strategy for bringing the bits and pieces of university efforts together under one guiding concept—the idea of survival. For the first time in history the survival of man is no longer assured. The major threats to our planet—wars of mass destruction, pollution, depletion of resources, and overpopulation—are serious challenges to mankind. Therefore, we must seek knowledge and insight from our educational institutions in order to meet these challenges.

Environmental education seems to Fisher to be the keystone to Survival U. and I believe it also leads to the way to the new conservation. It is the area of study that very readily lends itself to the problem-solving approach—so important an approach if students are to relate to their academic work. Quality, not quantity, has the higher priority.

"Survival U," Fisher states:

Will prepare its students to consume less. This does not necessarily mean an immediate

drop in living standards—perhaps only a change in the yardstick by which we measure them.

He continues:

Happy or not, our students had better learn how to live the Simpler Life, because that is what most of them are likely to have before they reach middle age.

Human ecology is one of the youngest disciplines, and probably the most important. It is the study of the relationship between man and his environment, both natural and technological. It teaches us to understand the consequences of our actions.

In other words, ecology may be considered the systems approach with a soul.

Fisher concludes:

A graduate who comprehends ecology will know how to look at what is going on in the world, and he will be equipped to do something about it. Whether he ends up as a city planner, a politician, an enlightened engineer, a teacher, or a reporter, he will have had a relevant education. All of its parts will hang together in a coherent whole.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Harper's, September 1969]

SURVIVAL U: PROSPECTUS FOR A REALLY RELEVANT UNIVERSITY

(By John Fischer)

It gets pretty depressing to watch what is going on in the world and realize that your education is not equipping you to do anything about it.—From a letter by a University of California senior.

She is not a radical, and has never taken part in any demonstration. She will graduate with honors, and profound disillusionment. From listening to her—and a good many like-minded students at California and East Coast campuses—I think I am beginning to understand what they mean when they say that a liberal-arts education isn't relevant.

They mean it is incoherent. It doesn't cohere. It consists of bits and pieces which don't stick together, and have no common purpose. One of our leading Negro educators, Arthur Lewis of Princeton, recently summed it up better than I can. America is the only country, he said, where youngsters are required "to fritter away their precious years in meaningless perregrination from subject to subject . . . spending twelve weeks getting some tidbits of religion, twelve weeks learning French, twelve weeks seeing whether the history professor is stimulating, twelve weeks seeking entertainment from the economics professor, twelve weeks confirming that one is not going to be able to master calculus."

These fragments are meaningless because they are not organized around any central purpose, or vision of the world. The typical liberal-arts college has no clearly defined goals. It merely offers a smorgasbord of courses, in hopes that if a student nibbles at a few dishes from the humanitites table, plus a snack of science, and a garnish of art or anthropology, he may emerge as "a cultivated man"—whatever that means. Except for a few surviving church schools, no university even pretends to have a unifying philosophy. Individual teachers may have personal ideologies—but since they are likely to range, on any given campus, from Marxism to worship of the scientific method to exaltation of the irrational (*à la* Norman O. Brown), they don't cohere either. They often leave a student convinced at the end of four years that any given idea is probably about as valid as any other—and that none of them has much relationship to the others, or to the decisions he is going to have to make the day after graduation.

Education was not always like that. The earliest European universities had a precise purpose: to train an elite for the service of the Church. Everything they taught was focused to that end. Thomas Aquinas had spelled it all out: what subjects had to be mastered, how each connected with every other, and what meaning they had for man and God.

Later, for a span of several centuries, Oxford and Cambridge had an equally clear function: to train administrators to run an empire. So too did Harvard and Yale at the time they were founded; their job was to produce the clergymen, lawyers, and doctors that a new country needed. In each case, the curriculum was rigidly prescribed. A student learned what he needed, to prepare himself to be a competent priest, district officer, or surgeon. He had no doubts about the relevance of his courses—and no time to fret about expanding his consciousness or currying his sensual awareness.

This is still true of our professional schools. I have yet to hear an engineering or medical student complain that his education is meaningless. Only in the liberal-arts colleges—which boast that "we are not trade schools"—do the youngsters get that feeling that they are drowning in a cloud of feathers.

For a long while some of our less complacent academics have been trying to restore coherence to American education. When Robert Hutchins was at Chicago, he tried to use the Great Books to build a comprehensible framework for the main ideas of civilized man. His experiment is still being carried on, with some modifications, at St. John's—but it has not proved irresistibly contagious. Sure, the thoughts of Plato and Machiavelli are still pertinent, so far as they go—but somehow they don't seem quite enough armor for a world beset with splitting atoms, urban guerrillas, nineteen varieties of psychotherapists, amplified guitars, napalm, computers, astronauts, and an atmosphere polluted simultaneously with auto exhaust and TV commercials.

Another strategy for linking together the bits-and-pieces has been attempted at Harvard and at a number of other universities. They require their students to take at least two years of survey courses, known variously as core studies, general education, or world civilization. These too have been something less than triumphantly successful. Most faculty members don't like to teach them, regarding them as superficial and synthetic. (And right they are, since no survey course that I know of has a strong unifying concept to give it focus.) Moreover, the senior professors shun such courses in favor of their own narrow specialities. Consequently, the core studies which are meant to place all human experience—well, at least the brightest nuggests—into One Big Picture usually end up in the perfunctory hands of resentful junior teachers. Naturally the undergraduates don't take them seriously either.

Any successful reform of American education, I am now convinced, will have to be far more revolutionary than anything yet attempted. At a minimum, it should be:

1. Founded on a single guiding concept—an idea capable of knotting together all strands of study, thus giving them both coherence and visible purpose.

2. Capable of equipping young people to do something about "what is going on in the world"—notably the things which bother them most, including war, injustice, racial conflict, and the quality of life.

Maybe it isn't possible. Perhaps knowledge is proliferating so fast, and in so many directions, that it can never again be ordered into a coherent whole, so, that molecular biology, Robert Lowell's poetry, and highway engineering will seem relevant to each other and to the lives of ordinary people. Quite possibly the knowledge explosion, as Peter F. Drucker has called it, dooms us to scholarship which grows steadily more specialized fragmented, and incomprehensible.

The Soviet experience is hardly encouraging. Russian education is built on what is meant to be a unifying ideology: Marxism-Leninism. In theory, it provides an organizing principle for all scholarly activity—whether history, literature, genetics, or military science. Its purpose is explicit: to train a Communist elite for the greater power and glory of the Soviet state, just as the medieval universities trained a priesthood to serve the Church.

Yet according to all accounts that I have seen, it doesn't work very well. Soviet intellectuals apparently are almost as restless and unhappy as our own. Increasing numbers of them are finding Marxism-Leninism too simplistic, too narrowly doctrinaire, too oppressive; the bravest are risking prison in order to pursue their own heretical visions of reality.

It is conceivable, then, that we might hit upon another idea which could serve as the organizing principle for many fields of scholarly inquiry; which is relevant to the urgent needs of our time; and which would not, on the other hand, impose an ideological strait jacket, as both ecclesiastical and Marxist education attempted to do?

Just possibly it could be done. For the last two or three years I have been probing around among professors, college administrators, and students—and so far I have come up with only one idea which might fit the specifications. It is simply the idea of survival.

For the first time in history, the future of the human race is now in serious question. This fact is hard to believe, or even think about—yet it is the message which a growing number of scientists are trying, almost frantically, to get across to us. Listen, for example, to Professor Richard A. Falk of Princeton and of the Center for Advanced Study in the Behavioral Sciences:

"The planet and mankind are in grave danger of irreversible catastrophe . . . Man may be skeptical about following the flight of the dodo into extinction, but the evidence points increasingly to just such a pursuit. . . . There are four interconnected threats to the planet—wars of mass destruction, overpopulation, pollution, and the depletion of resources. They have a cumulative effect. A problem in one area renders it more difficult to solve the problems in any other area. . . . The basis of all four problems is the inadequacy of the sovereign states to manage the affairs of mankind in the twentieth century."

Similar warnings could be quoted from a long list of other social scientists, biologists, and physicists, among them such distinguished thinkers as Rene Dubos, Buckminster Fuller, Loren Eiseley, George Wald, and Barry Commoner. They are not hopeless. Most of them believe that we still have a chance to bring our weapons, our population growth, and the destruction of our environment under control before it is too late. But the time is short, and so far there is no evidence that enough people are taking them seriously.

That would be the prime aim of the experimental university I'm suggesting here: to look seriously at the interlinking threats to human existence, and to learn what we can do to fight them off.

Let's call it Survival U. It will not be a multiversity, offering courses in every conceivable field. Its motto—emblazoned on a life jacket rampant—will be: "What must we do to be saved?" If a course does not help to answer that question, it will not be taught here. Students interested in musicology, junk

sculpture, the Theater of the Absurd, and the literary *dicta* of Leslie Fiedler can go somewhere else.

Neither will our professors be detached, dispassionate scholars. To get hired, each will have to demonstrate an emotional commitment to our cause. Moreover, he will be expected to be a moralist; for this generation of students, like no other in my lifetime, is hungering and thirsting after righteousness. What it wants is a moral system it can believe in—and that is what our university will try to provide. In every class it will preach the primordial ethic of survival.

The biology department, for example, will point out that it is sinful for anybody to have more than two children. It has long since become glaringly evident that unless the earth's cancerous growth of population can be halted, all other problems—poverty, war, racial strife, uninhabitable cities, and the rest—are beyond solution. So the department naturally will teach all known methods of birth control, and much of its research will be aimed at perfecting cheaper and better ones.

Its second lesson in biological morality will be: "Nobody has a right to poison the environment we live in." This maxim will be illustrated by a list of public enemies. At the top will stand the politicians, scientists, and military men—of whatever country—who make and deploy atomic weapons; for if these are ever used, even in so-called defensive systems like the ABM, the atmosphere will be so contaminated with strontium 90 and other radioactive isotopes that human survival seems most unlikely. Also on the list will be anybody who makes or tests chemical and biological weapons—or who even attempts to get rid of obsolete nerve gas, as our Army recently proposed, by dumping the stuff in the sea.

Only slightly less wicked, our biology profs will indicate, is the farmer who drenches his land with DDT. Such insecticides remain virulent indefinitely, and as they wash into the streams and oceans they poison fish, waterfowl, and eventually the people who eat them. Worse yet—as John Hay noted in his recently published *In Defense of Nature*—"The original small, diluted concentrations of these chemicals tend to build up in a food chain so as to end in a concentration that may be thousands of times as strong." It is rapidly spreading throughout the globe. DDT already has been found in the tissues of Eskimos and of Antarctic penguins, so it seems probable that similar deposits are gradually building up in your body and mine. The minimum fatal dosage is still unknown.

Before he finishes this course, a student may begin to feel twinges of conscience himself. Is his motorcycle exhaust adding carbon monoxide to the smog we breathe? Is his sewage polluting the nearest river? If so, he will be reminded of two proverbs. From Jesus: "Let him who is without sin among you cast the first stone." From Pogo: "We have met the enemy and he is us."

In like fashion, our engineering students will learn not only how to build dams and highways, but where *not* to build them. Unless they understand that it is immoral to flood the Grand Canyon or destroy the Everglades with a jetport, they will never pass the final exam. Indeed, our engineering graduates will be trained to ask a key question about every contract offered them: "What will be its effect on human life?" That obviously will lead to other questions which every engineer ought to comprehend as thoroughly as his slide rule. Is this new highway really necessary? Would it be wiser to use the money for mass transit—or to decongest traffic by building a new city somewhere else? Is an offshore oil well really a good idea, in view of what happened to Santa Barbara?

Our engineering faculty also will specialize in training men for a new growth industry: garbage disposal. Americans already are spending $4.5 billion a year to collect and get rid of the garbage which we produce more profusely than any other people (more than five pounds a day for each of us). But unless we are resigned to stifling in our own trash, we are going to have to come up with at least an additional $835 million a year.[1] Any industry with a growth rate of 18 per cent offers obvious attractions to a bright young man—and if he can figure out a new way to get rid of our offal, his fortune will be unlimited.

Because the old ways no longer work. Every big city in the United States is running out of dumping grounds. Burning won't do either, since the air is dangerously polluted already—and in any case, 75 per cent of the incinerators in use are inadequate. For some 150 years Californians happily piled their garbage into San Francisco Bay, but they can't much longer. Dump-and-fill operations already have reduced it to half its original size, and in a few more decades it would be possible to walk dry-shod from Oakland to the Embarcadero. Consequently San Francisco is now planning to ship garbage 375 miles to the yet-uncluttered deserts of Lassen County by special train—known locally as "The Twentieth Stenchery Limited" and "The Excess Express." The city may actually get away with this scheme, since hardly anybody lives in Lassen County except Indians, and who cares about them? But what is the answer for the metropolis that doesn't have an unspoiled desert handy?

A few ingenious notions are cropping up here and there. The Japanese are experimenting with a machine which compacts garbage, under great heat and pressure into building blocks. A New York businessman is thinking of building a garbage mountain somewhere upstate, and equipping it with ski runs to amortize the cost. An aluminum company plans to collect and reprocess used aluminum cans—which, unlike the old-fashioned tin can, will not rust away. Our engineering department will try to Think Big along these lines. That way lies not only new careers, but salvation.

Survival U's Department of Earth Sciences will be headed—if we are lucky—by Dr. Charles F. Park, Jr., now professor of geology and mineral engineering at Stanford. He knows as well as anybody how fast mankind is using up the world's supply of raw materials. In a paper written for the American Geographical Society he punctured one of America's most engaging (and pernicious) myths: our belief that an ever-expanding economy can keep living standards rising indefinitely.

It won't happen; because, as Dr. Park demonstrates, the tonnage of metal in the earth's crust won't last indefinitely. Already we are running short of silver, mercury, tin, and cobalt—all in growing demand by the high-technology industries. Even the commoner metals may soon be in short supply. The United States alone is consuming one ton of iron and eighteen pounds of copper every year, for each of its inhabitants. Poorer countries, struggling to industrialize, hope to raise their consumption of these two key materials to something like that level. If they should succeed—and if the globe's population doubles in the next forty years, as it will at present growth rates—then the world will have to produce, somehow, *twelve times* as much iron and copper every year as it does now. Dr. Parks sees little hope that such production levels can ever be reached, much less sustained indefinitely. The same thing, of course—doubled in spades—goes for other raw materials; timber, oil natural gas, and water, to note only a few.

Survival U, therefore, will prepare its students to consume less. This does not necessarily mean an immediate drop in living standards—perhaps only a change in the yardstick by which we measure them. Conceivably Americans might be happier with fewer automobiles, neon signs, beer cans, supersonic jets, barbecue grills, and similar metallic fluff. But happy or not, our students had better learn how to live The Simpler Life, because that is what most of them are likely to have before they reach middle age.

To help them understand how very precious resources really are, our mathematics department will teach a new kind of bookkeeping: social accounting. It will train people to analyze budgets—both government and corporate—with an eye not merely to immediate dollar costs, but to the long-range costs to society.

By conventional bookkeeping methods, for example, the coal companies strip-mining away the hillside of Kentucky and West Virginia show a handsome profit. Their ledgers, however, show only a fraction of the true cost of their operations. They take no account of destroyed land which can never bear another crop; of rivers poisoned by mud and seeping acid from the spoil banks; of floods which sweep over farms and towns downstream, because the ravaged slopes can no longer hold the rainfall. Although these costs are not borne by the mining firms, they are nevertheless real. They fall mostly on the taxpayers, who have to pay for disaster relief, flood-control levees, and the resettlement of Appalachian farm families forced off the land. As soon as our students (the taxpayers of tomorrow) learn to read a social balance sheet, they obviously will throw the strip miners into bankruptcy.

Another case study will analyze the proposal of the Inhuman Real Estate Corporation to build a fifty-story skyscraper in the most congested area of midtown Manhattan. If 90 per cent of the office space can be rented at $12 per square foot, it looks like a sound investment, according to antique accounting methods. To uncover the true facts, however, our students will investigate the cost of moving 12,000 additional workers in and out of midtown during rush hours. The first (and least) item is $8 million worth of new city buses. When they are crammed into the already clogged avenues, the daily loss of man-hours in traffic jams may run to a couple of million more. The fumes from their diesel engines will cause an estimated 9 per cent increase in New York's incidence of emphysema and lung cancer: this requires the construction of three new hospitals. To supply them, plus the new building, with water—already perilously short in the city—a new reservoir has to be built on the headwaters of the Delaware River, 140 miles away. Some of the dairy farmers pushed out of the drowned valley will move promptly into the Bronx and go on relief. The subtraction of their milk output from the city's supply leads to a price increase of two cents a quart. For a Harlem mother with seven hungry children, that is the last straw. She summons her neighbors to join her in riot, seven blocks go up in flames, and the Mayor demands higher taxes to hire more police. . .

Instead of a sound investment, Inhuman Towers now looks like criminal folly, which would be forbidden by any sensible government. Our students will keep that in mind when they walk across campus to their government class.

Its main goal will be to discover why our institutions have done so badly in their efforts (as Dr. Falk put it) "to manage the affairs of mankind in the twentieth century." This will be a compulsory course for all freshmen, taught by professors who are capa-

[1] According to Richard D. Vaughn, chief of the Solid Wastes Program of HEW, in his recent horror story entitled "1968 Survey of Community Solid Waste Practices."

ble of looking critically at every political artifact, from the Constitution to the local county council. They will start by pointing out that we are living in a state of near-anarchy, because we have no government capable of dealing effectively with public problems.

Instead we have a hodgepodge of 80,000 local governments—villages, townships, counties, cities, port authorities, sewer districts, and special purpose agencies. Their authority is so limited, and their jurisdictions so confused and overlapping, that most of them are virtually impotent. The states, which in theory could put this mess into some sort of order, usually have shown little interest and less competence. When Washington is called to help out—as it increasingly has been for the last thirty-five years—it often has proved hamhanded and entangled in its own archaic bureaucracy. The end result is that nobody in authority has been able to take care of the country's mounting needs. Our welfare rolls keep growing, our air and water get dirtier, housing gets scarcer, airports jam up, road traffic clots, railways fall apart, prices rise, ghettos burn, schools turn out more illiterates every year, and a war nobody wants drags on and on. Small wonder that so many young people are losing confidence in American institutions. In their present state, they don't deserve much confidence.

The advanced students of government at Survival U will try to find out whether these institutions can be renewed and rebuilt. They will take a hard look at the few places—Jacksonville, Minnesota, Nashville, Appalachia—which are creating new forms of government. Will these work any better, and if so, how can they be duplicated elsewhere? Can the states be brought to life, or should we start thinking about an entirely different kind of arrangement? Ten regional prefectures, perhaps, to replace the fifty states? Or should we take seriously Norman Mailer's suggestion for a new kind of city-state to govern our great metropolises? (He merely called for New York City to secede from its state; but that isn't radical enough. To be truly governable, the new Republic of New York City ought to include chunks of New Jersey and Connecticut as well.) Alternatively, can we find some way to break up Megalopolis, and spread our population into smaller and more livable communities throughout the continent? Why should we keep 70 per cent of our people crowded into less than 2 per cent of our land area, anyway?

Looking beyond our borders, our students will be encouraged to ask even harder questions. Are nation-states actually feasible, now that they have power to destroy each other in a single afternoon? Can we agree on something else to take their place, before the balance of terror becomes unstable? What price would most people be willing to pay for a more durable kind of human organization—more taxes, giving up national flags, perhaps the sacrifice of some of our hard-won liberties?

All these courses (and everything else taught at Survival U) are really branches of a single science. Human ecology is one of the youngest disciplines, and probably the most important. It is the study of the relationship between man and his environment, both natural and technological. It teaches us to understand the consequences of our actions—how sulfur-laden fuel oil burned in England produces an acid rain that damages the forests of Scandinavia, why a well-meant farm subsidy can force millions of Negro tenants off the land and lead to Watts and Hough. A graduate who comprehends ecology will know how to look at "what is going on in the world," and he will be equipped to do something about it. Whether he ends up as a city planner, a politician, an enlightened engineer, a teacher, or a reporter, he will have had a relevant education. All of its parts will hang together in a coherent whole.

And if we can get enough such graduates, man and his environment may survive a while longer, against all the odds.

THE NEED TO RESTRUCTURE PRIORITIES

Mr. SAXBE. Mr. President, during the debate on the tax bill I argued once again over the pressing need to restructure our priorities, to focus our resources on the matters that really need attention. If at a time of prosperity and inflation, we cannot pay for our social benefits, when can we? It seems irresponsible to me to borrow money, thereby increasing interest rates and inflation, to pay for things we can and should pay for out of adequate taxes.

I want to shift more of our spending to that which is most important—the cities, ecological advances, more funds to fight crime and the rest. Yet we are virtually raiding our Treasury at a time when we should be doing these things. That was perhaps the primary reason I voted against the tax bill that came out of the Senate last week.

These matters were treated in different ways recently: in a column written by James Reston and published in the New York Times last Sunday; in a speech by John W. Gardner before the National Press Club last week and excerpted in the Washington Post of last Sunday; and finally, in an appearance on the CBS television show, "Face the Nation," also Sunday, by Dr. Milton S. Eisenhower, Chairman of the National Commission on the Causes and Prevention of Violence.

I ask unanimous consent that these three excellent presentations be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the New York Times, Dec. 14, 1969]

WASHINGTON: THE FORGOTTEN REPUBLICANS

(By James Reston)

WASHINGTON, December 13.—In the last few days, two distinguished Republicans have spoken out on the state of the nation. They are Milton Eisenhower, president emeritus of Johns Hopkins University, and John W. Gardner, former Secretary of H.E.W. and now head of the Urban Coalition—and both have said about the same thing.

The major threat to the security of the nation, they insist, is internal and not external; it is the present conflicts within our own society and not the menace of foreign aggression. They agree, too, on the remedy: end the war as soon as possible, and redirect the nation's priorities, finances, energies and leadership to the problems of the homefront.

EISENHOWER'S THEME

In his final report to President Nixon as chairman of the National Commission on the Causes and Prevention of Violence, Mr. Eisenhower said: "While serious external dangers remain, the graver threats today are internal: haphazard urbanization, racial discrimination, disfiguring of the environment, unprecedented interdependence, the dislocation of human identity and motivation created by an affluent society—all resulting in a rising tide of individual and group violence."

"We are anxious but immobile," Mr. Gardner told the members of the Washington National Press Club. "We know what our problems are, but seem incapable of summoning our will and our resources to act. . . . The place to begin is with our national leadership, both in the executive branch and the Congress. With a few notable exceptions there has been a failure of leadership. More than any other factor it is the missing ingredient in our situation today."

The Eisenhower commission does not minimize the problem of reordering priorities. It points directly to "middle-class America, to the 'forgotten American' and his concern over some consequences of racial integration, his rebellion against rising taxes, his distrust of dissent on the campus and protest movements in the capital. How realistic is it, they will ask, to think that the majority of Americans will support a reallocation of our national resources to deal with social problems?"

THE POLITICAL DILEMMA

Of course, this is precisely what is puzzling and dividing the Administration and the opposition in Washington. Everybody sees the problems of the races and the cities but they also see the backlash of the white majority and there is clearly a political dilemma in both parties about whether to deal with the social problems or concentrate on the politics of those problems.

Mr. Eisenhower and his colleagues are conscious of this dilemma. They observe that there are some who predict that majority indifference to injustice will result in "a violent revolution of some kind," and others who actually advocate this course as the only remedy. The Eisenhower commission's conclusion, however, is that "the majority of Americans have always responded constructively to national crises when they have been fully informed and responsibly led."

GARDNER'S COMPLAINT

But are they? Mr. Gardner's complaint is that the people are neither fully informed nor "responsibly led." His press club speech criticizing the President and the Congress was not published textually, so far as one can discover, in a single newspaper in America, and this is interesting.

He is probably the most articulate Republican analyst of our society in America today. He quit the Johnson Cabinet because he didn't believe in Mr. Johnson's priorities, and felt that we could not solve our problems in America by Presidential leadership but had to rely mainly on the natural leaders of all the states and communities of the nation. This is why he took on the chairmanship of the Urban Coalition.

His experience in this job, however, has convinced him that local leadership, without a clear, strong, persistent definition of priorities from the White House, will not work. This is why he overcame his natural tendency to avoid personal criticism, and spoke out publicly against the President and the elderly and dictatorial committee chairmen of the Congress.

The President, he said, "must do more to to set a tone of urgency to which we can all respond, and more to exemplify in his own actions a determination to solve our pressing problems. . . . Only the President's clearly expressed concern and clearly stated priorities can mobilize the Federal apparatus, encourage the Congress to shake off its lethargy, and enable leaders in other sectors of American life to move decisively. . . ."

THE BASIC QUESTION

The meaning of the Eisenhower and Gardner reports—which are available at the White House and the Urban Coalition—is fairly clear. The debate about how to defend the nation is not only or even primarily a debate about Vietnam—that is only part of it. It is not primarily a partisan debate

or an argument between the Vice President and the press. It is a fundamental and sincere difference of opinion about how best to defend the security of the country—and the testimony of these two distinguished Republicans, while not conclusive, helps bring these central questions of priorities and leadership into focus.

[From the Washington Post, Dec. 14, 1969]

PARALYZED NATION NEEDS A JOLT FROM LEADERS

(By John W. Gardner, chairman of the Urban Coalition Action Council)

As we enter the 1970s, there are many curious aspects of our situation, but none more strange than our state of mind. We are anxious but immobilized. We know what our problems are, but seem incapable of summoning our will and resources to act.

We see the brooding threat of nuclear warfare. We know our lakes are dying, our rivers growing filthier daily, our atmosphere increasingly polluted.

We are aware of racial tensions that could tear the nation apart. We understand that oppressive poverty in the midst of affluence is intolerable. We see that our cities are sliding toward disaster.

These are not problems that stop at our borders. The problems of nuclear warfare, of population, of the environment are impending planetary disasters. We are in trouble as a species. But we are seized by a kind of paralysis of the will. It is like a waking nightmare.

I propose that as we enter the new decade, we made a heroic effort to alter both our mood and our state of inactivity. Let 1970 be a year of renewal, and during that year let us give our institutions and ourselves a jolting reappraisal and overhaul.

A LEADERSHIP FAILURE

The place to begin is with our national leadership in both the Executive Branch and Congress. With a few notable exceptions, there has been a failure of leadership. More than any other factor, it is the missing ingredient in our situation today.

We have had failures of leadership before, but rarely have we had the widespread distrust of our own institutions that we see today. And that distrust is not limited to radicals. Ask shopkeepers, housewives, young executives or insurance salesmen what concerns them. You will find that there is a deep and pervasive feeling among all segments of the populace that "things aren't working"—and Washington is given a major share of the blame.

When the great majority of Americans share that uneasiness, when a growing number are losing all confidence in our society, when the problems themselves are terrifyingly real, then it is immoral for our national leaders—in Congress and the Executive Branch—to temporize. It is indecent for them to let us imagine that we can solve our problems without money or that we cannot afford to tackle them. It is criminal for either Republicans or Democrats to put politics before the nation's future.

A FIGHTING STANCE

Now let me speak specifically of the President. Any judgment on the President's leadership must take into account that he came into office at a difficult time, must deal with a Congress of the opposing party and finds his options limited by inflation and the war. But given all that, he must do more to set a tone of urgency to which we can all respond, and more to exemplify in his own actions a determination to solve our present problems.

We are not—and should not become—blind followers of the leader. But only the President's clearly expressed concern and clearly stated priorities can mobilize the federal apparatus, encourage Congress to shake off its lethargy and enable leaders in other sectors of American life to move decisively.

His greatest test is on the international front. His first task—and one cannot exaggerate its urgency—is to end the war. Even more important in the long run will be steps that must be taken to cope with the threat of nuclear warfare. His recent action with respect to biological warfare was encouraging.

On the domestic front, the President must say more explicitly—and with greater urgency—what he conceives to be an appropriate strategy for dealing with the dilemmas of the cities, with equality of opportunity, with the environment and with other problems that are racking the nation. Not only must he propose social programs adequate to our need, but when the legislation goes to Congress, he must fight as hard for it as he fought for the ABM and Judge Haynsworth.

Now let's talk about Congress. This Congress, which has acquired a reputation for lethargy, could dispel that reputation not only by passing needed legislation but by enacting genuinely meaningful congressional reform. Few institutions in our national life are as gravely in need of renewal, and renewal requires, first of all, measures to abolish the seniority system and curb the abuse of power by entrenched committee chairmen.

In 1958, Congress enacted a law requiring the chief judges of federal circuit and district courts to give up their administrative duties at 70. I propose that Congress impose the same rule on its own members. The Speaker of the House is 78. Thirteen Senate and House committee chairmen are over 70, six of them over 75, two over 80. They are full of years and honors. They can serve their country best by stepping aside.

Congress must also put an end to the hypocrisy of tolerating grave conflicts of interest among its own members while attacking the same fault in others. It should pass a conflict of interest law with teeth in it.

And what about industry? I would propose that as we enter the 1970s, industry address itself to three central issues.

First, it should make an unqualified commitment to equality of opportunity for minority groups. Some firms have performed nobly in this respect, but the majority are still dabbling with the problem and many are engaged in outright fakery—giving lip service, preserving a public image and doing as little as possible.

Second, industry should commit itself to end pollution. Again, some farsighted business leaders have already done so, but the record of industry as a whole has been deplorable. It has lied to the public and to itself about the seriousness of the problem. It is not wholly an industrial problem, but industry has a crucial role in it and could contribute enormously to its solution—if only by forswearing its practice of emasculating pollution control legislation as it moves through Congress.

Third, industry should meet the rising tide of consumerism with constructive measures. Leaders in each industry should set standards of regard for the consumer and should be tough in demanding that the rest of their industry follow suit. If they don't, they will be brought under increasingly savage criticism by a bilked and frustrated public.

Labor unions, too, have their tasks to accomplish, and the one that overshadows all others at the moment is to root out racial discrimination, to eliminate restrictive membership practices that deny the opportunity to work or to advance beyond menial work.

For more than 30 years, the unions have benefited enormously from the fact that America's conscience has been basically on their side. In many of the battles that had to be settled in the public forum, that fact was decisive. Today, that advantage is leaking away very rapidly.

The possibilities of constructive change by the professions are enormous. The health professions must act at once to redesign the system of health services in this country. It is outworn, expensive and outrageously inefficient. If the health professionals don't modernize it, pressures from outside, particularly from governmental initiatives, will increase enormously.

Professionals in education must answer to much the same indictment. They preside all too complacently over a system that isn't working. They could change it, but often—as in the case of health professionals—they are obstacles to change rather than promoters of it. As for the colleges and universities, they have been jolted out of their complacency and are in an excellent position to accomplish the long-delayed overhaul of their institutions.

Let me say a word about private nonprofit activities in general—cultural, civic, social service, religious, scientific and charitable organizations. One of the worst known examples of organizational decay is the sense of moral superiority that afflicts such institutions. Sad to say, people who believe that they are doing a noble thing are rarely good critics of their own efforts.

THE CITIZEN'S JOB

Now let's have a look at the person whom practically no one ever attacks, the person who holds the highest title a free society can award: citizen. What has he done to give one confidence in self-government? Not as much as one would like.

Too many take a free ride as far as any distinctive effort to serve the common good is concerned. Too many are apathetic, self-absorbed and self-serving. In a vital society, the citizen has a role that goes far beyond the ballot box. He must man the party machinery, support social and civic reform, provide adequate funds, criticize, demand, expose corruption and honor leaders who lead.

One thing the citizen can do—must do—is to reject fiercely all politicians who exploit fear and anger and hatred for their own purposes. He cannot rid himself entirely of those emotions, but he can rid himself of politicans who live by manipulating them. Such leaders will not move him toward a better future.

Another thing the citizen can do is to throw the weight of public opinion against those in the private sector who are unwilling to work toward the solution of our common problems. They should find out which major firms in their area are equal opportunity employers. Which firms are shirking on that front? Let those firms know that their failure is recognized. What firms are contributing most to pollution? Let them feel the weight of public disapproval.

Now let me say a word about the nature of the urban crisis. Too many Americans have come to equate the crisis in the cities with racial tensions—and they are tired of the race problem and wish it would go away. It won't go away, but if it did, the urban crisis would remain.

Discrimination, in some measure, touches most urban issues in this country. But such critically important issues as housing, manpower and income for the poor deeply involve white as well as black.

Most of the poor are white. And one cannot blame racial tensions for our monumental traffic jams, for the inexorable advance of air and water pollution, for the breakdown in administration of the courts, for the shocking inefficiency and often corruption of municipal government. It is true that when urban systems malfunction, minorities and the poor are hit first and hardest, but the problem is deeper and broader and ultimately affects us all.

A BRAKE SYSTEM

In closing, let me remind you of an important thing to understand about any institution or social system, whether it is a nation or a city, a corporation or a federal agency: it doesn't move unless you give it a solid push. Not a mild push—a solid jolt. If the push is not administered by vigorous and purposeful leaders, it will be administered eventually by an aroused citizenry or by a crisis.

Systemic inertial is characteristic of every human institution, but overwhelmingly true of this nation as a whole. Our system of checks and balances dilutes the thrust of positive action. The competition of interests inherent in our pluralism acts as a brake on concerted action. The system grinds to a halt between crises.

Madison designed it in such a way that it simply won't move without vigorous leadership. I've often wondered why he didn't say so. Perhaps, having in mind his brilliant contemporaries, it just never occurred to him that the day might come when leadership would be lacking.

[From "Face the Nation" CBS–TV, Dec. 14, 1969]

INTERVIEW WITH DR. MILTON EISENHOWER

Mr. HERMAN. Doctor Eisenhower, for eighteen months your Commission has studies the causes and prevention of violence. As a realistic man with considerable experience in and out of the Government, do you really feel that a major reduction of crime and violence is within our national capability?

Doctor EISENHOWER. I most certainly do. I think we have to make a dual attack. I think we have to improve the whole criminal justice system, but we also have to attack the basic social causes of violent and serious crime in this country. And both of these can be done.

ANNOUNCER. From CBS Washington, in color, Face The Nation, a spontaneous and unrehearsed news interview with Doctor Milton Eisenhower, Chairman of the National Commission on the Causes and Prevention of Violence. The Commission this week issued its final report to the President. Doctor Eisenhower will be questioned by CBS News Correspondent Hal Walker; Richard Strout of the Washington Bureau of the Christian Science Monitor; and CBS News Correspondent George Herman. We shall continue the interview with Doctor Eisenhower in a moment.

Mr. HERMAN. Doctor Eisenhower, realistically, at this time in our nation's history, when we're busy reducing taxes, when we're trying to save money, do you think the United States, the American people, are willing to spend the money that you have suggested in your report here that is required to reduce crime?

Doctor EISENHOWER. I certainly don't think it can be done at once. I realize that the President and our whole national leadership must first of all bring inflation under control, which requires a great deal of discipline, and second, we have to await the end of the Vietnam war. But once these two things are accomplished, I think then that we simply must give new attention and develop new priorities by reducing defense expenditures and by devoting a good share of the increased tax—or increased revenue that comes to the Government through greater GNP. I think that we can easily start out with Twenty Billion Dollars a year devoted to the tackling of those social problems which basically are crimintogenic in our society.

Mr. STROUT. Doctor Eisenhower, I am a little disturbed at how different your solutions for crime are from those that Richard Nixon made in the 1968 campaign. You've just mentioned that you must get at basic social causes, and you've cited a cost of Twenty Billion Dollars. I just note some of the things that Mr. Nixon said: "We cannot explain away crime in this country by charging it off to poverty." He said again, "The role of poverty as a cause of the crime upsurge in America has been grossly exaggerated." Can you reconcile what you're telling us with what Mr. Nixon said a year ago?

Doctor EISENHOWER. Well, I think so. I may say that I had an hour's discussion with him the other day and found that he is gravely concerned about this problem. And I may say that we had no differences in our discussion. Now, I don't think that poverty in itself is a cause of crime. This would be far too simplistic an answer. What is a cause of crime in the total environment in which much of our urban population lives? This is unemployment, low level of education, poverty, fatherless families, mothers working, children raised on the streets, in what we may call a sub-culture of violence. In fact, many of the young people, in order to be accepted by their peer group, have to commit crimes for that acceptance. Now, the highest rate of crime in the United States is on the part of the young males of the fifteen to twenty-four age group, living in the urban slums. And it is no accident that it's in those conditions that the highest level of crime occurs.

Mr. STROUT. I don't find anything in your report about the Supreme Court, for example. I think Mr. Nixon said that it had been soft on crime and the Administration had been soft on crime.

Doctor EISENHOWER. I am not a lawyer, but we had nine lawyers on our Commission, and they gave serious attention to this problem. There is a vast difference of opinion among the lawyers of the country as to whether the scales have been tipped in favor of the criminal and whether new laws or maybe Constitutional amendments are needed. After debating this question very thoroughly, we thought that it was just as well to put the question aside and to concentrate on a better criminal justice system as well as upon attack on the social conditions that cause crime.

Mr. WALKER. Well, Doctor Eisenhower, as you looked into this problem and found the high percentage of crime among fifteen to twenty-four year old ghetto residents, why did you not look more into the question of white collar crime? Aren't these large corporate acts as much violence against society as the pocketbook snatcher?

Doctor EISENHOWER. Well, I think it is fair criticism that we concentrated on the areas of greatest crime. And I have regretted that there are some other things that we should have studied such as why is crime so much greater in our country than in other countries; what about violence as it's handled in the news media; and what about those crimes committed by not only the whites, but by members of very affluent white families. And, while there are indications in the report that deal with this perhaps superficially, because of time limitations we concentrated on the largest problem.

Mr. HERMAN. Why is crime greater in our country than in other countries, some of which have more concentration in the cities than we do?

Doctor EISENHOWER. I think the reasons are manifold. In the first place, we have a greater tradition of crime than any other civilized country. Throughout our history, we've had great periods of serious crime, not only of the personal type but of the group violence. But it is worse today than it has been anytime in this century. Twice it's doubled in the 1960's. Another reason is we have greater cultural diversity. Third, we have more rapid social change. And change itself is a disruptive influence in any society. Further, in the last fifteen years or so, there has been a tide of rising expectations on the part of the minority groups of this country, and the realization has fallen short of the anticipation. And it's an old sociological law, whenever this occurs, you are going to have violence.

Mr. STROUT. Do you feel there is something violent in the American character itself? I refer to this sickening Mylai alleged atrocity. It's been said that violence in America is just as American as cherry pie. Is there something indigenous to the United States about violence?

Doctor EISENHOWER. I most certainly don't think so. I don't think that any race is more violent than any other race, and I don't think that any human being inherently is any more violent than another human being, and I'm speaking of normal persons. We are all affected by the total environment in which we are raised, and I think that there are conditions in the American society that I just mentioned. You see, look at the facts: We're five times as violent per hundred thousand population as Canada, perhaps twenty times as much as Britain, and this is a basis for real concern.

Mr. WALKER. Could this tradition of violence be partly responsible for what we're hearing about in Vietnam in the Mylai incident? Should it not come as a surprise to Americans that our own men might do the sort of thing that is being reported over there?

Doctor EISENHOWER. Well, first, Mr. Walker, I wouldn't want to make any comment that indicated that I believe that there have been atrocities. I am going to await the evidence on that. But, if we assume that there have been, I would comment that from all I see on television and read in the newspapers about Vietnam, and I've not been there, that there are brutalizing circumstances in this kind of war, and what human beings may do under great tension under those circumstances I wouldn't want to predict.

Mr. HERMAN. Will those brutalizing influences stay in Vietnam or will they be reimported back to the United States to our streets?

Doctor EISENHOWER. I think that would be very speculative and I don't want to speculate, you know.

Mr. HERMAN. Well, in one of your studies, the studies of your Commission, isn't there an indication that periods of violence in the United States coincide roughly with periods of war?

Doctor EISENHOWER. No, no. They coincide with periods of great social upheaval and great social change, but not necessarily with war. As a matter of fact, the rate of violent crime in the United States declined from 1900 right through World War I and through World War II, down to 1960. The great increase of a hundred percent has occurred in the 1960's.

Mr. HERMAN. Was there no little peak or anything after World War I or after World War II when the men came back?

Doctor EISENHOWER. Not of a measurable degree that I recall.

Mr. WALKER. Doctor Eisenhower, with your recommendations and understanding the need to bring inflation under control, the need to stop our expenditures in Vietnam before much can be done, what have you set as a goal, a time table for putting these recommendations into effect and seeing some results?

Doctor EISENHOWER. Well, I suppose I'm optomistic, but I would like to think that all the branches of the Government will soon begin to study our entire report, as well as the Kerner and the Crime Commission reports that preceded it, and develop a well integrated program now, even though it is not possible to implement that program, and to enter into a commitment after studying all the evidence. I would then hope that as soon as the war is over and inflation has been brought under control, that having made the

commitment we will now begin to pass the legislation and do the other things necessary to put the program into motion.

Mr. HERMAN. Does some of this hope stem from your meeting with the President?

Doctor EISENHOWER. I think that would be going too far. What he authorized me to say as a result of our very helpful conversation was that he is gravely concerned about the problem, would not only study our report in great detail, but wanted me to mark some of the portions of the fifteen volumns of backup research material which he plans to read.

Mr. STROUT. Aren't you waiting a long time until the war is over or until inflation is curbed? Isn't this going to be just one more of the blue ribbon groups that have discussed this same subject? I was around, I recall, when the Wickersham Commission brought in its report on crimes. And your report is like the Wickersham Commission in 1930. It seems to me it's just layer after layer of crime reports, put one on top of the other.

Doctor EISENHOWER. Well, Mr. Strout, I realize that this subject has been studied before, and the things that we should have done have not been done. But I have considerable confidence in a few new developments. One, the television and the newspapers and the magazines of this country have carried the evidence that we've developed during the past eighteen months to all of the American people, and I'm very gratified by this. I have great confidence that if the American people really realize how serious this problem is, and they are stirred up, and they notify their Senators and Congressmen how they feel, that out of this welter of this great turmoil of discussion that we will get action.

Mr. STROUT. What happens if we don't get action?

Doctor EISENHOWER. Well, I suppose that some of us can keep on talking and hope that eventually something—one can't guarantee this. I said at our final press conference that if you'll just ask me back in five years, I would like to give you an accounting of what I think has happened in the meantime.

Mr. STROUT. Do you think the threat to the United States is greater from outside or within?

Doctor EISENHOWER. This is difficult to say, but I'll say this: In my judgment the threat to the future of the American society is as great internally as it is from any possible combination of external forces. And may I remind you, I'm sure you know——

Mr. HERMAN. Are you referring to crime when you say the threat, the internal threat?

Doctor EISENHOWER. The internal threat is very serious in my judgment. And you know, Toynbee pointed out that of the twenty-one civilizations that failed, nineteen of them failed because of internal decay, and not due to external forces.

Mr. HERMAN. I interrupted you. I'd like you to pinpoint for us a little bit what you consider to be the nature of the internal threat. Were you referring simply to crime, were you referring to violence, the mass demonstration problem; what is the internal threat that concerns you most?

Doctor EISENHOWER. I am concerned about, for example, the growing intellectual polarization in our society. This is partly due to civil rights, it's partly due to the war in Vietnam. There is a growing and very serious generation gap. I dislike such trite phrases, but perhaps in short order it describes what has happened. This needs to be closed. We have to be concerned about air and water pollution. We most assuredly have to be concerned about air and water pollution. We most assuredly have to be concerned about minority groups in our country not getting true justice in our society. And then here we are the most affluent country in the world, and we haven't yet solved the problems of poverty and hunger. And this is leading to still deeper intellectual divisions. It's all of these and more that to me indicate a weakening of the whole American internal structure.

Mr. WALKER. In your estimation have the recent remarks of Vice President Agnew widened or narrowed those gaps you talk about?

Doctor EISENHOWER. You mean his discussion about the television and the like?

Mr. WALKER. The war.

Doctor EISENHOWER. Well, you know, this brings up a very interesting thing. As you well know, Mr. Walker, I have never liked to base my comments on what others have said, but try to make my own views known. It is very interesting, you know, the press loves to criticize everybody else, but is awfully tender whenever anyone criticizes it. And this is a very interesting thing, you know, because of all the freedoms guaranteed to us by the Constitution, the only one that the individual can't exercise for himself is the freedom of the press, which is really the freedom to know. And this places a very serious responsibility upon all of the mass media of this country. And I think that the mass media are big enough to stand a little criticism and might even benefit by that.

Mr. STROUT. Doctor Eisenhower, I think the press can stand a lot of criticism, but we have our problems, too. I cite one to you. We had this recent peace moratorium parade in Washington.

Doctor EISENHOWER. Yes.

Mr. STROUT. Attorney General Mitchell said that it was characterized by violence. His wife, Mrs. Mitchell, compared the anti-war demonstration to the Russian Revolution, and said her husband attributed it to liberal communists. Now, your report that just comes out that we in the press are supposed to write and do write, you say that that same moratorium parade, "in the largest single protest demonstration in American history, the overwhelming participants behaved peacefully." Now, which of those versions is correct? Was it the same parade we are talking about?

Doctor EISENHOWER. You know, so much depends on where you were and what perspective you had when you saw it. There were two hundred and fifty thousand to three hundred thousand in this moratorium parade, and the best evidence we have is that between one and two hundred participated in two incidents of violence, one at the Department of Justice and one near the South Vietnamese embassy. Now, had I been an official of the Justice Department and had been sitting up there and had witnessed some windows broken and stones being thrown, I think maybe the next morning I would have said that this was a violent incident. But, if one just stands off from Baltimore as I did and looked at the whole thing, I absolutely marveled that you could bring so many hundreds of thousands of young people into a means of communication to the American people and to the Government, and have so little difficulty.

Mr. HERMAN. How about the impact of television films of things of this sort? This has been part of the field of study of your Commission, the impact of television news of violent demonstrations and how it should be handled.

Doctor EISENHOWER. Yes. Unfortunately, one of the three things that I hoped very much to complete we didn't complete, and this was a study of the effect of violence in the news media on the actual business of violence. We did complete the study in the entertainment media, and this showed in 1967 and 1968 a very serious picture. And I can't tell you how happy I am that the new program year in the entertainment aspects of television has greatly reduced the incidence of violence.

Mr. HERMAN. But on television news, you say you didn't complete the study. Can you share some of your thoughts with us on this serious problem of how television should bring into the living room a scene of violence in the streets, or should not?

Doctor EISENHOWER. Well, this would be purely personal, of course, because I can't speak—I realize that it's very difficult in a medium which is using both words and pictures to give a—quickly, a balanced picture. And there must be a temptation in using this medium to picture that which is most dramatic, and this therefore, if one has such as in the march we were discussing, I doubt that you would find it terribly attractive just to show two hundred and fifty thousand people peacefully marching down the street. But if you saw them throwing stones at the Justice Department, I think the cameras would be there.

Mr. HERMAN. Have you any personal deductions about the impact, the influence on violence generally in the country?

Doctor EISENHOWER. I cannot draw a conclusion. When we undertook our work, Mr. Herman, I made up my mind and all the Commissioners did, that we weren't going to give expression to our preconceptions. And so we hired two hundred of the finest criminologists and psychiatrists and sociologists and historians in this country, and we are willing and I am willing to speak up on those things where I think that all the evidence gives me a right to have a judgment, but I don't want to give expression just to an off-hand opinion.

Mr. WALKER. Doctor Eisenhower, one of the things you did come up with was a recommendation that we listen to the voices of youth. Yet when nearly a quarter of a million people came to Washington last month in the mobilization effort, President Nixon said that he watched a football game. Now, do you consider this the kind of response that you are looking for in your recommendations?

Doctor EISENHOWER. I think that these statements can sometimes be misconstrued. I've heard criticism of the President's statement. I think what he probably was saying is, we have at the White House, evidence on how the American people feel about the war in Vietnam. Everybody knows that—from the Gallup poll and everything else that about fifty percent of the people wish the war would come quickly to a conclusion, and that of the young people of the country, about eighty-five percent are opposed to it. And therefore, an additional march would not present additional evidence on the question, and I doubt that the statement meant anything more than that.

Mr. STROUT. Mr. Mitchell has sent up an omnibus anti-crime budget to Congress. He has appeared several times in favor of preventive detention, which means that you put the suspect in jail and keep him there before his trial. Did your Commission take a stand on that?

Doctor EISENHOWER. This was considered at great length, and as I have told you, we had nine lawyers and very imminent lawyers on the Commission, including two judges. And after the most serious consideration there is a brief statement in the report which upholds the position taken by the American Bar Association, namely, that pre-trial detention is, in effect, essentially determining the answer before the trial is held, and therefore we did not find it possible to favor the idea of detention.

Mr. STROUT. Putting that in positive terms, then, you're against it?

Doctor EISENHOWER. Yes, the report is.

Mr. HERMAN. Doctor Eisenhower, I would guess that in the next week or two we are likely to read more and more about a certain question of police violence. The police violence issue was dealt with in the Walker report and has been brought up from time to time, has kind of passed out of the news. Now the Black Panther problem has brought it

back into the news. Does the question of police violence, in your view and that of the Commission play a major role in things of this sort?

Doctor EISENHOWER. I don't want to accept the word major. Let me first say that most of the police of the United States are doing a good job, and they have one of the toughest jobs in America. They are not only out there enforcing the law, but in a way they are the only representative of all Government that the average citizen ever sees. He is the Government to them. Now, occasionally there is misbehavior or over-reaction by the police, and this leads to an exacerbation of the difficulty that's under way, and leads to widespread criticism. But we should not magnify this beyond what it actually is. It is very unhappy when it occurs. Further, you know, the nihilists and the anarchists in our society are deliberately trying always to entice or to lure police into overreaction as a means of solidifying larger support back of what they are trying to do. So, to try to put it into perspective it is very unhappy whenever there is misbehavior by the police, but most of the police in this country are doing a great job for all of us.

Mr. STROUT. Doctor Eisenhower, I was very much impressed by one statistic in your report, and that is that ninety million firearms are available to the civilian public in this country. I think the United States, am I not correct, that it is the only industrial, the only large nation where you can buy a revolver at the hardware store?

Doctor EISENHOWER. I am so glad you asked the question, because sometime back when I was detailing the reasons what is different in this country, I should have mentioned that we are the only advanced country in the world with ninety million fire arms, nearly twenty-five million of which are the real offenders, the concealable handguns. These are not sporting weapons; their only purpose is to kill. Unfortunately, too many American families think that they possess them in their homes for self protection. But the number of incidents where a householder used that gun for self protection is very small, but they are the very guns that are used in murders. And as you know, I'm sure, fifty percent of all the murders occur within the family, and eighty percent among the family and acquaintances. So, we have strongly recommended the system of restrictive licensing on handguns as a means of rendering serious crime in this country.

Mr. WALKER. On another subject, Doctor Eisenhower, your report calls for the extension and vigorous enforcement of the 1965 voting rights act. Now, the House recently amended that act, and some say that they watered it down. Is this what you had in mind, or have you already seen one of your Commission's recommendations ignored by the Administration?

Doctor EISENHOWER. The real specialist on our Commission on this regard was Congressman McCulloch, and I noticed when the House passed the new bill, he expressed regret that there was not simply an extension of the 1965 act which he feels is more attuned to the need of this period. Now, it may be that in some time in the future, we need to think in terms of expanding that act to apply to all of the United States, but I take Congressman McCulloch's word for this. I think he knows what he is talking about.

Mr. HERMAN. Doctor Eisenhower, we don't have much time left, perhaps thirty seconds. Let me ask you this: A great deal of what you have advocated, both in your reports and here this afternoon, sounds a great deal like former Attorney General Ramsey Clark. Now, he was one of the political villians in the last election. A great deal of capital was made by the Republicans in attacking him. Do you think, as a political reality, that your program can be accepted by the American people in their current mood?

Doctor EISENHOWER. Oh, I would certainly hope so. I feel no greater affinity for Ramsey Clark, whom I know very well, than I do for the present Attorney General, and certainly I have great confidence in our present President, and it was the last President who brought us in. I think this whole thing is above partisan politics.

Mr. HERMAN. Thank you very much for being here today on Face the Nation. We'll have a word about next week's guest in a moment.

ANNOUNCER. Today, on Face the Nation, Doctor Milton Eisenhower, Chairman of the National Commission on the Causes and Prevention of Violence, was interviewed by CBS News Correspondent Hal Walker; Richard Strout of the Washington Bureau of Christian Science Monitor; and CBS News Correspondent George Herman.

OUR WORLD—FIT FOR LIFE?

Mr. MONDALE. Mr. President, the subject of the environment is upon us as the most crucial domestic issue of the 1970's. We recently read that our college and other school-age youth are likely to make this subject a larger issue than Vietnam—because they feel more able to make meaningful accomplishments in the area. In my office the environment is at the forefront with the mails daily continuing pleas for a wide range of action to protect our greatest natural heritage.

A recent Minnesota poll, which I shall place in the RECORD, indicates that 82 percent of Minnesotans interviewed are interested in conservation.

I personally am most concerned with the entire range of issues on how to improve and enhance the quality of our environment and was quite honored to be named chairman of a new task force on this issue by the Democratic National Committee.

Mr. President, one of the most candid, thorough, remarkably concise, and well-written series of articles to come to my attention on the environment has recently been published in the Minneapolis Tribune. Written by Richard P. Kleeman of the Tribune's Washington Bureau, it deserves wide readership by those across the Nation who are concerned about our future world and whether it will be fit to live in.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

EIGHTY-TWO PERCENT INTERESTED IN CONSERVATION

Interest in conservation runs high for many Minnesotans, a recent survey by The Minneapolis Tribune's Minnesota Poll indicates. And most of the people in the survey have concrete ideas on what they can do to protect natural resources.

The 592 adults, representing a balanced cross-section of the state's population, were asked:

"Conservation refers to conserving our natural resources. How much interest do you have in conservation—a great deal, some interest, very little, or none?"

Almost half (48 percent) described their interest in conserving natural resources as great and another 34 percent said they have some interest in the problem. Thirteen percent said they have very little interest and the remaining 5 percent reported having none at all.

The more education the person being interviewed had, the more likely he was to be greatly concerned about conservation: 64 percent of college-educated people in the survey said they had a great deal of interest in the subject. People in their 30's showed a high interest more often than other age groups (58 percent), but a majority of all adults except those 60 and over said their interest in conservation was a strong one.

What can the individual do to conserve the environment? Minnesota Poll field reporters asked this question:

"What do you think you, yourself, could do at this time to conserve our natural resources?"

About one in three (36 percent) of the respondents was at a loss to know what he personally could do, but the remaining 64 percent cited specific ways they could contribute to conservation. The more interest the person had in conserving natural resources, the more inclined he was to know what he could do about it.

Thirty percent of the people said they could do their part by personally practicing conservation—by taking care not to litter, pollute or otherwise damage the land, forests or water they used. "We can keep the lakes clean by not dumping in them and by using biodegradable products in the home," suggested a 59-year-old Minneapolis housewife.

A 42-year-old Wilkin County farmer said, "How I handle the land to prevent erosion can help."

Supporting anti-pollution groups or speaking out to educate others about conservation was mentioned by another 19 percent. "I talk vehemently about it every chance I get," said a 48-year-old Edina man. "I deplore draining the marshlands, and I don't like snowmobiles in remote areas and careless campers who leave the area in an unnatural state."

A St. Paul chemist felt his training could be useful: "Professionally, I could become involved in control of industrial pollution. Politically, I could support groups such as MECCA."

Twelve percent recommended working through the political system. "I could encourage my senator or congressman to promote conservation," said a 42-year-old St. Paul man.

Finally, 8 percent said their chief concern was the preservation of fish and wildlife. A 32-year-old Ottertail County farmer favored "stopping all hunting for five years or Minnestoa will be a barren state as far as game goes."

Other specific Minnesota conservation projects mentioned by the respondents included stopping the pollution of Lake Superior and Lake Minnetonka and establishing Voyageurs National Park.

"How much interest do you have in conservation?"

[In percent]

	Great deal	Some	Very little	None
All respondents	48	34	13	5
Southern Minnesota	43	39	13	5
Twin Cities area	51	33	11	5
Northern Minnesota	47	33	15	5
Grade school education	29	37	23	11
High school	46	36	13	5
College	64	29	6	1

OUR WORLD FIT FOR LIFE? POLLUTION THREATENS MAN'S SURVIVAL

(EDITOR'S NOTE.—What men do to their world affects everyone in it—farmer or city-dweller, ardent conservationist or casual consumer. Everyone has to breathe the air, drink the water, eat the food, throw away his trash and share his living room with his neighbors.

(All this, and more, makes up the environment we live in.

(Now, after two centuries of apathy and ex-

ploitation, Americans are beginning to worry about what is being done to that environment by a society that is increasingly rich but too often heedless.

(The problems, and the things we are doing—or not doing—about them, will be described in this series of articles by a member of the Tribune's Washington Bureau.)

(By Richard P. Kleeman)

WASHINGTON, D.C.

"DEAR MR. PRESIDENT: My wife and I would like to bring a child into this world. But first we think perhaps something should be done—and quickly about its physical environment."

This letter is one of dozens on the subject that come to the White House each week as evidence of mounting public concern—and impatience—over what man is doing to the only world he's got.

A California mother writes: "Can it really be true that man has less than a half-century left on this earth? When I watch my two young sons sleep at night, the fear of this for them is strong inside me."

And a Maryland sixth grader speaks for his class: "We are very concerned about environmental problems. . . . Let the world be beautiful like it was at first.

A young man in Illinois summed up the mood: "Stop air pollution. Stop noise pollution. Stop water pollution now now now now now (repeated 60 times)."

It is almost impossible to pick up a magazine, read a newspaper or look at television without finding new accounts of actual or threatened danger to our surroundings. Congress and the state legislatures are flooded with proposals for cleansing our water, purifying the air, controlling pesticides and cutting the level of noise, radiation, erosion and other unwanted assaults upon our living space.

So great is the clamor that one water pollution expert's first reaction to a reporter's question is a protest: "You're not going to write another 'ain't-it-awful' story! At least try to say something positive."

There has been plenty of "aint-it-awful" writing—though there are positive things to be said.

TRUTH IS WORRISOME

But certainly the facts are frightening. Listen to Charles C. Johnson Jr., head of environmental health services for the Department of Health, Education, and Welfare (HEW):

"Toxic matter is being released into the air over the U.S. at a rate of more than 142 million tons a year, or three-quarters of a ton for every American . . .

"Not counting industrial and agricultural wastes, we discard more than 165 million tons of solid wastes very year . . .

"Much of the drinking water available in our nation's communities is of unknown quality . . .

"Radiation as an environmental hazard is a growing threat to ours and future generations which we have barely begun to understand. Radiation sources are now to be found throughout the environment . . ."

These facts—and more, from pesticide traces already found in many foods to the threat of sonic booms from supersonic planes yet to be built—have for the first time shoved the problems of environmental pollution onto the front burner of the political stove.

Now concern for the environment has become "good politics" on a national level. "It's about the only subject I speak on across the country, and I never find anyone who isn't interested," says Sen. Gaylord Nelson, the Wisconsin Democrat who has been campaigning on conservation issues since he first ran for his state's legislature in 1948.

Twenty years later, Nelson finds it hard to be optimistic but he sees the issue growing:

"This will be the biggest issue of the seventies—more important by far than Vietnam or hunger or equal opportunity, because those issues will be irrelevant unless we solve our environmental problems."

"CAN'T CONTINUE AS WE ARE"

Minnesota's Sen. Walter F. Mondale—just named chairman of a Democratic National Committee task force on the environment—agrees:

"We can't continue as we are. With our pollution of air and water, the use of the ocean as a garbage can, the destruction of remote areas of natural beauty and our tipping of the critical balances of nature, we are raising doubts as to man's very survivability."

In the past, presidential campaigns have been almost devoid of environmental discussion, except for a few brief ritual gestures, and the last campaign was no exception. "We should never again have such an election campaign," says conservationist David Brower—and Nelson and Mondale predict that we won't.

"I wouldn't be surprised to see a president elected on this issue," Mondale says. "But it's going to turn into a great national debate that won't be easily won; there are enormous commercial and industrial and military issues involved."

The issue; indeed, goes beyond our borders. Rep. Albert Quie of Minnesota found European lawmakers at a recent NATO parliamentary meeting in Belgium "tremendously interested" in problems like London smog (which floats across the North Sea to Norway) and U.S. pollution (which floats all the way across the Atlantic in air and water currents). Since Quie's return, NATO, at President Nixon's suggestion, has set up a committee on preserving the environment.

And the Duke of Edinburgh, when he wasn't telling how broke the British royal family is, predicted during his recent American tour that "hideous problems" of pollution, if unsolved, could mean "the world is heading for wreck."

INCIPIENT DISASTER?

A U.N. conference on human environment will be held in 1972.

Does all this mean the moment of environmental crisis is here?

"It's approaching the disaster stage," Nelson argues. "Our resources are actually quite limited and our air and water especially are being rapidly degraded.

"Knowledgeable scientists agree with Paul Ehrlich when he says the oceans will be sterile in 10 years—with man dying out soon afterward—because pollution and pesticides are destroying their productivity."

President Nixon's science adviser, on the other hand, won't go that far.

"There is a serious situation that needs very prompt attention," says Dr. Lee Dubridge. "But 'crisis' implies that unless something is done tomorrow, the world blows up—and these are long-term problems."

Dubridge concedes that there are "individual crisis areas" where present trends must be reversed quickly. Among these he lists the contamination—what some call the "death"—of Lake Erie and the fouling of the air over the nation's big cities by automobile engine exhaust.

But Dubridge notes that, even if we could pass laws forbidding air and water pollution, it wouldn't work: "Our whole economy would be brought to a halt."

There, in fact, is the problem at its simplist: The end result of an ever-growing society of ever-increasing wealth producing ever more goods and services with too little regard for preserving the world and its atmosphere.

Now, however, there seems to be a growing conviction that something's got to give. As one expert said to a congressional conference on the environment last month: "We can't afford the luxury of assuming that the extinction of man will not happen—and in our children's generation, it likely will happen. We may be the last people on earth who can alter this process."

OUR WORLD FIT FOR LIFE?: POPULATION OUTSTRIPS PLANNING—GROWTH ENDANGERS ENVIRONMENT

(By Richard P. Kleeman)

WASHINGTON, D.C.—Were you one of the many who drove into a national park campground last summer—and found the "full" sign already posted?

Have you tried to get a dial tone from a New York City pay telephone?

Were you in one of the tourist autos tied up for nearly two hours on Washington's Constitution Av. last July—by a minor rush-hour fender-bender collision?

Perhaps you flew to New York, Chicago or Washington on a tight schedule—only to find yourself circling for an hour or more waiting for landing clearance at these "saturated" airports.

Or maybe your errand was something as simple as picking up a quart of milk at the corner grocery some Sunday evening—and you had to wait in a checkout line behind 25 other improvidents.

If these situations sound painfully familiar you may find more truth than humor in those bumper stickers that proclaim: "Trouble parking? Support planned parenthood."

The fact is that the onrushing growth of population, and its unplanned distribution, are creating tremendous environmental problems—both here and around the world.

If present growth rates continue, the United States will have 300 million inhabitants by the end of the century. It took the nation 300 years to grow our first hundred million people, 50 years to produce the next hundred million—but the third will arrive in just 30 more years.

It's the same the world over. By the year 2000, there will be nearly seven billion human beings—twice today's total—and from then on, we'll add another billion every five years, at present rates.

Such population growth puts heavy strains on supplies of pure air and water, recreation space, mineral resources, and food stocks.

"A growing population will increase the demand for such resources," President Nixon said last summer, "but in many cases, their supply will not be increased and may even be endangered."

A biologist told a recent national conference on conservation and voluntary sterilization: "Competent scientists believe the world cannot indefinitely support the 3.5 billion people we have on earth today—let alone the horrendous numbers anticipated in the relatively near future."

Former Secretary of the Interior Stewart L. Udall is even more blunt: "If we're really going to double our population, our environmental problems become insoluble."

Most population studies focus on the specter of hunger and world poverty. But for the United States, most of the problems—like those listed at the start of this article—are not those of poor and underdeveloped people and nations, but of the affluent society.

The United States has 6 percent of the world's population—but it consumes 60 or 70 percent of its resources.

"Rich people occupy more space, consume more of each natural resource, disturb the ecology more—and create more land, air, water, chemical, thermal and radioactive pollution than poor people," says Dr. Jean Mayer, the Harvard nutritionist who is managing this week's White House conference on hunger.

"So it can be argued that, from many viewpoints, it is even more urgent to control the numbers of the rich than it is to control the numbers of the poor."

The same theme—tying living standards to population growth—was struck by a citizens advisory committee on environmental quality. Reporting to Mr. Nixon, the committee—headed by a very rich man, Laurance S. Rockefeller—declared:

"We believe there should be a national goal of at least reducing the increase of our population growth, and, upon further study, perhaps seeking to stabilize it as a key factor in restoring and maintaining environmental quality."

BIRTH CONTROL NOT SIMPLE SOLUTION

Although this philosophy would seem to unite two sizeable constituencies—conservationists and birth controllers—it's not that easy. And although President Nixon has called for expansion of federal birth control services, action has been hesitant.

The Office of Economic Opportunity, one of the federal agencies involved, is seeking congressional approval to spend $22 million this year to offer birth control services to 700,000 needy women. But although this would double the number of women reached, even the expanded program would fall short of serving the more than 5 million women who want and would qualify for subsidized birth control services—and who now bear an estimated 450,000 unwanted children every year, according to a federally sponsored survey.

Government birth control programs are not only small and strictly voluntary, they are also highly controversial. Typical of the source and tone of the opposition is the position of Cardinal Patrick O'Boyle, Roman Catholic Archbishop of Washington, D.C., who condemns expanding government birth control efforts as "anti-life" and based on "a false sense of values, which compares the cost of preventing people with the cost of serving them."

If the Roman Catholic hierarchy finds voluntary programs distasteful, it would probably react even more strongly to some of the more drastic proposals being aired for slowing U.S. and world population growth.

SOME CALL FOR STRICTER MARRIAGE LAWS

Some propose asking American parents to adopt the principle of the two-child family as "a social and family ideal."

Others would go much further. Kingsley Davis, a University of California population expert, suggests such steps as state laws raising the minimum age for marriage or federal laws ending income tax breaks for married couples and tax exemptions for children.

"This country would be better off with half the population," Davis argues. "With our present technology and the population of the 1930s, the country would be a paradise. As it is, it's getting to be like hell."

More practical, but no less an advocate of population "recession," is Udall. "The most hopeful thing in this area are our kids," he says.

"Our national policy has been growth and more growth . . . but our youth, with their new life style, seem to be adopting a new national policy—marrying later, having fewer children and having them later in life."

This trend has led to a nine-year drop in the birth rate which Udall believes may point to a leveling off of the nation's population in a decade or so at 230 to 240 million people.

Even if there should be a slowdown in growth, there will be a population problem as long as *70 percent of the nation's people are jammed into less than two percent of its land—the cities and suburbs.*

FARM ECONOMY SHOULD BE STIMULATED

"A national population policy," says conservationist Raymond Dasmann, "should seek to encourage people to live in areas within which environmental problems could be minimized—to discourage both unhealthy and unwieldy concentrations of people at one extreme and uniform land-destroying dispersal of people at the other."

Two men with Minnesota roots but of opposing politics—Republican Rep. Odin Langen and DFL former Agriculture Secretary Orville Freeman—have long argued for slowing down farm-to-city migration by new efforts to stimulate the economy of the countryside.

President Nixon appeared to be heeding such advice when, last month, he established a cabinet-level Rural Affairs Council as a counterpart to his Council on Urban Affairs.

A national commission on urban growth recently proposed creating 100 new cities of 100,000 people each, plus ten of at least 1 million each. But even this proposal, as Mr. Nixon pointed out, would house only one out of five of the people expected to join the U.S. population in the next 30 years.

OUR WORLD FIT FOR LIFE?: MUST DOUBLE SUPPLY OF ELECTRICITY IN 10 YEARS—POWER NEEDS AFFECT ENVIRONMENT

(By Richard P. Kleeman)

WASHINGTON, D.C.—One suburban Minneapolis man found out how much electric power means to modern life on a bleak October morning this year when a freak snowstorm knocked out the current in his home.

He didn't mind being without lights.

He wasn't disturbed when he found he couldn't shave.

He didn't even get upset when he realized he couldn't brew either regular or instant coffee because both his coffeemaker and his stove were dead.

But it was just too much when, after resigning himself to shaving and breakfasting downtown, he couldn't even leave home—because the electrically operated garage door wouldn't open and he didn't know how to disconnect it.

Such momentary inconvenience for one suburbanite translates into a major long-term problem for the nation. Four years and 37 major power failures after the great northeast blackout of 1965 experts say we must in the next 10 years double the output of a power industry which already has an $80-billion plant investment.

And in 30 years, if present forecasts of a U.S. population of 300 million come true, we'll need almost five times our current 325-million kilowatt power capacity.

Adding that much generating capacity could have a heavy impact on the environment.

And how that much power is to be produced—whether by more coal-, oil- or gas-fired plants or through a vast expansion of nuclear-powered generators—is producing intense, sometimes angry, debate.

Those who favor nuclear power lean heavily on environmental as well as economic arguments.

"Anyone who has ever visited a nuclear power station is bound to be impressed with its quiet and clean operation," says Glenn Seaborg, chairman of the U.S. Atomic Energy Commission (AEC). "The growth of nuclear power will help abate air pollution, help reduce traffic and noise in the area surrounding the power plant and generally should make that area a much more attractive and healthier place to be."

Seaborg goes on to contrast this picture with the situation if we try to meet end-of-century power needs with coal, saying we would need to burn 10 million tons of coal per day, moved by some 100,000 railroad cars, producing "a disastrous environmental hazard" in the form of air pollution.

The AEC, playing its controversial dual role as both promoter and regulator of nuclear energy, predicts that half of U.S. power needs will be filled by nuclear-generated power within 30 years, although today only about 1 percent is thus produced.

But there are many who disagree with Seaborg's cheerful view of the environmental benefits of nuclear power stations, and the smooth road to vastly increased nuclear generating capacity is filling up with chuckholes—as Minnesotans well know from the current controversy over Northern States Power Company's (NSP) plans to operate nuclear plants at Monticello and Prairie Island.

In rising numbers, scientists, politicians and plain citizens have become concerned—sometimes alarmed—over possible effects of radioactive or heated wastes from the "nukes."

CHANCE OF ACCIDENT CAUSES WORRY

They worry not only about known effects of pollution discharged into the air and water by normal operation (and the AEC stresses the outstanding safety record of existing nuclear plants). They worry also about unknown, long-term dangers of genetic harm—and about the chance, however slim, of a radiological accident that could release even small amounts of radioactive waste to the environment.

To Sen. Gaylord Nelson of Wisconsin, who wants a careful restudy of the seven nuclear power stations being built or planned around Lake Michigan, "It's the same old story in our dealings with the environment." He explains:

"Most of what we know about nuclear plant pollution is what we *don't* know . . . we put technology to work the minute it comes off the production line, without waiting to learn wheher it can improve quality as well as quantity in American life.

"Then, when it brings environmental disaster a few years later, it's too late to do anything."

AEC claims radioactive discharge from nuclear plant is minimal. AEC member James T. Ramey contended that Minnesota was "making a mountain out of a molehill" when it insisted that NSP's Monticello plant have radioactive discharge limits 50 times lower than AEC and international standards.

As for thermal (heat) pollution, about the only agreement currently is that it needs more study—and that raising the temperature of river and lake water can have both good and bad effects on different forms of aquatic life. The AEC has given its blessing to pending legislation that would let states regulate heat pollution under a federal licensing system: The Interior Department, bidding for jurisdiction in the field, so far has taken a tough, protect-our-waters stance.

The dispute is getting rough. Recently, an electrical industry publication took a two-page newspaper advertisement to claim that "a handful of people are pulling the plug on America."

MINNESOTA CASE TO PROVIDE TEST

The AEC's Seaborg doesn't go that far. But he calls for "less hysteria, less searching for scapegoats, less polarizing of conservationists and technologists." What is needed instead, he says, is "adjustment and compromise . . . and a better working relationship between reasonable and rational environmentalists and technologists who will see they are not as far apart as they believe."

In a conciliatory move, AEC broke precedent recently and agreed to have its top officials appear at several open conferences on nuclear power—the first of them held in Vermont and Minnesota.

But others are less placatory. NSP is suing the state of Minnesota over the Monticello plant permit in both state and federal courts; a half-dozen other states and several federal agencies are watching, with most quietly rooting for Minnesota's tougher-than-AEC position.

Some congressional boosters of nuclear

power plants have charged the coal industry with trying to block atomic power. Others, like Chairman Chet Holifield, D-Calif., of the Joint Congressional Atomic Energy Committee, argue that opponents are courting disaster.

"Unless the demands for clean water and air are kept in perspective," a Holifield committee report said this year, "the anti-technologists and single-minded environmentalists may find themselves conducting their work by the light of a flickering candle."

Seaborg warns that future power shortages could mean blackouts of days instead of minutes or hours:

"The environment of a city whose life's energy has been cut—whose transportation and communications are dead, in which medical and police help cannot be had, and where food spoils and people stifle or shiver while imprisoned in stalled subways or darkened skycrapers—all this also represents a dangerous environment that we must anticipate and work to avoid."

SEES NEW ROLE FOR STATES

Which way to turn, then, in this bitter controversy?

One man who should have a balanced view is Dr. Joseph Lieberman—an AEC veteran who helped run its nuclear reactor safety program, then moved over to help run the environmental health service in the Department of Health, Education and Welfare.

"In general," he said in an interview, "with the kind of care AEC requires to go into the location, design and operation of nuclear plants, and the regulation and compliance control exercised, I think they're safe.

"But, having said that, it does not mean you build a plant and go away and forget it: Here is an area where states can play a role of surveillance and monitoring, because states have a responsibility to their citizens to check the utility out, and to keep track of what is happening to these plants . . ."

Lieberman's agency and AEC are currently discussing a possible program of nuclear plant surveillance, and AEC has offered Minnesota a watchdog, monitoring role as a possible compromise of the current controversy.

OUR WORLD—FIT FOR LIFE?: VIEWS ON CONTROL OF POLLUTION VARY

(By Richard P. Kleeman)

WASHINGTON, D.C.—If the federal government's water pollution control chief ever needs a reminder of how tough his job is, all he has to do is look out the window of his spacious, 11th-floor office.

Below him the Potomac River, brown and sluggish; carries its load of pollution slowly toward the sea—evidence of the failure of past clean-up efforts and warning of disappointments that still seem likely in the future.

Every expert agrees that cleaning up the nation's rivers and lakes is essential to meet growing demands of a growing population that finds a growing number of ways to use water. By the year 2000, the only way to meet those demands will be to reuse our water—not two or three times, but many times over. And to be reusable for most purposes water must be decontaminated.

David D. Dominick, the 32-year-old former U.S. Marine officer who is commissioner of the Federal Water Pollution Control Administration is an optimist, despite the view from his office:

"I think we're going to see significant improvement in the quality of our waters in the next three to five years," he said.

But the man who used to sit in Dominick's chair looks ahead and sees disappointment, while the government's chief auditor looks back and concludes that $5.4 billion in public and private outlays over the past dozen years have produced little or no progress in cleaning up the nation's waters.

The complexity of the problem is reflected in the differing prescriptions of these men for curing it.

EXPERTS DIFFER ON TIME REQUIRED

Dominick bases his optimism on the fact that "we have time schedules for both industries and municipalities, many of which call for completing waste treatment works by 1972. Our real mission is to see that those schedules are met—if we can get everybody to come in with treatment facilities, we'll have clean water."

But James Quigley, one of Dominick's predecessors, foresees a longer wait for the kind of results Dominick predicts—and says the treatment works won't do it all anyway.

"In 10 or 15 years, I think we'll see a generally good job of 'point-source' pollution control," Quigley said. "But when that happens—and billions of dollars will have been spent to do it—the public may look at our waters and say, 'But they're still dirty.' "

By that Quigley said he means waters "will still be muddy and brown and contain pesticides and herbicides and bird and animal wastes. We'll still have a lot of 'non-point' pollution—runoff from farms, streets, parking lots, building projects—and I don't think anybody knows or even gives enough thought to how to control that."

Elmer Staats, comptroller general of the United States and Congress' chief auditor, reported recently that little progress has been made despite a 12-year effort by federal, state and local governments and private industry.

He blamed a "shotgun approach" that has allowed federal grants for sewage treatment plants to be made to lower-echelon governments on a first-come, first-served basis.

Staats recommended spending vastly more than the federal government's $1.2-billion share of the 12-year program, but under a new system that would give priority to grants for local treatment plants where they are most needed.

There's a congressional drive on—with Minnesota's Rep. John Blatnik among its leaders—to provide more federal money for such projects, but like other domestic programs in a war-weighted budget, it's an uphill fight.

$800 MILLION APPROVED FOR GRANTS

Despite prior congressional authorization of $1 billion for sewage plant construction grants this year, both the old and new administrations asked for only $214 million. Late yesterday a Senate-House conference committee agreed to provide $800 million, a compromise between the $1 billion favored by the Senate and the House-approved appropriation of $600 million—which is all the administration says it could use in the next 18 months.

Both houses now are likely to approve the $800-million spending level, and a bipartisan congressional group will call on the President to urge him to spend that much.

In addition to the spending hold-down, local officials also were worried about a proposal which the Nixon administration seemed ready to adopt from its predecessors: To replace direct federal cash grants with "pay-later" pledges to help finance sewage treatment works.

This would force local governments to fund construction initially—and entirely—by local bond issues in an increasingly tight market for local bonds, while federal reimbursement would be spread over a 30-year period. The Interior Department is reported reconsidering this scheme.

Who is responsible for today's widespread water pollution? Spokesmen for industry made clear—at a recent conference where Interior Secretary Walter Hickel proclaimed a "war against polluters"—that they are tired of being branded the nation's worst polluters.

They much prefer the approach of Hickel's assistant secretary for water quality, Carl Klein, who rates municipalities, agriculture and industry—in that order—as the leading offenders.

Klein, however, quickly adds that because smaller industries add heavily to municipal wastes, industry is responsible for two-thirds of the combined non-farm pollution.

Agriculture's role as a water polluter was acknowledged by former Agriculture Secretary Orville Freeman, who said in his final report that "sediments from eroding land are the main burden of pollutants in surface water"—contributing 700 times as much contamination as sewage discharge.

Freeman also has pointed up a startling statistic: The fact that a large feedlot housing 10,000 cattle "has about the same sewage disposal problem as a city of 164,000 people." And this, experts agree, is a part of the water-pollution problem that has yet to be tackled.

TOUGHER LEGISLATION SOUGHT

Despite present and prospective problems, Dominick believes "the political climate currently is such that we can get tougher legislation."

Hickel and Dominick have said they plan to ask Congress for beefed-up authority to move rapidly against polluters. Generally, present water-pollution statutes emphasize state and local enforcement roles.

Even as it is now, the federal government has shown it can get tough: It threatened to sue the city of Toledo, Ohio, and four industries for not moving fast enough to end their pollution of Lake Erie, and it acted to force the state of Iowa to set higher water quality standards for the Mississippi and Missouri Rivers and lesser streams than the state was willing to impose.

Iowa's expected challenge to that federal order may create a state's-rights controversy as significant as Minnesota's assertion of its right to set stricter-than-federal standards for radioactive waste from nuclear power plants.

Dominick and Quigley deny that political pressure has been brought to bear on them to back down from strong water-cleanup stands.

But Quigley believes such pressures are probably concentrated at the state level, where most of the pollution control responsibility rests.

"The big polluter in any state," he said, "is also likely to be the big industry, the big taxpayer—and the big political supporter."

OUR WORLD—FIT FOR LIFE?: DDT: DILEMMA FOR PRESENT, FUTURE

(By Richard P. Kleeman)

WASHINGTON, D.C.—"We're very much concerned about the environmental effects," the secretary of Health, Education, and Welfare said, "but at the same time we have to feed a nation."

Thus, as he announced first steps toward a near-ban on the use of DDT, Secretary Robert Finch spotlighted an agonizing dilemma: How to balance enormous past benefits of pesticides against their harmful effects—some proven, some potential—on man and his surroundings?

A Department of Health, Education and Welfare (HEW) commission of distinguished experts cited "abundant evidence" of widespread DDT residues "in man, birds, fish and other aquatic organisms, wildlife, soil, water, sewage, rivers, lakes, oceans and air."

Aware that massive doses of DDT had caused cancer in laboratory mice, the commission, reporting to Finch, also pointed to evidence that the pesticide is "highly injurious" not only to its insect-targets but to many other forms of life.

In recommending the virtual ban on DDT within two years, the commission said: "Our

nation cannot afford to wait until the last piece of evidence has been submitted on the many issues related to pesticide usage. We must consider our present course in terms of future generations of Americans and the environment that they will live in."

And yet to condemn any food containing DDT—to act, for example, as he did against cyclamate sweeteners—could be disastrous, Finch said.

Strictly enforcing against DDT the law used to ban cyclamates "would convert us to a nation of vegetarians," he observed, because small traces of pesticides are found in "much of our red meat, many dairy products, some eggs, fowl and fish—all parts of basic food groups deemed necessary to a balanced diet." And such foods have been found safe, despite those pesticide traces, the commission reported.

RACHEL CARSON'S WARNING RECALLED

Agreement to work toward a DDT ban was reached by Finch and the secretaries of agriculture and interior seven full years after this warning by the late Rachel Carson in her controversial—but finally vindicated—book, "Silent Spring":

"Can anyone believe it is possible to lay down such a barrage of poisons on the surface of the earth without making it unfit for all life?"

Sen. Gaylord Nelson, the Wisconsin Democrat whose bill to ban interstate commerce in DDT has been pigeon-holed by three congresses, also deplores using some 800 million pounds of pesticides on U.S. crops every year with incomplete knowledge of their effects:

"The Great Lakes coho salmon are loaded with DDT, and it seems to affect their nervous and reproductive systems . . . the bald eagle is dying out because hens can't produce sufficient calcium to form hard eggshells . . . persistent chemicals evaporate and become airborne—so DDT drops on Sweden, where it's banned . . ."

Nelson couples his dismal indictment with charges that agricultural and chemical interests have heedlessly promoted use of pesticides, while federal agencies—notably the Agriculture Department—and congressional committees have dodged the problem.

Nelson and 30 cosponsors earlier this year won Senate approval of a far-reaching proposal to require the Department of the Interior to include pesticides among pollutants when states set their water quality standards.

There are those, however, who counsel caution, perhaps because of DDT's incalculable World War II contribution in curbing malaria and other insect-borne diseases, and its 25-year record of protecting food crops.

"It's true that, improperly used, pesticides contaminate rivers and lakes and the life in them," Dr. Lee DuBridge, President Nixon's science adviser, said in a recent interview.

"But if we suddenly did away with them, there would be huge crop losses and possibly a huge incursion of disease-carrying insects that might cause losses greater than the loss of fish.

"That doesn't mean we do nothing. But we must use insecticides under controlled conditions and choose them for their qualities and the needed degree of persistency."

Pesticide played a part—albeit still a small one—in a federal health official's recent warning that "we can no longer afford to take the purity and safety of public drinking water supplies for granted."

Charles C. Johnson Jr., administrator of the government's environmental health service, made the statement in reporting early results of a survey of community water supply systems serving some 20 million residents in nine areas across the nation.

Preliminary results indicate that one water system in 11 contains some contamination and about 6 percent of the people served get drinking water that falls short of Public Health Service standards. Projected nationally, Johnson said, this would indicate that perhaps 8 million of the 150 million Americans served by community distribution systems may be drinking water of potentially unsafe bacterial content.

"While none of the samples exceeded recommended permissible limits," he said, "the high frequency of occurrence and our lack of knowledge of the long-term effects of this class of compounds dictate the need for increased surveillance and research, as well as for increased recognition of the potential of this problem by state and local health departments."

TENDENCY TO RELAX GETS BLAME

Individual wells and cisterns—from which some 50 million Americans get their water—also showed the presence of pesticides. This, Johnson said, "verified what many have long suspected: That pesticides are finding their way into ground water."

James McDermott, director of the federal bureau of water hygiene, speculates that communities have allowed their drinking water supplies to backslide.

And he says it's a drift that cannot long continue:

"Chances for accidental spills into water supplies have increased, towns are growing much closer together—so one man's intake is getting closer to the other's discharge.

"Within 50 years water is going to be so scarce in some sections of the country, and the cost of treating it will have risen so high, that direct reuse of water will make sense."

By then, McDermott suggests, technology, operation and surveillance of community water systems must be vastly improved: "If we're not able to maintain forward motion in these areas," he warned, "we shall not be able to maintain this affluent society—where people take water for granted."

[From the Minneapolis Tribune, Dec. 5, 1969]

OUR WORLD—FIT FOR LIFE?: ATTACK ON CROWDED, NOISY, POLLUTED U.S. AIR IS SLOW

(By Richard Kleeman)

WASHINGTON, D.C.—The businessmen had come to talk about pollution, but the secretary of the Interior jolted them into thinking about the air as well.

"How many of you know that the jets that flew you here dump 35 tons of solid wastes in just one day as they land and take off at Washington airports?" Walter Hickel asked.

Had he chosen to add more insult to airborne injury, Hickel could also have reminded the industrial leaders that:

The airport where most of them landed, Washington National, is one of five in the nation already operating at "saturation."

Airplane noise in the Washington area is so bad that, especially on summer evenings, plays and concerts must pause or be drowned out and living-room conversation in a sizable segment of the metropolitan area is periodically obliterated by jet arrivals and departures.

What is true in the capital is true across the nation: our air is getting dirtier, noisier and more crowded every day. But this triple problem is also under continuing—though slow-moving—attack.

Every year more than 142 million tons of pollutants are released into the air over the United States. That's three-quarters of a ton for every man, woman and child. It adds up to more than the nation's total annual production of raw steel.

And, despite clean-air laws that date back to 1955, experts say the air-cleaning problem remains far more complex than depollution of water—because water can more easily be contained, traced and tested.

NEW YORK'S AIR IS DIRTIEST IN UNITED STATES

A 1967 study by the Department of Health, Education and Welfare (HEW) found that New York, N.Y., had the dirtiest air of 65 major metropolitan areas. The Twin Cities ranked 32nd, or just about halfway down the list.

"It doesn't look like you've got much of a problem at all," a spokesman for the government's National Air Pollution Control Administration said recently after checking a report on Minneapolis-St. Paul area air quality.

The five most common pollutants are: carbon monoxide, which comes primarily from automobile exhaust and accounts for more than half the nation's air contamination; sulfur oxides, largely from industrial and power plants, which together account for nearly one-third of the total pollution; hydrocarbons and nitrogen oxide, which combine under strong sunlight to cause "smog"; and particles—liquid or solid—of various kinds and sizes.

Almost all air pollution results from some kind of combustion, or burning—gasoline in auto engines; coal, oil or other fuels in industrial plants, generators and heating plants; or incineration of garbage and other refuse.

Auto exhaust was an early, but elusive, target. After preliminary efforts by a few states to set their own exhaust-control standards—which raised the specter of cars having to be built to meet different regulations in every state—Congress in 1965 gave the Department of Health, Education and Welfare control over exhaust emissions from all new cars.

But even though 1970-model cars must carry effective antipollution devices, the problem remains—because of the 100 million older cars remaining in use and because most states don't require annual inspections to make sure the devices keep working.

WANTED: SUBSTITUTE AUTO ENGINE

Many experts, indeed, believe the only answer is elimination of the internal-combustion engine. And the Nixon administration recently announced plans to spur research on low-pollution steam and electric engines as possible substitutes—although recent reports question the practicality of steam for automotive power.

Dr. Lee DuBridge, Mr. Nixon's science adviser and a man who both lived in and analyzed Los Angeles, Calif., smog for 22 years, told The Minneapolis Tribune that the government "will find ways of greatly increasing its research funds in this area."

Although most federal research spending is being cut, this effort "is going to take priority," DuBridge said, with a boost from $2 billion to $10 or $15 million per year planned to fund "very significant and promising projects."

Rep. Joseph Karth, D-Minn., has urged the government to use its leverage in another way—by buying low-emission vehicles for federal agencies. The government's purchasing agency, the General Services Administration, has plans to test a mechanism that would allow an auto to switch at will from gasoline to compressed natural gas as fuel.

The auto industry's record is mixed. The federal government brought—and later dropped—a conspiracy suit in California against automakers who allegedly withheld emission-control devices. Now New York has started a similar suit.

On the other hand, General Motors last May exhibited 26 experimental vehicles that either had new pollution-control systems or were powered by turbine, steam, electric or other power systems.

If progress in dealing with auto exhaust has been slow, the effort to choke off other forms of air pollution has sometimes seemed completely stalled. President Lyndon B. Johnson asked Congress to give the federal

government full control of such polluters as industrial and power plants—but was turned down.

COMBINED APPROACH TO REGIONAL PROBLEM

Instead, Congress adopted a scheme devised by Sen. Edmund Muskie, D-Maine, for a combined federal-state-local approach to what is recognized as a regional problem not neatly confined by political boundaries.

This plan—slow-working and thus more to industry's liking—has resulted in designation of 57 "air quality control regions," including one for Minneapolis-St. Paul and others for Fargo, N.D.-Moorhead, Minn., and Sioux Falls, S.D.

The regions were set up so as to involve all the states; for each region, states will propose five-year air-quality improvement plans—subject to federal approval and consistent with federally-set guidelines.

Even this more gradual approach has met resistance: the American Mining Congress, for example, has demanded withdrawal of the federal guidelines, arguing that they interfere with states' rights and tend toward imposing a national air-quality standard.

The job ahead is a big one. Robert Finch, secretary of Health, Education, and Welfare, says combined federal-state-local government spending for cleaning the air should reach $454 million annually within five years—nearly four times the present level—and he says that industry should by then be chipping in some $750 to $950 million.

Noise is a relatively recent addition to the recognized list of air pollutants. The first federal control law was passed in 1968; it was not until last month that the government, acting under that law, issued its first regulations to limit the amount of noise new commercial jet airliners can make. And noise regulation applying to existing jets and those in the development pipeline won't be along until later.

Airplanes aren't the only noise problem. Former Interior Secretary Stewart Udall combines the expert's view with that of the ordinary citizen when he says that "the noise level in this country has been doubling every 10 years," then adds: "New York just drives me crazy."

BUSES, SIRENS, HORNS AND JACKHAMMERS

And while considerable work is being done to cut jet noise and study the threat of sonic-boom damage, little has been done to silence the buses, sirens, auto horns, jackhammers and other noisemakers on earth.

A citizens advisory committee on environmental quality reported recently to President Nixon that "all these and scores of other noise sources can be silenced with present technology—what we do not have is a means of enforcing them."

The problem of pollution by crowding—air traffic congestion—is being attacked on several fronts. New air traffic control regulations have been proposed for major airports by the Federal Aviation Administration; Mr. Nixon has asked funds for 4,400 more air traffic controllers, and a 10-year, multibillion-dollar airport development program—which the administration wants financed by higher taxes on air passengers and freight—is before Congress.

For some conservationists, however, all this is offset by the prospect of the SST—the 300-passenger, 1,800-miles-per-hour supersonic transport jetliner for which Mr. Nixon recently requested a federal financing go-ahead. The SST, according to some critics, poses a sort of triple-threat to the air around us.

A presidential study committee warned—before Mr. Nixon approved the SST—that the aircraft's sonic booms could cause "significant further deterioration in the environment for people on the ground."

Earlier, an official of the Conservation Foundation here spelled out some of the reasons why many people worry about the SST:

"Few of us resent the time actually spent in the air on the present modern jets.

"All of us resent the delays and confusion involved in our inefficient airports and in travel to and from airports.

"All of us resent the crowding and discomfort we experience in airplanes that carry too many passengers in too small a space.

"But, rather than spend money to solve these very real problems, we spend it to develop an unneeded, environmental harmful, airborne monstrosity . . . It seems to be a question of putting technology first and forcing people to fit into it, rather than using technology to benefit people."

[From the Minneapolis Tribune, Dec. 8, 1969]

OUR WORLD—FIT FOR LIFE?: "SOLID WASTE" ON MOON REFLECTS EARTHLY PROBLEM

(By Richard P. Kleeman)

WASHINGTON, D.C.—When his 1957 car gave out not long ago, Richard Vaughan found it neither cheap nor easy to give it a decent burial.

A shredding plant finally agreed to pay him $10 for the old clunker—but the neighborhood filling-station operator wanted $20 to tow it there.

Most of us might have taken the $10 beating and just grumbled, but Vaughan started thinking: Why not issue a certificate with every new car that would remain with the vehicle and entitle its final owner to recover $10 or $20 from a scrap dealer? The dealer in turn would be reimbursed by the auto maker—who thus would bear some of the cost of the waste pollution his product created.

Vaughan, it should be noted, is director of the Bureau of Solid Waste Management in the Department of Health, Education and Welfare. Thus his personal dilemma also was his professional concern.

But the incident illustrates a pollution problem that threatens literally to engulf the nation unless we handle it better—and soon.

The problem of "solid waste"—which is what the experts call anything that isn't air or water pollution—took on cosmic dimensions when the Apollo 11 and 12 astronauts left costly debris on the moon. But it has been an earthly problem of mounting proportions for a long time, as ever-present as the discarded can-opener rings that seem to have become America's new national symbol.

Every day, U.S. municipal and private collection services pick up the equivalent of more than five pounds of trash and garbage for each American.

And because we are using more no-return bottles, more cans and more plastic containers every year, our individual waste output has been going up by more than 4 percent each year. This means that by 1980, the collectors will have to pick up eight pounds of discard per person every day.

SOLID WASTES MUST BE MOVED

Even that is just what's actually collected. The experts figure that now another 10 pounds per person is jettisoned daily outside of collection channels by homes and businesses. And even these figures don't include the billions of tons of farming and mining wastes that pile up every year.

Solid waste differs from air and water pollution, which move on their own, often across political boundaries. Unless solid waste is picked up and carried away, it just piles up where it was dumped, creating ugliness, pollution and injury.

For the most part, even if we do pick it up, what we do with it isn't very different from what we did half a century ago: Though a number of major cities are experimenting with hauling garbage to remote dumping grounds by train, for example, that "merely substitutes an engine for the mule that used to haul the trash wagon," as one New York City sanitation official puts it.

Though the smoky, smelly open city dump has long been recognized as both an eyesore and a health hazard, more than 90 percent of this nation's solid wastes are disposed of on land. A recent survey of 6,000 such sites found that only one in 16 qualified as a sanitary landfill—a scientifically run area where refuse is spread, compacted and covered daily with earth, without burning or otherwise polluting air or water.

SOME LANDFILLS PUT TO GOOD USE

Space for such sanitary landfills is limited, but where they have been used, as in Los Angeles, Calif., for instance, they have been turned into community assets—parks, botanical gardens, even golf courses—when filled and covered over.

And for refuse that must be burned, there are now high-pressure, cleaner-burning incinerators—even one experimental model that would produce usable heat and power as byproducts. But the same survey found three-fourths of the nation's public and private incinerators lacking adequate air pollution control devices.

Past history of our concern for the solid waste problem is summed up by a recent National Academy of Engineering report with these words: "Minimum attention, minimum funding and minimum application of technology."

In 1965, after long disregarding the problem, Congress passed a law to provide $92.5 million over four years, to pay for research on new ideas in solid waste management, with payments to state and local agencies that tested them. With this encouragement, the number of state solid-waste agencies has risen from a handful to 42.

This year a bipartisan group of senators, led by Edmund Muskie of Maine, introduced a broader bill to provide $733 million in the next five years, mostly for grants to help build regional or local disposal plants. This "Resource Recovery Act of 1969" also would set up a national materials policy commission to develop better methods of solid waste planning and handling.

The picture is not all bleak. The National Academy of Engineering report found that sufficient technological know-how exists to permit progress toward solving "many" current waste problems—not through any single, dramatic breakthrough but on a step-by-step basis that would deal with one problem at a time .

And Vaughan's agency figures that increasing present total annual spending of $4.5 billion a year by less than $1 billion could raise the nation's solid waste collection and disposal services to satisfactory levels.

NEW APPROACHES TO BIG PROBLEM

Those figures assume that we would do things about as they're being done now—but engineers, scientists and politicians are beginning also to look at new approaches to the problem. Among them:

Improved equipment: An "ideal incinerator" is being developed under a federal research contract in California, while safer, quieter and cleaner garbage-collection trucks are being produced for what is not only an unpleasant job but one of the nation's most dangerous occupations.

Improved disposal: Besides experiments with garbage—hauling trains, cities are using or considering use of remote, unwanted areas for dumping—deserts, abandoned coal mines and land in need of reclamation. One device being tested would suck garbage from cities to disposal sites through underground pneumatic tubes.

Reuse: The recent Interior Department announcement that government scientists have extracted a barrel of crude oil from a ton of pressurized garbage is the latest of

many attempts to reclaim and reuse what normally is discarded as waste. The idea of reusing scrap materials, familiar to anyone who saved paper or tinfoil or cans during the shortages of World War II, is being revived.

A can manufacturer has declared a bounty of a half-cent apiece for aluminum cans in certain areas of the country, and distributing 35,000 magnets to Boys Scout troops to help them identify nonmagnetic aluminum.

"We've got lots of thing around here made with garbage," says Vaughan. On his desk are several glass vials—one with a ground-garbage compound that can be used to purify water, another with a mixture usable in road building and a third containing a slow-release fertilizer—expensive but effective.

JUNK METALS, PAPER PROVE VALUABLE

"Reclaiming materials from solid wastes is still a financially marginal operation," the Citizens Advisory Committee on Environmental Quality reported to the President recently, "but there is considerable value in the reclaimed residue of our junk.

"The U.S. Bureau of Mines estimates that if all solid waste were properly incinerated, it would yield salvageable metals worth more than $1 billion each year. A ton of recycled waste paper can provide an amount of wood pulp equivalent to 17 pulped trees."

There is talk—and research—about "self-destructible" containers that dissolve or disintegrate after use, but so far few have been marketed.

Secretary Robert Finch of the Department of Health, Education and Welfare, recently proposed making manufacturers whose products constitute potential waste share in the cost of disposing of them.

This has set off talk of a "pollution tax" which the federal government might impose on manufacturers, with revenues to be shared with states and cities that confront actual disposal problems.

In two sections of Boston, Mass., the Ford Foundation is financing experiments that combine new technical disposal and collection devices with advice on how to use them from social scientists, design experts and black community leaders.

"We want to find out what lies at the heart of the problem," a project spokesman said. "Is it people or technology, or both? The only way we can find out is to get the technology there and then get the people directly involved in it."

[From the Minneapolis Tribune, Dec. 9, 1969]

OUR WORLD—FIT FOR LIFE? POLLUTION: WORRY, BUT LITTLE FUNDS

(By Richard P. Kleeman)

WASHINGTON, D.C.—How much do we care about halting pollution and cleaning up the world we live in? Answer: Quite a bit.

How much are we willing to pay for it? Answer: Not much.

These contradictory conclusions can be drawn from two recent public-opinion surveys—one national, the other taken in Minnesota.

The contradiction points up a little-discussed but critical part of the struggle to preserve our environment—the fact that it's going to cost money, and most people would like to have someone else pay for it.

In the long run, of course, the cost inevitably will be borne by individual citizens—whether the money is spent by governments, which will get it back in tax collections or fees, or by industry, which will seek reimbursement by passing the cost along to its customers.

A nationwide survey taken by a major polling firm for the National Wildlife Federation found that almost all of the nearly 1,500 persons questioned were willing to have the federal government spend more on natural resource preservation than it does now—but only if the money is raised by cutting other outlays, not by increasing taxes or costs to consumers.

More than half of those questioned favored diverting some federal spending from national defense, and nearly half would also spend less on space and such international programs as foreign aid.

FEW WILLING TO PAY

But when it came to specifics, two-thirds of those interviewed said they would not be willing to have their family expenses boosted by $200 a year—in taxes and higher product prices—to reduce pollution. Even an annual expense rise of $20 a year won approval of only 55 percent.

Another question asked. How much would you be willing to have added to your electric bill to help the power company eliminate air and water pollution from its plants? Only one out of five was willing to pay an extra $2 a month; only two out of five would pay an extra $1 and only three out of five would be willing to pay as little as $25 cents a month.

(One intriguing sidelight of the poll was the fact that residents of the Midwest seemed more willing than those who lived elsewhere to pay for antipollution efforts. Where only 55 percent of the national sample, for example, was willing to pay $20 a year more for clean-up programs, the figure was 65 percent for Midwesterners.)

The Minnesota survey—conducted by a professional polling firm for one of the state's politicians—asked a cross-section of voters to identify the state's major problems.

Statewide, and in every region of Minnesota, high taxes were rated the No. 1 problem, being cited by 31 per cent of those questioned. But in most areas, the problems of pollution and conservation ranked second—though generally well behind taxes.

There was special evidence of environmental concern in Hennepin County suburban communities and in St. Paul, with 30 percent and 24 percent, respectively, of respondents in those areas ranking conservation issues second.

In Minneapolis, 17 percent ranked environmental problems in third place, well behind welfare and social problems and, of course, high taxes.

INDUSTRY EXPECTS TO BE REPAID

The public reluctance to dig into the pocketbook suggested by the Wildlife Federation's national survey found an industry echo during a recent water pollution conference here.

Several industrial leaders at the meeting made clear that not only is industry unhappy with its "polluter" image, but it also expects to be repaid for cleaning up the pollution it does cause.

"Only a profitable enterprise can afford the cost of what must be done," Brooks McCormick, president of International Harvester Co., told the conference. He added:

"Bankrupt businesses don't pollute streams. But they don't meet payrolls either."

The president of the U.S. Steel Corp., Edgar B. Speer, said his company opposes "water treatment for treatment's sake." He explained:

"Unless some user receives value as the result of the treatment given the waste, the money spent for pollution control is removed forever from productive use."

Speer made clear that he does not expect industry to absorb antipollution costs, either. "It should be realized," he said, "that the individual citizen, in the final analysis, foots all of the treatment bills—either in taxes or in the price of goods and services."

Another industry complaint has to do with federal tax policies. A spokesman for the paper industry—acknowledged to be a major source of pollution—professes "deep concern" over moves to repeal the 7-percent credit for business investments. Both the tax reform bill passed by the House and the measure pending in the Senate would do this.

SOME PROGRESS IS NOTED

"Our industry has been counting on that credit to ease the financial burden of acquiring antipollution facilities," said Edwin A. Locke Jr., president of the American Paper Institute.

"If the credit is now removed, it will be much harder to make the huge outlays required."

Despite all these indications of citizen and industry reluctance to cough up money for a pollution clean-up, there was evidence to the contrary in some of last month's elections.

Maine voters approved a $50-million bond issue for sewage treatment plants—though they turned down less than half as much for roadbuilding.

In New Jersey, a $271-million bond issue to fight water pollution passed easily. New York voters approved a sweeping amendment, called a "conservation bill of rights," calling on the state Legislature to give more attention to environmental protection.

At the local level, several mayoral elections apparently were influenced by pollution issues. A California district turned down a coal-burning power plant—despite its tax-paying potential—because it threatened to dirty the air, and citizens of a Seattle, Wash., suburb voted to preserve a park rather than bulldoze it into a golf course.

[From the Minneapolis Tribune, Dec. 10, 1969]

OUR WORLD—FIT FOR LIFE?: POLLUTION FIGHT NEEDS MONEY, LEADERS, EDUCATION AND IDEAS

(By Richard P. Kleeman)

WASHINGTON, D.C.—Garbage trucks clatter as they haul our refuse to smoky, smelly dumps.

Noisy factories pollute both air and water.

Huge jets whine overhead, spewing smoke into the air as they fly in and out of overcrowded airports whose inadequate access roads are clogged with traffic.

The automobile fouls the atmosphere in its lifetime, demands land-gobbling highways and ends up in an ugly junkheap.

These problems of environment, all different, all complex, all add up to one big mess. As one industrialist told a water-pollution meeting here: "Pollution is indivisible, and it should be attacked as one big problem."

But can this work? Other experts warn against trying to do too much on an over-all basis. As a recent study by the American Chemical Society said, "It is vital to recognize that the environmental system is made up of a bewildering number of sub-systems that often are only distantly interdependent. Environmental problems are rarely amenable to sweeping solutions."

What, then, of the future? Many are quick to forecast impending disaster for a human race overwhelmed by its own technology—but that view is not unanimous.

"We have to start by recognizing that by the nature of civilization and of people, we can't avoid some impingement on the environment," says Dr. Lee DuBridge, President Nixon's science adviser. "A perfect environment can only be obtained at infinite cost—such as everybody dying."

A former Minnesota conservation official who now helps run the Federal Environmental Health Agency is not willing to give up hope.

SEES HOPE IN MAN'S ADAPTABILITY

"I'm not either with the gloom-and-doom people who say we've had it, or with those who say we've never had it so good," says Dr. James Lee. "Man has been able to adapt to past environmental and biological insults, and he gives every indication of being able to continue this adaptability.

"So, while I don't hold with the idea that man is going to succumb to the inroads on

his environment in the near future, I also don't minimize the fact that, left uncontrolled, many of these environmental insults some day may result in his termination.

"We'll just have to await the verdict of time."

It is, of course, not just a matter of waiting. There are signs that we recognize the "insults" and are doing something about them—with air and water pollution control programs; the forthcoming near-ban on DDT; new government steps to prevent future oil spills, jet aircraft noise, and auto exhaust fumes; and the slow spread both here and abroad of birth control programs.

What more is needed? In addition to the already-impressive evidence of public concern—a necessity by everyone's assessment—it seems to boil down to four main ingredients: more money, education, stronger leadership and new ways of thinking about the problems.

Sen. Gaylord Nelson of Wisconsin told a recent congressional conference on environment that it will take up to $150 billion in spending by all levels of government, plus another $150 billion from private industry, to clean up pollution in the next 15 to 20 years.

GAINS FROM EXPENDITURES SUGGESTED

By contrast, the same conference was told that current federal spending on all "natural resource" programs amounts to only $3.7 billion, or 1.8 percent of this year's federal budget—the lowest percentage in a decade of steady decline.

What can we gain by spending more money on the environment?

The chemical society report begins by answering "better health," then adds: "Money spent to manage the environment buys cleaner laundry in the back yard, longer life for the paint on houses, less corrosion and breakdown of electrical and other equipment.

"It buys cleaner lakes and rivers for recreation. It buys relief from annoyance: a speck of ash in one's eye, unpleasant odors, yellowed foliage in the springtime.

"It buys nature as it ought to be, although it must be recognized that a modern, industrial society and a pristine environment cannot coexist."

"Nothing less than a revolution in our educational system is required," said Russell Train, president of the Conservation Foundation, before he became undersecretary of the interior in the Nixon administration.

The student must learn to see himself, Train said, as "part of an interdependent, inter-relating world—not simply as its manipulator."

Echoing this recently, a presidential advisory committee on environmental quality said, "Our formal education system has done little to produce an informed citizenry, sensitive to environmental problems and prepared and motivated to work toward their solution."

And a White House staff report urged $20 million in federal spending to support formation of schools of human environment at U.S. universities.

Already convinced that college-age young people consider the environment as "relevant" an issue as Vietnam or race relations, Sen. Nelson has been organizing a nationwide "teach-in" on the subject.

As planned by a mushrooming organization led by Nelson and Rep. Paul N. McCloskey Jr., a California Republican, the teach-in calls for setting aside one day—next April 22—on campuses across the nation to hear speakers, hold discussions and stage rallies on environmental problems of particular local concern.

LEADERSHIP BY PRESIDENT NEEDED

If national policies on the environment are to be strengthened and continuously monitored, presidential leadership will be needed.

Last spring, President Nixon set up an eight-member, cabinet-level "Environmental Quality Council," with DuBridge as its executive secretary.

But to some critics, the cabinet group—which has met just three times since it was formed—is not enough. Nelson calls it "a poor second cousin" because Cabinet members' prime interests lie elsewhere. Rep. Joseph Karth of Minnesota says the council "has a built-in conflict of interest."

Though DuBridge disagrees, congressional critics want a presidential board of environmental advisers, assisted by an independent office of environmental quality. After a lot of pulling and hauling, Congress seems about to approve such an arrangement.

Many see a need—beyond these other steps—for a basic change in national philosophy.

"What needs to be developed at the earliest opportunity is a habit of thinking ecologically—of being thoroughly familiar with the balance of nature," says Adm. Hyman Rickover, the iconoclastic Navy expert on nuclear propulsion.

"It troubles me," he adds, "that we have always acted as if technology were an irrepressible force of nature to which we must meekly submit: if we reflected, we might discover that not everything hailed as progress contributes to happiness, that the new is not always better, nor the old always outdated."

Stewart Udall, for eight years secretary of the interior, sees a need to harness technology. In a recent interview, he noted that conservationists have always been "at war with technology," and called for a change:

"The question we now need to ask is whether we can make technology solve problems—and use it creatively, so that major public proposals, instead of diminishing the environment, will enhance it.

"Industry must solve environmental problems instead of doing things the cheapest way—because we have the capacity to do anything we want to do."

To one expert addressing the congressional conference on environment, engineer-conservationist Aaron Teller, the key lies in "looping the system"—learning to reuse scarce resources. "This must be legally imposed by a new value system," he said.

For example, he suggests that an auto—which wastes over 300 gallons of gasoline over its lifetime—be taxed for this when first sold. Teller predicts this would lead automakers to develop more efficient engines—which could eventually save the nation nine billion gallons of gasoline now wasted each year.

Nelson offers an even more drastic problem: "If we had any sense, we'd establish a national land use policy—and tell people what they could do with their land."

Some proposals would go even beyond this—such as that of the California researcher that all technological research and innovation—except that aimed directly at reducing present dangers to the general welfare—be halted for two years so man could "perfect" existing technology before pursuing more.

Adm. Rickover, reviewing more than a century of science-based technological development, asks gloomily:

"What use have we made of it? We have multiplied inordinately, wasted irreplaceable fuels and minerals and perpetrated incalculable and irreversible ecological harm.

"I have thought much about this," the outspoken Navy officer adds, "and I can find no evidence that man contributes anything to the balance of nature—anything at all."

A final, simple—yet perhaps futile—warning comes from conservationist Raymond Dasmann: "There is one basic rule we cannot really afford to ignore:

"'Do not destroy what you cannot recreate.'"

THE RISK OF RECESSION

Mr. HARRIS. Mr. President, the cover article of Time magazine this week is entitled "The Rising Risk of Recession." Featured on the cover and in the story in the business section is Milton Friedman, economics professor at the University of Chicago. The article points out that even Professor Friedman, who it is said, "believes in a monetarist view of economics" and feels the chief instrument in controlling movement of the economy is the seven-man Federal Reserve Board," thinks that the present tight money policy of this administration and the Federal Reserve Board must be loosened.

The article also states that two members of the Federal Reserve Board, Sherman Maisel, and George W. Mitchell, both economists agree.

Mr. President, the policies of this administration have not done the job of restoring health to this economy, and as the Time article points out:

> The American people are angered and frustrated by inflation and the polls show that an overwhelming majority criticize Nixon's handling of the persistent problem.

In a special box on page 69 of the same December 19, 1969, issue of Time is a dramatic set of illustrations of what rising inflation has done to the average American during this administration.

Pointing out that inflation is no laughing matter, this box begins in a whimsical way by saying that some old phrases have to be up-dated now, such as "two birds in the hand are worth three in the bush."

I ask unanimous consent that the article, entitled "The Consumer: Behind the Nine Ball," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CONSUMER: BEHIND THE NINE BALL

Inflation is no laughing matter, but the prices of so many products have risen in 1969 that some Pittsburgh newspapermen have concocted a new game based on inflationary psychology. According to them, it now takes three to tango, four's a crowd, and that favorite song of a few years back has become *Four Coins in a Fountain*. Similarly, the number 14 is bad luck, and so is four on a match. A stitch in time saves ten, cats have ten lives, two birds in the hand are worth three in the bush, a bluffer is a fiveflusher, and that soft drink should really be called Eight-Up, Life, these days, begins at 41, girls are Sweet 17 and never been kissed, and inescapably, the American consumer is behind the nine ball.

The pastime is a wry reaction to a far more serious numbers game. As fast as incomes rose, the price of necessities seemed to rise even more steeply in 1969, and few wage-earners felt that they were better off than when the year began. An inflation sampler:

Food. The Department of Labor food-price index jumped 5% from January to October. In Pittsburgh, the price of eggs almost doubled overnight from 43¢ to 83¢ per dozen. The price of pork chops in Boston increased from 99¢ to $1.39. One shopper in Cuyahoga Falls, Ohio, Mrs. Richard Davis, protested: "This can of soup had four prices on it when I bought it." The final price was 11¢ more than the first. The nickel Hershey bar vanished, and practically nobody could find a 10¢ cup of coffee.

Housing: The average cost of a home

reached $25,900 compared with $24,200 a year ago. In San Francisco, for example, the price of a home climbed 12% in twelve months. One survey of the Bay area disclosed that there was enough low-cost housing to provide shelter for all the area's poor—but the comparatively well-off occupants refused to move out. Taxes took an ever deeper bite. In San Francisco, for example, property taxes jumped from $102.30 per $1,000 valuation to $122.90.

Manufactured goods: Appliances cost more across the U.S. The price of a new car rose by an average $107. Clothes were more expensive almost everywhere, and rose an average 10% in Boston. Men's neckties commonly went up by 50¢ or $1—or more.

Medical care and pharmaceuticals: In the year's first ten months, the price of medical care—doctor's bills, hospital services and drugs—rose by 5%. In Boston, a hospital bed could cost $85 a day, $10 more than last year, and the price of dental care advanced from $6 or $7 per filling a year ago to $9 to $10 today. Even aspirins were up, from 89¢ to 98¢ per 100 tablets. A mouthwash named Binaca cost 29¢ when it was introduced by a Swiss company five years ago; it has since been taken over by a U.S. firm—and now sells for 79¢ in some places.

Entertainment: Movies were more expensive, up 25¢ per ticket in Manhattan's Radio City Music Hall. The cost of watching a Pittsburgh Steelers home game rose from $6 to $7—plus a 15¢ surcharge to help pay for building a new stadium, whose estimated price increased from $32 million last spring to $35 million at present. In the taverns of the steel city, the 15¢ beer could be found no more; it now costs 20¢.

THE EMERGENCY DETENTION PROVISIONS

Mr. INOUYE. Mr. President, I am most pleased that the Committee on the Judiciary has ordered favorably reported S. 1872, a bill I introduced with 25 other Senators to repeal the emergency detention provision of the Internal Security Act of 1950. I am hopeful that floor consideration on this measure will take place in the near future.

I invite attention to an excellent letter I received from the American Civil Liberties Union in support of my fight to repeal the emergency detention provision. Their letter, I believe, clearly and concisely sets forth the need for the repeal of this law and I welcome their support. I ask unanimous consent that the full text of this letter appear in the RECORD following my remarks.

As I have stated before, I believe that it is the responsibility of Congress to repeal this statute, and I believe that we should do so immediately. The repeal of the emergency detention provision will remove this threat to our liberty and freedoms.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN CIVIL LIBERTIES UNION,
Washington, D.C.

Hon. DANIEL INOUYE,
U.S. Senate, Old Senate Office Building, Washington, D.C.

DEAR SENATOR INOUYE: The American Civil Liberties Union applauds your effort in leading the fight to repeal the Emergency Detention Act—Title II of the Internal Security Act of 1950. We thoroughly support you in this worthwhile effort and request that this organization be listed along with the many others in backing the various bills which have been introduced by you and many other Senators and Congressmen which would repeal this clearly unconstitutional and thoroughly abhorent measure. Indeed, the opposition of the American Civil Liberties Union to the Internal Security Act and the Emergency Detention Act is an old one. We vigorously fought against their enactment in 1950, and have participated in challenges to the constitutionality of various parts of the Internal Security Act ever since. Our policy guide sets forth our position on the Emergency Detention Act as follows:

"The ACLU opposes, on basic civil liberties grounds of equality, free speech and association, and due process of law, the emergency detention provisions of the Subversive Activities Control Act of 1950. This law allows detention, during times of invasion or insurrection, of aliens whom the government feels to be politically 'suspect'."

If there is any way in which we can be of help in your valiant efforts towards eliminating the Emergency Detention Act from the statute books, please let me know.

Sincerely yours,

LAWRENCE SPEISER,
Director, Washington Office.

THE INTER-AMERICAN DEVELOPMENT BANK

Mr. CHURCH. Mr. President, the Washington Post of Sunday, December 14, contains an article by A. D. Horne on the Inter-American Development Bank. Mr. Horne has done a thorough job of highlighting the major problems which face the bank, including internal administrative troubles, the potential dangers in the U.S. veto power over bank loans, and the complexities of utilizing bank resources throughout the hemisphere in a balanced program of loan aid.

As long-time advocate of channeling our foreign aid through multilateral agencies such as the Inter-American Bank, I think Al Horne has done a singular job of showing us both the advantages and the potential problems we face as we move—as I think we must—toward greater utilization of such agencies.

I ask unanimous consent that Mr. Horne's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE INTER-AMERICAN BANK: A CONTROVERSIAL SUCCESS

"The Inter-American Development Bank stands as an outstanding example of multilateral financial cooperation among the nations of the Americas." (President Nixon, message to bank's 1969 annual meeting.)

"The Inter-American Development Bank has made a major contribution, but technical rather than political consideration should be stressed in future loans." (The Rockefeller Report.)

"It's the peculiar nature of the animal: we provide the money and they control the bank." Sen. Frank Church (D-Idaho), interview.)

(By A. D. Horne)

Even the initials are different: IDB in English; BID (for Banco Interamericano de Desarrollo) in Spanish.

The original impulse came from Latin Americans, in the early 1950s, and the Eisenhower administration resisted it until 1958, when Vice President Nixon returned from his fourth crisis in Lima and Caracas and told the President that something had to be done to mend U.S. relations with Latin America. One of the results was the Inter-American Development Bank.

Now, a decade and more than $3 billion of loans later, it has outgrown its plush headquarters on 17th Street, a success in many ways, a focus of controversy in others. It has pioneered in funding types of projects the older World Bank thought too risky, but its loan procedures have been criticized as slipshod even by an independent consultant it hired. It has balanced carefully the needs of its small and large members, but it has been accused of both discrimination and logrolling.

It has provided the United States with a channel for development aid insulated at least in theory from direct political pressures, but Washington's role as chief stockholder and potential vetoer of low-interest loans has led to constant backstage maneuvering and occasional open confrontations with Latin members.

There are 22 members. Although the United States based on its subscription to the bank's ordinary capital, is allotted 42.25 per cent of the votes on the board of directors, a recent bank document put the actual U.S. contributions to all its resources at almost $2.2 billion out of $2.8 billion, or 76.9 per cent.

A YOUNG PRESIDENT

The bank has had just one president: Felipe Herrera, who helped promote the idea as a Chilean delegate to the 1954 Inter-American Economic Conference in Rio de Janeiro and served on the Chilean delegation to the bank's charter-writing conference in Washington in 1959. He had been Chile's finance minister at 31 and was only 37 when he took office in 1960.

The roster of that charter conference is studded with names of future officials of the bank. The head of the U.S. delegation, for example, was Assistant Treasury Secretary T. Graydon Upton, who since 1961 has been executive vice president, Mario O. Mendivil, the Argentine delegate, is its representative to the Latin American Free Trade Association (LAFTA) in Montevideo, Jorge Hazera of the Costa Rican delegation heads the bank's secretariat.

The bank's employees—about 830 here and 155 in the field—were drawn from all the member countries plus Cuba, which signed the charter before the Batista government fell but never ratified it. Roughly 80 per cent of the personnel is Latin and there is a constant exchange between the bank and the loan-seeking countries.

Employees go home to become planning officials and finance ministers, return to represent groups of countries as executive directors voting on loans and may stay on here in well-paid executive jobs when their terms on the board end.

Over this multinational society, Herrera presides from an impressively vast 11th-floor office decorated with hemisphere art and maps showing the 550 loans made by the bank.

"It's a one-man show," says one U.S. official. "Felipe is king. Nothing moves without his blessing."

"You've got to give him credit," says another. "He took this thing and made it fly. But 10 years is a long time; the barnacles are starting to grow."

A THIRD TERM

Herrera, still only 47 and a vigorous advocate of Latin American integration in his frequent speaking tours, obviously does not agree. Last year, although mentioned briefly as a possible compromise choice for secretary general of the Organization of American States and later, also briefly, as a possible candidate for the presidency of Chile in the 1970 elections, Herrera took the unusual step of winning his third five-year term as bank president more than a year before his second term was up.

Relations between Washington and the Latins were strained at the time because of

a prolonged wrangle over the OAS job, for which the United States was promoting Galo Plaza of Ecuador—with eventual success. Assured that Herrera had support from all the Latin nations to keep the IDB post, and unprepared to offer an alternative candidate, the United States went along. "It was a real coup," says one official.

Now U.S. officials privately express concern that Herrera, backed by the growing Latin unity exemplified in last spring's 21-nation "Consensus of Vina del Mar," may be preparing to test the limits of American permissiveness implicit in President Nixon's low-profile Latin policy speech of Oct. 31.

If there is a showdown, it will take place in the back rooms of the bank, not in public. In theory, the bank's directors—one appointed by the United States and six elected for three-year terms by six groups of the 21 other members—must vote approval of all loans. Also in theory, the U.S. voting power of 42.25 per cent is not enough to block conventional-interest loans from ordinary capital, but even a U.S. abstention can veto a "soft" loan from the bank's Fund for Special Operations, which require two-thirds approval.

In practice, however, Herrera's policy is not to submit a loan proposed to the directors for a formal vote until, as Upton put it in a recent paper, "each of the board members, Latin American and U.S., is satisfied with the loan." In effect, then, any nation is able to delay approval of any loan.

CAUGHT IN A COUP

One such case, which came to light last spring, involved a soft loan of $12.6 million for a housing project in Peru. The board had approved the loan in April, 1968, but Peru's civilian government had neglected to complete the signing before it was overthrown in October.

The new military government then tried to activate the loan but was told that the bank's rules required the board's approval for anything beyond a doubling of the original three-month time limit for completion of loan papers. And the United States, then confronting the new Peruvian regime over its seizure of the American-owned International Petroleum Co., told the bank it could not vote to extend the time.

So the loan remained in limbo until April 14, a week after the Nixon administration backed off and announced that it would defer indefinitely applying the aid-cutting Hickenlooper Amendment against Peru. Washington's stall was based on a broad interpretation of an amendment to the U.S. Inter-American Development Bank Act that parallel's Hickenlooper; still, the U.S. action, carrying a bilateral grudge into a multilateral arena, aroused Latin resentment.

The Peruvian housing case was on many minds at the end of April when the finance minister of the member nations gathered in Guatemala for the tenth annual meeting of the bank's board of governors. Among the resolutions passed was one calling for a study of the bank's structure in terms of the OAS charter—a veiled way of seeking an end to the U.S. veto power.

Actually, because of Herrera's policy of seeking prior consenus, the veto has never been used and the Latin directors have had the same potential power to block a loan as the U.S. director. But because the Latin directors represent countries that also seek loans and could face retaliation if they blocked another country's, it is the U.S. director who repeatedly raises questions—sometimes at the request of a Latin director—during the board's informal discussions of loan proposals. The resulting heat has been fierce at times, with U.S. ambassadors called in for a personal persuasion by a minister or president of the country whose loan has been questioned.

The U.S. also has forced some changes in the internal workings of the bank, most notably in limiting to two a week the number of loan proposals the directors may consider. Although the bank makes only about 60 loans a year, until 1968 there was an annual rush of approvals in the fourth quarter. (The same problem exists at the Agency for International Development and is becoming more acute at the World Bank.)

INSISTED ON AUDIT

The limits of U.S. intervention in the bank's activities were most clearly tested in 1967 when the House twice approved a floor amendment by Rep. Armistead Selden (D-Ala.) to demand an independent performance audit of the bank's loans. Selden's move was seen by bank officials as a threat to its international status and the House conferees were persuaded to drop the audit requirement in conference with the Senate.

But Selden, who as chairman of the House Foreign Affairs Inter-American Subcommittee had toured projects funded by the bank and had filed a critical report, persisted and the amendment was passed. The bank's response was a compromise which averted a major confrontation: it set up a "Review and Evaluation Group" with an American chairman and one representative each for the large nations and the small.

Apart from crises such as the Selden amendment, U.S. influence on the bank is exercised chiefly through the American executive director and his alternate. They get their instructions from the Treasury but also maintain contact with the combined State Department-AID Inter-American bureau.

President Johnson's last nominee as executive director, Texas lawyer Edward Clark, was a part-timer who drew no salary and concentrated on personal contact with congressmen and bank officials while leaving daily details to his alternate, Reuben Sternfeld. To replace Clark, the Nixon administration considered former Sen. Thomas H. Kuchel (R-Calif.), now a Los Angeles-Washington lawyer reportedly thinking of runing for the Senate as a Democrat. Instead, it chose a highly skilled technician with none of Clark's or Kuchel's political clout: Henry J. Costanzo, who headed the Treasury's liaison with the bank for six years before becoming AID director in South Korea.

American officials say that the choice of Costanzo indicates the administration's intent to tighten U.S. supervision of the bank's activities. They insist that this supervision is directed more to helping the bank use its resources efficiently and avoid loan defaults or scandals than to protecting U.S. political interests.

"For years," says one U.S. official, "we've held our nose and looked the other way and waited for it to improve. And," he add, "it has."

A JOLTING REPORT

The most fully documented analysis of what has ailed the bank in its lending procedures was made by John P. Powelson, professor of economics at the University of Colorado, under a contract as a bank consultant. Powelson's highly critical three-volume report, based on a year's study of 20 loans, rocked the bank when he presented it in 1968.

Today, bank officials take the position that the report was, in Upton's words, "very constructive," and that some of its criticisms have been met. A sanitized version circulated within the bank deletes specifics identifying the 20 case studies as well as a section of anonymous quotes from 175 staff interviews, such as these:

"Everything is paralyzed here; weeks are spent making picayune changes in language . . . there is never clear guidance. All communication (with persons above the immediate superior) is by memo; it would take three or five days of insistance to get a personal appointment. . ."

"Behind-the-scenes struggles between technicians and loan officers are frequent. . . . Whether the technician makes his point or not often depends on how well he can fight, not on how good the point is."

"There are times when I have absolutely nothing to do, and other times I cannot give adequate attention to the several loans I am processing. I feel this especially in the end-of-the-year rush to get loans approved."

Powelson's analysis shows a curious fact, however. Loans made in the fourth-quarter rush seem to turn out no worse than loans made under less pressure the rest of the year.

Some of Powelson's criticisms:

". . . the bank staff does not study borrowers' administrative capacities more than superficially, and it is customary in loan documents to make unsubstantiated laudatory statements about borrower management."

"In at least one case, the borrower's market study was accepted unquestioningly . . . it may well have been in the interest of the borrower to exaggerate the potential market in order to persuade the bank to make the loan."

"The current practice of overemphazing good points to the neglect of the bad not only disturbs the morale of technicians, who complain that the Loan Division 'dresses up' their analyses, but also makes loan administration difficult, since potential problems are concealed."

"In short, the bank's procedures are biased toward favorable consideration of any application from the time a project committee is appointed and the number of problem loans the bank now faces is doubtless due in no small part to this fact."

CULTURAL CONFLICT

Upton, the bank official who gave Powelson his assignment, spoke philosophically of the problems of a multinational institution in a recent interview.

"When two cultures meet, some bitterness is inevitable," he said. The bank is a "very complex organization," and one can't expect the same standards as in commercial banking, where all personnel represent a single viewpoint.

Since Powelson's report, he continued, the bank has formed an administrative unit, brought in marketing experts and added an extra set of loan documents, for internal use only, which shows the criticisms made in technical studies.

He acknowledged a key point of Powelson's: "Once a project committee is formed, there's probably going to be a loan." But he stressed that formation of such a committee is a decision made by the bank's top management after periodic sectoral and country strategy reviews.

The bank has often been criticized for balancing off loans among its member countries. Upton and Assistant General Counsel Arnold H. Weiss acknowledge and defend the practice. "If you didn't do this," said Weiss, "you'd find all your loans going to the most developed countries because they're most able to bring in projects."

Despite this spread-the-wealth effort, the bank has not based its loans on any mechanical country or per capita formula. As of Sept. 30, Brazil, largest in size and population, had drawn $653.7 million, $210 million more than runner-up Argentina. On a per capita basis, however, Chile's figure of $29.98 is one-third higher than any other major nation's.

"Chile," says one official who will not allow his name to be used, "has done very well under Herrera."

FRICTION OVER EXPORTS

The bank's president acknowledged in a recent interview that he spent much time reconciling "conflicting national interests," especially between the larger and smaller Latin nations. One area of such disagree-

ment, he said, is in attitudes toward his long-time goal of regional integration.

"The smaller countries are more integration-minded," Herrera said, while the larger countries are the strongest supporters of the bank's export financing program, which helps them sell capital equipment to their smaller neighbors. "They have tried to broaden it to include home appliances and consumer products."

The bank considers export financing, into which it has put nearly $36 million, part of its integration effort. But the major integration spending, some $259 million, has gone into funding of multinational institutions, mostly transportation, power and communications systems.

A major effort has been development of the five-nation River Plate basin extending from Montevideo and Buenos Aires to headwaters in Brazil and Bolivia. Bank loans totaling $116 million have gone into the region.

The United States has supported Herrera's emphasis on integration, but President Nixon's Oct. 31 speech, reflecting the movement's current uncertainties, said it was up to the Latins to decide "how far and how fast this process of integration goes." Venezuela's failure last May to join the Andean Common Market it had helped bring into being deprived that group of its wealthiest member, and the Salvador-Honduras war in July nearly shattered the promising Central American Common Market.

But Herrera remains hopeful, both for increased economic cooperation and for a later stage of political unity. "This may be a dream," he said, "but I am convinced that the solution for Latin America could be a type of political confederation of the states. Whatever I can do I will do to work for this, but I think the moment is not right."

"SOFT LOAN" COMPLAINTS

Herrera also spoke of disagreements among the member countries over the terms on which they receive loans. The bank's policy is to give preferential treatment to the less developed members. At the Guatemala governors' meeting, Herrera said that these poorer countries had received 85 per cent of their bank credits on "soft" terms compared to 55 per cent soft loans for the richer countries.

While all the countries are eligible for the soft loans, which now run at 3 and 4 per cent interest, 19 of the 21 are allowed to repay the Fund for Special Operations in their own currency. Mexico and Venezuela, however, must repay dollar loans in dollars—"a treatment that is not only discriminatory but unjust and unfounded as well," Mexican Finance Minister Antonio Ortiz Mena declared at the Guatemala meeting.

Roughly a third of the bank's lending is on conventional terms, and these also have been under fire. Conventional rates are fixed at 1¼ per cent above the cost of new borrowing, and they have risen to about 8¼ per cent. This compares to 7 per cent for conventional loans made by the World Bank, which also gives soft loans from its International Development Association at only a 0.75 per cent service charge (but requires repayment in hard currency).

Herrera's reply to criticism of the bank's rates is that its loans in the first eight months of this year were at an average of 4.53 per cent, 0.1 per cent below its nine-year average. This was done by increasing the mix of soft loans to hard and in some cases by giving a combination of soft and hard loans to the same project. The World Bank's Latin American loans in the past fiscal year have carried average interest of 6.26 per cent.

This is because the World Bank group considers Latin America a relatively developed area and channels most IDA credits to Asia and Africa. In the last fiscal year, for instance, $457.7 million of the $472.3 million committed to the Western Hemisphere by the World Bank group was on hard terms.

One other difference between World Bank and IDB development aid is in the size of individual loans. The World Bank's average loan is nearly $20 million while the average IDB loan is about $6 million.

PURPOSE IS DETERMINANT

The bank's criteria for using its soft or hard loan window are very flexible, allowing much room for negotiation. Hard loans are out in Bolivia and Haiti; otherwise, the criteria are based on the purpose of the loan, not on the country.

All loans for housing and education are soft, as are most agriculture loans, especially for land reform projects. Water loans are generally mixed. Most industrial loans, and all export financing loans, are made conventionally.

In 1961–65, the bank made nearly $500 million in loans from the Social Progress Trust Fund, which it administered for the United States. With this fund now committed, Herrera is prospecting in Europe for new outside resources.

The bank already has administered $45 million in Canadian funds, $7 million in British money and $5 million in Swedish funds. But Herrera's hope is to establish a trust fund contributed by the European Common Market as a way to "diversify our pipelines"—and perhaps give the bank an alternative the next time the U.S. veto is threatened on a politically sensitive loan.

To Sen. Frank Church (D-Idaho), chairman of the Senate Foreign Relations Inter-American Subcommittee and advocate of channeling all U.S. economic aid through multilateral agencies such as the Inter-American Development Bank, the U.S. veto power is a serious concern. His hope, the Senator said in an interview, is that the veto eventually will disappear through increased Latin funding of the bank.

Church also expressed concern about recurrent reports of the bank's administrative shortcomings.

"I've wanted to give the bank the benefit of the doubt," he said. "I've urged the Secretary of the Treasury to take the matter more seriously, to put on the board a man who will recognize the importance of his role. A lot rides on it. If they fail, the whole movement toward multilateral aid will be endangered."

PUBLIC AFFAIRS ACTIVITIES OF THE DEPARTMENT OF DEFENSE

Mr. FULBRIGHT. Mr. President, recently, I made a series of four speeches in the Senate concerning the public relations activities fo the military services and the Department of Defense. I made a study of these activities because of my concern over the vast apparatus that has quietly grown up in the Pentagon over the years to shape public opinion about military programs and policies.

From 1952 to 1959, when budgeting categories were revised, Congress, by law, limited the amounts that could be spent within the Department of Defense on public information and public relations. In fiscal year 1959, the last year a congressional limitation was imposed, the allowance was $2,755,000. According to data supplied to me by the Department of Defense, the three military services and the Department spent 10 times that amount for this purpose in the 1969 fiscal year—$27,953,000.

The material I presented to the Senate and the Appropriations Committee clearly proves that the Defense Department's efforts to mold public opinion have gotten out of control since the legislative limitation was removed. I suggested to the Appropriations Committee that the limitation be reinstated, and that a ceiling of $10 million be imposed for public affairs spending in fiscal 1970. This cutback would still allow a funding level 370 percent above the amount Congress allowed in 1959. Unfortunately, the timing of my suggestions to the committee was such that it would have been difficult for the committee to have gone into this subject in the detail it deserved before it marked up the bill. Although the committee did not adopt my suggestion for a ceiling, or those dealing with other aspects of the problem, I was pleased to note that it concurred in House cutbacks of $5 million in military public affairs programs. This is a step in the right direction but much more needs to be done to bring these activities under effective congressional control.

The budget for fiscal 1971 is now being formulated within the executive branch. I hope that the Secretary of Defense and the Director of the Bureau of the Budget will take a hard look at this program with a view to trimming the military public affairs program back drastically. I, for one, expect to study very carefully the budget submitted to Congress next year, and I hope that both the House and Senate Appropriations Committee will take a special interest in this matter.

I had planned to ask the manager of the Defense appropriations bill several questions about the funds allowed for public affairs purposes but it was not possible to do so. However, I ask unanimous consent to have these questions printed in the RECORD for the information of Senators, especially the members of the Appropriations Committee. I hope that it will be possible to have a colloquy with the manager of the bill about the subject when the conference report is presented to the Senate.

There being no objection, the questions were ordered to be printed in the RECORD, as follows:

QUESTIONS

1. The Senate Committee concurred in the House cut of $5 million in the budget request for military public affairs programs. Does the Committee have an estimate of the total budget request for this program, including personnel and other costs?

2. According to information given to me by the Department of Defense, some 2,300 people were working full time in public affairs programs in fiscal 1969. Does the Senator know how many people would be involved in these programs under the budget request?

3. Does the budget estimate include the cost of transportation furnished by the military services for public affairs purposes? Does the Senator believe these costs should be included?

4. The Department of Defense maintains five television camera crews in Vietnam to provide newsfilm for the TV networks. Does the Senator think that the Defense Department has a responsibility to provide newsfilm to the TV networks, when each have many reporters and cameramen of their own in Vietnam?

5. Does the Senator believe that it is proper for any government agency to engage in lobbying the public to build up support for its programs? Does the Senator think the public should have full information about the nature and extent of government public relations programs?

6. Does the Senator agree that some type of Congressional spending limit on military public affairs activities may be desirable in order to bring the program under more effective Congressional control?

7. Does the Senator think that his Committee may give some detailed study to this problem in connection with its consideration of the budget request for FY 1971?

TROOP WITHDRAWAL IN VIETNAM

Mr. McGEE. Mr. President, in the aftermath of President Nixon's announcement last night that he is continuing his policy of phased withdrawal of U.S. combat forces in Vietnam, it is well that he ask the very question the President proposed: Is this not taking a risk? Reporter Don Oberdorfer, writing in the Washington Post of Sunday, December 14, assessed this very question and concluded that the chances of the policy now being pursued working were reasonably good—by that, he meant better than 50–50. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. PULLOUT MAY NOT MEAN LOSING WAR

(By Don Oberdorfer)

SAIGON.—One of the wisest and most discerning of Vietnam's intellectuals is preparing to write a history of his generation, which was brought up under the mandarins and has known the French, the Japanese, the Americans, the Vietnamese Communists and 25 years of war and turbulence with only a few interludes of national peace.

The title of his work will either be "Vietnam Between Despair and Hope" or "Vietnam Between Hope and Despair." He still hasn't decided which.

The uncertainty is understandable and widely shared. In four years of periodic visits to this country, I have encountered only a handful of men, mostly Americans, who were certain they had a clear vision of the future. The majority of these men are long departed, and few of them left with either their visions or their careers intact.

Surely there is no other place on earth where what seems impossible today so often takes place tomorrow and where the foreseeable future for natives and foreigners alike usually runs to about noon on the following day. "The problem of projection here is the if factor," one of the most experienced U.S. officials observed wryly the other day. "You can formulate a handy-sounding program for the future, but there are always three if's in every sentence."

AN EDUCATED HUNCH

Nonetheless, projection is now more pressing and perhaps more feasible for Americans and Vietnamese than it has been in many months. The U.S. government has taken a clear new direction—the gradual withdrawal of U.S. ground combat troops in the next year or two—and the insistent question is whether this can be accomplished without losing the war.

Can the United States withdraw 300,000 or so men on such a schedule without drastic military reverses or a political collapse in South Vietnam? Can the South Vietnamese government hold its own in the short run—say the next three or four years—with substantial U.S. economic help plus American artillery, air and logistical support? In short, can the Nixon policy work?

After a return visit of four weeks and with some trepidation, my guess is that as of today the chances are reasonably good, by which I mean something better than 50–50. The chances for South Vietnam's survival in something like the present form in the long run appear to be considerably lower, but that is another story.

Anyone who ever spent much time here can cite a dozen reasons for a hundred supposed facts to support or refute almost any side of any question. In this country, it is usually the estimate that comes first and the reasons later, which is another way of saying that people are forced to rely in the end on educated hunches. Here are some of the factors behind my hunch of the moment:

First, there is the sheer inertia force of regimes and events, which counts for much in this part of the world. Nobody expected Ngo Dinh Diem to last a year or Nguyen Cao Ky to last a month, but both lasted for as long as the military were behind them. At present, Nguyen Van Thieu appears to be unchallenged from within the army, which amounts to nearly one million full-time soldiers under arms and is likely to be raised soon by another 100,000 or so. Roughly one in every nine South Vietnamese is in the government's armed forces.

The United States has now supplied the South Vietnamese with 70,000 M–16 rifles, 1,200 tanks and armored vehicles, 30,000 machine guns, 4,000 mortars and nearly 25,000 jeeps and trucks. The enemy force of Vietcong and North Vietnamese troops has also been supplied with modern weapons by their allies, Russia and China.

But the human arsenal of South Vietnam is no pushover so long as its soldiers fight. There is every sign that they will do so, particularly when self-preservation is involved.

Second, South Vietnamese leaders and officials are finally beginning to act as if this is their country and they have a real stake in the war. This is less true of the general populace, who have less room to maneuver and less at stake. It may be significant, though, that the children in Hue are playing childhood games of how to defend the city against the nasty Vietcong.

Third, the Vietnamese government, from necessity if not conviction, has begun to accord a greater measure of military and political power to the villages and hamlets in the countryside. Two of the most important changes since my last visit were the decision in the summer of 1968 to distribute weapons to a people's self-defense force of local volunteers, and the decision that fall to put local village chiefs in control of the paid Popular Force soldiers in their areas.

As of today, military conditions are better in most places than they have been for several years. According to the hamlet evaluators and the computers, 92 per cent of the people are under government control at midday. An American general says that "Saigon is safer than Washington, D.C."

Favorable as present conditions may be, they could change rapidly with changing military pressures. This has happened before. Since much of the progress is reversible, the great question is not so much the pattern of today or even of the next several months—when some sort of Communist offensive is expected—but the pattern of a year from now or two years from now, as American forces are gradually withdrawn.

One of those who has been living with the problem for the longest time is Gen. Cao Van Vien, who turned 48 years old this week and by popular repute is the only top Vietnamese general who was ever wounded in action. For more than four years, Vien has been chief of the joint general staff of the Vietnamese armed forces.

His spacious office, where the top political and military leaders gathered in refuge the first morning of the 1968 Tet offensive, is on the second floor of a former French headquarters building in a heavily guarded compound near the Saigon airport.

Vien is a handsome man who speaks good English, and he had prepared written answers to some questions submitted in advance. One of them said that he realizes "the U.S. commitment is bound to diminish." He estimated that "if nothing out of the ordinary should come about—such as a dramatic increase in the rate of North Vietnamese infiltration—I do not forsee any serious military reverses for the South Vietnamese army." The clause about infiltration was underlined.

Throughout his written and oral remarks in an interview lasting an hour, there was an underlying note of concern about a possible Communist military buildup during the period of American military withdrawal. Vien said that on the average, 12,000 soldiers monthly have been coming from North Vietnam into the South this year, plus 3,000 tons of supplies monthly through the mountains and another 600 tons through the Cambodian port of Sihanoukville. The infiltration has stepped up in recent weeks.

"We may have to come up with something absolutely novel to sever the North Vietnamese infiltration flow, the single most important factor contributing to the enemy's capability to prosecute this war," the general says. This novel method must cut the flow "effectively and entirely." Otherwise, South Vietnam will continue to be threatened for 10 or even 25 years more.

BAFFLED MARINES

By Vien's reckoning, it would take a minimum of three divisions to interdict the Ho Chi Minh Trail in Laos with a ground invasion (informed Americans estimate the required force at five divisions) and that kind of strength is simply not in sight. At the moment, South Vietnam lacks sufficient force even to stop the flow of men across the demilitarized one—just as the U.S. Marines who formerly manned this area could not stop it.

Unless the infiltration is stopped, the general said, "the Vietnam war may still produce results that, for us Vietnamese, are to be expected, but for outside observers may prove the ill-foundedness of the present strategic approach." He is anxious to be able to turn to American air and artillery troops for support in such a case. He wouldn't say how many such troops would be needed, but he reported hearing that the United States plans to leave 250,000 troops in enclaves at least for several years.

An American general with as many stars as Cao Van Vien was asked if there is any realistic prospect of cutting off the infiltration into South Vietnam. The answer was no.

Vien describes the problem of infiltration as "the single dark spot in an otherwise rosy picture," and no doubt it is a fundamental problem. Nonetheless, it is possible to spot many other serious problems that, together with contniued Communist pressure, could someday wreck the whole effort.

South Vietnam is basically rich in natural resources—rice, timber, fish and rubber—but as presently constituted, it is not a viable nation in the absence of massive American aid. North Vietnam, with its Communist regime and greater history of hardship and privation, has greater self-sufficiency.

South Vietnam cannot support a million men under arms or anything like it with the resources it is itself willing or able to muster. More than a million people have been driven from their homes and farms by the war, and the country cannot support them either.

President Thieu recently informed his people that the country spends $600 million annually to import various types of goods, but sells only $20 million in exports to pay for them. A nation cannot spend 30 times its

dollar earnings without large and continuing subsidies.

The hope and expectation of American embassy officials is that U.S. economic aid will increase as the number of American servicemen in the country declines. Failure to foot the bill for these subsidies, whether from refusal by Congress or any other cause, would bring a severe crisis.

Finally, there is the still unsolved political problem, which may well become acute as the country faces the constitutiionally prescribed preisdential elections of September, 1971.

Many Vietnamese who accept the Thieu regine as a necessity today are dead set against its continuance for four years after 1971. But it seems improbable that Thieu will step aside.

If the constitution is followed and the elections honestly held, Thieu may have a most difficult time winning over any strong or united opposition. If the opposition is throttled or the election rigged, there could be trouble of a different sort. Meanwhile, North Vietnam is believed to be absorbed in its own political power struggle, which is another factor of first importance.

A SYMBOLIC SOUVENIR

Pondering the past and future of this tragically divided nation, one turns in the end to the blood that has flowed because of ideology, historical accident, geography and conflicts rooted far beyond the borders of Vietnam.

Since my first trip here in April, 1966, in what seemed then to be the last reel of a double-feature war, some 36,000 Americans, 69,000 South Vietnamese soldiers and 446,000 Vietcong and North Vietnamese soldiers have been killed, according to official report. Uncounted thousands of civilians in both North and South Vietnam have also been victims.

South Vietnam has filled one national cemetery in this period, and is 3,000 graves into a new one. Despite all this, the U.S. military estimates that 230,000 Vietcong and North Vietnamese troops are fighting in the South, which is virtually the same number as were carried on the official order of battle four years ago.

Late one afternoon, in search of a change of view, I went to the An Quang Pagoda to see Thich Tri Quang, the sometimes militant and sometimes enigmatic monk who is among the few truly charismatic Vietnamese. He and his Buddhist followers were the surprise catalytic agents who stirred the 1963 revolt against Diem and who almost split the country in a battle for political change in 1966.

The living embodiment of the unexpected and the unpredictable was alone in his cloister inscribing classical Chinese characters on rough paper with a thin brush and a bottle of ink. The temple bells were tolling and the young novices were padding about. The monk spoke of history and philosophy, but would say nothing about the present or the future.

Before saying farewell, Tri Quang agreed to draw an appropriate Chinese character to be carried back to the United States as a souvenir of the visit. First he drew the character *Hoa*, an angular, graceful series of strokes meaning a harmonious mixture, like the mixture of pigment and water in his bottle of ink. Then he drew *Binh*, which means serenity and calm.

Together they spell *Hoa Binh*, which means peace. Surely there is nothing the Vietnamese on both sides need more desperately, or seem less likely to achieve in the years just ahead.

INSURANCE FOR HIGH QUALITY MEDICAL CARE

Mr. YARBOROUGH. Mr. President, in a very timely address at the Lowell Lecture Series in Boston, the Senator from Massachusetts (Mr. KENNEDY) has today proposed that Congress begin work to bring high quality medical care to all the American people through a national system of insurance. In his speech, he outlines a timetable that would put such a program in operation by 1975.

Reaching this goal, of course, will require much more than a method of payment. It will require a great expansion in medical manpower and in the education of men and women in the health professions. It will require an expansion of facilities, particularly diagnostic clinics where large numbers of people can have their medical problems investigated and prescribed for. All these facets of health need are outlined here, as well.

I hope that all Senators and others who are interested in the health needs of the American people, will read and examine this speech by Senator KENNEDY. I invite attention to the mention which he makes of the conversations I have had with him about this program. It is my hope and expectation that the Subcommittee on Health, of which I am chairman, will go into the subject of health insurance next year.

As chairman of the Health Subcommittee of the Senate, I have advocated health care for the American people, and am one of a committee of 100 supporting health care for all of the American people.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR EDWARD M. KENNEDY, LOWELL LECTURE SERIES, BOSTON UNIVERSITY MEDICAL CENTER—LOWELL INSTITUTE, DECEMBER 16, 1969

I am delighted to be in Boston today under the auspices of the Boston University Medical Center and the Lowell Institute to address this distinguished audience of medical educators, private physicians, and lay men concerned with the quality of health care in America.

I am particularly pleased to be here because it gives me the opportunity to commend the many worthy accomplishments of the Boston University Medical Center and its School of Medicine. You have succeeded in breaking down walls that for decades have turned medicine inward toward the age-old trinity of patient care, research and teaching. You have expanded your horizon to embrace the equally important area beyond your walls—the community in which we live.

For more than 90 years, your Home Medical Service has taken students into the community and provided model health care and innovative medical services in the home. Your expanding programs of new hospital affiliation have brought modern urban medicine to outlying communities. You have helped to lead the way in efforts throughout the world to unify cancer care with cancer research, so that today's advances in the laboratory become tomorrow's accepted treatment. Your School of Graduate Dentistry, dedicated in September, will provide high quality dental care as part of the Medical Center's total health program for the community.

In the course of the past decade, your pioneering program in community psychiatry and mental health in the South End and Roxbury—launched long before the Great Society and the Office of Economic Opportunity came into being and made such programs fashionable—have become a model for the nation. You helped develop what is now the rallying cry for health planning in America—that new health programs must be designed *with* the people and *by* the people, not just *for* the people. As Dr. Bandler has so eloquently stated, your far-reaching role in community involvement is like a man standing by a river watching people drown:

"Medicine traditionally wades in," he said, "and tries to save them one at a time. After doing this repeatedly, you can't help but ask what is happening upstream. It seemed sensible to go back and find out why all the people were falling in, and try to do something about it."

I commend you for your leadership in looking upstream, and for the remarkable efforts you are making in preventive community medicine and all the other major areas of this great center's activity.

Six weeks ago in Springfield, I had the occasion to discuss what I regard as the single overriding economic issue of the day—the war against inflation. As I have frequently stated, the war against inflation is a war that can and must be won without the cost of heavy unemployment. It is a war that can and must be won without cutting back on our important domestic priorities.

Nowhere is the impact of inflation more obvious than in the rising cost of medical care. Never has the gift of good health been more precious:

In the last three years, the cost of health has risen by 22 per cent, or nearly double the rise in general consumer prices.

Hospital daily service charges have soared by the astronomical rate of 55 per cent, or nearly five times the rise in consumer prices. The average cost of a hospital day is now $68. It will rise to $74 next year, and to $98 by 1973.

Physicians' fees have risen by 21 per cent. Doctors line up at lawyers' offices to form corporations and raid the Federal Treasury for hundreds of thousands of dollars a year in deferred taxes.

All of this inflation has occurred during the early years of Medicare and the troubled Medicaid program. The most rewarding experience of Medicare has been its success in solving the serious problem of health costs for our poor and our aged citizens. In spite of inflation, Medicare has been immensely popular. It is liked and accepted by the people.

The most painful experience of Medicare and Medicaid has been their unfulfilled promise. We sought to spread the benefits of medical science and technology to millions of Americans, without considering the anachronistic and obsolete structure of the system by which the health services would be delivered. Unwisely, as many experts have recognized, we assumed that all that stood between our poor and aged citizens and high quality medical care was a money ticket into the mainstream of modern American medicine.

We know now that we were wrong. The money ticket *was* important, but it was not enough to solve the problem. In the years since Medicare and Medicaid were enacted, we have learned that medical insurance and payment programs could not be translated instantaneously into more doctors, more nurses, more health facilities, or better organization of the delivery system.

In wedding new purchasing power to the already existing demand for health services, we did nothing to solve an already intolerable situation. The cost of health care began to soar. In some cases, the quality of care declined, and an enormous strain was placed on the capacity of our existing health services and facilities. When an already overworked physician goes from seeing one hundred patients a day to seeing two hundred patients a day, the quality of his care is inevitably affected. His only escape is to consign more of his patients to hospital treatment, thereby increasing the strain on hospital facilities and hospital costs.

Today in the United States, health care is big business. Indeed, it is the fastest

growing failing business in the nation—a $60 billion industry that fails to meet the urgent demands of our people. Today, more than ever before, we are spending more on health care and enjoying it less. By 1975, we may be spending $100 billion a year on health and be worse off than we are now in terms of the quality and responsiveness of our health care system.

Perhaps the most serious fault in the present situation is the failure of the Federal Government to play a greater role in improving the quality of the nation's health care. Health is big business in America, and the Federal Government has become a major partner in this business. The total outlays for medical and health-related activities in the Federal budget estimated for 1970 are $18 billion, or nearly one-third of the total health expenditures in the nation. The outlays for 1970 are divided among 14 principal departments and agencies. By far the largest amount—$13 billion—is expended by the Department of Health, Education and Welfare, but significant amounts are also expended by the Department of Defense—$2 billion—and the Veterans Administration—$1.7 billion.

In 1960, the total outlays for health in the Federal budget were only $3 billion. Thus, in the decade of the Sixties alone, we have had a six-fold increase in total Federal outlays for health. Indeed, almost 10 per cent of the total Federal budget now goes for health. The major share of the rise in recent years has been for Medicare and Medicaid. Yet, in spite of the dramatic increases in the health budget and the large amounts we are now spending, there is almost no one who believes that either the Federal Government or the private citizen is getting full value for his health dollar.

Of course, a significant proportion of the increase in health expenditures is being consumed by rising costs and our growing population. Between 1950 and 1969, personal health care expenditures increased by $42 billion. Of this increase, 50 per cent was attributable to rising costs, and another 19 per cent was attributable to population growth, so that only 31 per cent of the increase represents real growth in health supplies and services over the past two decades.

Although the conventional wisdom is content to blame our current medical inflation on Medicare and Medicaid and the excess demand created by these programs for health care, there is another, more controversial aspect to the rising prices. As Professor Rashi Fein and other experts in the field of the economics of medicine have made clear, the basic models used by economists are not appropriate when applied to health. The medical market is characterized by the absence of competition, diverse products, and consumer ignorance. Comparisons of quality and performance are extremely difficult, if not impossible.

In other words, the medical marketplace is an area where the laws of supply and demand do not operate cleanly, and where physicians have a relatively large amount of discretion in setting their fees. Thus, at the time Medicaid and Medicare were instituted, fees rose for a variety of reasons, many of which were unrelated to the creation of excess demand:

Some physicians raised their fees in anticipation of a Federal fee freeze.

Some raised their fees in the face of rising hospital costs, in order simply to preserve their slice of the growing health pie.

Some raised their fees simply because they had the discretion to do so, and decided to take advantage of the instability and price consciousness generated by the new Federal programs.

As in the case of physicians' fees, the economic model of supply and demand does not tell the whole story of rising hospital costs. In part, hospitals took the opportunity to provide substantial—and wholly justified—wage and salary increases to their notoriously underpaid employees. In part, costs rose because the new Federal financing methods contained few incentives for improving efficiency, but simply encouraged hospitals to pass the higher costs on to Washington.

The high cost of medical care is but one aspect of the overall health crisis. In America today, it is clear that we are facing a critical shortage of health manpower. Indeed, at bottom, our crisis in medicine is essentially a crisis in manpower. The need is urgent for more physicians, more dentists, more nurses, and more allied health professional and technical workers. We must develop new types of health professionals and para-professionals. We must make far more efficient utilization of our existing health manpower. Only if we succeed in these efforts will we be able to free our physicians and highly trained medical experts to perform the sort of intricate operations and sensitive counselling discussed by Dean Redlich in the inaugural lecture in this series.

The need is especially clear in the case of the shortage of doctors. Our low physician-population ratio means that unsatisfactory medical care is a way of life for large numbers of our people in many parts of our nation. In 1967, in the United States as a whole, there were 260,000 private physicians providing patient care for our 200 million people. This is a ratio of 130 physicians for every 100,000 citizens, or one doctor for every 700 people.

At first glance, the ratio appears to be fairly close to the satisfactory ratio generally recommended by many health experts, but the figures are misleading. The family doctor—the general practitioner—is fast disappearing, and is on the verge of becoming an extinct species. At the present time only one out of four of the nation's physicians is engaged in the general practice of medicine. Three out of four are specialists, most of whom accept patients only on a referral basis. The true doctor-population ratio, therefore, is more like one general practitioner per three thousand population, a ratio that is clearly unacceptable for adequate health care for our people. For far too many of our citizens, the only "doctor" they know is the cold and impersonal emergency ward of the municipal hospital.

To make matters worse, the geographic distribution of our doctors is highly uneven. Two-thirds of our physicians serve the more affluent half of our population. In some states, of course, the physician-population ratio is higher than the national average of 130 doctors per 100,000 population. In Washington, D.C., the ratio is 318; in New York it is 199; in Massachusetts, 181.

In sixteen states, however, the physician-population ratio is far below the national average. In Alaska and Mississippi, the ratio is an abysmal 69, or about one-half the national average. In Alabama, it is 75. Even in Texas, it is only 106. Clearly, therefore, extremely large groups of our population are receiving seriously inadequate medical care because of the shortage of physicians.

One of our most urgent needs to meet this crisis is a stronger Federal program to expand existing medical schools and establish new schools. We must substantially increase the output of doctors from our medical schools. At the present time, about 8,000 students are graduated from our medical schools each year. The Association of American Medical Colleges estimates that the number of students entering medical schools will increase by 25 per cent to 50 per cent by 1975, as a result of the construction of new medical schools already begun, and the expansion of existing schools already planned. Yet, if the physician-patient ratio is to be improved substantially, our goal should be to admit double the number of current students by 1975, with special emphasis on medical schools in regions where the physicians-population ratio is too low.

There is another reason why we must increase the enrollment in our medical schools, aside from the need to provide better health care for our people. Today in America, the medical profession is that one profession that flies in the face of the American credo that every man shall have the opportunity to join the profession of his choice. Today in America, if a poor black or white young American aspires to be a lawyer, he will have the opportunity to enroll in a law school somewhere in the nation that will give him the chance to fulfill his dream. It is the shame of American medicine that no such opportunity exists for the youngster who aspires to enter what is perhaps the most exalted and selfless of all our professions, the healing arts.

Ironically, at the very time we are denying this opportunity to our own citizens, we are importing thousands of foreign-trained doctors each year to meet our manpower crisis. Twenty per cent of the newly licensed physicians each year in the United States are foreign-trained. Forty thousand foreign medical graduates are now practicing medicine in the United States, or about 15 per cent of the total number of doctors providing patient care. Thirty per cent of all our interns and residents are foreign-trained.

These figures are appalling. I believe that at this crucial period in world history, it is deeply immoral for us to be luring physicians from the rest of the world to meet our own doctor shortage, when their services are even more critically needed in their own lands.

The landscape we see is bleak, but it is not without hope. If we are to be equal to the challenge, however, we must be prepared to take major new steps. As Hippocrates himself put it two thousand years ago, where the illness is extreme, extreme treatments may be necessary. I would like, therefore, to share with you my views as to the directions we should begin to take now, if we are to meet the challenge.

First, and perhaps most important, we need a new approach to the politics of health. Our single greatest deficiency in the area of health is our failure to develop a national constituency, committed to a progressive and enlightened health policy. As a prestigious Committee of the National Academy of Sciences has recently and eloquently stated with respect to the problem of the confrontation between technology and society, the issue is far more serious than the simple question of braking the momentum of the status quo. Today, all too often, whether the area be that of medicine, or education, or pollution, the vested interests are strongly ranged against innovation, and there is no champion capable of marshaling the diffuse advocates for progress and reform. When a better teaching organization threatens the bureaucratic status quo in education, we know there will be organized opposition from school officials, but there is seldom organized advocacy by parents and children. When a new and more efficient development is offered that threatens the status quo in health—whether in the organization, financing, or delivery of health care—we know there will be opposition from organized medicine, but there is seldom organized advocacy by health consumers.

In these situations, a thorough consideration of the relative merits of alternative proposals is rendered difficult, if not impossible, by the presence of powerful spokesmen for the old, and the absence of effective spokesmen for the new. If we are to succeed in making basic changes in our health care system, we can do so only by creating the sort of progressive national health constituency that can make itself heard in the halls of Congress and the councils of organized medicine.

To be sure, there is cause for hope. The present generation of medical students is

outstanding. They are already beginning to develop the commitments to public causes, the enlightment and social conscience so desperately needed in the health profession. And, in spite of the heavy responsibility that organized medicine must bear for the inadequacy of our health manpower and other resources, a few leaders have recently made progressive statements suggesting a new recognition and awareness of the problem.

Second, the Federal Government must play a far more active and coherent role in the formulation and implementation of health policy. We must develop a comprehensive and carefully coordinated national health policy, with an administrative structure capable of setting health goals and priorities for the nation. In the spring of 1968, I introduced legislation urging the creation of a National Health Council to be established in the Executive Office of the President with responsibility for setting health policies and making recommendations for the attainment of health goals, including the evaluation, coordination, and consolidation of all Federal health programs and activities. The National Health Council would be modeled along the lines of the Council of Economic Advisors, which has consistently played a superlative role in planning and coordinating the nation's economic policy.

Third, we must move away from our excessive emphasis on high-cost acute-care hospital facilities. We must make more imaginative use of innovative types of low-cost facilities, such as neighborhood health centers and other out-patient facilities, storefront clinics, and group health facilities. In spite of the active opposition of a substantial segment of the medical profession, group practice and hospital-based practice are probably the most efficient and economical means of delivering health care today. In many areas, the ideal arrangement consists of a teaching hospital in a medical center, with affiliations to community hospitals in the surrounding area. In turn, each of the community hospitals serves as the center of a series of satellite group practice clinics that can reach out directly into the entire community.

Fourth, while we are building the nation's overall health policy, we must give special attention to the health of our urban and rural poor. For too many of the poor, the family physician has disappeared, to be replaced by the endless lines and impersonal waiting rooms of huge municipal and county hospitals. Yet, there are few physicians today who were not trained on the wards and charity patients in our teaching hospitals. Too often, as Professor Alonzo Yerby has eloquently stated, our poor have had to barter their bodies and their dignity in return for medical treatment.

In America today, millions of our citizens are sick, and they are sick only because they are poor. We know that illness is twice as frequent among the poor. We know that the poor suffer three times as much heart disease, seven times as many eye defects, five times as much mental retardation and nervous disorders. Although our goal must be one health care system open to all our citizens, we have an obligation now to increase the range and efficiency of the health services and facilities available to the poor, with special emphasis on breaking down the barriers that have for so long divided our society into a two-class system of care—one for the rich and one for the poor, separate and unequal.

Specifically, I urge the Administration to create a National Health Corps, as an alternative to the draft for doctors, and stronger than the "Project U.S.A." program recently recommended by the AMA. Today, doctors are exempt from the draft if they serve two years in the National Institutes of Health or other branches of the Public Health Service. The same exemption should exist for doctors volunteering for medical service in urban or rural poverty areas. Only in this way will we be able to meet the critical need for health manpower in depressed areas. And, once young physicians are exposed to the problems of health care for the poor, a significant proportion of them will be encouraged to remain and dedicate their careers to this service.

In addition, we should make a substantial new effort to expand the neighborhood health center program. At the present time, less than a dozen medical societies in the nation have become actively involved in neighborhood health centers. Yet, in recent weeks, prominent leaders of the AMA itself have called for a greater role for neighborhood health centers as a means of extending health care to the poor. A few imaginative pilot projects reaching in this direction have recently been funded by the Office of Economic Opportunity, including a program to reorganize the out-patient department at Boston City Hospital as a nucleus for community health care, but our overall effort has been inadequate. Tragically, at a time when even organized medicine is moving forward, we have been unwilling to allocate the resources so urgently needed for this program.

Fifth, within the critical area of health manpower, we must give special attention to training new types of health professionals. In far too many cases, highly trained physicians spend the overwhelming majority of their working day in tasks that do not require their specialized medical skills. One of the most promising methods of easing the shortage of doctors is to train new types of health workers to perform these non-specialized tasks, thereby freeing our physicians for other, more urgent needs. We must develop a broad new range of allied health professionals, such as paramedical aides, pediatric assistants, community service health officers, and family health workers.

At a number of our universities, imaginative new programs are under way to train medical corpsmen from Vietnam as physicians' assistants. In the State of Washington, hospital corpsmen are trained for three months in the medical school, and then sent into the field for nine months' further training in the offices of private physicians. A similar program now exists at Duke University. These programs are unique in their emphasis on combined training in the classroom and in the field. They are programs that must be greatly expanded if we are to meet the urgent demand for more and better trained health manpower.

Sixth, we must restore the severe budget cuts that have been proposed in Federal health programs by the present Administration. Later this week, the full Senate will vote on Federal health appropriations for the current fiscal year, 1970. None of us in Congress can be proud that almost half way through the present fiscal year, we are only now about to vote the funds that may be used. Our error is compounded by the knowledge that at this time of medical crisis, Federal assistance to health programs may be drastically curtailed, especially in the areas of research and manpower training.

Today, when every medical school and every other health school is being urged to expand its manpower programs, the Administration is requesting far less funds than Congress authorized as recently as 1968 for these vital programs.

The impact of the proposed cuts will be felt in medical schools, hospitals, research centers, and communities throughout the nation. It will be measured in terms of cancer research cut short, lives lost because coronary care units are un-funded, special hardship for the poor, and the loss of dedicated young students from careers in medicine and medical research.

Seventh, I come to what I believe is the most significant health principle that we as a nation must pursue in the decade of the Seventies. We must begin to move now to establish a comprehensive national health insurance program, capable of bringing the same amount and high quality of health care to every man, woman, and child in the United States.

National health insurance is an idea whose time has been long in coming. More than a millennium ago, Aristotle defined the importance of health in a democratic society, when he said:

"If we believe that men have any personal rights at all as human beings, then they have an absolute moral right to such a measure of good health as society and society alone is able to give them."

Today, the United States is the only major industrial nation in the world that does not have a national health service or a program of national health insurance. The first comprehensive compulsory national health insurance was enacted in Prussia in 1854. Throughout the Twentieth century, proposals have been periodically raised for an American program, but never, until recently, with great chance of success.

National health insurance was a major proposal of Theodore Roosevelt during his campaign for the Presidency in 1912. Shortly before the First World War, a similar proposal managed to gain the support of the American Medical Association, whose orientation then was far different than it is today. During the debate on social security in the Thirties, the issue was again raised, but without success.

Today, the prospect is better. In large part it is better because of the popularity of Medicare and the fact that many other great national health programs have been successfully launched. The need for national health insurance has become more compelling, and its absence is more conspicuous. In part, the prospect is good because the popular demand for change in our existing health system is consolidating urgent and widespread new support for a national health insurance program as a way out of the present crisis.

For more than a year, I have been privileged to serve as a member of the Committee for National Health Insurance, founded by Walter Reuther, whose goal has been to mobilize broad public support for a national health insurance program in the United States. Two months ago in New York City, the Reuther Committee sponsored a major conference, attended by officers and representatives of more than 65 national organizations, to consider a tentative blueprint for a national health insurance program. At the time of the conference, I commended Mr. Reuther for the extraordinary progress his Committee has made. I look forward to the future development of the program. Already, it offers one of the most attractive legislative proposals that is likely to be presented for our consideration next year in Congress.

We must recognize, therefore, that a great deal of solid groundwork has already been laid toward establishing a national health insurance program. It is for this reason that I believe it is time to transfer the debate from the halls of the universities and the offices of professors to the public arena—to the hearing rooms of Congress and to the offices of your elected representatives.

Early next year, at the beginning of the second session of the 91st Congress, I intend to introduce legislation proposing the sort of comprehensive national health insurance legislation that I believe is most appropriate at the current stage of our thinking. The mandate of the Medicaid Task Force in the Department of Health, Education and Welfare has been expanded to investigate this area, and I urge the Administration to prepare and submit its own proposals.

Senator Ralph Yarborough of Texas has told me that, as Chairman of the Senate Subcommittee on Health, he will schedule comprehensive hearings next year on na-

tional health insurance. Our immediate goal should be the enactment of legislation laying the cornerstone for a comprehensive health insurance program before the adjournment of the 91st Congress. This is an issue we can and must take to the people. We can achieve our goal only through the mobilization of millions of decent Americans, concerned with the high cost and inadequate organization and delivery of health care in the nation.

Last week on the floor of the Senate, we witnessed the culmination of what has been one of the most powerful nationwide legislative reform movements since I joined the Senate—the taxpayers' revolution. It now appears likely that by the end of this month, there will be laid on the President's desk the best and most comprehensive tax reform bill in the history of the Federal income tax, a bill that goes far toward producing a more equitable tax system.

We need the same sort of national effort for health—we need a national health revolution, a revolution by the consumers of health care that will stimulate action by Congress and produce a more equitable health system.

Because of the substantial groundwork already laid, I believe that we can agree on three principles we should pursue in preparing an effective program for national health insurance:

First, and most important, our guiding principle should be that the amount and quality of medical care an individual receives is not a function of his income. There should be no difference between health care for the suburbs and health care for the ghetto, between health care for the rich and health care for the poor.

Second, the program should be as broad and as comprehensive as possible, with the maximum free choice available to each health consumer in selecting the care he receives.

Third, the costs of the program should be borne on a progressive basis related to the income level of those who participate in the program.

I believe there is no need now to lock ourselves into a specific method of financing the insurance program. There are distinct advantages and disadvantages to each of the obvious alternative financing methods that have been proposed—financing out of general revenues of the Treasury, out of tax credits, out of the Social Security Trust Fund, or out of another independent trust fund that could be created specifically for the purpose.

At the present time, I lean toward a method of financing that would be based on general Treasury revenues, with sufficient guarantees to avoid the vagaries of the appropriations process that have plagued the Congress so much in recent years.

I recognize the obvious merit of the tax credit and social security approaches. In particular, Social Security financing offers the important advantage that it is a mechanism that Americans know and trust. In the thirty-five years of its existence, Social Security has grown into a program that has the abiding respect and affection of hundreds of millions of Americans. In 1966, it demonstrated its capacity to broaden its horizon by its successful implementation of the Medicare program. To many, therefore, Social Security is the obvious vehicle to embrace a program for national health insurance, and soothe the doubts and suspicions that will inevitably besiege the program when it is launched.

At the same time, however, we must recognize the obvious disadvantages of Social Security financing. Under the Social Security system, the payroll tax is heavily regressive. The poor pay far too high a proportion of their income to Social Security than our middle or upper income citizens. Today, at a time when Congress is about to grant major new tax relief to all income groups, I believe it would be especially inappropriate to finance a national health insurance program through the conventional but regressive procedures of Social Security, rather than through the progressive procedures of the Federal income tax laws.

I wish to make clear, however, that I am not now rejecting an approach that would finance national health insurance by a modified approach through the Social Security System. By the use of payroll tax exemptions and appropriate contributions from the Federal Government, it may be possible to construct a program that will build in the sort of progression that all Americans can accept. The important point here is that we must discuss these possibilities in a national forum, and weigh the alternatives in the critical light of open hearings and national debate.

We must be candid about the costs of national health insurance. In light of our present budgetary restrictions, the price tags applied to the various health insurance programs are too high. They range from about $10 billion for "Medicredit," the AMA proposal, to about $40 billion for the Reuther proposal. It is therefore unrealistic to suppose that a total comprehensive program can be implemented all at once.

We can all agree, however, that it is time to begin. In light of the fiscal reality, the most satisfactory approach is to set a goal for full implementation of the program at the earliest opportunity. I believe that the goal should be 1975. The legislation we enact should reflect our firm commitment to this target date. Halfway through the decade of the Seventies, we should have a comprehensive national health insurance program in full operation for all Americans.

I have already stated my view that legislation establishing the program should be enacted next year. In January, 1971, we should begin to phase-in a program that will reach out to all Americans by the end of 1975. To meet that timetable, we should establish coverage in the first year—1971—for all infants, pre-school children, and adolescents in elementary and secondary schools. In each of the following four years, we should expand the coverage by approximately ten-year age groups, so that by the end of 1975, all persons up to age 65 will be covered by the program, and the existing Medicare program can be phased in completely with the new comprehensive insurance.

The idea of phasing in children first should receive wide support, both from the population as a whole and from the medical profession as well. As a nation today, the United States is the wealthiest and most highly developed medical society in the world, but we rank 14th among the major industrial nations in the rate of infant mortality, and 12th in the percentage of mothers who die in childbirth. In spite of our wealth and technology, we have tolerated disease and ill-health in generations of our children. We have failed to eliminate the excessive toll of their sickness, retardation, disability and death.

Equally important, we are already close to the level of manpower needed to implement a national health insurance program for our youth. American medicine is equal to the challenge. We have a solid tradition of excellence in pediatric training, with a strong and growing supply of experienced pediatricians, pediatric nurses, and allied manpower.

Moreover, by beginning our new program with youth and child care, it will be easier for the medical profession to implement the changes in the delivery system that must accompany any effective national health insurance program. And, the changes that we make in the delivery system for pediatric care will give us valuable experience and insights into the comparable but far more difficult changes that will be necessary in the delivery of care to adults as the insurance program is phased in over subsequent years.

Finally, by phasing in the insurance program over a period of years, I believe we can avoid a serious objection that will otherwise be raised—that national health insurance will simply exacerbate our current inflation in medical costs by producing even greater demand for medical care without providing essential changes in the organization and delivery system.

We know from recent experience that changes in the organization and delivery of health care in the United States will come only by an excruciating national effort. Throughout our society today, there is perhaps no institution more resistant to change than the organized medical profession. Indeed, because the crisis is so serious in the organization and delivery of health care, there are many who argue that we must make improvements here first, before we can safely embark on national health insurance.

I believe the opposite is true. The fact that the time has come for national health insurance makes it all the more urgent to pour new resources into remaking our present system. The organization and delivery of health care is so obviously inadequate to meet our current health crisis that only the catalyst of national health insurance will be able to produce the sort of basic revolution that is needed if we are to escape the twin evils of a national health disaster or the Federalization of health care in the Seventies. To those who say that national health insurance won't work unless we *first* have an enormous increase in health manpower and health facilities and a revolution in the delivery of health care, I reply that *until* we begin moving toward national health insurance, neither Congress nor the medical profession will ever take the basic steps that are essential to reorganize the system. Without national health insurance to galvanize us into action, I fear that we will simply continue to patch the present system beyond any reasonable hope of survival.

The need for comprehensive national health insurance and concomitant changes in the organization and delivery of health care in the United States is the single most important issue of health policy today. If we are to reach our goal of bringing adequate health care to all our citizens, we must have full and generous cooperation between Congress, the Administration, and the health profession. We already possess the knowledge and the technology to achieve our goal. All we need is the will. The challenge is enormous, but I am confident that we are equal to the task.

SECRECY ABOUT ACTIVITIES IN LAOS

Mr. FULBRIGHT. Mr. President, the Senate debate yesterday, both during the open and the closed sessions, took us a little closer to the goal of removing the official secrecy in which our activities in Laos have been cloaked since the Kennedy administration.

The awkward and fragile nature of that secrecy becomes more apparent as pieces of our activity in Laos gradually emerge for public view. The President himself last week added to the public's knowledge with the statement that, in his words, "we are also interdicting the Ho Chi Minh Trail as it runs through Laos." I do not believe that an American official prior to that time had publicly acknowledged that activity.

Yesterday, the Senator from Louisiana (Mr. ELLENDER), as acting floor manager of the Defense Appropriations Act, stated that that measure includes "approxi-

mately $90 million for the support of the Royal Laotian Army." That represented, I believe, the first time a figure had been publicly disclosed.

My point today is that these are facts the American public deserves to have before it just as the Senate deserved to have the full details of our operations in and over Laos yesterday in order to deal responsibly with the proposed legislation before it.

The President's statement about interdiction and Senator ELLENDER's military assistance figure were both incomplete. Therefore, both statements were unfortunately misleading if used to imply a total description of what we are doing in Laos or the cost to the American people of our activities there.

I would hope that the administration will seriously study yesterday's Senate debate and reconsiders its position on continuing the secrecy of our Laos involvement. As the Senator from Arizona (Mr. GOLDWATER) put it yesterday during the open session:

I was in Thailand two days ago and there are no major secrets there as to what we are doing.

Mr. President, unlike Senater GOLDWATER, the people of the United States cannot go to Thailand to get the facts on what we are doing there and in Laos. The time has come for their Government to tell them—directly and with the detail that permits them to understand that policy which clearly involves both war and peace and the spending of American lives and dollars.

PAUL PETZOLDT, MOUNTAIN MAN

Mr. McGEE. Mr. President, in an age of increasing creature comforts and the luxuries of civilization, there remains a need for the true men of the outdoors—for those who will use the challenges of nature to temper the new generation. Such a man lives in Lander, Wyo. His name is Paul Petzoldt. He runs the National Outdoor Leadership School, whose campus is the Wind River Mountains of Wyoming. He teaches outdoor life, conservation, and survival as perhaps no one else can or does. But more, what he teaches is confidence—a badly needed commodity always. Life magazine, in its current issue, profiles Paul Petzoldt and his school, and writer Jane Howard, in that article, sums up his message to his students when she writes:

Petzoldt keeps saying he is no missionary, but somehow he transmits an evangelistic message: you are more and better and stronger than you ever thought you could be.

Mr. President, I ask unanimous consent that Jane Howard's article entitled "Last Mountain Man? Not If He Can Help It," published in Life, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAST MOUNTAIN MAN?—NOT IF HE CAN HELP IT

(By Jane Howard)

If I could choose somebody to be stranded with on a desert island, or to get me out of any dilemma from a flat tire to the charge of an enraged bull moose during a lightning storm, I would instantly and confidently ask for Paul Petzoldt.

I'd have good reason. For one thing, Petzoldt is reassuring just to look at, reminding one as he does of Santa Claus, Falstaff and Hercules. He is six feet one inch tall, weighs 240 pounds and has gigantic circumflex brows over slightly slanted blue eyes. He is also transfixing to listen to, using words like *alpenglow, timberline* and *scarify* to tell of nearly 62 years of adventure—set not only in Wyoming, where he lives, but the Himalayas, the Alps and even flatlands and offices.

More to the point, Petzoldt would get us both out of there, wherever "there" might be, with more finesse than anyone I know of. We'd end up safe, warm, and a little sorry it all was over, because adventure is to Petzoldt what hymns are to a choirmaster. It has been not only his livelihood but his delight ever since 1924, when the first pair of dudes hired him to guide them up the Teton mountains. "I guess I've never been afraid to try anything," he says, and I guess he's probably right.

But he is not merely intrepid. Besides his gusto for skirmishes with the elements, he has a militant reverence for the natural world, as those whom he ushers into the wilderness soon learn. Once he made two boys walk back 12 miles to pick up a couple of pieces of tinfoil.

Petzoldt legends abound. He holds the world record for spending the longest continuous time at an altitude of more than 20,000 feet without artificial oxygen. He has invented a widely used system of signals for rope climbers, started the first mountaineering guide service in the United States, and probably made more first ascents of mountains than anyone in this country.

He knows the Tetons and the Wind River Mountain Range the way a good cabbie knows The Bronx. Once, when nobody else dared climb to the top of the Tetons to investigate a plane crash, he and a ranger made a three-day ascent in a whiteout blizzard, to discover 23 corpses. Another time, when a hapless parachutist had been trapped for a week atop a 5,117-foot volcano plug, Petzoldt led the rescue.

Once he skied seven days in howling winds and −30° weather, to dig through 10 feet of snow in search of uranium, only to find himself the victim of a hoax: the rock sample that had sent him off turned out to be from the Belgian Congo. Once he stayed in an Arizona canal all day to avoid walking barefoot on the sizzling rocks. He has also been known to kill an elk with a pocketknife, walk a tightrope, and disguise himself as a Sikh potentate during an anti-Western street riot in Calcutta. He has played water polo and football, raised alfalfa, hopped freights, and been a chef, a fur trapper, a downhill and slalom ski champion, a traveling lecturer, a golfer, a used car salesman and a dude rancher.

"Once," says an old friend, "Paul and Gene Tunney nearly came to blows in my living room in an argument over Chinese politics. I had to strain to keep them apart, because I wasn't at all sure Gene would win." Once Petzoldt bicycled all the 400 miles from Basle to Antwerp without a centime in his pocket. Once he gave some thought to running for Congress. Earlier he yearned to be a rodeo rider, "but a horse named Appendicitis changed my mind about that." Never mind. If someone told me Petzoldt had a blue ox named Babe or could literally leap tall buildings with a single bound, I wouldn't be too surprised.

Now, at a point in life when most men face retirement, Petzoldt is plunged into an involving new venture. His National Outdoor Leadership School, founded in 1965 and affiliated with the University of Wyoming and Kansas State Teachers College is growing so fast it keeps him in the mountains all but four or five nights every summer and absorbs his year-round attention. The NOLS campus, in Wyoming, is the rugged Wind River Mountain Range, some of which has never been accurately mapped.

NOLS students, mostly in their teens and twenties, flock by the hundreds from all over the country and the world for five-week courses. Divided into patrols of 12, they carry everything they will need in backpacks that can weigh more than 40 pounds. There is no weaving of lanyards, no compulsory singing of jolly songs around campfires. The students eat what they carry and find and catch, sleep in tents, and read topographical maps so they can plot their own 100-mile itineraries up and down through arctic and tundra zones, learning as they travel to recognize mushrooms, wildflowers and trees. They never even see the rear end of a jeep, much less a newspaper or a franchised root beer stand.

A handful of them, each summer, turn out to be "lookers and readers instead of doers." Two or three usually drop out, "because they suddenly decide their mothers need them at home"—a neat trick when they have no communication whatever with the world. The majority, however, find astonishing reserves of strength. Petzoldt keeps saying he is no missionary, but somehow he transmits an evangelistic message: you are more and better and stronger than you ever thought you could be. You didn't think you could rappel your way down that cliff, or sleep comfortably outside in a blizzard, or swing by a rope across a furious river, but guess what: you can. The students emerge with a self-reliance useful even back in the overcivilized world where problems are murky and abstract and solutions more so.

To get a glimpse of what he is about, I spent a few days with Petzoldt. We flew over the Wind Rivers, which for all their majesty looked about as habitable as a bank of clouds, as if they'd just been sprinkled with some giant Claes Oldenburg shaker of powdered sugar. Then we went camping in the Tetons, which in profile resemble the growth graph of some highly erratic corporation. We heard, once in a while, what must be the most primeval noise in the world: the bugling of male elks, in many-syllabled cries ranging over an octave. They sounded a little like inept Boy Scouts trying to play taps and a little like rusty door hinges, but not really much like either.

This gentle trip was no flirtation with peril. Even when frost covered our tents at night we were plenty warm with two sleeping bags apiece. My only trouble was trudging a steep quarter-mile uphill through tangled knots of sagebrush, but I did what Petzoldt advised and took a breath with each step to save wind. We made coffee from Jenny Lake water, cooked potato pancakes, used sage leaves as napkins and wished trout weren't out of season. When the time came to reload our packs I felt sad to go back down. Even Wyoming, one of the few states to have lost population in late years, seemed too crowded.

Brief as it was, this excursion showed me how Petzoldt is to outdoorsmen what Heloise is to housewives: an endless and bountiful source of useful tips and hints. My notebook was a jumble of miscellaneous outdoor lore. Fir needles are flat, spruce needles are square. Bottles and cans don't belong in the mountains at all. There are at least 13 ways of cooking trout. Salt is much more essential in cold weather than people realize. The quietest place in the world is a snow cave (a handy thing to know how to dig now that winter camping is getting to be as promisingly as popular as skiing was 30 years ago). Fiber-glass saddles are better than leather ones, but horses mar the wilderness even more than jeeps do, pawing at roots of trees, tearing up flower beds, and giving trail dust a lingering manure smell.

Dacron is better than down for sleeping bags and jackets; down is too warm if you wear it uphill and takes far too long to dry.

A foam-rubber product called Insulite is much better than an air mattress to put under a sleeping bag. Most books on survival are phony and impractical because they teach you to whittle wooden spoons instead of what you really need to know, like reading maps and dressing right.

Europeans and cowboys dress worse than anybody. "We almost consider it sinful," Petzoldt said, "to take young people into the hills shivering in Levis, letting their feet get bloody with blisters and sleeping cold all night." Proper dress means four layers of wool, to be added or removed as the sun and body heat change. Thermal socks aren't good, "because they're made principally of nylon and cotton, not wool. Electric socks? They're warm, sure, but who wants to carry batteries around?"

Good outdoorsmen travel light, Bad ones "accumulate so much arctic and Himalayan stuff they practically need a moving van to carry it around. All you really need to do, to be practical and warm, is scrounge around your own basement or attic. Before you leave you should make two piles; things you'll absolutely *have* to have and things you think you might need, and throw all the 'might needs' away." Good outdoorsmen needn't spend much money on food, either. "Even at today's prices you can eat well—two pounds and 3,500 to 4,000 calories—on $1.25 a day, if you buy stuff like Bisquick, dried soups, cereals and dried milk cheap at supermarkets.

"Some of the great mountaineers don't know how to camp or fish or swim or even start a fire," Petzoldt said. "A big percentage of people who go into the wilderness—even those who think of themsleves as great conservationists—ruin what they came to enjoy. We do less damage taking 100 people into the wilderness for 35 days than some parties of four camping out for two nights. It doesn't follow that if you've climbed K–2 or Everest you're a good outdoorsman."

Petzoldt's school is not for sybarites. Even in July the weather can be far from clement, with snows, lightning and rainstorms that can last a week. "And at the beginning of the course we generally kill a couple of cows—shoot them, cut their throats, de-gut them and have the girls butcher them. It's a good way to learn how to dress game. Inevitably someone faints and accuses us of cruelty, but we say, "Where do you think your steaks come from? They aren't manufactured at the supermarket, you know.' "

His students, Petzoldt thinks, hunger for reality. "Much of what they see around them," he says, "is phony. All through society they find people who talk one thing and do another. If they have a brain in their heads they can see that something is radically wrong." So, at NOLS, raw honesty is encouraged. "If somebody makes you mad in the mountains (where you have to pay, sometimes immediately, for every rationalization and mistake) you don't beat around the bush. You tell him about it."

But back in civilization, where half-truths are sometimes a necessity, such candor can lead to trouble. "When I tell my friends at Rotary or the Elks Club what I honestly think of youth and long hair and a few other things, they make me feel like a goddam effete intellectual. Out here there's an open season on Democrats." Even Petzoldt's wife Dottie is an ardent Republican, and an indoorswoman at that. She would rather work at the CBS radio station in Lander, of which she is co-owner, than rappel down a mountain. "But she has terrific humor," says her husband, "and we get along fine."

He is nobody's father but a vociferous champion of young people, "maybe because I was a protesting kid myself in the Depression. The world is changing so fast the old mores don't have a chance. Most judgments against kids are wrong. Suddenly they've become the type of Christians we were always told to be—their brothers' keepers. My generation says you're just supposed to talk about such things. I've always distinguished between Christianity and churchianity, which hides a lot of hypocrisy and evil."

Petzoldt was born in Iowa, the last of nine children, and raised on a farm in southern Idaho. When he was 14 his widowed mother returned to the Midwest, and he decided he'd rather set forth on his own than live with her or his married older siblings (one of whom became a champion jockey). "I wasn't running away from anything, but *toward* something," he says—the something of course being adventure. By thumb, rail and whatever means he could devise, he made his way all around the country, busing dishes, waiting tables, guiding dudes and playing poker. "I'm a good card player," he admits. "No, that's wrong. I'm a *very* good card player."

Horatio Alger could have written a book about Petzoldt's early years. Once, after he guided the dean of the chapel at Windsor Castle through the Tetons, the good dean bade him spend a year in England as his guest, studying and traveling. Petzoldt went, and stayed on to investigate most of Europe, including of course the Alps, where he didn't like the way guides were treated. "I never allowed myself or my guides to be treated like Swiss guides," he says. "We'd treat our people as *our* equals, even if we didn't think they were, and expected the same of them." Nor did he much like traditional explanations of why men climb. "I never could see the sense of going to the top of the goddam mountain just because it was there," he says. "If that's all, you might as well stay at the bottom in a bar."

The freighter that brought him back from Europe docked in New Orleans, and Petzoldt enrolled for a year at Louisiana State University. Later he studied at the universities of Idaho, Utah and Wyoming. He never did get a degree, which oversight bothered him only in establishing NOLS. "Then I finally realized that if you don't have a degree you're like a car going around without a taillight. If you *do* have one you have to prove you're stupid, and if you don't you have to prove you're smart."

Nobody questioned his brains during World War II, when he managed lend-lease programs for food shipped to Russia, devised medical evacuation methods for the Army's 10th Mountain Division and was later assigned to the Control Council in Berlin. Then he worked with the Chinese Nationalist Relief Administration in Shanghai and made his second excursion in the Himalayas, after which, for a time, he helped run a cold cream factory in India.

There he came to wonder about a practice nowadays known as transcendental meditations. "First I was convinced they were all a bunch of cultists lying to each other," he says, "but after practicing what they called 'concentration' for two months, eight or 10 hours a day, I got the idea. It was a beautiful sort of trance. I don't think any opium eater ever had it any better. It was so pleasant, physically as well as mentally, that I quit, because I was afraid I might get hooked and withdraw from the world."

Instead he went back to Wyoming to raise certified alfalfa seed. But the elevator in which he deposited his crops took bankruptcy, and he ended up broke. He struggled to recoup his losses until 1963, when he was asked to teach at the Colorado branch of an international program to accustom young people to outdoor adversity, called Outward Bound. Later he became chief instructor.

"I owe a great debt to Outward Bound," he says, "I disagree with their emphasis on toughness for its own sake, because I think toughness should only come through doing things that are fun. But I think Outward Bound is great, and it convinced me of the importance of something further—something I'd had in the back of my mind all along: giving people proper technical training to take kids outdoors (which is plenty tough, all right, but plenty of fun, too). All the organizations that tried to do this—the YMCA, the Scouts, the church groups—meant well, but they were stymied because they just didn't have the know-how. Not that you aren't doing a city kid a great favor if you take him to the country and say, 'Look, this is a tree, this is a flower, this is a rabbit.' But I saw a need for something more—something that might require more stamina and energy than Outward Bound, and yet be more fun."

Hence NOLS. "We started the school from scratch without one penny of financing," Petzoldt says. "Maybe it's a good thing the school doesn't have any angels: it makes us operate more efficiently. I wish we could give more scholarships, so more poor kids and black kids could come, but to *beg* them to come and be our token Negroes would be patronizing and insulting. We do give a few scholarships—some to kids who are getting out of penal institutions. The school is a great transition place for the return of criminals to society—for them just as for kids from rich prep schools in New England, all that counts is what you *do*, not what you were."

Those who get scholarships are expected eventually to pay the school back the $400 each course costs, and so far most have. Petzoldt doesn't regret his financial status. "Once I could have bought a cheap option on the Jackson Hole ski resort," he says, "but that I didn't is probably the most fortunate thing of my life. If I had a lot of money I'd get into all kinds of trouble. I'd probably weigh 300 pounds or be an alcoholic, or both."

Instead he has taken arms against the desecration of the wilderness, even as he leads more people into it. Critics find this paradoxical and say that even the best-taught, best-intentioned of visitors can only help sully such relatively untouched places as the Wind River Mountains. They foresee a glum day when public comfort stations and hot dog stands will mar places where, so far at least, few men have ever set foot. As somebody said in Jackson Hole, "It's a matter of numbers. As the population keeps exploding everybody professes to hope that the hordes of kids now growing up will dig the outdoors and the mountains, sure, but not *my* mountain—try that one over there." Some long for the old pre-Petzoldt days when cowboys, squinting at the awesome peaks and doubtless speaking for most other people, would say, "I ain't lost nothin' up there; why should I want to go up?"

But now that masses of people do want to go up, Petzoldt figures it's all to the good if they go up prepared. He thinks, in fact, that nobody should be allowed into the wilderness who hasn't demonstrated—perhaps to the satisfaction of some governmental agency—that he can read maps, has proper equipment, and knows what he's doing. The last thing he wants to do is keep people from savoring the outdoors, the best arena he knows of to slake thirst for adventure—"maybe even better," he suggests, "then marijuana or LSD." Aware of the Peter Principle dangers of his school's getting too big for its own good, he nevertheless contemplates establishing a branch in the East, and welcomes all imitators.

Home in Lander after a summer outdoors with his school, Petzoldt relishes hot baths and clean clothes, reads, listens to music, and takes Dottie out for a six-course *haute cuisine* dinner. "I have no desire to wear a hair shirt," he says. "I like comforts and civilization as much as anybody." But it's never very long before he has vanished again, for a while anyway, up into the mountains.

DEATH OF HON. FELIX HEBERT, FORMER SENATOR FROM THE STATE OF RHODE ISLAND

Mr. PASTORE. Mr. President, I rise to record the passing—on December 14, 1969—of a former U.S. Senator from my State of Rhode Island, the Honorable Felix Hebert.

Former Senator Hebert was notable for many reasons—among them his wealth of years. He had just celebrated his 95th birthday on December 11. He was the first man of French-Canadian ancestry to serve in this Senate. In my own State of Rhode Island men and women of French-Canadian ancestry form a very valuable part of the community and they have filled the highest offices in the power of our citizenry to bestow.

Felix Hebert was a direct descendant of the group of 50 from Old France who 327 years ago founded the city of Montreal.

He served here in a period of national change and challenge—from March 4, 1929 to January 3, 1935—and he was privileged to share this Senate with names that ring down the corridors of time—and I mention just a few from the 71st Congress—Hayden, Black, Ashurst, Caraway, George, Borah, Capper, Barkley, the elder Tydings, Gillett, Walsh, Vandenberg, Wheeler, Norris, Moses, Wagner, McNary, Metcalf, Smoot, Carter Glass, and LaFollette. The membership of the 72d and 73d Congresses were also his colleagues.

Distinguished as an attorney and international authority on insurance law, devoted to music, literature and civic affairs, Felix Hebert—to use his own phrase—was never more than "semi-retired" even in the final decade of his busy life.

To his surviving son and daughters the respectful sympathy of this Senate joins the appreciative condolences of the community to which Felix Hebert was devoted.

Mr. PELL. Mr. President, I was saddened to learn of the death of a former member of this body from Rhode Island, the Honorable Felix Hebert.

Senator Hebert represented the people of my State here in the Senate during the very difficult years from 1929 to 1935 when this country was struggling to recover from economic collapse.

Born in the Province of Quebec, he was the first man of French-Canadian ancestry to serve in the Senate. His Republican colleagues here in the Senate recognized his energy and leadership by electing him to serve as the Republican Whip during the 73d Congress. In that capacity he was a forceful spokesman for his party's views on the great issue of that era—the formulation of policy to restore the Nation's economic health.

After his loss in the 1934 elections, Senator Hebert returned to Rhode Island and remained active in party and civic affairs, serving as Republican National Committeeman from the State from 1944 until 1952.

I did not know Senator Hebert, but I recently had the pleasure of having his grandson, Adrien W. Hebert, Jr., serve in my office as an intern.

At his death on Sunday at the age of 95, Senator Hebert was the oldest living former Member of the Senate.

I extend to his family and friends my sympathy at their loss.

Mr. President, I ask unanimous consent that an article from the Providence Journal of Monday, December 15, on Senator Hebert's career be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORMER U.S. SENATOR FELIX HEBERT, 95, DIES

Felix Hebert, a former United States senator from Rhode Island, an international authority on insurance law and a one-time power in the state's Republican Party, died last night at Kent County Hospital. He was 95.

Mr. Hebert, born in the Province of Quebec, was the first man of French-Canadian ancestry to sit in the U.S. Senate. He served from 1928 to 1934.

He was a former deputy insurance commissioner of Rhode Island and was judge of the Fourth District Court in Kent County from 1919 to 1928.

Although his formal education ended after his graduation from La Salle Academy in Providence, he studied law and was admitted to the Rhode Island bar in 1907. A protege of powerful political figures of that day, he rose rapidly to a position of prominence.

Indirectly, it was his love for music that landed him in politics. Self-taught in music as he was in the law, he became a proficient violinist and cellist, married a musician and saw all his children develop musical talent.

As a young man, he came under the wing of the late Gen. Charles R. Brayton, the "blind boss" who ruled the Rhode Island GOP with an iron fist at the turn of the century.

Later, he was associated with the Peck-Pelkey wing of the party which gave him the Senate nomination. His term in the Senate was his first and only elective office.

A direct descendant of Leger Hebert, who, with Sieur de Maisonneuve and 50 others from Paris, founded Montreal in 1642, Mr. Hebert's father settled in Quidnick, a village in Coventry, in 1860.

His father, Edouard, a bootmaker, and his mother, Catherine, were married in Rock Chapel in the village of Phenix in 1865. They had 13 children, of whom Mr. Hebert was the last survivor.

Edouard and Catherine went to St. Guillaume, Quebec, in 1874 because of Edouard's ill health and it was there, on Dec. 11, that Felix Hebert was born. When he was five, his father having regained his health, the family returned to Rhode Island.

Mr. Hebert received his early education in the public schools of Coventry, then attended the parish school of St. Jean Baptiste Church in West Warwick. He was graduated from La Salle Academy in 1893 and was, until the time of his death, its oldest alumnus.

In 1961, the academy's Alumni Association named him as one of the first three in its new Hall of Fame. The others were the Most Rev. Russell J. McVinney, D.D., Bishop of Providence, '16, and the late U.S. Rep. John E. Fogarty, '30.

After his graduation, Mr. Hebert got a job as a stenographer in the freight department of the old New York & New England Railroad Co. In two years he rose to chief of the billing department. For a brief time, he also was secretary to John Howard Appleton, a professor of chemistry at Brown University.

His "break" in politics then came about. A few years earlier, Mr. Hebert had made the acquaintance of Alexis Boucher, known as "the best fiddler in the Pawtuxet Valley." Mr. Boucher gave young Felix a violin on condition that he learn to play it. He did.

While he was working for the railroad, Judge Eugene F. Warner of the Fourth District Court was combing the area for talent for a local orchestra. Mr. Hebert accepted the judge's invitation to play the viola.

When he found his long hours of employment conflicting with his time for music, he ventured to suggest he would have to give up his position with the orchestra. Judge Warner would not hear of it.

The judge, who was secretary-treasurer of the Republican State Central Committee and clerk of the state Senate, prevailed upon "Boss" Brayton to hire Mr. Hebert as his secretary and pay him as much as he earned on the railroad, $18 a week plus a $3 transportation allowance.

Mr. Hebert recalled that Brayton balked at the amount but was finally convinced when Mr. Hebert explained that he needed the money to contribute to his large family.

In 1896, Mr. Hebert was chosen as clerk of the GOP State Central Committee and assistant to Judge Warner, while still working for the general.

Two years later, Mr. Hebert was selected to reorganize the accounting in the office of the state general treasurer and the same year was appointed a deputy insurance commissioner, a post he held until 1917.

As a representative of the office, he visited the headquarters of almost every insurance company doing business in Rhode Island to inspect their books and report on their financial responsibility. He became expert in insurance accounting and procedures.

During his early years in state employment, he began reading law in the office of Judge Warner in the village of Anthony and in the office of Walter B. Vincent, a retired Supreme Court justice.

He was admitted to the bar in November 1907.

Mr. Hebert's main law offices were in the Turks Head Building where he specialized in the practice of insurance law. He appeared before Congress, the legislatures of a great many states and in a British court as an expert on insurance problems. In 1948 he was a registered lobbyist in Washington for the Associated Factory Mutual Fire Insurance Companies for which he was also chief counsel.

In 1923, William C. Pelkey, Republican state chairman, named Mr. Hebert to the party's legislative committee. Mr. Pelkey and Frederick S. Peck, then GOP national committeeman, chose him in 1928 as the man who could beat Peter G. Gerry for the U.S. Senate.

While Gov. Alfred E. Smith, the Democratic candidate for President, carried Rhode Island, Mr. Hebert defeated Mr. Gerry by 2,994 votes.

His election to the Senate resulted from an agreement Mr. Pelkey made with the approval of Herbert Hoover, the Republican presidential candidate, Mr. Hoover did not need Rhode Island's electoral votes but he did need another GOP senator. So the arrangement was made for a bloc of Democratic votes to go to Mr. Hebert in return for some GOP votes for Smith.

Mr. Hebert became a confidant of President Hoover and often visited him at the White House or at the President's Rapidan camp.

One of Mr. Hebert's appointments was to a special Senate committee to study the problem of unemployment insurance, a vital issue in the early years of the great depression. His election as chairman of the committee over the head of Democratic Sen. Robert F. Wagner of New York touched off a controversy in which Sen. Alben W. Barkley of Kentucky, later to become Democrat majority leader, accused Mr. Hebert of having lobbied for seven or eight years in behalf of insurance companies. Mr. Hebert denied the charges.

In the summer of 1931, Mr. Hebert went to Europe to survey unemployment com-

pensation systems there. On his return, he conferred with the President and then gave as his view that a federal unemployment compensation system would be the first step toward a dole. The next year, his committee recommended that state laws be enacted compelling industry to set up reserves against unemployment.

Throughout his Senate term, and afterward, he continued his opposition to federal unemployment compensation and old age pensions. He said they were a state, not a federal problem.

When the 1932 election neared, Mr. Hebert was named director of the GOP campaign in the East. After the Democratic sweep of that year, he was elected Republican whip and vigorously opposed New Deal measures. He reportedly favored a purge of Republicans who had bolted to Franklin D. Roosevelt in the campaign.

He fought repeal of the gold clause and when the country went off the gold standard in 1933 he accused the administration of having "dishonored" the nation.

He tore into the Agricultural Adjustment Act, later voided by the U.S. Supreme Court; assailed Henry A. Wallace, Secretary of Agriculture, for killing pigs and plowing under cotton; called the Bankhead cotton bill a step toward "complete regimentation"; attacked the reciprocal tariff bill, and voted against immediate payment of the $2.4-billion soldiers' bonus.

ATTACKED NEW DEAL

Both in Washington and Rhode Island, Mr. Hebert hammered away at the New Deal. He scoffed at the theory that taxes should "soak the rich," warned against "rash legislation," appealed to the government to leave industry alone because its domination was impending recovery, told audiences that the New Deal was legislating the Constitution to death, and bitterly assailed the "intellectuals" in Washington.

Mr. Hebert ran for reelection in 1934. Mr. Gerry, again his opponent, charged that Mr. Hebert and President Hoover were "examples of a reactionary era." Mr. Gerry was elected with a 35,130-vote plurality. In January, 1935, Mr. Hebert returned to the private practice of law in Providence.

Before the election, however, he had shown his continued strength in GOP circles by helping to unseat Ernest L. Sprague as state chairman. Mr. Herbert, a member of the State Central Committee from 1914 to 1946, has asked Mr. Sprague to resign and run for secretary of state. Although he said he had no intention of resigning, Mr. Sprague was out within a month, replaced by George R. Lawton, a former Brayton adviser.

Mr. Hebert remained active in GOP affairs. In 1944, he was elected Republican nation committeeman from Rhode Island and, in the same year, was mentioned as a possible gubernatorial candidate. He let it be known he was not to be considered for any spot on the state ticket.

In 1948, Mr. Hebert lost the endorsement of the State Central Committee for reelection to the GOP National Committee to Thomas J. Paolino, then North Providence town chairman, by a 47-to-35 vote. The committee battle was marked by charges of bias against Italo-Americans. However, the state convention of the party reelected Mr. Hebert.

Insiders said that Mr. Hebert would have quit quietly if he had been asked to but resented efforts to push him out. Although he spoke, in an interview that same year, of the need for older men to step out of the national committee and make room for younger, more liberal elements, it was not until 1952 that Mr. Hebert was succeeded as a committeeman by Mr. Paolino.

His thinking on that subject was summed up when he said, "A man at 70 can be young and one at 50 can be old."

A self-described conservative in his political philosophy, Mr. Hebert created a stir in 1950 when he and Mrs. Marion Yatsman, then the state's National Committee woman, suggested in a letter to the committee that the GOP adopt a national strategy of coalition with Southern conservatives.

Mrs. Yatman subsequently repudiated parts of the letter that she held to be pro-isolationist and anti-civil liberties. She said she had signed it without sufficiently careful consideration of those points.

DEFENDS LETTER

Mr. Hebert said, in defense of the letter, that its position against antilynching, anti-poll tax and fair employment practices legislation was not based on the intrinsic merits of those issues but on his conviction that they were unconstitutional.

A supporter of the late Sen. Robert E. Taft for the GOP presidential nomination in 1952, Mr. Hebert again aroused the ire of some circles in the party, particularly the pro-Eisenhower faction, when he gave his national convention proxy to Steven B. Wilson of Barrington, a Taft man. Both Mr. Wilson and Robert B. Dresser, another Taft supporter, had been defeated in bids for delegate posts.

Although he reduced his activities—or as he put it, "tapered off"—in 1954, Mr. Hebert continued to serve as an advisory counsel to the Associated Factory Mutual Fire Insurance Companies, for whom he had been general counsel for 30 years.

He continued to visit his Providence office in the Turks Head Building three times a week as late as 1961, when he was 87 and described himself as semi-retired.

Mr. Hebert gave up the family residence at 18 Payan St., West Warwick, in 1956 and moved to his 400-acre estate, The Evergreens, on the Flat River, Coventry. The estate, formerly a fishing camp, had been cleared by him and his sons and turned into a handsome landscape of lawns, shrubbery and ornamental trees.

In 1957, he sold the last three acres of his West Warwick estate to the town for a playground. For many years, he had raised high-bred poultry as a hobby.

His intense interest in books—in his later years, he spent five hours a day reading—was evidenced in his leadership of a $25,000 fund-raising campaign in 1959 for the Anthony Lyceum Library Association, of which he was a board member and of which his early mentor, Judge Warner, was the first secretary. As a boy in Anthony, he had used the library. His grandchildren followed his foot-steps there. His personal library was extensive.

As music started Mr. Herbert off in politics, so did it lead to his courtship of Miss Virginie (Deslauriers) Provost of Ware, Mass. She was the organist of St. John's Church, Arctic, when they met. He was in the choir. They were married Sept. 18, 1900. Mrs. Hebert died on July 14, 1958.

PLAYED AT WHITE HOUSE

All four of their children became accomplished musicians who, during their father's term in the Senate, played often at the White House. They played as a quartet at the marriage of Henry H. Woodring, then assistant secretary of war, to Miss Helen Coolidge, daughter of Sen. Marcus A. Coolidge of Massachusetts in 1933.

For years, Mr. Hebert—still called "the senator" by many Pawtuxet Valley residents—was an active leader of civic affairs. He headed the Pawtuxet Valley Red Cross and Franco-American charitable organizations.

He was a member of the Catholic Club, the Turks Head Club, the Flat River Club, the Pomham Club, the Franco-American Foresters, Unien St. Jean Baptiste of Woonsocket, Societe St. Jean Baptiste of Centreville and the University Clubs of Boston and Providence. He was the oldest living resident of Coventry.

He is survived by two daughters, Mrs. W. Bruce Loomis and Mrs. Howard C. Sanford, both of Coventry; a son, Edouard F. Hebert of Coventry; six grandchildren and two great grandchildren.

Funeral arrangements are incomplete.

IN SUPPORT OF STRENGTHENING PRESIDENT NIXON'S BAN ON BIOLOGICAL WEAPONS—BW

Mr. GOODELL. Mr. President, yesterday I drew the attention of the Senate to the Pentagon's attempt to exclude biological toxins, including "botulin," from President Nixon's orders to the Defense Department "to make recommendations as to the disposal of existing stocks of bacteriological weapons."

Today, it has been reported that Dr. Henry Kissinger, the President's adviser on national security, has called a halt to the Pentagon's intention to proceed with toxin germ warfare and production of weapons such as "botulism bullets."

I welcome this immediate halt to evasion of a total ban on all germ weapons.

Mr. President, let us recall that on August 11, the Senate passed an omnibus antichemical and biological warfare amendment by a vote of 91 to 0.

In this amendment, when referring to biological weapons, we used the words: "any disease-producing biological microorganism or biological toxin." We put restrictions on both biological agents and toxins in germ weapons use.

In view of President Nixon's directive to ban germ weapons and to begin dismantling, are we now to settle for distinctions between weapons made of germ agents as contrasted to germ toxins? I would hope not.

I urge a total ban on all germ weapons.

I hope that all Members of the Senate will join in support of strengthening President Nixon's ban on biological weapons—BW.

I ask unanimous consent that the article "Two Agencies Clash Over War Toxins" by Robert M. Smith which appeared in this morning's New York Times be printed in the RECORD for additional background information on this important matter.

There being no objection, the article was ordered printed in the RECORD as follows:

TWO AGENCIES CLASH OVER WAR TOXINS—STATE DEPARTMENT OPPOSES PRODUCTION BY ARMY AS NEGATING NIXON RULING

(By Robert M. Smith)

WASHINGTON, December 15.—The Pentagon and the State Department are at loggerheads over whether President Nixon's decision last month on chemical-biological warfare included some of the most potent and practical elements in this area of America's arsenal—disease-producing toxins.

The quarrel has reached the point, according to informed sources, where Dr. Henry A. Kissinger, the President's adviser on national security affairs, has instructed the Army to stop producing toxins until the National Security Council can clarify the President's decision.

In the meantime, however, State Department officials have made it clear in private conversations that if the Army is allowed to continue producing toxins, they feel the United States will lose both the practical and

propaganda advantages it has reaped in the wake of the President's announcement.

On Nov. 25, Mr. Nixon renounced the first use by this country of chemicals and the use of all biological agents.

He also ordered the destruction of existing stocks of germ weapons and the limitation of biological research to defensive measures.

A few experts in the chemical-biological area regard the Army's insistence on keeping its stockpile of toxins and on producing more as an "end run" to defeat the limitation on chemical-biological facilities and stocks ordered by the President.

The more widely accepted interpretation, however, seems to be that Mr. Nixon's speech left the question of toxins up in the air and that the Army began to produce toxins again because it regarded them as chemicals. The President's decision did not restrict the production of chemical agents.

Toxins are the dead but poisonous by-products or end products of bacteria. Since they are not living, the Army—and many experts—do not consider them agents of biological warfare. On the other hand, the toxins of possible military value cannot be produced without producing bacteria.

What this means, the experts point out, is that the Army's biological production facility at Pine Bluff Arsenal in Arkansas would have to be maintained to produce the germs that generate toxins.

"The assembly line [at Pine Bluff] would just keep going," said one official who had predicted after the President's speech that the arsenal would be dismantled.

Some of those familiar with chemical-biological warfare, see the continued operation of the Pine Bluff facility as a threat to any effect the President's action in November may have had in dampening international interest in chemical-biological weapons.

"We try to match any weapons we know other countries have, and sometimes we try to match weapons we suspect they have," one expert commented. "Now turn that around. Here we are still operating a biological facility at Pine Bluff."

"We say we would be producing biological agents at Pine Bluff only to get toxins," one official said. "But a biological is a biological—how would Russia know we aren't producing germs there to use as weapons?"

The official also expressed concern that the international goodwill generated by the President's decision "would go down the drain." "Other countries are likely to think the whole thing was meaningless and a hoax," he said, if the United States keeps on producing toxins.

A Pentagon spokesman confirmed at a press briefing last Friday that the Defense Department regarded toxins as chemical, not biological, agents.

An Army technical manual, "Military Biology and Biological Agents" lists some of the diseases that can be induced by toxins as botulism, diphtheria, gas gangrene, staphylococcus, food poisoning, tetanus, plague, cholera and typhoid.

One important difference between a germ and a toxin is that the toxin does not multiply in the human body and it is not contagious—it cannot be transmitted from one person to another.

This means that toxins must be dispersed like chemical agents, so that they reach each person they are to infect. It also makes them more practical weapons than germs; there is no danger that they will spread through contagion into neutral or friendly areas.

On the other hand, a prominent authority on chemical-biological warfare said that toxins were not as reliable weapons as chemical agents like nerve gas.

"The clear intent of the President's decision is undermined," he said, "to no military advantage."

The precise toxins that the Army is producing and stockpiling is secret. However, the technical manual singles out for separate treatment the botulinum toxin and the staphylococcus toxin.

The botulinum toxin produces botulism—an acute, usually fatal disease. The staphylococcus toxin produces a food poisoning usually characterized, according to the manual, by "severe nausea, vomiting, stomach cramps, severe diarrhea and prostration."

It is known that the Army has manufactured and stored at Pine Bluff more than 20,000 bullets containing botulinum toxin.

In his announcement last month, the President also said the United States would support a British draft treaty submitted to the Geneva disarmament conference. The treaty prohibits the production, stockpiling and use of biological agents.

A spokesman for the British Embassy here said that his Government was not interpreting the treaty ban to include toxins, although it would have no objection to their being included.

One usually reliable source reported, however, that British officials were reconsidering the issue of whether the draft treaty should include toxins.

ARCHDUKE ROBERT VON HABSBURG'S ADDRESS AT CONFERENCE ON THE CONCEPT OF ATLANTIC PARTNERSHIP

Mr. PELL. Mr. President, Archduke Robert von Habsburg delivered a particularly thoughtful, well-balanced, and wide-ranging speech at the conference on the Concept of Atlantic Partnership, sponsored by the American Institute on Problems of European Unity, this past October 17.

Archduke Robert, whose family continues to give ideas and leadership in Europe, is to be congratulated on this speech. It made a fitting keynote and added greatly to the proceedings of the Conference.

I believe my colleagues would be interested in reading this excellent speech and for this reason ask unanimous consent that Archduke Robert's speech be inserted in the RECORD following my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KEYNOTE ADDRESS BY ARCHDUKE ROBERT VON HABSBURG

It has been my habit for several years, after many months of hard work and a hectic life, to take my holidays in the southernmost part of Italy, in Calabria. It is a wonderful country, far away from what one calls civilization. There is neither telephone nor telex. The next post office is ten miles away. There are no traffic problems or noise on the dirt roads. The weather is always fine, although not too hot, contrary to what one might think. An ideal place to rest and think.

Again this year in July I was there. It was, as usual, a lovely evening, and the television screen offered us an uninterrupted twenty-four-hour space program, including the landing on the moon. We decided to install the television set on the terrace. About midnight, local time, on this famous night of the 20th and 21st of July, the village shepherd arrived and asked whether he could watch with us. This man looks after about 100 sheep which belong to various people in the village. He takes them grazing on the mountains during the day and guards them in a corral at night. He can neither read nor write, although he is capable of signing official papers, instead of making the traditional cross. At 4:00 A.M., just as the first light of the new day appeared on the horizon, we saw on the television screen Commander Neil Anderson and Colonel Aldrin descend from the LEM to the moon's surface. The first man had landed safely on our satellite.

My shepherd friend shouted with joy, "L'abbiamo fatto!" (We made it!). I could not resist correcting him by saying, "Yes, the Americans made it." He lifted his hand in a gesture of indifference. What are the Americans in their vast majority but descendants of people who lived in Ireland, Great Britain, Scandinavia, Germany, Poland, Italy, etc.? They are indeed our brothers, our cousins living across the sea.

There you have the feeling of the ordinary man in Europe. Not only has he the idea of Europe as a single entity in his mind, but he is already considering that Europe and America are one body, one soul and one united force for the progress of humanity.

You can imagine that such a straightforward and realistic answer from a very simple man incited me to prod a little deeper into his philosophy of life.

I, therefore, asked him what he thought of our present time. And here, too, I had an answer worth recording: "My grandfather and my father who, like me, were shepherds, lived a quiet life, not much changed in their time compared with their ancestors'. But with me things have changed deeply; everything happens quicker; everybody knows something about everything," and he reached in his pocket and took out a transistor radio, tapping it as if it were proof of his saying. "I am too old, alas, to see the results, but my son will. He will no longer be a shepherd. He has learned to read and write. He is now in a technical school for electricity, and he helps to make these inventions, to create a totally different world. Good luck to these youngsters, and may God help them."

Yes, the new era has begun and has been highlighted by the conquering of outer space, the landing on the moon. We witness today a second great industrial revolution with many new inventions in the traditional fields of industry and the opening of completely new fields, like space and oceanic research. The mechanization, the tremendous speed of calculation through computers and the consequent acceleration of production have obviously changed and adapted all ideas, all concepts, all methods. The idea that teamwork will promote efficiency and produce profit is flourishing everywhere. Values have totally changed. While before, certain raw materials made the wealth of a country, today the most expensive commodity is men—technical men, commercial men, research men, administrative men.

The old law of the war, "vene victis," is a good example. The victor tries always to appropriate the most valuable properties of the vanquished. After World War I, the Allies seized the Ruhr to find the coal and iron they needed badly and which, at that time, were Germany's greatest wealth. After World War II, one even thought in terms of coal and iron, but the race was on for Penemunde and such places where the great brains, the great researchers, the technical teams of Germany were located. The great wealth of Germany was no longer material; it was the men, the brains, the technical knowhow which everyone sought.

When General de Gaulle decided upon and implemented his decolonization policy, one of his great achievements, it cannot be denied that an economic factor, apart from the political and human aspects of his plan, influenced his decision heavily. The benefit France could reap from the material richness of its colonies could not be compared, by any stretch of the imagination, to the cost of financing them and the loss of manpower to the homeland. The so-called "pieds noirs," that is, the Europeans in North Africa who came back to France after the war have proved to be a real shot in the arm of the French economy.

When Holland lost her fabulously rich colony of Indonesia, thousands and thousands of Dutchmen were repatriated, leaving all their belongings in Indonesia. Holland, contrary to all prophecies, has never been so rich and so prosperous as now.

Finally, take the famous "German economic miracle" of which so much has been said. It could never have been realized, had it not been for the influx of East Germans, Sudeten Germans and others who, ousted by the communists from their country, arrived with only their intelligence, their technical capacity in many fields and their uncrushable will to create a new and better existence for themselves.

This change in values has been made possible by the extraordinary inventions of our time. Among the most important, let us mention the new power supply, the invention of computers, and lately the beginning of the conquering of space. Industry will no longer depend only on natural resources, coal and water, and therefore, to the places where these commodities can be found. Atomic power can be produced anywhere, a fact which will force the transport industry to reconsider its policies and organization. Better location of industry will lessen transport cost, influencing total cost and, therefore, prices. You have seen in your own country that there has been a migration of industry to the south which enjoys better climatic conditions, allowing reduction of overall charges. It obviously creates certain social questions which, in many countries, arouse uneasiness, doubts, fears and unhappiness among employees and workers, and will have to be solved here.

The computer world, one too complex for many, of whom I must humbly admit I am one, to understand, renders untold services. Here you can amass information which a human memory could never retain. You can exchange information gathered from all the corners of the world. Further, the computers are now the essential instrument for all research. What used to take many mathematicians many weeks, nay months, to achieve, the computer does in a few seconds, delivering men from tedious work and reducing the risk of errors due to human fatigue or distraction. Without the computers men could never have conquered the moon. The computer, too, owing to its rapidity and exactitude, is now, and here I speak from personal knowledge, the indispensable instrument for modern management. Each day you can see how your business develops, how much stock you have, in which way best to organize your deliveries, where there are delays or faults, and much more essential information. Thus, fully aware, you work with realities, and your decisions can, therefore, be rapid and efficient. In this it is true that European management was significantly behind that in the U.S.A. We have had and always will have capable men. Let me just mention people like Abs in Germany, Weinstock in the United Kingdom, Angeli and Pesenti in Italy, Martin, Rivoud and Ricard in France, and the list is not exhaustive. But we came to computerizing management later than you did. It is indeed not fate that IBM developed first in the U.S.A.

The acceleration in production, information and travel is sometimes terrifying. Just imagine that between the invention of the telephone (1820) and its industrial production (1876), fifty-six years elapsed, while between the time the revolutionary idea of the transistor was conceived (1948) and it first appeared on the market (1953), only five years went by. When today, in the era of the supersonic airliner, Concorde, it takes 28 minutes to cross all of France (calculated according to the longest possible route), 18 minutes to cross Germany and 3 minutes 15 seconds to cross Austria, all limits, all frontiers just fade away.

Then there are the mass information methods, like television, which not only fly across frontiers like Concorde, but come to you as you sit quietly in your easy chair and watch and hear Commander Anderson and Colonel Aldrin some 300,000 miles away walking and talking happily on the moon's surface. There, too, technical progress has been phenomenal.

The tourist industry, unknown to ordinary people a few years ago, is now a multibillion dollar industry stretching around the world. People learn to know each other whether they live in the East, South, North or West of our earth. The barriers of distance, language and, let us admit it, mistrust are breaking down also.

All this is, nevertheless, just a beginning, and one can visualize wider horizons. A great problem for us was, and still is, the question of water. Consumption rises enormously, and some people have thought rightly that a real danger exists that, in the not-too-distant future, there will be a shortage of this essential commodity. Human intelligence has already been applied to the solution of this problem, and research has advanced so far that in years to come, one can expect that we shall be able to desalt sea water at moderate cost. The same applies to air and water pollution, a major health hazard which is now being scientifically tackled and will certainly be mastered. In the field of food, it is quite certain that we have not even begun to exploit the possibilities of ocean products or synthetic foods.

This second industrial revolution has already deeply affected not only the mentality of people but also their employment. These changes will have to be accelerated if we want to keep developing.

In France at the end of World War I, 40 percent of the active population earned their living from agriculture. By 1954, this percentage had dropped to 27 percent and the latest statistics (1967) show that only 17 percent of the active population was still working in agriculture. These changes can be compared with the U.S.A., where in 1954 11 percent of the active population could be found working in agriculture; this percentage had dropped to 5.5 percent by 1967.

On the other hand, it is also interesting to compare the active population in the other sectors: in French industry in 1954: 35 percent and in 1967: 40 percent; in the U.S.A. in 1954: 35 percent and in 1967: 34 percent.

The most startling comparison is, nevertheless, in the creative and service sectors, those which we in France call terciere: in France in 1954: 38 percent of the active population and in 1967: 41 percent, while in the U.S.A. in 1954: 54 percent and in 1967: 60.5 percent.

All these statistics show not only the great shift in employment realized in the last few years, but for Europe its backwardness as compared to the U.S.A. Here lies the real technical gap in all its horror.

In the service sector, 41 percent as against 60 percent shows we have not yet developed our research and administrative and commercial activities sufficiently, and again in the industrial sector, 40 percent as against 34 percent in the U.S.A. shows that we have not utilized automation enough and that we use too many people who now could be replaced by machines.

Farsighted Europeans think of the French Minister, Robert Schuman, known as the father of the Common Market. He realized that this tremendous technical development, this industrial explosion, outdated the old concept of a Europe divided into small national units and was definitely harmful to the smooth, coordinated development of that Continent. Robert Schuman saw the necessity for one large market of at least 200 million inhabitants. Capital, manpower, technical knowhow and goods could be moved freely, according to economic laws only. Alas, this great man, this courageous pioneer of a new and exalted idea of progress, had to fight against ignorance, vested interests, laziness, nay, even the lack of courage to face the facts hidden under the false name of traditionalism in economy and politics. Nearly every European country has a system of law and taxation, a currency, a political structure, habits of living and a language different from all the others.

These terrible barriers must be overcome if Europe is to survive as an industrial power. First, a small group of dedicated persons got to work to spread the idea, to convince their fellow countrymen of the absolute necessity for changes. It led, as you know, first to the European Coal and Steel Company (E.C.S.C.) which came into being on August 10, 1952 in Luxembourg. A few years later, on the 26th of March in 1957, a handful of courageous political men signed the Treaty of Rome and the Common Market was born. A cold wind blew across the ranks of industry. Finished were the good old protective days with their customs barriers. When faced with the possibility of terrible losses or outright ruin, it is marvelous how fertile the human brain can become and what energy and courage can be deployed to adapt to the new situation. During these years, with their backs to the wall, industrial leaders initiated enormous changes in concepts and methods of industry and commerce. Modernization, profits and new products were the leitmotiv. This new spirit had to be applied in two directions—order in one's house and collaboration with other groups, national and foreign, so as to be competitive in all of the old markets now in the process of becoming one unique general market.

Looking back over the past ten years, one must admit enormous progress, far outreaching the narrow limits of the Common Market, in the public sector. Take the transport section where, under the dynamic and far sighted leadership of Louis Armand, now a Member of the French Academy, a perfect integration of all Western European nations has been realized without any publicity. This progress has not been only a matter of time tables; in the technical field also European standardization was introduced. The same can be said of the various airlines whose collaboration is very close and friendly, while leaving a spirit of competition so necessary to progress and so advantageous to the consumer.

Two other facts should be mentioned here which will show the progress of European integration. Sweden has changed its motor car driving system to righthand driving, as is the habit in all of the other continental European countries. And finally, even the United Kingdom, always slow to change its traditional way of life, has decided to introduce the decimal system current in all other industrial countries. But this is only a beginning! Very much remains to be done, e.g., the standardization of various tax systems, a first step toward which has already been taken with the tax *a la valeur ajoute*. There is a need for identical legal systems and, finally, for a common currency which had a sort of beginning with the Eurodollar. In the private sector in France, equally enormous changes have occurred which one can apply *mutando mutandis* to other European countries.

France was, and to a certain degree is still, a country of medium-sized industrial units. Not one of its industries could have ranked as an international enterprise. Today this has changed and will change more. One can now see Michelin, the greatest tire producer in Europe; the Francaise des Petroles among the petrol giants; the Europeenne do Brasseries, the biggest brewery in Continental Europe. All of this has been achieved by a legion of dedicated men conscious of the

tremendous changes of our new era. The first thing was to *restructure* each industry separately; to abandon products which could no longer find a large market; to produce new lines, to diversify; to put the accent on research, efficiency, cost and investment. Many a casualty fell on the battlefield, and many more will follow because this battle will remain a constant feature of our European economy. The better-situated ones, the most energetic and farsighted, will emerge as the victors.

The second stage, if one can so express oneself, is concentration. The old principle, *viribus unitis*, proved itself once again. This was particularly remarkable in those sectors of industry which require a lot of manpower like food, textile, chemicals and steel. In France in 1965, there were seven iron and steel concerns worth mentioning. Today there are three. In the textile group, plagued by several hundred small industries, two groups emerged from the crisis. Agach Willot in 1963 had a turnover of 100 million francs and today has reached 427 million francs, and Dollfuss Krieg passed from 66 million francs to 289 million francs. There were in France in 1952 780 breweries; today there are but 150 units. The Europeen de Brasseries, which I mentioned before, produced in 1961 one million hectoliters and is today at nearly seven million hectoliters. Thus, bigger and more competitive units are emerging, and again, this will remain a permanent feature of the economic life of each country.

The third stage was the internationalization of enterprises. Here one must speak of the intervention of America private capital in Europe which I, for one, contrary to some official or private fears, welcome. It has not always been rightly handled, but what human venture can boast perfection? It has sometimes created much ill-feeling because of different methods, frontal attacks against traditional habits and, let us admit it, a little bit of a holier-than-thou attitude but, and the but is extremely important, it brought to Europe new ideas, new methods, new ways and a competition against which one had to fight. As long, therefore, as it does not degenerate into monopolies, a danger that really exists because of the vast superiority in American industrial power and financial possibilities, it is a real contribution that the new world has brought to a somewhat stale and retrograde Europe.

The internationalization in the limited framework of Europe, and by Europe I mean again industrial Europe, not the Common Market alone, has begun. Thus, we had the Belgian Empain Group coming into the French Schneider Group, the Fiat-Citroen merger, the Hoechst-Roussel Ucalf collaboration and many others.

Maybe my own very small and humble experience can throw light on these developments. I was a partner in a family-owned private bank in Paris which we changed into a limited company. Our main shareholders, apart naturally from the French, are English, Swiss and Italian.

The great changes which I have tried to describe to you have not been obtained without what Churchill described in his famous speech as blood, sweat and tears. Just look at the appalling agony of the agricultural world, politically still too powerful not to be left alone to fight for its own renovation, economically too feeble to carry on with its existent structures.

It is quite certain that today progress toward a united Europe varies, whether you consider the industrial and economic sector, public opinion or the national political structure. Economic integration is by far the dynamic factor behind a united Europe. Public opinion is not far behind. Take, for instance, the idea, recently much discussed in France, of regionalization, in my mind the only way to get out of this overaged concept of the sanctity of national sovereignty at any price. Regionalization involves the creation of local capitals or economic poles of attraction, behind which are grouped hinterlands big enough to be economic units, small enough to be easily administered by local authorities aware of local interests and possibilities rather than by a distant, central, omnipotent authority. Now in the public discussions in France, great was my surprise to find many people who approved the extension of these regions beyond the actual national frontiers, or even more astounding, the giving up of territories which naturally and economically should belong to one of those poles of attraction situated in another country.

Today the political machine is the obstacle to development. Indeed, it has not been able to adapt its structure to the revolution and has, up to now, shown little desire to do so. Again, I take the example of France which I admit is the most dramatic one in the Common Market. You speak sometimes of "red tape." You cannot imagine to what perfection the administrative structure of the French State, created 200 years ago by Napoleon and never really modernized since that time, has brought this art. The permanent and irresponsible personnel of the administration interferes in every facet of the citizens' lives. The thought of the administration appears to be that the State is not the servant of the citizens, but that the citizens are raw material to be fed into a wonderful machine called the State which they are called upon to organize according to their own ideas. The former Minister of Education, and probably one of the ablest political figures in France, Mr. Edgar Faure, called it the technostructure against which even responsible ministers are often completely powerless.

The technostructure is composed of able men with brilliant minds who have never been asked to think in terms of the practical business of daily life. To them everything can be reduced to a simple problem which you solve on paper, regardless of human reaction, or cost and profits. We have to admit that, in our day, more and more matters must be discussed and decided upon by professional men. The politicians elected to Parliament are obviously not professional people in all fields; nevertheless, they are called upon to discuss, propose and decide in all fields. This is why Parliaments, as we know them now in Continental Europe, are more and more losing their grip on public life, and their debates are less and less favored with public interest.

Aware of this trend, General de Gaulle suggested reforming the Senate by opening it up to responsible professional people, trade union leaders, agricultural experts, members of chambers of commerce, outstanding business people, technicians, etc., so that the political parties in Parliament, so necessary to the democratic process, would be balanced by another chamber composed of real experts. But he was defeated.

This resistance of the political technostructure to reform led directly, in my opinion, to the events of May 1968. The rowdyism of the students who protested against the teaching system, with the help of professional agitators, showed the very profound uneasiness of youth in the face of the rigid, outdated attitude of the technostructure. It was a clumsy, thoughtless reaction against an archaic form which no longer corresponds to the needs of our time. Later, the referendum which General de Gaulle called on the question of the regions, linking it with his own political future, was lost, I am convinced, not because people were against the regions, but because the General, rightly or wrongly in their minds, incarnated the old regime which they no longer wanted.

The new President, Pompidou, and his Government understood the warning and spoke of the new society they want to create. Let us hope that they will really do something; otherwise, they will be cast out because the citizens have decided that a change must be made.

I hope that in this short and obviously incomplete expose of the development of European integration, you will have seen that I am a deep believer in the future of a United Europe. We needed perhaps to go through the endless negotiations, frustrations and ill feelings which finally gave birth first, to the E.C.S.C. and later to the European Economic Community and the European Free Trade Association, so as to awaken to reality, to throw away the shackles of nineteenth-century concepts while keeping the good we have inherited from our forefathers, and to play again our role in the world.

In my mind, all of these organizations which we have created are only steppingstones to a true United Europe. It appears, therefore, of minor importance whether the United Kingdom joins the Common Market now or later. The United Kingdom is an essential element of Europe. It cannot free itself of this historic and mainly geographical reality and, as we all know, Englishmen are by nature realists and, therefore, will face up, at the moment they choose, to join either the Common Market or the European Organization that will follow, and thus open the way definitively to a United Europe.

As United Europe is being born amid great travail, the question naturally asked by my shepherd friend immediately jumps to one's mind: "What about relations with our brothers who live across the sea?" It is quite obvious that the U.S.A. has, for the moment, an enormous head start compared to Europe—a single market of 200 million people, a modern political and administrative organization, a federal capital, a single currency, a single language, a system of law applicable to the 3.5 million square miles which form the largest and most powerful industrial concentration in the world.

But with the tremendous development of technical knowledge and industrial production, even that market might become too small. Even the 80 million active people in the U.S.A. will not be enough to tackle the final technical and industrial problems in front of us. As you know, you cannot, with all your political might, impose a global policy aimed at a better organization of human life everywhere. You will have to make a political choice; you will have to decide who your true friends, your brothers, are. Your choice can, I think, only be your brothers across the sea, the Europeans, who are inspired by the same ideals as you and prepared to share with you work and responsibility for this new world.

Obviously, you could make what I would call a colonial policy. You could drain any other country of its greatest wealth, implant your industrial machines where manpower is cheap, and impose your world monopoly on certain sectors of industry. History teaches us that this is the wrong solution, and we still have, alas, such examples in our time. I, for one, therefore, discard this short-term view, this facile solution which, in the end, would turn against its authors. You can and will associate yourselves with us, just as we try to associate with each other in Europe, and form an even more powerful unit. Today such an association across the Atlantic Ocean might seem a daydream, but do not forget the idea of a common market, much less a United Europe, was a daydream thirty years ago. With the tremendous acceleration of things in our time, even such a daydream can come true sooner than we can now imagine.

An association, and we are giving ample proof of it in Europe at the moment, does not grow all of a sudden. It needs preparation and previous contacts and collaboration;

then and then only can it grow harmoniously. I think, therefore, that the time has come when real collaboration between the U.S.A. and a growing Europe should be started on a practical basis. We have already an example which is not talked about enough and which is highly successful. It is the communications satellite network which began as a purely American adventure, but in which American shareholding is now a little over 50 percent. The United States is, admittedly with every show of reluctance, beginning to concede some say in planning and management to foreign member countries. The benefit to Europe is that most of the communications satellites are now being built in Europe to American specifications. A few days ago, the BASF bought an American chemical concern, not paying in dollars, as has been the custom until now, but by exchanging shares. This shows a real change of mind on both sides of the ocean.

There is no reason why the same should not happen in the conquest of space, a new field where there is room for everyone. When 20,000 contractors and 500,000 men are required to put three astronauts in the orbit of the moon, you will agree that it is totally immaterial to the planning of the project whether components are built in Europe or the U.S.A.

It was calculated by Professor Hermann Bondi, Head of Europe's International Space Research Organization, that Europe spends 1.5 cents a year per head on space compared to 54.5 cents a year per head for the Americans. Professor Bondi should have added that Europe gets, and rightly so, only 1.5 cents worth of space. In fact, the biggest European rocket under development is not even capable of launching the smallest American communications satellite. We are, therefore, wasting our money stupidly.

I have learned from my experience as a banker that what you cannot do profitably with your own organization, you have always to call in experts to do for you for a fee. Thus, you have a better result with less expense in the end. Expensive as a lawyer, fiscal expert, or specialized engineer may be, he can save you from making costly and useless errors.

To put the cosmonauts on the moon, the N.A.S.A. has spent $3.7 billion in a year. This represents 0.4 percent of the national gross product of America. If the European Economic Community were to do the same alone, it would cost roughly $1.8 billion, and the E.E.C. and E.F.T.A. together would represent $2.2 billion. If their efforts were combined, the N.A.S.A., today without any doubt the most efficient instrument in space development, could have a budget of over $5 billion and I need not say what we could achieve together. My fellow Europeans could object that this would represent for them a very important new fiscal charge. Let me answer them by saying that the sum thus collected would represent less than one-third of what they spend on smoking. It would also bring a number of space contracts to Europe, benefitting all parties and keeping them abreast of technical developments, while now they are powerless onlookers, wasting valuable money in an effort which has already proved to be a failure. It would, on the other hand, give N.A.S.A. the possibility of accelerating its research and create between the U.S.A. and Europe a practical link of friendship, of partnership in these totally new fields which, gentlemen, will not only be the playground for your and my children, but may be the beginning of yet another completely new era.

If we can realize, and I believe we must, such collaboration, we can tell our children that we have lived through the greatest transition period of the world—where the future was shaped by foresight and courage. We are leaving you a practical plan for collaboration between America and Europe in many fields. It is up to you to create now an even larger and permanent association.

A LOOK AT ISSUES IN ATOM FUEL PLANT CONTROL

Mr. GOODELL. Mr. President, the discussion on the complex question of Government-owned atomic plants and private enterprise makes pertinent the observations expressed by Alan Emory in the Watertown, N.Y., Daily Times.

I ask unanimous consent that Mr. Emory's views be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Watertown (N.Y.) Daily Times, Nov. 13, 1969]

NIXON PLAN TO SELL THREE FEDERAL ATOM PLANTS STRONGLY OPPOSED

(By Alan Emory)

WASHINGTON.—If President Nixon is "really interested in nationalizing the power industry, he is going at it the right way," says Sen. George D. Aiken, R. Vt.

Rep. Chet Holifield, D., Calif., warns that the Nixon move could stifle price competition in atomic fuel.

If the president is merely postponing a move to turn government-owned fuel plants over to private industry until after the 1970 elections, says Sen. Albert Gore, D., Tenn., "I think I will still be at the bridgehead."

Atomic Energy Commissioner James T. Ramey fears a potential private monopoly could stem from the president's proposal.

Nixon took the first step this week looking toward the sale of three federal plants that make enriched uranium—the key to atomic power and atomic weapons—to private industry.

AEC Commissioner Ramey said, in an interview, "if the decision is made to sell the plants, the government should hang onto at least one."

Ramey said it would be 10 years or more before any disposal could be made, and he was concerned about the private-company monopoly that could occur then.

"We can't get meaningful competition with only three plants," he said.

Utility and oil companies have been pressuring the government to sell at a price that could give them a windfall of more than a billion dollars.

Opponents of the proposed sale—which the president endorsed formally for the first time Monday—claim the result could be a scandal that would put the Eisenhower Administration's Dixon-Yates controversy in the shade.

Nixon has told the Atomic Energy Commission, which owns the plants, to set up a separate internal organization to run the facilities, but only until they are sold.

CONCERN OVER COSTS

He is concerned about the costs of modernizing and expanding them over the next 10 to 15 years and wants them shouldered by private enterprise. Nixon said they should be sold to private owners "at such time as various national interests will best be served, including a reasonable return to the Treasury."

The government paid $2,300,000,000 for the plants at Oak Ridge, Tenn.; Paducah, Ky., and Portsmouth, O. Utility interests want to buy them for about $1,300,000,000. Their current value is estimated at between $2,500,000,000 and $3,000,000,000.

Ironically, a private firm was commissioned to study the proposed sale without the knowledge of the A.E.C. representative. Eventually, the commission was allowed in on the act.

The General Accounting Office and several utility interests, including the Consolidated Edison Co. and some small utility firms, have opposed the sale. The most popular suggestion has been to have the plants owned and run by a government corporation similar to the Tennessee Valley Authority.

Holifield, warning against "another Dixon-Yates," says he is against selling the plants at 10 cents on the dollar with a penny down and the other nine cents owed. He says there is a serious question "whether there is any likelihood for effective price competition in what is now, and in all probability for some years to come will be, a highly concentrated industry."

His colleague on the Joint Congressional Atomic Energy Committee, Senator Aiken, said, "They have done pretty well, but they don't quite make it. If they can get the enriched fuel plants they will be in a position to do business the world over, and there could be a monopoly of all sources of power."

Gore, who is also on the committee, had warned six months ago the administration would propose turning the plants over to "private power trust facilities."

NIXON CONGRATULATED

This week he congratulated the president for postponing the basic sale decision and forecast that it "will likely never be justified."

"Since he does not now recommend it," Gore said, "we can cross that bridge when we reach it—and I will then be at the crossing. If the postponement is merely until after next year's election, I think I will still be at the bridgehead."

Sale of the plants, known as gaseous diffusion facilities, was first urged by the Atomic Industrial Forum, an organization of top private utility executives. The proposed sale price was about half the government's original cost, not counting outlays for research, development and staff and technical training.

"The overwhelming proportion of our electricity is expected to be generated by nuclear reactors," Gore said. "Whoever controls the source of fuel will be in the driver's seat."

Aiken says utility companies want a single producer of electricity and to control that one. He says he understands oil billionaire J. Paul Getty is one of those seeking to buy the fuel enrichment plants.

The Dixon-Yates controversy, which rocked the Eisenhower administration and is being cited as a model for the current fight, involved a private ultility plan to combine with the A.E.C. to build a steam generating plant, with the power to be fed into the T.V.A. system as a replacement for T.V.A. power. Congressional opposition defeated the plan and preceded senate rejection of A.E.C. Chairman Lewis L. Strauss as secretary of commerce.

[From the Watertown (N.Y.) Daily Times, Nov. 12, 1969]

ATOM FUEL PLANT CONTROL

Congress must take a long hard look at President Nixon's proposal to sell three government-owned uranium enrichment facilities to private enterprise. Then it should either reject the plan or surround it with tight regulations that will insure protection to electric consumers and the public in general.

The enrichment plants carry out the final processing in providing fuel for the country's nuclear power plants. If such vital plants are turned over to the private utilities, the result will be a monopoly, with industry calling the shot over pricing decisions. This is one sure way to eliminate competition from the public power agencies which have helped keep power costs in line and which have been the one major protection consumers have had.

Although the president has yet to order the outright sale of the three plants, his directive to the Atomic Energy Commission to put them in a separate financial accounting category is the major preliminary step toward eventual release to the private sector.

The U.S. taxpayers have spent billions of dollars on the uranium enrichment facilities. The need for getting sufficient quantities of U-235 to sustain nuclear reaction for the benefit of our entire atomic program was essential and still is. This same money provided the bounty and the blessing for the private and public power utilities.

The money and efforts should not be sacrificed for the expediency of shedding one more government obligation, to the exclusive advantage of one particular private segment. The government would find itself scandalously giving the plants away at the expense of the taxpayer and the electric power consumer.

Without the uranium enrichment process, there can be no nuclear electric power. That, in plain language, is how important the functions of the three plants are. Whoever controls the plants has a hammerlock over all other agencies, private and public, domestic and foreign, that will need precious nuclear fuel to run their power plants. Congress must act in behalf of millions of American residents who want to flick their light switches without their sounding like cash registers.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The PRESIDING OFFICER (Mr. ALLEN in the chair). Is there further morning business? If not, morning business is closed.

DEPARTMENTS OF LABOR AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATIONS, 1970

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the pending business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The ASSISTANT LEGISLATIVE CLERK. A bill (H.R. 13111) making appropriations for the Departments of Labor and Health, Education, and Welfare for the fiscal year ending June 30, 1970, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MAGNUSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I send to the desk an amendment which I will call up later. I offer it in behalf of myself and Mr. MANSFIELD, Mr. MAGNUSON, Mr. BOGGS, Mr. MONTOYA—members of the Appropriations Committee—and Mr. MUSKIE and Mr. RANDOLPH, for the purpose of increasing the appropriation of the air pollution control program. I will call the amendment up later.

The PRESIDING OFFICER. Without objection, the amendment will be received.

Mr. MAGNUSON obtained the floor.

Mr. JAVITS. Mr. President, will the Senator yield so that we may have an idea of time?

Mr. MAGNUSON. I yield.

Mr. JAVITS. I do not wish to trouble the Senator about the substantive details; only as to some idea of time. We all have just now received report on the the pending bill. Many of us may wish to propose amendments. Some things are controversial.

I wonder whether the chairman could give us a little idea of time, so that we might cooperate in facilitating the work of the Senate. One could ask for a live quorum and get time, or somebody could talk, but that is neither here nor there. I wonder whether the chairman might give us his idea as to how this matter will be orchestrated.

Mr. MAGNUSON. Let us get this straight. We have had this bill ready for several days. The reports and the bill were on the desks last night.

Mr. JAVITS. Will the chairman allow me to contradict him. No report was in until this morning.

Mr. MAGNUSON. They were ready.

Mr. JAVITS. We did not get them, so we did not know what is in the bill.

Mr. MAGNUSON. This was ready a week ago; and we have been talking, as members of the committee know—Senator COTTON has been to every meeting—about the general language, the Whitten amendment and the Cotton amendment. The money items have been long since settled. Anyone could have found out about them. We had this finished some time ago.

Mr. JAVITS. I served on the Appropriations Committee. We really tried to find out what is in this bill. I think I have as good sources as anybody else. We could not find out. The staff down there, bless them, is very private about all this information.

Mr. MAGNUSON. Will the Senator permit me to finish? Then perhaps he will not have to ask all these questions. I should like to make a general statement about the bill, and then we can stay here as long as we want, and the Senator can bring up any amendment to any section of the bill.

I think it will save the time of the Senate if we deal first with the money items and near the end get down to where we obviously will have a great deal of discussion, and we can have a yea and nay vote on the so-called Cotton amendment and the so-called Whitten amendment, which the committee changed slightly, but I must say that I do not think there is much difference.

Mr JAVITS. No.

Mr. MAGNUSON. That is the purpose, and we want to go on. I will make a statement, and then the Senator can go on as long as he wants with respect to the different items in the bill he would like to discuss.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. JAVITS. Would the Senator except section 407 and section 408 from the normal request that the amendments be considered original text? I shall certainly raise the issue on 407, and I understand that another Senator—I cannot name him, because he has not agreed—will raise the issue on section 408.

Mr. MAGNUSON. That issue can come up in the normal course. I think we will save time if we discuss the money items as long as we can.

Mr. JAVITS. I think the Senator knows me well enough to know that I will do my utmost to cooperate with the Senator's wishes; but I do hope he will hold out these two amendments, so that we can have a yea and nay vote on each one. I mean, in an original sense, so that the committee amendments are up for consideration.

Mr. MAGNUSON. The usual request is to accept the committee amendments en bloc, and then the Senate can work its will.

Mr. JAVITS. I do not wish that. I will object. I do not wish to object. I ask the Senator to except from his unanimous consent request sections 407 and 408.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. COTTON. I should like to make one suggestion, which may not commend itself either to the chairman of the subcommittee or to the Senator from New York.

The Senator from New York and others, I am sure, are justifiably concerned that they want the dollar items in this bill. There are many, and they are complicated. They want an opportunity to study this matter and digest it and know what they are doing. We all sympathize with that. Everybody knows that we are going to have a contest here on the language——

Mr. MAGNUSON. On sections 407, 408, and 409.

Mr. COTTON. That is correct.

It would seem to me that, if we excepted those from any en bloc request and proceeded to get behind us the contest that is inevitable on sections 407, 408, and 409, while we would be doing that, it would give the Members of the Senate a chance to familiarize themselves thoroughly with the dollar content of the bill, and, in the end, would save us time and permit us to finish earlier tonight.

Mr. MAGNUSON. I do not disagree with that. I would like this general language considered separately, whether the Senate wants to do it first or last; I would not like to have that mixed up with the dollar items because it has only an indirect connection with the dollar items. There are many items in the bill. I do not know how many line items are in the bill, but there are several hundred. Then, there are breakdowns of the line items. There are probably several hundred items in the report where matters are spelled out.

We would be glad to explain what the House did and said. I could explain all of that in my opening statement. The

OEO matter has not been authorized yet but the House passed it. Then, we have the item the House passed on the floor on title I, ESEA. So it is not just a straight bill that came up. Everyone is making changes, even on sections 408 and 409. The administration saw fit to send wires to everyone and the wires got to most of us at 2 o'clock, 3 o'clock, and 4 o'clock in the morning. I am speaking of night before last. It was a very long telegram. We are trying to be fair about it and give everyone all the time needed.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. ALLOTT. Mr. President, first, I wish to give notice now that I will object to any limitation of time on this bill on any item except as that limitation may be agreed to upon the calling up of any particular item or particular amendment; otherwise, as to any general limitation of time on this bill I want to interpose an objection now.

Second, in line with what has been said by the distinguished senior Senator from New York, I would like to suggest that the Senator at this time, before he starts his discussion of the items, ask unanimous consent that the text of the bill be considered as original text for the purposes of amendment, except for sections 407, 408, and 409.

Mr. MAGNUSON. Except the general language provision.

Mr. ALLOTT. Except the general language provision.

Mr. MAGNUSON. Except title IV, General Provisions.

Mr. ALLOTT. Then, we are on the way.

Mr. MAGNUSON. Then, we are on the way. Will the Senator from Colorado make that request?

Mr. ALLOTT. Mr. President, I ask that the amendments of the committee be adopted en bloc, and considered as original text for the purposes of amendment, except "Title IV—General Provisions," which will not be considered in that respect.

Mr. JAVITS. Mr. President, will the Senator omit the word "adopted"? The Senator used the word "adopted."

Mr. MAGNUSON. It should be "considered." If the Senator will yield further, the correct word is "agreed."

Mr. ALLOTT. Mr. President, I ask unanimous consent that the committee amendments to H.R. 13111 be considered and agreed to en bloc, and that the bill as thus amended be regarded for purposes of amendment as original text for the purposes of further amendment, provided that no point of order shall be considered to have been waived by reason of agreement to the request, except title IV of said bill, to which this consent will not apply.

The PRESIDING OFFICER. Is there objection?

Mr. WILLIAMS of Delaware. Mr. President, reserving the right to object, I wonder if it would not be more appropriate to make this request after we get the bill that has been reported by the committee.

Mr. MAGNUSON. I am sorry. I cannot hear the Senator.

Mr. WILLIAMS of Delaware. Reserving the right to object, I wonder if it would not be more appropriate to proceed with the explanation and then make this request after we get back from the printer the bill that has been officially reported by the committee. All we have here before us now is the committee print. The committee never officially reported this bill until this morning. I think it is a highly irresponsible procedure to be considering a $20-billion bill within an hour after the committee takes final action.

Mr. MAGNUSON. There is no change in this at all.

Mr. WILLIAMS of Delaware. Then, what was the committee meeting on this morning?

Mr. MAGNUSON. There is no change at all.

Mr. WILLIAMS of Delaware. I still want to see the bill before granting unanimous consent. That is the least we can do when a $20 billion bill is before the Senate.

There will be no consent agreed to at this time.

Mr. MAGNUSON. This is the same language.

Mr. WILLIAMS of Delaware. We shall wait until we get it. This is the committee print.

Mr. MAGNUSON. Does the Senator object to this?

Mr. WILLIAMS of Delaware. I object to any action until we see the bill.

Mr. MAGNUSON. The only thing before the Senate is this unanimous-consent request.

Mr. WILLIAMS of Delaware. It is not there now.

Mr. MAGNUSON. Do you object to this?

Mr. WILLIAMS of Delaware. Yes.

The PRESIDING OFFICER. Objection is noted.

Mr. MAGNUSON. What is the pending order of business?

The PRESIDING OFFICER. The clerk will state the first committee amendment.

Mr. MAGNUSON. The bill is the same as this.

Mr. GRIFFIN. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. GRIFFIN. Mr. President, I was in charge of the floor for this side of the aisle late last evening after the vote on the Defense appropriation bill, when the unanimous-consent request was made that this bill be made the pending order of business even though the bill had not been reported from committee.

I must confess I was torn in my own mind because I think that is not a good way to proceed. We, on this side of the aisle, are also anxious to conclude and get the work done on the various appropriation bills that have to be acted upon. I did not object but I think it is obvious from the colloquy that has taken place that a number of Senators are very disturbed about trying to act on such a complicated bill without the bill being before the Senate and without time to consider what is in the bill. Ordinarily amendments that are going to be offered would be printed and available on the desks of Senators. In this case, at least as of now, they will not be. I know the Senator from Delaware feels the same way and other Senators are very concerned. I think it is important that we protect Senators' rights until they have ample opportunity to acquaint themselves with the bill. Within that framework and within those limitations we are going to do everything we can to expedite the bill, but we should not move too rapidly.

Mr. MAGNUSON. No one intends to move too rapidly. I hope the Senator from Delaware will take the word of all committee members that this is the bill.

Mr. WILLIAMS of Delaware. This may be the same as the final bill, but we did not receive even the committee print until 1 hour ago.

Mr. MAGNUSON. Not a "t" or an "i" or a dot has been changed.

Mr. WILLIAMS of Delaware. This bill has been before the committee since August 4. It has been held up and not reported to the Senate until today, December 16. If it took the committee that long Senators should at least have a chance to read it before being asked to vote. This is a $20-billion bill.

The fact is the original bill which was reported by the committee is not back from the printer. This is only an advance committee print. To consider an appropriation and make it the pending business before the committee actually reports the bill is highly irresponsible in my opinion. I have no objection to the chairman proceeding to explain the bill, but I do not want the amendments considered en bloc until we know what they are. I suggest the absence of a quorum.

Mr. MAGNUSON. Mr. President, will the Senator withdraw that request?

Mr. WILLIAMS of Delaware. I will withdraw the request if the Senator wants me to, but before the Senator makes a speech——

The PRESIDING OFFICER. The Senator from Washington has the floor.

Mr. MAGNUSON. I have the floor. If the Senator wants to engage in a colloquy with me or members of the committee with respect to why portions of this bill were over here, the Senator can apply the same thing to the Defense appropriation bill, the foreign aid bill, and the transportation bill. There are about seven appropriation bills.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. MAGNUSON. I shall yield in just a moment. I would like to finish. We have been sitting around here waiting for the administration to bring up programs. They asked us in several instances to wait, and even as late as last week they sent us another program from the Budget. We have been waiting for the OEO appropriation, which is a $2 billion part of the bill.

The Senate authorized it and the House authorized it but they are in conference on it today, I believe. The Senator from Delaware and I have been around here considering appropriation bills on many occasions in the month of

December. I will go back into the record on foreign aid where we were here between Christmas and New Year's on it.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Washington yield?

Mr. MAGNUSON. I do not yield. I have got the floor.

Mr. WILLIAMS of Delaware. Then use it.

Mr. MAGNUSON. Everyone here is trying to expedite this, including the leadership. I hope the Senator will take the word of the full committee and the subcommittee that this is the bill.

It is a little bit unusual, but this has happened many times toward the end of the session. I do not know whether it has happened since the Senator from Michigan (Mr. GRIFFIN) has been here, but it certainly has happened since the Senator from Delaware has been here.

Mr. WILLIAMS of Delaware. Will the Senator from Washington yield?

Mr. MAGNUSON. No, I do not care to yield. I will stay here until New Year's Eve, if the Senator wants me to, but Members of the Senate at least can proceed with the bill. This is the bill.

Mr. COTTON. Mr. President, will the Senator from Washington yield?

Mr. MAGNUSON. I yield. I do not think anyone is irresponsible. The Senator from Delaware did not sit and listen to over 470 witnesses as the Senator from New Hampshire and I did. Perhaps the Senator heard that many on the tax bill, but those witnesses were shut off. We had to listen to ours, some of them all important people, the top men in education, science, and in other fields, and some of them would take maybe all morning, from 10 o'clock to 12 o'clock. We met at 9 and would go on until 7:30 in the evening.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Washington yield?

Mr. MAGNUSON. I just think we had better take a look at this. If we want to proceed with appropriation bills, I suppose someone could object. The Senator from Delaware has asked for a bill to lay over in committee. I am sure the Senator has done that, has he not?

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Washington yield right there?

Mr. MAGNUSON. I yield. I do not know—this does not make any difference to me personally. I am speaking for the full Committee on Appropriations and the subcommittee.

We had the bill in the subcommittee ready 10 days to 2 weeks ago, but we have had these continual arguments regarding the general provisions. That is not the fault of the members of the committee. People are seriously and deeply concerned on portions of this issue.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Washington yield to me now?

Mr. COTTON. Mr. President, will the Senator from Washington yield?

Mr. HOLLAND. Mr. President, will the Senator from Washington yield?

Mr. MAGNUSON. I yield to the Senator from Florida.

Mr. HOLLAND. Mr. President, I recall that the——

Mr. MAGNUSON. Oh, I had yielded to the Senator from Delaware a few moments ago.

Mr. WILLIAMS of Delaware. I want to suggest to the Senator that any unanimous consent be withheld at this time; in the meantime if the Senator wants to explain the bill I have no objection, but if he wants to lecture me for trying to get a copy of the bill before the Senate acts, let me say that he is not scaring anyone. So keep right on, but it may take a little longer this way. I still say this is an irresponsible way to pass an appropriation bill.

Mr. MAGNUSON. I am going to explain the bill, but in general terms. It is open for anyone to offer an amendment.

Mr. HOLLAND. Mr. President, if the Senator will yield to me now?

Mr. MAGNUSON. I yield.

Mr. COTTON. Did not the Senator yield to me before?

Mr. HOLLAND. I recall that the Senator from Delaware (Mr. WILLIAMS) made the same objection when we were considering the agricultural appropriation bill. Rather than wait indefinitely, we went ahead and took up amendments, amendment by amendment, and we got through that same day, as I recall. We received the cooperation of the Senator from Delaware by proceeding in that way.

I suggest that maybe that is the answer to this problem now.

The Senator from Delaware will recall that.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Washington yield?

Mr. MAGNUSON. I yield.

Mr. WILLIAMS of Delaware. I have not been trying to delay the Senate. We have a situation here where we only have a committee print. The bill was not officially reported until this morning. If Senators will turn to page D1210 of yesterday's CONGRESSIONAL RECORD, Daily Digest, it says:

Committee on Appropriations: Committee met in executive session to begin mark up of H.R. 13111, fiscal 1970 appropriations for the Departments of Labor and Health, Education, and Welfare, but did not conclude action thereon, and will meet again tomorrow.

The committee met at 9 o'clock this morning and then reported the bill which would authorize over $20 billion in expenditures for this one agency.

Mr. COTTON. Mr. President, who has the floor?

Mr. MAGNUSON. Mr. President, I have the floor and I yielded to the Senator from Florida.

Mr. WILLIAMS of Delaware. The Senator from Washington yielded the floor. I make the point that he does not have the floor.

The PRESIDING OFFICER. The Senator from Washington yielded to the Senator from Delaware.

Mr. WILLIAMS of Delaware. I am trying to reply to the Senator from Washington to say that I have no objection to proceeding, but Senators should have an opportunity to look at the bill. I do object to a unanimous consent at this time.

So far as the lecture of the Senator from Washington is concerned I am not the least bit impressed by it. The bill was in the Senator's committee for 4½ months, and I can tell the Senator why it was not out before. I hope we can proceed with consideration of this bill without getting into personalities, but if the Senator wants the real reason for this delay in the record I shall be glad to oblige.

Mr. MAGNUSON. We had 3 months of hearings and then 3 weeks of recess——

Mr. COTTON. Mr. President, I have been waiting to speak. I am the ranking minority member of the subcommittee.

Mr. HOLLAND. Mr. President, I have the floor, and I yield to the Senator from New Hampshire.

Mr. COTTON. I thank the Senator.

Mr. President, it is regrettable, with the problems we have before us today, that we start out with a rather acrimonious exchange. It is no use going back into the history of discussion on appropriation bills. The Senator from Delaware has some justifiable points that he is making. I happen to have worked night and day with the distinguished chairman of the subcommittee the Senator from Washington (Mr. MAGNUSON), and I know that when we got going on the bill, we worked on it from early morning until late evening. Here we are with only a few days left and we have a bill before us. Whether it came late, early, or in between, we have a bill that is one of the largest appropriation bills, second only in amount to Defense appropriations.

The pending bill has almost $21 billion in it which I will say something about later. Now we have all worked hard, and are tired and even anxious. We have got to try to handle this thing dispassionately and as expeditiously as we can, but not to the extent of running a bill of this size through the Senate without giving every Senator full opportunity to examine it and know what it contains.

I think perhaps it would be wise to withhold this consent agreement. Certainly the Senator from Washington must make his opening statement which the Senate is entitled to hear and which the Senator is entitled to give. I shall not make any. But everyone in the Senate knows and I said this before—we are going to have a floor fight on sections 407, 408, and 409.

Those sections, of course, have to do with language in the bill and with what came over from the House, the Whitten amendments.

We know that debate will be fairly prolonged. So, if we start in after the chairman's preliminary statement, on the dollar items in the bill, we will find ourselves here in the middle of the night with a long, drawn-out debate on the disputed language which cannot be avoided. After the opening statement, if we could agree to go on to this disputed language, we would use the early hours of the day in making that inevitable debate, and it will be behind us. While that is going on, Senators will be able to

examine the report and look at the bill item by item. And we will have saved a lot of time.

I make that suggestion again. I think, in the condition we are all in at the present time in the Senate, it would help avoid any possible unpleasantness and irritation, and as the Senator from Delaware has very correctly asked, Senators would have a chance to look carefully at the bill and the report.

Mr. President, this procedure, I believe will save wear and tear, will save our tempers, and will afford everyone an opportunity to fully consider the matter.

Mr. HOLLAND. Mr. President, I appreciate the kindly suggestion of the Senator from New Hampshire. I just want to say that, although I am a member of the subcommittee, I did not go through anything like the punishment that the chairman and the ranking minority member went through in hearing, as I recall, something over 400 witnesses. Nor did I go through the frustration of waiting for the House, after several postponements, to pass its version of the OEO bill, so that we would know what to put in the bill for that important activity. Nor did I have to go through the frustration of waiting from time to time while the executive department was sending down new items. I understand the items continued to reach the subcommittee until perhaps the last month or thereabouts.

All I can say is we are indebted to those two Senators. We ought to take it up in any way that suits them. I have suggested taking it up amendment by amendment. If that is not acceptable, I certainly will join the Senator from New Hampshire in his suggestion. But I do want to say to the Senator from Delaware that he is making a point that is only technical, because this committee print is the committee bill. There is not a word changed. There is not an "i" dotted or a "t" crossed different in the bill as reported today from that which is in the committee print, because we were only awaiting final action by the full committee this morning, which was held up on some of the general provisions in title IV of the bill. The rest is all behind us and all agreed to, and apparently it was not at all unknown, because last Saturday I received a nine-page wire from the Secretary of Health, Education, and Welfare relating what the subcommittee had done. Somebody in the subcommittee evidently had done some talking.

That was received by me last Saturday. I noted in the press in Washington next morning a long discussion about it, and I have that in my pocket also. So nothing has been furtively or secretly held back here. The committee print is the bill we are considering so far as the substance is concerned. It is changed in no regard.

I hope we can hear the opening statement of the distinguished chairman and the ranking minority member, if he cares to make one. Then if the Senator insists we must take it up item by item, just as we did in the case of the agriculture bill, we can do so.

I yield now to the Senator from West Virginia.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield to me first?

Mr. HOLLAND. I yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. I stated yesterday that I had no objection if they wanted to take up the bill, but I did not mean before the bill was available. I am not asking that it be delayed after we get the official bill. I know the Senate wants to proceed. I do not question that the committee print may be the same as the final bill, but it is not the bill. Even the committee print was not available to us until a few minutes ago. To suggest that the Senate should act on a $20-billion appropriation bill before it is even back from the printer is most irresponsible.

All I suggested to the Senate was that unanimous consent to accept the committee amendments en bloc be withheld until some of us have at least had a chance to examine the bill. That request could be presented later in the day. I was not filing any permanent objection, but I thought it was a reasonable request to ask for a short delay.

When there is before us a $20-billion bill that is not available to Members of the Senate and even now technically is not before the Senate, I say that there is no reason for such a rush. To avoid any misunderstanding there will be no unanimous consent as far as I am concerned—and I think I shall be here to take care of that—until we get a chance to look at the bill.

We would make much better time if the chairman would proceed to discuss the bill instead of having all this colloquy about procedure, because he is not going to get anywhere. Some of us understand the rules of procedure. I think we would make much better time if they proceed to talk about the bill.

Again I say it is indefensible that the Senate does not get this until 3½ months after it came from the House. Frankly I do not care how the committee wants to proceed, but there is not going to be a unanimous consent on the committee amendments en bloc until some of us have a chance to look at them.

This bill is over $900 million above the budget requests. Surely some attention needs to be given to these excessive expenditures, and to try to vote on a bill before it is even back from the printer is not being fiscally responsible.

Mr. HOLLAND. I understand the Senator from Delaware.

I yield now to the Senator from West Virginia.

Mr. BYRD of West Virginia. Mr. President, the Senator from Delaware has made a legitimate objection to the adoption of the committee amendments en bloc. I think under the circumstances it is an understandable objection and a reasonable one.

As I understand the Senator, he has no present intention of continuing his objection throughout the day to the adoption of the committee amendments en bloc. He merely wants to have an opportunity to look over the committee amendments before removing his objection.

I would hope that at some time during the day the Senator would remove his objection after he has had an opportunity to study the committee amendments.

Mr. President, the chairman has done a very fine piece of work on this bill. He has held evening sessions and he has held sessions throughout the day for many weeks. He and the ranking minority member, (Mr. COTTON), have heard hundreds of witnesses. I think they are to be congratulated on their work on this very important bill. Many items had to have lengthy study.

We have only 7 days, including Christmas Eve, in which to complete our work, if we can. We have already consumed 30 minutes this morning, without accomplishing anything.

I hope the Senator from Delaware will have an opportunity to study the amendments and that later he will not interpose an objection to their adoption en bloc. I hope the chairman will proceed with his statement and the ranking minority member with his. During that time perhaps we can work out an agreement with everyone concerned to expedite the procedure, because we ought to pass this bill as soon as possible so as to allow prompt consideration of the Transportation appropriation bill, which will be ready for floor action.

I thank all Senators, on behalf of the majority leader, for their consideration.

Mr. HOLLAND. Mr. President, I yield the floor.

Mr. MAGNUSON. Mr. President, I think all understand what this is about. The Appropriations Committee can take these items up one by one, if Senators want to do that. There are a great number of them. Many of them are not in controversy. Many of the budget items and the House items were the same, and the Senate committee adopted them. It will expedite matters if we work it the other way.

I have a general statement about the bill which I would like to present to the Senate at this time.

The Labor-HEW appropriation bill, which is H.R. 13111, as reported totals $20,819,691,700.

This is an increase over 1969 of $1,492,657,000, an increase over the President's recommendations of $985,566,000, and an increase over the House allowances—and I want to underline this figure for further discussion—of $3,246,089,000.

First, I know the Senate would question this tremendous difference with the House allowances of over $3 billion. This is explained easily by the OEO appropriation, which was sent up late by the Budget, which is now in conference, and has not yet been authorized, but that amounted to $2,048,000,000.

Then there was the advanced funding for education for 1971, which was sent up in the meantime, I will say to the Senator from Delaware, only a short time ago, in the amount of over a billion dollars for advanced funding for 1971.

The House, during their action on this bill, did not consider either of these items due to lack of authorization. Although both issues remain to be resolved, we did consider appropriations for the Office of Economic Opportunity,

and Advance Funding of Education for 1971.

Those two items make up the $3.246 billion, except for some other items sent up by the Bureau of the Budget, some of them as late as the last 2 weeks, amounting to another $50 million, which were not considered by the House of Representatives, in budgets for unemployment compensation, a new amount, labor-management services, capital grants for the Federal City College—that never came up—the Social and Rehabilitation Service salaries and expenses, Social Security Administration limitation on salaries, and two smaller items, the Office of the Comptroller and the Federal Mediation and Conciliation Service.

These items were not considered by the House of Representatives, and they came up since the hearings—in some cases during the middle of them—and the total of these items would add up to $3.338 billion.

Then there was an item of great importance not considered by the House of Representatives, in a relatively large amount, though small compared to the total of the bill. Congress passed what we called the Older Americans Act, and finally we got a budget estimate on that, after a long period of time.

So there were a lot of various items that kept coming in, that the House of Representatives had not considered, after the House had passed its bill. The House of Representatives, during its action on the bill, not only did not consider those items, in many cases not necessarily due to delay in authorization, but in many cases because there was no authorization.

Although both issues, the advance funding and the OEO, remain to be resolved, we did consider the appropriations for the Office of Economic Opportunity and the advance funding also. Those were the two items amounting to $3,274 million which we have had before us only about 2½ weeks.

The bill recommends $1,624 million as a conditional appropriation for the Office of Economic Opportunity. For advance funding of education in 1971, we have provided $1,117,580,000, which will be 80 percent of the 1970 levels. The two items total $2,741,530,000, and make our actual difference with the House allowances $505,509,000.

In arriving at the final recommendation, the committee carefully considered and reviewed every request and every action taken by the House of Representatives. We received from the President, as I have pointed out, several budget amounts as we were moving along, the latest one arriving on November 14. During our reviews, we cut 28 bureaus, agencies, and divisions by a total of $231,753,000 below the President's requests.

On a comparable basis to the House action, we made increases of $591,149,000 and decreases of $72,640,000. Thus we would have items in question with the House of Representatives that total approximately, in round figures—we will have the exact figures for the record—$591,149,000; the net difference with the House of Representatives, on these items, of $517,509,000.

Of the increases we have recommended, about 42 percent, or $246,214,000, are to bolster the health manpower and medical research programs of the National Institutes of Health, the regional medical programs, the Chronic Disease Control Center programs—which the Bureau of the Budget cut out completely—the Health Services, and an additional amount for Mental Health Administration.

About 46 percent of these increases, or $271,835,000, is slated for education, primarily in construction funds for community colleges and technical institutes, other 4-year colleges; books for public libraries and college library resources, including librarian training programs; for student assistance in the form of educational opportunity grants; and for juvenile delinquency control and the dropout prevention programs which will help to curb crime among youth. About 7 percent will fund programs under the Older Americans Act, the foster grandparents program and grants to States for programs they develop for the aging. About 5 percent will help the social and rehabilitation service to launch better auditing programs and reviews of medicare-medicaid expenditures, which are also in the bill for a large sum.

During our review of all the programs covered in this Labor-HEW appropriation bill, we became quite disturbed over several trends in the budget. While we all support the goal of holding down Federal outlays in an inflationary period, we do not believe this should be accomplished at the expense of vital domestic programs.

Cuts in education, health research, health manpower, and economic opportunity programs cannot be justified by general and often superficial references to the dangers of inflation. Inflation may indeed dictate firm control of the total Federal budget, but we had serious doubts about priority choices reflected in the 1970 Federal budget recommendations presented to us as related to that problem.

In fact, we held strongly to the premise that, even in times of economic uncertainty, care must be taken to protect, or for that matter even expand, programs that represent long-term investments in the basic health and well-being of our society. This bill and our recommendations represent an important and continuing step in that direction.

We are recommending that not only should the Senate agree with the action taken by the House of Representatives to protect vital education programs, but that we should also take a special initiative of our own to protect the Nation's investment in health research and the production of health manpower. The returns from past investment in this area have been substantial.

It is clear to me and to my fellow members of the subcommittee that health research must be expanded if heart disease, cancer, stroke, and other killing and crippling diseases are to be conquered. Yet, not only did the administration request a cut in health research projects but also asked that we cut research training projects. The implication of this action is unmistakable, and therefore properly subject to careful scrutiny by ourselves.

The cutback in health research is not intended to be temporary, because I think below the surface of the budget and the House allowance for health research training is a subtle budget policy with long-term implications for the production of future research scientists and, most important, the production of future teachers of physicians, medical technicians, and others on the periphery of the medical field, the supply of which is falling further behind with every passing day.

We are opposed to such a policy, and recommend restoration of a proper level of health research activity for 1970, and the continued expansion of health manpower programs for research, teaching and service personnel. Continued shortages within the health professions can only result in acceleration of the spiraling costs of health care and inexcusable delay in bringing to the American people possible improvements in the delivery of health care, and the benefits of some good research that has been conducted.

During our hearings, many instances of overlapping programs and responsibilities came to our attention. This is why we spent a great deal of time on the hearings and heard from an almost overwhelming number of witnesses to find out why these many programs, many of them in HEW, had a tendency to overlap and programs in different departments had the same purpose.

We found the matter of mental health and mental retardation in at least seven or nine divisions of Health, Education, and Welfare. We are for this program. However, we felt that if we could get some of them consolidated, we would have more efficiency and spend the same amount of money but spend it more properly.

Both the Department of Health, Education, and Welfare and the Office of Economic Opportunity operate virtually identical neighborhood health center programs.

Organizations seeking to provide health services to the poor are confronted by a maze of funding sources and confusing and overlapping application procedures.

It is not unusual for any Senator to have the experience of people from his home State who want to participate in one of the programs come to Washington and be at a complete loss to find out where to make an application, whether to make it in one department or another.

We hope that this will be changed by the reorganization which is still in process. That is what made the funding of some of the money a little confusing at times to the committee.

Health manpower training and mental retardation programs are scattered all over the Department of Health, Education, and Welfare. Each one, I guess, is doing its particular job. The testimony is that they are different programs as such, because they deal with separate phases of the matter.

This kind of fragmentation and competition among agencies is inherently inefficient. While the program objectives are worthwhile, this method of organizing to attain them wastes public resources. We expect a careful review to be made of this problem and for steps to be taken to streamline program administration.

Our committee specifically directed the Secretary of Health, Education, and Welfare to examine the following areas of activity within the Department to determine whether there may be excessive overlapping or duplication: First, mental retardation; second, assistance to migrant farmworkers; third, family planning; fourth, nutrition; fifth, health services for the poor; and sixth, health manpower training programs.

We especially directed the Director of the National Institutes of Health to take charge of the review of health manpower training programs and requested a comprehensive and carefully documented report, with recommendations, that would cover the current status and future development of all Federal programs involved in any way with health manpower.

The members of our committee also shared a criticism of delegated programs with funds flowing through and among several different agencies. This was especially evident in the OEO programs.

A number of economic opportunity programs have been transferred from OEO and are now administered by other departments and agencies. In some instances, however, OEO has continued to budget for transferred programs and then allocate funds to the other agencies. The most prominent examples of this are the Headstart and Follow Through programs now administered by the Department of Health, Education, and Welfare and a number of manpower programs administered by the Department of Labor.

We found this practice of one agency budgeting for another to be quite confusing to the Congress and the public, and expect this method of budgeting to be discontinued as soon as possible.

In detailing my summary or review of our recommendations, I should like to commence with what are called the "related agencies." Other than the two Departments, there are 11 related agencies in this bill, excluding the Office of Economic Opportunity. For those 11 related agencies, our recommendation is $93,902,000.

This would be $97,000 below the President's requests, and $15,472,000 over the House allowances. It would be $13,874,000 over the comparable appropriations for fiscal 1969, but the major reason for this difference and our difference with the House allowances is reflected by the payment to the Corporation for Public Broadcasting.

This is another item, I suggest to my good friend, the Senator from Delaware, that we received only 2 weeks ago from the Budget Bureau. This is a very important matter of keeping alive the matter of educational TV. That item was included in our bill. The House did not consider that amount. So that is the main difference between those related agencies.

The House did not consider funding for the Corporation for Public Broadcasting, and we allowed $15,000,000 for these activities that help to support creative and innovative programing by public television and radio stations—such as those produced by NET—and for technical assistance to improve station operations. The President requested $20 million for this program. They had $5 million in 1969. So our allowance of $15 million accounts for the bulk of our difference with the House on these items, and the increase over 1969.

Included among these related agencies is the National Commission on Product Safety which will be completing its investigations during this fiscal year, and preparing a comprehensive report on the adequacy of measures currently employed to protect consumers against unreasonable risk of injuries caused by hazardous household products. That Commission was created by an act of the last Congress. It passed the Senate unanimously. Last year they received $525,000 and for 1970 we recommended $1,474,000 which is the balance of the authorization for this excellent program.

They have held lengthy hearings in 10 or 11 sections of the country and are doing what everyone thinks is a marvelous job. They will make recommendations at the next session of Congress.

Among the other differences in this bill as recommended by our committee and the House allowances, are:

The President's Council on Youth Opportunity: An item not considered by the House, our allowance of $300,000 is under the President's request. We felt they were spending far too much for "consultants fees," and that they should either take advantage of volunteers, or make these people regular employees so we can determine just what their salaries actually should be and whether such expenses are reasonable.

The Federal Mediation and Conciliation Service was increased by $172,000. This will allow them to participate, along with the Department of Labor, in the Federal employee labor-management relations program that was recently instituted—again, long after the House bill was passed.

The Office of Economic Opportunity is also one of the related agencies in this bill, and we have recommended an appropriation of $1,624,000,000 which is $424 million below the President's request, and $324 million below the 1969 level of operations.

In dealing with the OEO program, the committee was confronted with a series of difficult situations, and I quote from our report:

> The Economic Opportunity Act amendments of 1967 authorized appropriations through June 30, 1969.
>
> The administration has proposed a two-year extension of the existing provisions of the Economic Opportunity Act of 1964, as amended, requesting that $2,048,000,000 be authorized for the appropriation for the fiscal year ending June 30, 1970, and such sums as may be necessary for the fiscal year ending June 1971.
>
> The Senate has passed the bill entitled "The Economic Opportunity Amendments of 1969," which would authorize the same amount, $2,048,000,000, to be appropriated for the fiscal year ending June 1970, and $2.732 billion for the fiscal year ending June 30, 1971—in other words, carrying out the 2-year extension.
>
> Authorizing legislation for the Economic Opportunity Act program has been passed by the House, but is still in conference.

Here, again, are some of our problems. I wrote this opening statement 4 days ago, and now I have to change that because of action of the House since that time. It has passed the House, it is in conference, and I do not know whether the conference will be resolved this week. The House members of the committee have hopes that it will. That will have some bearing on these amounts.

The fiscal year 1970 Appropriation Act is here under consideration, almost 6 months after the fiscal year has begun. Should congressional action continue to be withheld, it is unlikely that funds will be available much before 8 months of the fiscal year for which they are intended.

I might say to the Senator from New York (Mr. JAVITS) the more I read this, the more I think that we should pass the Magnuson plan of the legislative and fiscal sessions, of which the Senator from New York has been a prominent cosponsor.

The committee is aware of the importance of the economic opportunity program and notes that the Senate has taken timely action on its passage of S. 3016, the "Economic Opportunity Amendments of 1969." It believes that it would be damaging to the important new directions set by the administration and the Senate itself if there is further delay than absolutely necessary in providing appropriations. These new directions call for the Office of Economic Opportunity to reconstitute itself as the vanguard of experimentation and development in more effective ways to deal with domestic problems affecting the poor and disadvantaged.

None of us likes to provide appropriations for some program that has not been fully authorized. The differences between the House and Senate, however, are not too great, so that we can estimate pretty closely the amount. But we do have a Senate rule, called to my attention vividly by the Senator from Florida, to the effect that we have the right to make appropriations on bills that we have authorized, which we did. But we cut it down because of the time element involved and because we knew that the Administration would then come up with the first appropriation supplemental in the year; but they would have the money, if the conference agrees, to carry out the program up to that time.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. JAVITS. I do not believe that it works that way, because, as I understand the way the departments operate, they have already spent money on the continuing resolution. They will then allocate what they have received in the way of appropriation, or the Budget

Bureau will do it for them, and it may result in scaling down their allocation if the appropriation for this fiscal year is less than for the previous fiscal year, for the period which the Senator has in mind.

The supplemental appropriation bill really does not help too much in that kind of situation, where you have ongoing administration, because they have to condition their activities, which have a certain amount of leadtime, according to the very low appropriation which is provided for in this bill. It is not an automatic situation, such as in the case of interest on debt or veteran's benefits, where a supplemental can really mean something. It is also unlike situations which are prospective in their application, such as the neighborhood youth corps summer program where we do not get action until July but the money can still be used.

The Economic Opportunity Act appropriation is an ongoing thing which requires balance through the year, and it does not do them any good unless they have some stabilizing concept of what they are budgeting and what they are doing.

Therefore, I would appreciate it if the Senator would tell us precisely what the substantive basis was for the Appropriation Committees' cuts, unless the only substantive basis was the committee's idea that half the year has expired. With all due respect, I do not think that represents any basis for cuts of this kind.

Mr. MAGNUSON. That is not involved, because they have been spending every month one-twelfth of what they had last year.

Mr. JAVITS. That is correct.

Mr. MAGNUSON. Another peculiar thing about OEO—I have never understood why it happens, and it is like our fiscal year versus the calendar year—is that most of their programs run to April 15, and then they are renewed. That is true of a great number of their progams. I do not know how they got April 15, unless the first appropriation for OEO might have been passed by Congress in January, in the beginning, and then they started their programs.

Because of the uncertainty of the authorization, as to whether the House would get to it at all, we thought we would put some money in the bank, with the general understanding that if the conference report came here similar to what the administration recommended, we would immediately honor it. That is about the only answer I have.

Mr. JAVITS. What I am trying to get at is this: Is there any substantive basis for this very large cut in the Senate-authorized amount? If there is, then, by a discussion on the floor, at least the agency and we—I am the ranking minority member of that committee—can get an idea why the committee sort of turned thumbs down on the OEO to the extent of approximately a 20-percent cut. Twenty percent is a good deal of money for one agency.

Mr. MAGNUSON. The Senator from New Hampshire has spent a great deal of time looking into this matter, and I am sure he is going to mention that.

Because of the lateness of authorization, and even yet not knowing, we thought we should have some say as they move along on the priorities. The Senate Appropriations Committee may not necessarily want to establish the same priorities in OEO. We may want more for one program and less for another. That is one reason why we gave ourselves this leeway. Other than that, we had no reason.

Mr. JAVITS. May I hope that when the Senator from New Hampshire (Mr. COTTON) adds his analysis to that of the chairman, we will have either the fact that it is not substantive or that it is, and if so, on what basis. Otherwise, it would be hard to judge what to do about it.

Mr. COTTON. As a matter of fact, usually, the ranking minority member rises and retraces the points covered by the chairman. I do not intend to do that, because I think it is important for the Senate to take up these matters as they come along.

The history of this matter is that when the subcommittee first had to face up to this OEO problem, we were going blindly. We had no evidence. The Director of OEO had not appeared before us, because the chairman, quite correctly, told him that we preferred to listen to him when we had an authorization. We did not have an authorization, and we were writing up the bill. We agreed at that time, as I recall—to appropriate—for the remainder of the year; that is, to appropriate all they used for 6 months under the continuing resolution of OEO. Then, we appropriated 80 percent for the remaining part of the year with the idea this would keep them going and that we could take care of surpluses in the supplemental. The figure was 80 percent, was it not?

Mr. MAGNUSON. Yes; 80 percent.

Mr. COTTON. At that point we got the authorization, or part of it. Am I correct?

Mr. MAGNUSON. The new Director appeared before us when we were marking up the bill and said, "Please wait until tomorrow night." That would be, for instance, on a Wednesday. So we waited. He is a very able man. I know him well. Then, the House got into a squabble about the Green amendment. So the Director came back and we had to do what we are now doing here in sheer desperation to get the bill up.

I wish to read from the committee report.

Mr. COTTON. Mr. President, if the Senator will yield, I would like to correct a misstatement I made.

Mr. MAGNUSON. I yield.

Mr. COTTON. I referred to 80 percent with respect to advance funding. We appropriated the amount that they had already used under the continuing resolution in the first 6 months and two-thirds of the request for the remaining 6 months.

Mr. MAGNUSON. That is correct.

Mr. JAVITS. When the Senator says "request," does he mean the Senate-passed authorization?

Mr. MAGNUSON. It was the same as the Budget request.

Mr. COTTON. It was two-thirds, not with the idea that it was sufficient, but we were proceeding with no evidence. We appropriated two-thirds of the Budget request for the last 6 months of this year with the intention that when the supplemental came in we could hear the Director, hear all of his program, all of the details, and obviously do whatever was necessary in the judgment of the subcommittee and the committee.

Mr. MAGNUSON. I wish to read to the Senator from New York the language which appears on page 93 of the committee report. I might add that we knew this long before the squabble in the House:

> For these reasons the committee includes $1.624 billion, which is the rate of operations in fiscal year 1969, projected through the first 10 months of fiscal year 1970. This amount has been deliberately held at a point where the agency will be able to sustain necessary operations for the time being, but is clearly below what the Senate and House authorized.

That is taking the cue from what we did in the budget. That is the key.

> This appropriation will enable the Economic Opportunity Program to continue in as orderly a fashion as possible immediately upon completion of final action on this authorization. The committee would then expect—

We bind ourselves to this—

> to act on such supplemental appropriation requests as would be required to reflect whatever new directions might be indicated by its new authorization.

As the Senator knows, there is much controversy in connection with the direction of some of these programs. We reserved the right to take a look at them but did not deny them the right to go on.

Mr. JAVITS. Mr. President, I think both Senators have been very helpful, and I refer to the chairman of the committee, the Senator from Washington (Mr. MAGNUSON), and the ranking minority member, the Senator from New Hampshire (Mr. COTTON), in giving us the rationale for the action of the committee.

I wish to indicate to the chairman what I think we have to do on our side. I think we have to ascertain whether OEO can really proceed with this $1.624 billion level, or, in fact, more would be jeopardized by proceeding at that level. Second, we have to determine what OEO would have to propose for the supplemental and what reception it would be likely to get from the Bureau of the Budget. This should not take more than a few hours. Then I hope to be able to report that to the Senate and to the committee from the OEO point of view and from our point of view. I shall contact the Senator from Texas (Mr. YARBOROUGH). Then, we can mutually determine if this can stand as it is or whether we might contemplate any amendment; but I am sure the Senator will look at this matter de novo in the supplemental, as if it were an initial application because then he would look at the facts.

Mr. MAGNUSON. Mr. President, there

was another factor. We did not get word directly from the Bureau of the Budget. I do not know what part of the OEO program they are going to continue. There is a great deal of discussion. There is one school of thought to cut it out altogether. That is the extreme. The other extreme is to keep everything going. Frankly, I do not see how we can keep all these programs going and cut it down much lower than we cut it. I do not know what the result will be because we have had so many changes in the last 4 months down there. I hate to suggest what it is going to be. I am waiting for another telegram at 4 o'clock in the morning.

Mr. COTTON. Mr. President, I would like to add to that. I wish to say to the Senator from New York that in all the years I have been on this subcommittee, and all the years I have been on the Committee on Appropriations in both the House and the Senate I have never seen such an unhappy example of what should not happen to this bill.

We have the situation which has been covered in the report. One bureau—one department—getting the money and turning it over to another. In this case OEO turning the money over to Labor. There is no business procedure about it whatsoever, and no way we can know what we are doing in committee.

In addition, OEO has not had the opportunity to tell us—we should have known but we were unable to get the information—as to exactly what they wanted. They did tell the House but not the Senate. The Bureau of the Budget has not gotten around to telling us what their analysis is or what their idea is of the function of OEO and how much money it is going to take.

The administration has not done so. The Senator from New Hampshire expected we would get some of the information the Senator from New York is now seeking to obtain. The Senator from New Hampshire thought, handicapped as we were and operating in such a vacuum if we arbitrarily gave them only two-thirds for the last months of the year of what they were probably expecting, that it would bring to us some definite, clear-cut information. We have not received it.

I know the Director of OEO is not to blame because he is eager and willing to give it to us. But whether it is in the Bureau of the Budget or where the holdup takes place, I do not know.

Frankly speaking for one member of the committee, and I think that was the feeling of the subcommittee, we thought that the quickest way to get some real, definite, down-to-earth information was to do something that would cause them to see the necessity of getting it to us. Apparently, that method fell on the desert air. If the Senator from New York, during the day, can acquire that information, he will be rendering a great service.

Mr. JAVITS. I am grateful to my colleague. I shall do exactly that.

PRIVILEGE OF THE FLOOR

Mr. President, may I ask the chairman to yield to me, so that I may ask permission for the privilege of the floor to be given to the various staff members of the Committee on Labor and Public Welfare while we debate the bill?

Mr. MAGNUSON. Oh yes. I yield.

Mr. JAVITS. Mr. President, I ask unanimous consent that the necessary members of the staff of the Committee on Labor and Public Welfare have the privilege of the floor during debate on the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. While the Senator is on that subject, so that I will not forget it, let me say that no one can be more grateful than the Senator from New Hampshire (Mr. COTTON) and myself for the tremendous work that the staff on HEW and all members of the Appropriations Committee staff gave us. They worked late at night for weeks, night and day. That is how complicated the bill is. I wanted to say this while the Senator from Delaware is in the Chamber. We had to add 17 new items which came up from the Budget in the last 5 weeks. They were new ones in the bill.

Mr. JAVITS. I thank the chairman very much.

Mr. MAGNUSON. It is pretty hard to know what is going on down below.

Now, Mr. President, I will continue with the statement.

The committee is aware of the importance of the Economic Opportunity program, and notes that the Senate has taken timely action in its passage of S. 3016, the Economic Opportunity Amendments of 1969.

But, again there, the Senate was plagued with the proposition that two of its most important programs—I suggest not the most popular but at least two of the most worthy programs—the largest was transferred out of OEO and we did not know at that time whether the administration would transfer the remainder of the program. No one seemed to know. They were working on it but had made no decision and have not yet, but we did start here on the HEW Job Corps and two or three other job training programs which went to Labor but they did not want the onus of the funds. They wanted us to fund it through the OEO which we deplore and suggest that that does not happen again.

The committee believes that it would be damaging to the important new directions set by the administration and the Senate itself if there is further delay than absolutely necessary in providing appropriations. We do not know what the experiments will be with the rest of them. I suppose it will be, much of it, a continuation of past programs.

This committee has been critical in the past Economic Opportunity programs and management, which fell short of reasonable expectations for efficiency and effectiveness. It hopes that the commitment of the present administration and the new management of the Office of Economic Opportunity may be realized. However, the committee also acknowledges that it is almost impossible to expect creditable performance with such unprecedented delay in authorizing a program now almost halfway through the fiscal year.

For these reasons the committee includes $1,624,000,000, which is the rate of operations in fiscal year 1969, projected through the first 10 months of fiscal year 1970.

I shall not discuss that in my statement any further. I think it is pretty clear what we did and why we did it.

This amount has been deliberately held at a point where the agency will be able to sustain necessary operations for the time being, but is clearly below what the Senate authorized in S. 3016. This appropriation will enable the Economic Opportunity program to continue in as orderly a fashion as possible immediately upon completion of final action on its authorization. The committee would then expect to act on such supplemental appropriation requests as will be required to reflect whatever new directions might be indicated by its new authorization.

The House took final action on the OEO authorization last week, and a conference report should be forthcoming shortly.

DEPARTMENT OF LABOR

For the Department of Labor, our recommendation is $979,578,000, which is $23,457,000 below the President's requests, and $2,673,000 over the House allowance.

Our recommendation would reflect an increase over 1969 funding of $208,009,000. When you consider the activities of the Manpower Administration, with their responsibility for the Neighborhood Youth Corps, job opportunities in the business sector and the concentrated employment program, it is understandable that their appropriation is increased $248,113,000 over the 1969 level. We do not feel those increases within the Department of Labor are unreasonable.

Mr. JAVITS. Mr. President, will the Senator from Washington yield at that point?

Mr. MAGNUSON. I yield.

Mr. JAVITS. I hope the Senator will forgive me, but I think he knows that this is my principal committee and I am heavily involved in all of its activities, including the manpower provision to which the Senator has just referred. We will check out the Neighborhood Youth Corps summer program in order to see whether any effort to increase that allocation is justified and I will report to the Senate and to the chairman, but I did want to ask the Senator this one question which puzzles me. The Senator speaks of the JOBS program, but the Senator does not say exactly what the committee gave that program.

Mr. MAGNUSON. We will come to that later on.

Mr. JAVITS. That will be fine.

Mr. MAGNUSON. I break this down. I was merely saying, in view of things the Senator is talking about, and probably even more, it is not unusual to see this two hundred and more million dollars over in 1969.

Mr. JAVITS. So that the Senator can understand better the point that I raise on page 6 of the report, it reads as follows:

> The amount requested for 1970 was an increase of $192,050,000 for the JOBS program and $44,200,000 for the Concentrated Employment Program. These are both relatively new programs funded at a low level at the beginning of fiscal year 1969 . . .

Mr. MAGNUSON. They did not themselves break it down. Page 6 of the report states:

The Committee directs that within the total funds approved $26,400,000 be reprogrammed to provide for an increase in the Neighborhood Youth Corps summer program in 1970 to a level of $147,900,000, the same level as the total program for 1969. This reprogramming will require a reduction in the program increases specifically requested by the Department within the total amount approved by the Committee. Most of the Departments' request was accounted for by two programs, the Job Opportunities in the Business Sector program (JOBS), under the sponsorship of the National Alliance of Businessmen, and the Concentrated Employment Program. The amount requested for 1970 was an increase of $192,050,000 for the JOBS program and $44,200,000 for the Concentrated Employment Program. These are both relatively new programs funded at a low level at the beginning of fiscal year 1969, but expanded considerably during the year under the appropriations made for this purpose. The amounts requested by the Department for 1970 would have done little more than maintain the level of activities reached by the end of fiscal year 1969.

The Committee strongly supports efforts of the department to evaluate the effectiveness of manpower programs, and feels that a continuing review is vital if we are to make the most effective use of our resources. The Committee would welcome evidence that we should give emphasis to those programs that are best contributing to our objectives of improving the work skills and quality of life for all Americans, and the reduction or elimination of less productive programs.

In other words, the Senator is trying to find out the exact amounts.

Mr. JAVITS. I know what they requested, but what did the committee give them?

Mr. MAGNUSON. We did not direct a breakdown because they did not ask for a breakdown. They wanted the full sum. They wanted it to be flexible. We strongly suggested that they keep it at the 1969 level.

Mr. JAVITS. Nevertheless, the committee funded the program at less than the 1970 budget request.

Mr. MAGNUSON. They did not ask for a breakdown. There were many witnesses, but I received the impression that they wanted this flexibility. However, we made that statement in the report.

As mentioned, our recommendations in Labor are $2,673,000 above the House allowances, and to highlight these differences:

The Office of Manpower Administrator: Our increase of $1,582,000 allows them to conduct a study of seasonality in the construction industry and to further their mobility demonstration and placement assistance programs.

Office of Labor Management Relations: Our increase of $841,000 allows them to strengthen and improve the new program established for Federal employees and their unions. This was an administration request. The Assistant Secretary for Labor-Management Relations will be responsible for determining appropriate bargaining units, supervising representative elections, deciding cases involving unfair labor practices, and administering the standards of conduct for Federal employee organizations. This is very important and should prove beneficial to all Federal employees.

In the Wage and Labor Standards Administration, we feel the safety program in high-hazard industries is very important, and long neglected.

The increase of $250,000 over the House allowance will provide $150,000 for a high-hazard inspection training and education safety program which will permit the Department to carry out its responsibilities under the safety provisions of the Walsh-Healey and Public Service Contracts Acts.

The funds recommended will only permit long overdue first steps toward proper administration of the acts. Without them the safety activity will be able to carry on only a skeleton program. It will also provide $100,000 for restoration of mandatory Federal pay increase costs not completely funded in 1969 and will permit the filling of positions authorized in 1970 and a reduction of the backlog in adjudication and payment of claims of injured Federal employees.

For "unemployment compensation," we also allowed a trust fund transfer of $26,929,000 in this grants-to-States program. This will cover increased salary costs in the administration of these programs in the States and for the establishment of 11 "job banks"—the program that has proved so successful in the Baltimore demonstration in helping to place people in jobs.

In the Office of Labor Management Relations, we agreed with the House, in not allowing them $2 million plus to investigate union pension plans under the so-called attack against organized crime. The Office of Labor-Management and Welfare-Pension reports may well contain a wealth of information essential in the fight against organized crime, but these reports are public information and readily available to the Department of Justice for use in their law enforcement activities. The committee feels the Department of Justice should make whatever request it finds necessary; that the costs of any review of these reports should be carried by that Department, and conducted by employees of that Department.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

The variety of programs administered by this most important agency of the Federal Government occupied most of our time in committee, and I am certain will take most of the time the Senate spends deliberating these recommendations.

The grand total of our recommendation for HEW is $18,122,211,700 which is $1,433,120,000 above the President's requests, and $486,364,000 over the House allowances if we discount the advance funding of education for 1971.

During our deliberations, we essentially agreed with the House additions for education, but we made further increases for the construction of facilities for the community colleges and technical schools, and other 4-year colleges.

I need not tell the Senate the importance of community colleges in our scheme of education, and their great success in pretty nearly every State of the Union in filling the needs and relieving the pressure on some of the 4-year colleges, although some of the community colleges have been attempting to become, and some have become, 4-year colleges.

We added funds for libraries, for college library resources, for librarian training programs, for student assistance in the form of educational opportunity grants, and for the dropout prevention program.

In the area of health, especially the critical needs for additional health manpower, we became convinced that the administration ignored their own rhetoric.

There is an impending crisis in the delivery of health care to the people of the United States. One of the basic reasons for this is the increasing shortage of trained personnel—people who can help to deliver health care. Costs of all types of health care have been accelerating at a rate far in excess of any inflationary factors.

Worst of all, possible improvements in the actual health care available to average Americans is being denied them today. Denied because the knowledge about all of those improvements is not being made available to every practicing physician and to every hospital.

This is due, at least in part, to budgetary restrictions—here at the Federal level, but also at the State and local levels, and within the private sector. We could not, in good conscience, shirk back from those truths. We therefore increased those items within health and health manpower by a total of $246,214,000, and of that amount, 71 percent or $175,733,000 is slated for the National Institutes of Health.

I want to discuss these increases in more detail, but for those members who have not had an opportunity to study these items in detail, I think it best that I review all of these increases within the HEW budget that we are recommending.

FOOD AND DRUG CONTROL—$691,000

We were concerned that the Fair Packaging and Labeling Act has not been implemented as vigorously as was intended by the Congress. To rectify the chronic deficiency of resources for fair packaging and labeling activities, we recommend an increase of $691,000 over the House allowance for the Food and Drug Administration. These funds are intended to answer legitimate consumer demands, by stimulating expanded efforts to detect and prevent economic cheating in the food market and violations of the Fair Packaging and Labeling Act.

MENTAL HEALTH—$24,698,000

We recommend an increase of $8,000,000 over the President's budget request and $4,000,000 over the House allowance to assist communities in providing treatment services for alcoholics, a program authorized in the Alcoholic and Narcotic Addict Rehabilitation Amendments of 1968. The $8,000,000 increase will support grants for the construction and initial staffing of facilities for the prevention and treatment of alcoholism, consistent with the community health center concept.

The committee recommends an in-

crease of $1,102,000 over the House allowance to restore the funds, including administrative support, requested in the budget for an early child-care demonstration program.

An increase of $500,000 in direct operations will restore funds requested in the budget, but denied by the House, for special contract research studies.

We recommend an increase of $5,000,000 over both the House allowance and the budget request for the training grant program. This will provide a total of $112,500,000, the same amount requested in the original 1970 budget. The budget amendments submitted included a reduction of $5,000,000 in this program which would have eliminated funds for new training grants and reduced the size of some established training programs. This would have come at a time when there is a particular need for increasing the manpower available for mental health research and services. We oppose this policy and therefore restored this program to the original budget.

We recommend an increase of $7,000,000 over the House allowance and the budget request for grants for the construction of community mental health centers. The development of community mental health services and facilities has been a significant factor in reducing the size of the patient population in the Nation's mental hospitals and has been a major advance in the treatment of the mentally ill.

An increase of $7,096,000 over the House allowance and the budget request is provided for community mental health center staffing grants and for research fellowships. This recommendation is consistent with the committee's general policy on expanding the supply of essential health manpower.

COMPREHENSIVE HEALTH PLANNING AND SERVICES—$6,890,000

With the restoration of these funds, $15,000,000 will now be available for health programs that serve over 325,000 migrant workers in some 120 projects in 36 States. We suggested this increase be utilized in reaching a greater number of eligible recipients with out-patient care and increasing the quality of that care. An intensified program of early case-finding, with ambulatory care facilities available where the migrants are located, should further enhance the achievements of this program.

REGIONAL MEDICAL PROGRAMS—$24,000,000

Now I come to a program that has had great success. It is somewhat new, but we heard many witnesses on what this program has been accomplishing, and the importance of it. I refer to the regional medical programs. We added $24 million for the amount for this item.

Of the $100,000,000 allowed $24,771,000 is for direct operations, primarily for the long-established chronic disease control program and a domestic nutrition program; and $73,500,000 is for regional medical operational and planning grants.

We are strongly opposed to the proposal of the Department to make a $4 million reduction in chronic disease control programs and shift this amount to operational and planning grants of the regional medical programs. We think they should have both. If this were done as recommended by the Department the action would entirely eliminate ongoing activities in five disease categories: heart disease; respiratory disease; cancer, diabetes and arthritis; and neurological and sensory diseases.

We expect that there will be no diminution of effort in the kidney dialysis program. Advances in kidney dialysis are saving lives every day and there is no reason to slow the rate of technical progress, although I must say, Mr. President, that in that field there is still a long way to go. I forget the exact testimony, but I think there are still something like 8 out of 10 of the people affected who cannot obtain the kidney machines in order to live. Only about 20 percent can afford them because of the tremendous cost involved.

But this chronic disease program, which is in part a research program, is doing a great job. We were shown, in the committee, a small bio-engineering device that can sell for a relatively small amount of money, which can be used now for the purpose of kidney dialysis, and will be of great help in reaching many of those people who must otherwise die if a dialysis machine is not available to them. Here, again, is an example of the folly of cutting down on health manpower programs. Even if we appropriated great sums, there simply are not enough trained people to handle the machines for the benefit of all the people suffering from this problem.

DISTRICT OF COLUMBIA MEDICAL FACILITIES—$10,000,000

For the District of Columbia medical facilities, we added $15 million in the supplemental for construction funds. This is for all of the problems involved in this area, in the supplemental. But we added $6,500,000 for loans in this field, and $3,500,000 for grants, for some needed repairs and remodeling. The need for improved medical facilities in the District and in the area, of course, has been well documented.

NATIONAL CANCER INSTITUTE—$19,275,000

Now come the Institutes proper, within the National Institutes of Health. Your chairman has a deep personal interest in this next item, because when I came to Congress some 33 years ago as a Member of the House of Representatives, the bill to establish a National Cancer Institute was the first bill of which I ever obtained passage. So I have watched it for 30-odd years, hoping that its research programs can finally press the button that will do the job on this great killer in this country.

We have had some great successes. The testimony shows very exciting developments in the new fields of the establishment of the relation of viruses to cancer, the pap test problems, Parkinson's disease—for which there is a new drug that seems to work, research on leukemia, and many other fields of cancer problems as to which there is now some light at the end of the tunnel.

We have figures which show that whereas 2 out of 3 afflicted persons died of cancer some 30 years ago, or up until approximately the time of World War II, we have now cut the figure down, in many cases, to 1 out of 5 or 1 out of 4. So we have made much general progress, and the necessity of education for all types of people, not only those in the National Cancer Institute, to work toward the early detection of cancer, is of utmost importance.

To advance the work of the Institute toward a level of activity commensurate with the complexity, urgency, and importance of the problems in whose solution it is engaged, we increased the appropriation to $200 million. This is in sharp contrast to the appropriation I mentioned back in 1938, for which we received the great sum of $1 million, to start the program. If it had not been for a very generous lady in Bethesda who owned the land where the Institute now stands and donated it to us, we could not have started then. The land has an immense value today.

We provided $200 million for this, the Cancer Institute. I do not know, but I think in this field the members of the committee who hear the testimony wonder if perhaps we had some sort of a crash program in the field and were to add 4, 5, or 6 times the amount of the appropriation. Perhaps we should proceed on a crash program within the various types of cancer, rather than proceed as we are doing. Perhaps it would be good to work on one that shows a promise of achieving a cure and let the others go.

This is an agonizing problem for the people working in this field.

We provided an appropriation of $200 million. And we hope that a part of the increase will be devoted to the cancer chemotherapy program and to studies on the possible virus origin of cancer. There are 200 types of cancer. And it is hard to know which one to get at first. However, there are some promising things.

The increase also includes an addition of at least $3,232,500 for the training grant and fellowship programs.

In some cases we thought of appropriating a much larger amount of money. However, there are not enough skilled people in the field to do this work. That was the effect of the testimony.

NATIONAL HEART INSTITUTE

The biggest killer in the United States, of course, is heart disease. For the National Heart Institute we recommended an increase over the budget request of $21,487,000. Of this increase, at least $4,950,800 shall be used for the training grant and fellowship programs as allocated between these two programs by the Director of NIH. We just cannot get at these things, even if more money were available, unless we train people. The additional funds also include an increase of $5 million for the artificial heart program, which will bring the amount available for hardware and engineering development to $13 million.

NATIONAL INSTITUTE OF DENTAL RESEARCH

We recommend an increase of $2,711,000 over the budget request for this Institute. Of this increase, at least $1,376,400 shall be used for the training grant and fellowship programs as allocated between these two programs by the Director of NIH.

We all know about the shortage of doctors in the country. I will come to that again. However, there is a greater short-

age of dentists in the country. And if one does not believe it, let him try to get an appointment with a dentist. If he does not go to the dentist's office on the day of the appointment, he is out for awhile.

We think it is vitally necessary to keep the training grants and fellowships moving.

In this particular case, when we talk about trainees, there are many things that a dentist does that some trained help can do. I refer to the ordinary dental care, cleaning of teeth, and things like that that take the time, energy, and talents of dentists. That time could be better used for more important work.

This is true also with respect to the Cancer Institute and the Heart Institute.

NATIONAL INSTITUTE OF ARTHRITIS AND METABOLIC DISEASES

We add $17,332,000 in this appropriation. Of that increase, we directed that at least $4,576,000 be used for the training grants and fellowship programs that an additional $2,000,000 be allocated for the artificial kidney-chronic uremia program.

They are in both Institutes. However, the artificial kidney machine that we hear about so much is in this program. There is also an additional $2 million provided for special arthritis clinical research centers.

We are making some progress in arthritis and some of these other diseases. As to the cause, there again some exciting things are happening in relation to virus in arthritis.

NATIONAL INSTITUTE OF NEUROLOGICAL DISEASES AND STROKE

We added $11,440,000. We want to establish a research program on head and spinal cord injuries. And they can do it. They testified they would like to do this.

A research program on head and spinal cord injuries has been launched in the hope of mitigating this fairly common cause of death, mental impairment, and severe physical disability. Of the increase appropriated for the Institute, $700,000 should be used for research on spinal cord injuries, and at least $3,802,200 shall be used for the training grant and fellowship programs.

I do not think we have more than one or two centers around the country at this time. And they have been run in a rather haphazard fashion because of inadequate funds.

NATIONAL INSTITUTE OF ALLERGY AND INFECTIOUS DISEASES

We added $2,611,000. Infectious diseases provide dramatic examples of what can be achieved by research. Most of the infectious diseases that were dreaded killers earlier in this century have been virtually eliminated, and the incidence of others has been sharply reduced.

To continue these varied and important activities at a reasonable level, we recommend an increase of $2,611,000 over the budget request for this Institute. Of this increase, at least $1,297,000 shall be used for the training grant and fellowship programs.

Here again, I hope that someday we can enlarge this Institute and direct more of its activity into the field of prevention and delivery of care to people. It would save so many more lives, so much suffering, and so much money.

We could do it in so many ways nowadays with all kinds of drugs and antibiotics and shots and things of that nature, particularly in children's diseases, which are on their way to being eliminated.

THE NATIONAL INSTITUTE OF GENERAL MEDICAL SCIENCES

The National Institute of General Medical Sciences is one that cuts across many paths. I think this is a good thing, and for this reason.

This Institute has the largest increase. We added $20,712,000. This Institute has the largest and most diverse health manpower training program at the graduate levels and we therefore directed that at least $12,998,400 be used for those programs.

NIGMS is also the principal coordinator of biomedical engineering and because of the excellent work they have done, and sponsored, to bring into being the necessary "hardware" of medical science, we have suggested they might well add the word "technology" to their name. Through this Institute, NIH helps to support the Oak Ridge National Laboratory and we earmarked $3 million for that activity.

NATIONAL INSTITUTE OF CHILD HEALTH AND HUMAN DEVELOPMENT

We recommend an increase of $4,902,000 over the budget request for this Institute. Of this increase, at least $2,617,500 shall be used for the training grant and fellowship programs as allocated between these two programs by the Director of NIH. The remainder shall be used primarily for funding the mental retardation research centers.

In every case, it will be noted that in attacking the health manpower problem, we have used the word "shall," and we hope this is carried out literally the way the committee suggested.

NATIONAL EYE INSTITUTE—$1,315,000

The National Eye Institute has been made a separate Institute. The committee recommends an increase of $1,315,000 over the budget request for this Institute. Of this increase, at least $832,900 shall be used for the training grant and fellowship programs as allocated between these two programs by the Director of National Institutes of Health.

GENERAL RESEARCH AND SERVICES—$6,000,000

Our committee recommends an appropriation of $79,658,000, a decrease of $5,151,500 from the 1969 appropriation, an increase of $9,960,000 over the budget estimate, and an increase of $6,000,000 over the House allowance.

The committee is much disturbed by the announcement that rising hospitalization costs will force NIH to close 19 of the 93 general clinical research centers now located in 32 States, the District of Columbia and Puerto Rico. These general clinical research centers have played a vital role in raising the quality of health care capabilities in our Nation.

The committee heartily concurs in the action of the House in adding $3,960,000 to restore the appropriation for the general clinical research centers to the original budget estimate. In order not merely to keep these important centers in operation but to keep them operating at an optimum level, we included an additional $6 million in this appropriation.

HEALTH MANPOWER—$31,979,000

We have recommended an appropriation of $250,000,000 which is an increase of $77,824,000 over the 1969 level, and an increase of $31,979,000 over the budget estimate and the House allowance.

Here, again, we are talking about health manpower. We are talking about the need for more doctors, more trainees, more specialists, more dentists, and more nurses. We have a nurse program in this bill, also.

We allocated $20,781,000 of this increase to student assistance programs: $10,500,000 for direct loans, and $10,281,000 for scholarships. We felt an increase in scholarships, over last year, was especially important if we are to expect these professional schools to continue their efforts to recruit into their programs an increasing number of minority students.

The balance of the health manpower increase, $11,198,000 will be for institutional support, and we earmarked about $1.5 million for new methods, demonstration grants under the allied health program. This will support programs like those developed for returning medical corpsmen.

Compared to the revised budget estimates, this new allocation of these funds to student assistance will allow some 42,292 nursing students and 43,361 students in the various health professions to be recipients of this aid. Over 14,080 fewer students would have received financial assistance without this addition.

DENTAL HEALTH—$1,165,000

This is a separate item, and is not to be confused with the Institute of Dental Research. Dental health is the delivery of dental health to neighborhood centers, clinic centers, child care, and other such institutions, and the training of so-called subprofessionals.

The House reduced the amount requested for other dental health activities by $165,000. We do not understand why. These funds were intended for the continuation of five long-range training programs, one additional grant for a continuing education project for dentists, and the extension of the dental manpower survey.

Although the Department did not ask for the restoration of these funds, we see no reason for withholding them, and recommend an increase of $1,000,000 over the budget request and $1,165,000 over the House allowance for dental health activities.

CONSTRUCTION OF HEALTH EDUCATIONAL, RESEARCH, AND LIBRARY FACILITIES—$33,900,000

We added $20 million to the budget request for the construction of teaching facilities for health professional schools. The role of these schools is crucial to the whole national health improvement effort. The facilities for providing the necessary numbers of well-qualified professional health personnel must be expanded as rapidly as possible.

In the case of nursing, where the need is particularly acute throughout this country, the budget request is inadequate. Only $8 million was requested, and the committee has added $2 million to this item.

We are especially concerned that health research facilities and medical libraries received no funds in this budget. Both are essential features of high-quality professional schools. The opportunity to conduct research, which includes access to a well-stocked library, is indispensable to the training of graduate students and is an important factor in attracting and retaining first-class faculty. In addition, a medical library is a valuable community asset with a direct influence on the quality of health service. These construction needs must be given higher priority. The committee has therefore added $10 million for health research facilities construction and $1,900,000 for library construction.

BUILDINGS AND FACILITIES—$900,000

The budget request provides no new funds for construction of the Lister Hill National Center for Biomedical Communications whose creation the Congress authorized last year in honor of the beloved former Senator from Alabama, Mr. Hill, who worked so diligently throughout his long and distinguished service in the Congress to strengthen the Federal programs aimed at improving the health of the American people.

The Bureau of the Budget eliminated, from the funds requested by the Department for buildings and facilities, the planning funds for the construction of the building for the Lister Hill Center. While it is, for the time being, prudent to postpone construction wherever possible, we see no valid reason for postponing the planning and architectural design—which, at best, seems to take an inordinate amount of time—so that construction can proceed without further delay when construction funds can be appropriated. The committee has therefore included funds for this purpose.

Mr. President, that concludes the items increased under the health section of the bill. There were many items. We heard many witnesses on every item in this breakdown.

OFFICE OF EDUCATION

The committee has given careful attention to all of the programs within the Office of Education, but wishes to make particular mention of those programs which require various levels of matching funds from State and local governmental agencies, or educational institutions. Matching programs enjoy a greater incidence of success in achieving objectives because of the investment by recipients of their own funds, after making difficult financial decisions comparable to those of our committee and Congress. We are well aware that the matching approach is not always possible, nor preferable, in all Federal programs to assist education. We are also well aware of the burden such programs impose upon possible recipients, and that such programs do not result in perfect distribution patterns. But it is obvious to this committee that these particular programs have achieved a significant portion of their stated objectives, and they must not be abandoned.

ELEMENTARY AND SECONDARY EDUCATION

We recommend $702,036,700, a decrease of $48,740,000 from the House allowance, and a net increase of $297,458,000 over the budget estimate. We concur in the $78,740,000 allowed by the House for educational equipment and minor remodeling, but have decided to include this item under a separate appropriation, "Instructional equipment." On a comparable basis, therefore, the recommendation is an increase of $30,000,000 over the House allowance.

We were impressed with the initial success that has been shown in projects funded by the dropout prevention program, and have allowed $20,000,000, an increase over the House allowance of $15,000,000.

Several Senators came in and testified in connection with the need for bilingual education. There are at least 3 million children in this country who need bilingual education. For bilingual education we recommend $25 million, an increase over the House allowance and the budget request of $10 million.

In addition to new projects begun in 1969, at least 80 more projects wait to be funded.

Our recommendation will more adequately support this fine program and allow the vital expansion of bilingual education.

ELEMENTARY AND SECONDARY EDUCATION—$1,117,580,000 ADVANCE APPROPRIATIONS

The committee recommends $1,117,580,000 for advance funding of title I of the Elementary and Secondary Education Act. Due to the lack of authorizing legislation, the House deferred consideration of this item. The Senate Subcommittee on Education of the Committee on Labor and Public Welfare has, however, extended the title I authorization through June 30, 1974, and the committee has included the advance authority, at a level equal to 80 percent of the 1970 estimates contingent upon final extension of the basic law.

This is a large sum. These are some of the problems that plagued us in trying to mark up the bill, waiting for these authorizations. A committee cannot appropriate without having some idea what the budget is going to be.

EDUCATION PROFESSIONS DEVELOPMENT—$25,000,000

The amount approved by the committee includes $21,500,000 to fund the program of grants to States for the recruitment of educational personnel, an increase of $6,500,000 over the House allowance and budget estimate. This additional amount will enable the States to step up their recruitment and training of elementary and secondary teachers and teachers aides.

For parts C, D, and F of the Education Professions Development Act, the committee is recommending $98,000,000, an increase of $18,000,000 over the House allowance and budget estimate. Under these programs, grants and contracts are made with institutions of higher education and State and local education agencies for inservice and preservice training programs to improve the quality of educational personnel at the preschool through postsecondary vocational levels.

We feel that special attention should be given to the collection and dissemination of information regarding shortages and surpluses within the education profession, and giving adequate publicity to such opportunities, and therefore allowed $500,000 for this purpose.

TEACHER CORPS—$9,363,000

The amount approved by committee represents an increase of $10,200,000 over the 1969 appropriation. The number of corps members supported will total 4,389, of which 2,389 will be assigned to inservice programs in local school districts during the current school year. Within this total, the committee allowance provides for 2,000 new Corps members whose preservice training will commence in the summer of 1970, an increase of 500 new Corps members over the level approved last year.

HIGHER EDUCATION—$161,741,000

For construction of public community colleges and technical institutes, we recommend $125,000,000, an increase of $82,000,000 over the House allowance and budget estimate. For other undergraduate facilities, $75,000,000 is allowed, an increase of the same amount over the budget estimate and $42,000,000 over the House allowance.

Now we had a great deal of testimony from educators, even in cases when they were down here to testify on some other specific project. They went out of their way to mention the need, the prominent place for, and the most important function of the community colleges which they are playing in our system of education.

In my State, we started them early, and they are in nearly every State of the Union now. They serve the purpose of relieving some of the pressure on other colleges which cannot handle the enrollments, and gives educators an opportunity to put more stress and thrust upon vocational education. They are crowded. They are busy. They are doing a fine job.

In my State, there are 23 public community colleges averaging perhaps 4,000 students per college. They used to be called junior colleges. They call them community colleges now.

For student assistance programs, we recommend an appropriation of $667,500,000. This is an increase of $16,000,000 above the House allowance for educational opportunity grants, which will allow a modest expansion of initial year grants.

We also included the popular NDEA program of matching grants to purchase undergraduate instructional equipment and other resources, which had been eliminated by the budget requests. We restored the program by adding $14,500,000. A combination of two NDEA programs now shows these as a line item.

Mr. COTTON. Mr. President, will the Senator from Washington yield at that point?

Mr. MAGNUSON. I yield.

Mr. COTTON. I dislike interrupting the Senator, but I wish to express to him my appreciation, and the appreciation of many other Members, of the fact that this is national defense education funds for educational equipment which was inserted at about the same rate as last year plus, of course, the $4½ million. I would like to make this point. The Ele-

mentary and Secondary School Act is a pure Federal program, where we furnish every dollar. Under the National Defense Education Act the States or local communities have to match every penny, dollar for dollar. Now the school superintendents and the State boards of education and the principals and the administrators in the States say they need this national defense program and they eagerly provide the matching funds. If they were not confident they needed it, they would not be digging down in their own pockets.

It has therefore been impossible for me to follow the reasoning whereby the Bureau of the Budget, under the last administration and this administration, cuts out the program that requires the matching funds, when the States want it and are ready to meet it, and insist on swelling programs where the Federal Government pays it all.

I compliment the chairman for his fairmindedness in inserting this.

Mr. MAGNUSON. As the Senator from New Hampshire has said on many occasions, when the local people match these funds, they see that the program is carried out successfully. This is a step toward better use of those dollars.

Mr. COTTON. They see that every dollar is spent wisely and frugally because, as the Senator says, it is their money.

Mr. MAGNUSON. I agree with the Senator.

Now, Mr. President, on the subject of libraries and community services.

LIBRARIES AND COMMUNITY SERVICES—$20,231,000

For college library programs we approved $25,000,000, an increase of $12,500,000 over the House allowance and the budget estimate. The allowance will restore this important activity to its 1969 funding level. We are also restoring the libraries training program to its 1969 level of $8,250,000. This is an increase of $4,250,000 over both the House allowance and the budget estimate. Another library activity which we believe deserves additional support is the acquisition and cataloging program of the Library of Congress. Centralized support of these services avoids wasteful duplication by college and research libraries throughout the country, conserves scarce library manpower, and saves millions of dollars. Therefore the committee has included an increase of $1,856,000 above the House allowance of $5,500,000.

For grants under the educational broadcasting facilities program we recommend $5,625,000, an increase of $1,625,000 over the House allowance and the budget estimate, and the 1969 level.

EDUCATION FOR THE HANDICAPPED—$5,000,000

The amount allowed for preschool and school programs for the handicapped is $34,190,000, an increase of $5 million above the House allowance, the budget estimate, and the 1969 level. This additional amount will help meet the increasing costs of special education as well as provide some funds for additional services.

RESEARCH AND TRAINING—$12,500,000

The committee recommends funding at the level requested for all items except major demonstrations and experimental schools. Under major demonstrations, we allowed $4,000,000 for the Anacostia Community School project, an increase of $3,000,000 over the House allowance and a decrease of $1,000,000 from the budget estimate. In allowing the increase, the committee feels that the Anacostia project has proven highly successful and should be continued.

We had splendid testimony from the people directly involved. It is really a community enterprise, of community people.

For "Experimental schools," a new program recommended by the administration, we recommend $9,500,000, which is $15,500,000 below the budget request. The House did not include any funds for this project, even though it indicated that it had no objection to planning for these schools within the overall research budget. Although we have allowed operational funds, we urge the Department to go slow on this program and limit support to a small number of carefully selected experiments.

INTERNATIONAL EDUCATION—$2 MILLION

We have approved the budget request of $2 million for implementation of the International Education Act of 1966. This has never been funded—and we feel this program will help our colleges and universities to strengthen studies in world affairs.

This is not a foreign aid program.

SOCIAL AND REHABILITATION SERVICE

MENTAL RETARDATION—$2 MILLION

We recommend that $2,000,000 be appropriated for the construction of university-affiliated mental retardation facilities.

Most of these facilities are in conjunction with a university medical school, and they work with the medical school in the problems of mental retardation. We recommended $2 million for the construction of university-affiliated mental retardation facilities. Nothing was requested or included in the House allowance for this purpose. An application to construct a university-affiliated facility in Cincinnati, Ohio, has been approved but unfunded by the Social and Rehabilitation Service.

There are either 11 or 12 throughout the country. They have been very successful in the studies of mental retardation, because they work with the medical schools, train teachers, and are truly a campuswide activity, involving a number of disciplines.

DEVELOPMENT OF PROGRAMS FOR THE AGING—$35,650,000

We recommend $35,650,000, an increase of $7,290,000 over the budget estimate, and include $9,250,000 for support of the foster-grandparent program, which in 1969 was funded by the Office of Economic Opportunity.

Here is another item, the Older Americans Act, which the President himself did not sign into law until late in September.

Let me repeat that for the Senator from Delaware. Here is a major item which the President himself did not sign into law until late September. The Bureau of the Budget did not send a recommendation for a long time, but on that program we recommended $35,650,000, an increase of $7.290 million over the budget estimate, and included $9.250 million for support of the foster-grandparent program, which had been funded by the Office of Economic Opportunity.

The administration waited until October to shift this around.

So again it was not as simple as the ordinary appropriation that we have handled in previous years.

The House did not act on this item inasmuch as the basic authority for the conduct of the aging program had not been extended. The amendments to the Older Americans Act were signed into law on September 17, 1969. Then we had to wait for the budget recommendation.

We recommend $20,000,000 for title III programs, an increase of $7,000,000 over the budget estimate. This will provide for a more adequate implementation of the new legislation than would be possible with the budget estimate.

The committee has added $290,000 to the budget request for training to restore this program to the 1969 level of $2,900,000.

JUVENILE DELINQUENCY PREVENTION AND CONTROL—$10,000,000

We feel that increased support must be given to the objectives of the Juvenile Delinquency Prevention and Control Act of 1968 and the Federal effort to assist State and local communities to develop effective approaches to the prevention and control of juvenile delinquency must be expanded. America's best hope for reducing crime is to reduce juvenile delinquency and crime among youth. There has been little sustained support of delinquency prevention and control programs, and local community resources for working with problem youth are universally scarce. The major thrust of this act emphasizes treating the offender in the community in which he lives, not an isolated institutional complex far from normal family life, and we heartily endorse the cooperative nature of this program.

SALARIES AND EXPENSES—$2,893,000

Subsequent to the House action, a budget amendment for 125 positions and $2,893,000 was sent to the Senate by the President to mount a major effort to improve and redirect the management of the medicaid program at both the Federal and State levels.

Here again is a budget amendment that showed up only recently. After the House had acted, the budget wanted 125 more positions, quite late. So we had to consider it late.

The committee is fully in agreement with this effort. Medical care of the highest quality should be available to the poor, and it should be administered through the use of the most sophisticated business and management systems to insure efficiency and eradicate the circumstances which breed fraud. It is hoped that with these added resources the Social and Rehabilitation Service will be able to make a strong beginning toward attaining these objectives.

SOCIAL SECURITY ADMINISTRATION CONSUMER CREDIT TRAINING—$300,000

The committee does not agree with the House finding that many other programs

are duplicating this program. On the contrary, the committee's findings are clear that the Bureau of Federal Credit Unions' Protect Moneywise is the only program of its kind. This program was designed to teach money management to people in low-income areas and to establish credit unions owned and operated by the people themselves, to serve as a lending source at reasonable rates.

GALLAUDET COLLEGE—$314,000

The increase relates directly to the security problems on the Gallaudet campus. A tripling of the security force, which our addition to salaries and expenses will allow, must be coupled with improved lighting of the grounds within the confines of the campus and additional fencing along the edges of the campus. At least $164,000 would be required during fiscal year 1970 to improve the lighting system on the grounds. While there is existing fencing around part of the campus, repairs need to be made and a major addition of fencing along Florida Avenue would require at least $46,000, and possibly as much as $75,000. The remaining $75,000 was allowed for the salaries of 14 additional guards, which would bring their total security force to 21.

Mr. President, this completes my review of the actions of our committee increasing items over the House allowances. Again, I remind the Senate this bill totals $20,819,619,700. The actual net increase over the House is $504,509,000, and our increase over the President's estimates is $985,566,000.

Mr. BIBLE. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. BIBLE. Mr. President, I rise simply to pay tribute to the distinguished chairman of our subcommittee, as well as the ranking minority member of that subcommittee. It seems to me this is one of the most complicated of all the blls to come before the Congress annually.

I think it was increasingly complicated, and made more complex and difficult this year, for the reasons which are detailed rather fully on page 2 of the committee report, showing the five items that were not considered by the House of Representatives due to lack of authorization, and I feel that probably the distinguished Senator from Washington, the chairman of the committee has commented at length on those items already; I did not hear all of his statement.

In addition, there is a total of seven additional items of budget amendments which were proposed subsequent to House action, making a total addition of some $3,338,531,000 in this bill that were not in the House bill.

Mr. MAGNUSON. Nor was the recommendation from down below sent up for them.

Mr. BIBLE. That is right. It came up very late, and I heard the Senator from Washington commenting on that.

I think, in fairness to the record and in fairness to the amount of work that has gone into this bill, that point should be made abundantly clear. We always leave, at the end of the year, with great New Year's resolutions. I hope that we will leave this year resolving to move forward earlier next year, with the hope that the legislative committees might finish their work at some earlier time, so that our action on the appropriation bill can be a little more timely.

Mr. MAGNUSON. Yes, and with the hope in mind also—the Senator from Nevada spent a great deal of time at these hearings, listening to all kinds of witnesses—that there will be some reorganization in clearing up some of the duplication that the Senator from New Hampshire and I have been looking at, and that when the budget does come up here, it will be the final budget, and we can start working on it. It would be very simple if, when the President in January sends up his budget, that would be, and remain, the budget. Then we can start work on it, even before the House of Representatives, as far as I am concerned, to hear the witnesses, because, as I say, there will be at least 500. Some of them this year could not testify, because we could not get them all in. One day we had them stacked up in the hall downstairs. I thought maybe there was something else going on, but there was not; it was just our witnesses.

We could not do what we normally do, and say, "You have 10 minutes, put it in the record," because, if Senators will look at the list, the witnesses, as the Senator from Nevada knows, who testified for this bill, were the top people in their fields from throughout the Nation, and they had somethnig of vital interest to say.

Mr. BIBLE. I could not agree with the Senator more fully.

Mr. MAGNUSON. They ranged from Nobel Prize winners to university presidents, from students to volunteer workers in the field. Everyone was involved. This is a bill that touches every American in some way.

Mr. BIBLE. As I understand it, there were some 450 witnesses on the list.

Mr. MAGNUSON. Yes.

Mr. BIBLE. It was humanly impossible to give them all adequate time.

Mr. MAGNUSON. And of that number, the Department had 153 witnesses.

Mr. BIBLE. I think they could cut theirs down somewhat.

Mr. MAGNUSON. There were 153 witnesses from the Department alone.

Mr. BIBLE. I think they could stand a very substantial reduction, not only in the number of their personnel, but in the number of witnesses to justify their existence.

Mr. MAGNUSON. I think we all realize that.

Mr. BIBLE. But I compliment the chairman, and put particular emphasis on some of the experts we heard in connection with the field of cancer and some of the exciting breakthroughs that are apparently just around the corner, and in the field of heart disease which, as I understand it, is the greatest of all the cripplers.

A million people, I believe the figures show, die each year of heart disease—more than half the deaths in this Nation stem from heart and circulatory disease—and some 400,000, or some such figure, of cancer, which is the second major cause of death in the United States. The medical researchers continue to contend that they are getting very close to a cure for cancer. I do not know whether they are or are not; but they maintain they cannot make orderly headway down the path of success unless they have adequate funding. I am sure the Senator has commented on that earlier.

I was very happy to support the chairman and the subcommittee in making these fundings more realistic, not only for heart and cancer but for all the important health research efforts. There is a great deal of money involved, no doubt about it, but I know of no problem that crosses our entire Nation with greater impact than the problems of heart disease, cancer, and other major afflictions. I am not downgrading the other cripplers and the other diseases, because they are entitled to greater emphasis and importance as well; but the point is that over the years, we have made great headway. If everyone in the Senate, for example, could have been there to hear witnesses such as Dr. DeBakey and Dr. Barbour, or the other experts in all this great range of medical expertise, they would have come away with the feeling that the tax dollar in this area is well spent. I think that message came through to us time and time again.

I have no hesitancy at all in supporting the higher level of funding—and it is a higher level; it is a level that gets back to about the amount of the 1969 funding, plus about 10 percent; is that not correct, in general?

Mr. MAGNUSON. Yes. I am glad the Senator brought that up. Both the subcommittee and the full committee, on the Institute items——

Mr. BIBLE. I am talking about the National Institutes of Health at this time.

Mr. MAGNUSON. Yes. We raised those items, on an average, from 10 to 12 percent over last year. We thought perhaps we should have done even more, because they do have some costs going up in the meantime; but at least they can maintain the level at which they are operating now, and maybe take some of the funds and reallocate them, and zero in on the virus-caused cancers about which we heard testimony.

That is very exciting. And then what was the drug with the very appropriate name, that is working on Parkinson's disease? L-dopa.

Mr. BIBLE. And we have had people in our own midst who have received the benefit of the expertise and training in that area. If I am not mistaken, the Senator's predecessor in the very spot he occupies so nobly today had a problem in his own family in that area. I think his wife had some serious difficulty, and I am told that, through the discovery of this so-called wonder drug, vast improvement has been shown. Also, we have a colleague now who has some problems in that area.

Mr. MAGNUSON. Yes.

Mr. BIBLE. All of these things are forward looking. They are justified. One thing that came to my attention time and time again, throughout the testi-

mony of the many witnesses who appeared before us. This was the fact that if you cut them off at the purse strings, then you lose a crew of experts that are almost irreplaceable; is that not true?

Mr. MAGNUSON. That is true.

Mr. BIBLE. We heard, for example, from one professor I have particularly in mind at UCLA, in Westwood, Calif., where they have built up some fine medical talent into a team to work on many of the cancer problems. If they are cut short and their work cannot be funded, he said, the man who has to get a paycheck to pay his grocery bills is going to leave that facility and go into private practice, which I think would be a loss, with the background and knowledge that he has.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. BIBLE. I am happy to yield to the Senator from New Hampshire.

Mr. COTTON. I call the attention of the Senate to the fact that recommendations for the various Institutes of Health in the NIH which came to us totaled $1,628 million. After we added roughly 10 percent to those items, the whole NIH program would exceed that for fiscal 1969 by less than $220 million; and when you realize that the dollar buys less research today than it did in fiscal 1969, that amount is comparatively small; and it exceeded the budget, after we granted these raises, by less than $177 million.

When you get up to $21 billion—which was the total amount of this bill—I think we did the very least that could be done in these fields of research. I compliment the chairman, and I compliment the distinguished Senator from Nevada. I believe we are completely in accord on this matter, that for those increases we need make no apologies to anyone, and if we were to make any, it would be for the fact that we did not raise them enough. Those were the minimums, and I think the committee was very wise in making the revision it made.

Mr. BIBLE. Mr. President, I thoroughly agree with the Senator from New Hampshire.

There is one other rather closely allied field in which he is interested. It is not in the National Institute field, but in the public health field. That is the regional medical program. I think they are of vast importance, particularly to those who come from rather sparsely populated States.

We heard some very compelling testimony from several medical men, one from Seattle, Wash., one from Sitka, Alaska, and another from the New England area.

I know the program is of great importance in my area of the country because of the remoteness of hospital facilities.

The regional medical programs disseminate the actual medical know-how, medical science, and medical ability to the sparse areas of the country that are in short supply of doctors. These are vital services that go directly to the people. I regard this as being tremendously important.

I am delighted that the committee funded this at a level of $100 million, which together with a $20 million carryover, was an increase over the budget figure. The authorized amount for grants was $120 million. There was some carryover which would allow them to continue next year at near the $120 million level.

These regional programs are finally beginning to bear fruit, and I hope the other body will agree with the need for the fullest funding possible.

This is one program which gets to the people who need it the most.

I am very grateful for the very wholehearted support of the chairman of the committee. I congratulate him and the Senator from New Hampshire for the great leadership they have shown in this field.

Mr. MAGNUSON. Mr. President, when we look at this field, we realize the tremendous problem involved. We have to meet this situation, and we are doing it.

We heard testimony on man's environment with relation to cancer. It is startling. The estimates are that there are in the order of 20,000 chemical compounds in relatively common contact with man. So, there is very little knowledge about how many of these would cause cancer or other diseases and in what concentrations and over what period of time.

At the present rate of testing these compounds, which are all around us, it would take several centuries to assess their relative safety. This gives some idea of the problem we face today with reference to environment, which the present Presiding Officer knows so well.

With respect to the problem of man's environment today, it may be some simple thing in our environment that causes cancer that we do not know about. It might be a virus that can be isolated. This is what we are hoping.

In the heart program, I was quite pleased with the optimism expressed by some of the well-known heart specialists, regardless of their field, and concerning the progress they believe they are making with the mechanical heart and the pacer.

A lot of people are walking around today with that mechanical pacer. I have four or five friends who have these mechanical pacers. And one would not know the difference.

These are the sort of things that we are struggling to work out.

Mr. President, I yield to the distinguished Senator from Hawaii, who has a conference at 2 o'clock.

The Senator from Hawaii was very diligent in attending the many weeks of hearings. No one appreciates his help more than the Senator from New Hampshire and I.

Mr. FONG. Mr. President, I thank the Senator for yielding. I have an appropriation bill markup at 2 o'clock. That is why I asked the Senator to yield at this time.

The Labor-Health, Education, and Welfare appropriation bill which is pending before us is the second largest appropriation bill Congress considers.

Programs in this complicated and far-reaching measure affect, directly or indirectly, nearly every one of America's 204 million people.

For these programs, the Appropriations Committee, on which I have the honor to serve, has recommended a total of $20.8 billion.

The Appropriations Subcommittee on Labor-HEW, on which I also serve, after reviewing the testimony that spanned some 8 weeks, concluded there are areas in education, health, and welfare where greater emphasis is needed than the House of Representatives provided in its version of the bill.

Our subcommittee recommended substantial increases for health, education, and welfare. The full Appropriations Committee agreed.

The record should show very clearly that we on the Appropriations Committee in this bill offer concrete proof of the very high priority we place on better education and better health for all Americans and on better programs to alleviate poverty and assist handicapped persons.

HIGH PRIORITY ON DOMESTIC PROGRAMS

Earlier this year when some of us in this body were supporting certain controversial defense systems, which we believe are high priority in our Nation's survival, we were criticized. It was implied that we did not accord high priority to poverty programs, education programs, health programs, social security programs, aid for our cities, and all our other high-priority domestic needs.

At that time I said:

I believe that this Nation, this Administration, and this Congress will find the ways to provide the wherewithal to finance the limited Safeguard ABM proposal before us and to finance education, poverty, health, social security, transportation, and many, many other programs.

By the strong support the Appropriations Committee, including myself, have given to high-priority domestic programs in the Labor-HEW bill before us, I, and other members of the committee, demonstrate our determination to provide the wherewithal to move America forward on these vital programs.

ENORMOUS SCOPE OF LABOR-HEW BILL

To comprehend the enormous scope of this bill, we have only to look at some of the wide-ranging activities included under the Department of Labor, the Department of Health, Education, and Welfare, the Office of Economic Opportunity, the National Relations Board, the National Mediation Board, the Federal Mediation and Conciliation Service, the Federal Radiation Council, the National Commission on Product Safety, the President's Council on Youth Opportunity, the Corporation for Public Broadcasting, and other special institutions and related agencies.

In this bill are funds for manpower development and training activities, labor-management relations, administration of the minimum wage law, employees compensation, Bureau of Labor Statistics, Federal contract compliance and civil rights program, activities to prevent age discrimination in employment and mediation services of the Federal Government.

In this bill are funds for the essential activities of the Food and Drug Administration which are designed to protect

the American people by insuring pure food and safe drugs and medicines.

In this bill are funds for air pollution control, environmental control, and radiological health.

HEALTH ACTIVITIES

Under the Health Services and Mental Health Administration, for which funds are carried in this bill, are such activities as mental health, health services research and development, comprehensive health planning and services, chronic diseases control, regional medical programs, communicable disease prevention and control, hospital construction, and national health statistics.

This bill contains funds for the National Institutes of Health, which provide research on such vital health matters as cancer, heart, dental disease, arthritis and metabolical diseases and stroke, allergies and infectious diseases, general medical science, child health and human development, eye diseases, environmental health, and general research and services in the field of health.

This bill also contains funds to help finance the training of doctors, dentists, nurses, public health professionals, and allied health professionals.

In addition, this bill contains substantial funds for the construction of health educational, research, and medical library facilities.

EDUCATION ACTIVITIES

In the field of education, this bill finances the Federal programs for elementary and secondary education, federally impacted areas, education professions development, Teacher Corps, higher education, including program assistance and construction for community colleges, land-grant colleges, 4-year colleges, graduate schools, and technical schools.

This bill also covers substantial programs of assistance to students and to teachers, including for students educational opportunity grants, direct loans, insured loans, work-study programs, and such special programs as Talent Search and Upward Bound.

College teacher fellowships and training programs are also funded in this bill.

Vocational education, which is currently undergoing modernization and upgrading, is given strong support in this bill.

Funds in this bill are carried to provide financial aid for construction of public libraries, for library services, for college library resources, for librarian training, adult basic education and educational broadcasting facilities.

Education for handicapped persons comprises various activities such as preschool and school programs, early childhood programs, special education and recruitment for teachers of the handicapped, for regional resource centers, and for research and demonstrations in the field of education for the handicapped.

This bill also provides funds for education in foreign languages and world affairs including Fulbright-Hayes training grants, funds for centers, fellowships, and research in this area, and funds for the International Education Act.

SOCIAL AND REHABILITATION SERVICES

Under the social and rehabilitation service of the Department of Health, Education, and Welfare, for which funds are carried in this bill, there are such programs as grants to States for public assistance, including welfare, medicaid, and social services.

Also included are the work incentive programs designed to enable persons on welfare to qualify for jobs and become self-sufficient. Under this program are funds for child care, so that while parents are taking work-incentive training their children will receive supervision and care.

Important rehabilitation services are funded in this bill as well as rehabilitation facilities, so that persons who are handicapped can be trained and assisted to obtain employment.

Another very important activity covered by this bill is in the field of mental retardation where funds are provided for research, hospitalization improvement, rehabilitation projects, and community construction of facilities.

Maternal and child health services and activities are also covered by this bill, which contains more than a quarter of a billion dollars for maternity and infant care, crippled children's services and health of school and preschool children.

Child welfare services are also included under this bill.

AID FOR THE AGING

Programs for our senior citizens, under the jurisdiction of the Administration on Aging, are covered in this bill by grants to States for community planning and services, the foster-grandparents program, and research and training activities.

Still another important activity covered by this bill concerns juvenile delinquency prevention and control.

ANTIPOVERTY FUNDS

The antipoverty program is also funded in this bill. Now that legislation extending the Office of Economic Opportunity has been passed by the Senate and House of Representatives, I am hopeful this legislation will clear the conference committee and the Congress before we adjourn, so that the funds provided for OEO in this bill will be fully authorized for expenditure.

I have not included all of the activities for which we provided funds in this pending appropriations bill. But merely to list those that I have shows the enormous and widespread reach of this bill in terms of many of the basic problems and needs of the American people.

This is a bill which shows the heart and the compassion of the Congress and of the taxpayers of this Nation.

Now to be specific on some of the items which are of special note. I have received many letters from interested citizens of Hawaii, as well as from other States, on the important programs in this bill.

EDUCATION HIGHLIGHTS

For education, we on the Appropriations Committee provided a total of $4,587,489,700. This was $1,375,415,000 more than the House of Representatives provided and $1,174,670,000 more than the budget request.

For elementary and secondary education, the committee added $15 million for dropout prevention, which we on the committee consider a very serious problem, and $15 million for bilingual education.

We also allowed $78,740,000, as the House did, for educational equipment and minor remodeling. But we put this figure under a separate appropriation, "Instructional equipment." Although technically the Senate committee total for elementary and secondary education appears to be $48,740,000 less than the House amount, our total is actually $30 million more than the House, on a comparable basis.

We also urged the administration to tighten up the title I ESEA program so that educationally deprived youngsters from low-income families would receive the assistance Congress intended.

Our committee provided $50 million, the same as in 1969, for title II ESEA school library resources and $17,000,000 for guidance, counseling, and testing. The budget did not request funds for these two programs.

Our committee also agreed to $1.117 billion for advance funding of title I ESEA. The House of Representatives did not provide any funds for the year ahead.

Failure of Congress to complete action on education appropriations early in the year puts a great strain on school districts throughout the country. By advance funding, these districts will be able to make better plans for the coming academic year.

For impacted areas like Hawaii, where Federal installations bring a sharp rise in school enrollments, the Senate committee provided over $600 million. This would cover allotments to States for 100 percent of category A children of Federal parents and 90 percent of all other categories of federally counted children.

For higher education, our committee provided a total of $1,006,874,000—nearly $150,000,000 more than the House amount.

Compared with the House bill, this included an increase of $82 million for construction of community colleges; $42 million more for building 4-year colleges; and $16 million more for Educational Opportunity Grants.

In all, our committee approved $125 million to build 2-year colleges and $75 million for 4-year colleges.

We were convinced these extra construction funds are needed so that colleges will be able to accommodate mushrooming enrollments.

We provided educational opportunity grants for 120,400 first-year students, whereas the House cut these grants below the budget. Only 92,200 students could get educational opportunity grants under the House bill.

We agreed with the House to provide $229 million for direct loans to students, up $67.1 million over the budget.

For education professions development, we added $25 million to the House and budget figures. The increase breaks down to $18 million for teacher training and retraining, $6.5 million for grants to States and half a million for recruitment.

For the Teacher Corps, we granted the $31 million budget request, $9.4 million more than the House provided.

Vocational education received a hefty increase over the budget. Our committee recognized the need to modernize and improve vocational training to prepare

millions of young people in America to hold skilled jobs in today's labor market and to be better homemakers.

We, therefore, approved $488,716,000 for vocational education, the same as the House and $209.5 million over the budget.

We put stress on libraries and community services, going above the House amounts. We doubled—to $25 million—the amount for construction of college library resources. We more than doubled the amount for library training, for a total of $8,250,000. And we added $1.625 million for educational broadcasting facilities.

We added $5 million to the House amount for education for the handicapped. All of the increase is for grants to States.

HEALTH HIGHLIGHTS

In the field of health, we increased research funds of almost all the National Institutes of Health to about the 1969 level.

With heart disease the Nation's No. 1 killer—1 million fatalities a year—and cancer No. 2, we strongly endorsed intensive research by the Heart Institute and Cancer Institute so that we can reduce this terrible toll of lives and suffering.

We believe with greater effort made possible by the increased funds, we can make progress against other diseases such as stroke, spinal cord injuries, arthritis, eye diseases, allergies, and infectious diseases.

With vigorous efforts on a broad front, Americans in the future should be able to look forward to a life of better health.

Under the Health Services and Mental Health Administration, we provided extra funds to build and to staff community mental health centers, to pursue an alcoholism control program, to conduct early child care demonstrations and to train technicians and subprofessionals in the mental health field.

The committee also took steps to prevent closing out of chronic disease centers.

To alleviate the shortage of hospital rooms, we provided $104 million above the budget for Hill-Burton hospital construction. We also added $33.9 million to build health educational facilities and medical libraries.

With the shortage of doctors, nurses, dentists, public health workers, and other allied professionals growing more acute, we provided $250 million for health manpower programs, nearly $32 million more than the House and budget amounts.

In addition, where the House had cut funds for medical, dental, and nursing scholarships, transferring these to loans, we restored the money for scholarships.

Our committee heard impressive testimony that scholarship assistance is imperative in order to permit students from low- and moderate-income families to take medical, dental, nursing, and other health professions trainings.

OTHER HIGHLIGHTS

We also approved more funds for the Food and Drug Administration, including nearly $700,000 to administer the Truth-in-Labeling Act.

We beefed up research in solid waste disposal by about $3 million.

For programs for the aging, the committee increased by $7 million grants to States for community planning and services.

We agreed with the President on $15 million for juvenile delinquency prevention and control and restored the $10 million cut by the House.

Our committee also agreed with the President on $300,000 for consumer credit training. Dubbed Project Moneywise, this has been popular on the island of Maui in my State.

To make sure the antipoverty program continues, the committee provided funds to cover OEO requirements through April.

Our Appropriations Committee allowed a total of $1,624,000,000 for 10 months of fiscal year 1970 and told OEO to ask for the remainder in a supplemental appropriation bill in January.

All in all, the Senate version of the Labor-HEW appropriation bill is a far-reaching measure which puts the priorities where they belong: on education, health, and economic betterment.

Before concluding my remarks, I want to pay special commendation to my two able colleagues. Senator WARREN G. MAGNUSON, chairman on the Labor-HEW Appropriations Subcommittee, and Senator NORRIS COTTON, ranking minority member, for their diligence and leadership on this very important and complex measure. We are all indebted to them for their fine work on this bill. It has been a privilege to serve with them on this subcommittee.

Mr. MAGNUSON. Mr. President, I thank the Senator very much.

Mr. COTTON. Mr. President, the chairman of the subcommittee has made a very thorough and exhaustive review of the bill. I am not going to take the time of the Senate to follow his path and reiterate what he said item by item.

I want to call the attention of the Senate to two or three things that we ought to be thinking about not only as we deliberate on the bill this year, but also as we look forward to our course in the future.

It has been my privilege ever since I have been a member of the Appropriations Committee—and that has been over the period of about a decade—to serve as a member of the subcommittee, and for all but 2 years as the ranking member.

The amount of the bill has grown and grown. And it has been justifiable. Every item in the bill is pointed to the health, the education, the enlightenment, and the opportunity of our people.

The majority of these items are earmarked and directed at the underprivileged and the disadvantaged.

I feel just as disheartened as any other Senator about the money we are pouring into all of these defense items and the money that we will apparently continue to pour into Vietnam. I cannot work up too much enthusiasm about repeated excursions to the moon when we have air pollution and water pollution here on earth and have people living in unfortunate circumstances.

I wish that the next time someone says that we are not doing anything for these people, we would remind them that the pending bill carries almost $21 billion, and that practically every dollar of it is pointed to relieving and preserving the health and the educational opportunity of the American people and our children, our handicapped people, the deaf, the blind, and the mentally retarded. It is a great humanitarian bill, but that does not mean it does not have fat in it, because it does.

I shall recite, in capsule form, the history of the pending bill:

The committee of the House of Representatives reported this bill to the floor of the House in the amount of $16.5 billion. More than $1 billion was added on the floor of the House. Then the House passed a bill which was brought up to $17.5 billion, and it came to the Senate; and the subcommittee of which I am a member added $3.5 billion to that.

As a matter of fact, the distinguished Secretary of Health, Education, and Welfare came before us at the beginning of these hearings and asked us to cut the billion dollars that was written into this bill, added by the House of Representatives, practically all on educational items. He said that the House had puffed it up too big.

This is like the story about the preacher, when they asked for his resignation.

He said, "Do I not argufy the Scriptures?"

They said, "Yes; you argufy the Scriptures."

He said, "Do I not sputify the Scriptures?"

They said, "Yes; you sputify the Scriptures. But you do not state wherein."

The Secretary came up and said, "You must not keep this billion dollars in the bill that was added on the floor of the House." But he failed to tell us just what items he approved of cutting. When we started cutting some items, we immediately got a big protest from downtown. So the subcommittee added $3.5 billion; and, of course, as has been explained, a large portion of that are write-ins that were not considered by the House.

The big leaks in this bill, of course, come in OEO. The President of the United States said some time ago that we were not going to destroy the OEO but we were going to make it on experimental agency and turn the regular programs over to HEW and elsewhere. They have turned over the programs, but they have not shrunk OEO. We had to guess at what we had to appropriate in order to keep them going until we got the specifications and the authorization.

The same is true of title I funds under the elementary and secondary school bill, which run into a tremendous amount of money.

The same is true of medicaid. If we do not find some way to plug up the medicaid hole, which is growing bigger and bigger every year, and if we do not put it on a rational basis, we will find that next year this bill will swell, and it will swell the following year, until it chokes us to death.

That money does not go to medicare for the aged. It does not go to the handicapped children. It does not go to educate youth. It goes for medical attention for people in the prime of life. Some

of it is necessary and needed, but some of it is not justified, and it is gaining every year.

After the subcommittee had added $3.5 billion, the full committee began to bring in items and added $31 million more. So that the Senate bill now is almost $21 billion.

I want to suggest, Mr. President, that we must do certain things in Congress, and if we do not, we are going to find these appropriations entirely out of control. Necessary and vital though they are, they will be entirely out of control.

I shall go through these items as quickly as possible.

No. 1, we have to take care of the problem of authorization.

The chairman of the subcommittee, the distinguished Senator from Washington (Mr. MAGNUSON)—I compliment him for all the constructive work he has done—has a plan for dealing with the problem of authorization. A colleague from my own State, a member of the Appropriations Committee of the other body, Representative WYMAN, of New Hampshire, has introduced a bill which provides that legislative committees get through their authorizations bills in the first 6 months of the year, before the 1st of July; that if they have not completed them by the 1st of July, the Appropriations Committees can go ahead and appropriate without authorization, and their appropriation will be the authorization.

We must do something to take care of the authorization problem. That is the main reason why we are here—with the Christmas bells ringing and Christmas carols being sung—dealing with a $21 billion bill that goes to the heart of the needs of America, and we are dealing with it in a few hours, without an opportunity for the Senate to study it ahead of time.

Mr. PASTORE. Mr. President, will the Senator yield on that point?

Mr. COTTON. I yield.

Mr. PASTORE. As a matter of fact, I had occasion to make the same admonition on a discussion of the appropriation bill for independent offices. That bill was sent to us from the House in the latter part of June. Our hearings were held on July 22. We were ready to mark up the bill on July 23. But the final authorization conference was resolved on November 4 on NASA, which made it impossible for us to mark it up until after November 4.

How can we do business that way? If a private industry were run the same way, it would go bankrupt.

Mr. COTTON. I thank the Senator. As usual, he has hit at the heart of the problem.

No. 2 is the matter of matching funds. I am certainly one of the ardent friends and supporters of the President of the United States. I have great admiration for him. I believe that he is completely sincere and that he is giving his level best to his great responsibilities. The President has been giving out some pretty high-sounding statements about his plans for tax sharing with the States. Many Members of this body have been Governors and I think they will agree with me when I say—that the Governors' conferences, and the various tax organizations of our States have been talking about tax sharing for years now, referring to the fact that the Federal Government is drying up the tax resources and that there must be some way to send some money back to the States. I do not see any immediate prospect of sending much money back to the States, as long as our feet are stuck in the mire in Vietnam and as long as we have—and I say this in frankness and candor—a bureaucracy of such proportions. That word bureaucracy has been worn out and beaten to death. There is nothing wrong with a bureaucrat, and the sneering about bureaucrats does not do us much credit, because a bureaucrat is a man who is doing a job in Government. He believes his job is important. I would not give 10 cents for anybody downtown who did not think that his particular job was important, because he cannot be dedicated to it unless he does.

Nevertheless, it is a fact that the executive branches of Government that have grown and grown are filled with people who insist that the Federal Government must direct the spending of every cent that we send out to the States. Billions of dollars are in this bill for payment to the States in all kinds of programs. They are good programs, but most of them are being administered from Washington, and they are not being matched by anyone. When a State or a community matches even 25 percent or 30 percent of a Federal grant, Senators may be certain that there will be self-policing, and that the money is going to be spent carefully and frugally so that it accomplishes its purpose, and hits the mark.

The States eagerly grasp these funds because there is not a State, community, or city that does not have horrible problems that must be met. Every one of them reaches out eagerly to get some of this money; but they do not spend it quite as carefully as they would if they contributed something to match a percentage of it.

Mr. President, this appropriation bill is the second largest appropriation bill for fiscal year 1970. There is nothing above it except our huge defense appropriation bill. This bill used to be equal with the appropriation bill for independent offices, but it far outstrips that bill now. This is a $21 billion bill. If Senators do not want to see it grow some more until it shocks us to death, we have to see to it that there is a partnership between the Federal Government, the States, and the local subdivisions of the Government so that there is some responsibility and control back home, back in the States, and back in the area where the money is spent.

So I have mentioned, first, the authorization problem, second, the matching of funds problem, and now I come to the problem of consolidation of programs .

I shall not be much longer because we want to get to work here. But I do wish I had time to go into a full discussion of this problem. I wish I could go into the duplication and the parallel programs that just honeycomb this vast appropriation bill.

Mr. President, at this point, in order to save the time of the Senate and so as not to inflict myself on the Senate too long, I ask unanimous consent that there be printed in the RECORD an excerpt from the committee report starting in the middle of page 3 under title "General Comments," through the sections entitled "Health Research and Manpower Programs," "Reprogramming," "Program Overlap," "OEO Delegate Agencies," and "Program Evaluation" on page 5.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

GENERAL COMMENTS

During its review of the programs covered by the Labor-HEW Appropriation Bill, the Committee became quite disturbed over several trends in the budget. While the Committee supports the goal of holding down Federal outlays in an inflationary period, we do not believe that this should be accomplished at the expense of vital domestic programs. Cuts in education, health research, and economic opportunity programs cannot be justified by general and often superficial references to the dangers of inflation. Inflation may indeed dictate firm control of the total Federal budget, but the Committee has serious doubts about priority choices reflected in the 1970 Federal budget. In fact, the Committee holds strongly to the premise that, even in times of economic uncertainty, care must be taken to protect, or for that matter even expand, programs that represent long-term investments in the basic health and well-being of our society. This bill represents an important step in that direction.

HEALTH RESEARCH AND MANPOWER PROGRAMS

The Committee recommends that, not only should the Senate agree to the action taken by the House to protect vital education programs but that it should also take a special initiative of its own to protect the Nation's investment in health research and the production of health manpower. The returns on this investment have been substantial. It is clear that health research must be expanded if heart disease, cancer, stroke, and other killing and crippling diseases are to be conquered. Yet, not only did the Administration request a cut in health research projects but also asked that we cut research training projects. The implication of this action is unmistakable. The cutback in health research is not intended to be temporary. Lurking below the surface of the budget and the House allowance for health research training is a subtle budget policy with long-term implications for the production of future research scientists and, most important, the production of future teachers of physicians and medical technicians, the supply of which is falling further behind with every passing day. The Committee is strongly opposed to such a policy. The Committee is recommending restoration of a proper level of health research activity for 1970, and the continued expansion of health manpower programs for research, teaching and service personnel. Continued shortages within the health professions can only result in acceleration of the spiraling costs of health care and inexcusable delay in bringing to the American people possible improvements in the delivery of health care.

The Committee has heard considerable testimony on the provisional 1970 ceilings which the Budget Bureau has set for the Department of Health, Education, and Welfare. The bill recommended by the Committee would require a substantial adjustment in that ceiling. The Committee feels that the increases recommended in health and education programs are both reasonable and justified, and that they will not, when re-

lated to Congressional action on other appropriations, cause the Federal budget to exceed the government wide expenditure ceiling for 1970. The Committee expects that the Department of Health, Education, and Welfare portion of this ceiling will be adjusted so that the appropriations made in this bill can be spent in an orderly manner.

REPROGRAMMING

The Committee is aware of the complexities involved in administering budgets the size of those covered by the Labor-HEW Appropriation Bill. Inevitably, the need for a certain number of reprogrammings will arise during the course of the year. The Committee, however, expects to receive *advance* notice of any such reprogramming. This has been the practice for some years and should be well-known to budget administrators. Yet, the Department of Health, Education, and Welfare took steps to cut back a number of ongoing chronic disease programs and NIH research projects without providing adequate advance notice to the Committee on Appropriations. It should be perfectly clear to all agencies that cutbacks in programs as well as increases should be cleared with the Committee before final decisions are made.

It has also come to the Committee's attention that the budgets for the principal agencies covered by this bill have been realigned to give special assistance to the Model Cities designated by the Department of Housing and Urban Development. The Committee supports the Model Cities program and realizes that its success depends on the coordinated effort of all the domestically oriented agencies. However, the budget justifications and testimony at the hearings made virtually no mention of any money being spent in the Model Cities. The Committee expects this problem to be corrected before the hearings on next year's budget. There should be increased Congressional review of budget plans for Model Cities so that they are reviewed to the same extent as any other program.

PROGRAM OVERLAP

During the hearings, many instances for overlapping programs and responsibilities came to the Committee's attention. For example, both the Department of Health, Education, and Welfare and the Office of Economic Opportunity operate virtually identical neighborhood health center programs. Organizations seeking to provide health services to the poor are confronted by a maze of funding sources and confusing and overlapping application procedures. Health manpower training and mental retardation programs are scattered all over the Department of Health, Education, and Welfare. This kind of fragmentation and competition among agencies is inherently inefficient. While the program objectives are worthwhile, this method of organizing to attain them wastes public resources. The Committee expects a careful review to be made of this problem and steps taken to streamline program administration. The Committee specifically asks the Secretary of Health, Education, and Welfare to examine the following areas of activity within the Department to determine whether there may be excessive overlapping or duplication:

1. Mental Retardation.
2. Assistance to Migrant Farm Workers.
3. Family Planning.
4. Nutrition.
5. Health services for the poor.
6. Health manpower training.

Testimony before this Committee suggests that such overlapping or duplication exists in these programs.

OEO DELEGATE AGENCIES

A number of economic opportunity programs have been transferred from OEO and are now administered by other departments and agencies. In some instances, however, OEO has continued to budget for transferred programs and then allocate funds to the other agencies. The most prominent examples of this are the Headstart and Follow Through programs now administered by the Department of Health, Education, and Welfare and a number of manpower programs administered by the Department of Labor. The Committee finds this practice of one agency budgeting for another to be quite confusing to the Congress and the public. The Committee expects this method of budgeting to be discontinued as soon as possible.

PROGRAM EVALUATION

The Secretary of Health, Education, and Welfare has indicated to the Committee a strong interest in the evaluation of major HEW programs, particularly some of the newer programs that involve large sums of Federal funds. The Committee commends the Secretary for this objective and would urge him to move as quickly as possible to initiate meaningful studies and evaluations of as many HEW programs as possible. These evaluations should stress results rather than effort and amount of money spent. There are a number of instances in which this bill contains specific resources for such program evaluations. There are a number of other areas in need of review. In the opinion of the Committee, such reviews and studies may be made within regular appropriations made for the programs themselves. Examples of such instances include education of the handicapped, education professions development, Teacher Corps, health manpower education, child welfare services, Headstart, mental retardation, and others. In all such instances, the Committee expects the Secretary to use, to the extent necessary, related program and/or salary and expense appropriations to finance meaningful reviews, studies, analyses, and evaluations that will permit both the Secretary and the Congress to determine the adequacy and effectiveness of the programs in question. Further, the Committee would expect the Secretary to make maximum use of appropriations made for research and development for this purpose. Examples of such appropriations are Education Research and Training, and Rehabilitation Research and Training. Other than funds already included in the bill, the Committee sees no need for special or separate appropriations for such purposes at this time. The Committee would expect, however, to be kept informed of the Secretary's plans for such evaluations. Wherever this involves significant shifts or earmarkings of monies, the Committee would expect to be advised in advance through established reprogramming procedures.

Mr. COTTON. Mr. President, I wish every Senator sometime during the debate—and heavens knows, it is going to be long enough—would pick up the report and read those sections. I mention that in connection with the third of my suggestions, that is, consolidating programs. I will now read from page 5, the paragraph under the headline "Program Overlap":

During the hearings, many instances for overlapping programs and responsibilities came to the committee's attention. For example, both the Department of Health, Education, and Welfare and the Office of Economic Opportunity operate virtually identical neighborhood health center programs. Organizations seeking to provide health services to the poor are confronted by a maze of funding sources and confusing and overlapping application procedures. Health, manpower training and mental retardation programs are scattered all over the Department of Health, Education, and Welfare.

Mr. President, as a matter of fact manpower training is scattered not only all over the Department of Health, Education, and Welfare but also it spills over into Labor, Defense, Agriculture, and into many other deparments. The same is true of job training and vocational training.

I asked the staff to tell me how many separate programs of vocational job training we have in the appropriation bill this year and how many departments there are. They found 19 and they are still counting. They are not all the same. Some of them are to retrain people who have been deprived of vocations, like the coal miners in West Virginia and elsewhere. Some of them are for young people, in order to get them off the streets and train them.

I shall continue to read from the report:

This kind of fragmentation and competition among agencies is inherently inefficient. While the program objectives are worthwhile, this method of organizing to attain them wastes public resources.

There is a lot of waste in this $21 billion bill and do not think there is not.

The committee expects a careful review to be made of this problem and steps to streamline program administration.

Practically those same words have been in the report of this subcommittee every year for the past 5 years. We say what we expect to be done, and it is similar to the boy who hung up his stocking at Christmas time and found it empty in the morning.

I wish to read that sentence again:

The committee expects a careful review to be made of this problem and steps taken to streamline program administration.

Next year when they begin to hear those 400 witnesses who will flood through the subcommittee, if I am still a committee member, I have no idea that we will find that has been done.

The committee specifically asks the Secretary of Health, Education, and Welfare to examine the following areas of activity within the department to determine whether there may be excessive overlapping or duplication:

1. Mental retardation.
2. Assistance to migrant farm workers.
3. Family planning.
4. Nutrition.
5. Health services for the poor.
6. Health manpower training.

Mr. President, those are just some of the fields of overlapping. Let me repeat: First, we have to do something about the authorization problem; second, we have to do something about matching funds; third, we have to do something about consolidating programs and cutting out parallel and overlapping efforts; and fourth, we have to do something about facing up to the so-called advance funding.

As I remember we went through the same thing on foreign aid. We got it to going good and then they would come in and say that they wanted appropriations not for 1 year in advance but for 3 or even 4 years so that they could plan their programs. We began to let go of our authority.

Now in this bill, because of the problem that the schools have, because they want to be able in late winter or spring to plan their activities and equip themselves and get the personnel to do the work in edu-

cation, they want to know what they are going to get in the next school year. I do not blame them. It would be wasteful, and inefficient if they did not.

As a matter of fact, we do not have to make any radical changes to accomplish that. All we have to do is what I suggested in the No. 1 recommendation. That is to have a time limit on the legislative committees giving us their authorizations, and make them act by the end of the fiscal year or shortly thereafter. If we do that, they will know what will get put into a bill and it will save a lot of advance funding. We are tying our hands, in many instances, for fiscal 1971.

Mr. MURPHY. Mr. President, will the Senator from New Hampshire yield?

Mr. COTTON. I yield.

Mr. MURPHY. I wonder whether the distinguished Senator knows of the program we have in California which was funded last year and was a bipartisan program enthusiastically adopted by the Governor and also by at least one of the men who will be his opponents next year, to do exactly what the distinguished Senator from New Hampshire has been suggesting; namely, to cut out duplications and giving them permission to consolidate many programs and put them all in one unified, central place so that we can eliminate the duplication and make them much more operative and much more practical and, I am told, much less costly.

I have not had a chance to read the report on the bill because, as my colleague knows, the report has been barely printed, but I have been told that the program has been taken out of the bill. Is the Senator familiar with the program referred to?

Mr. COTTON. I am not sure that I am familiar with that program as it appears in the bill. The Senator means something similar to what is being done in the State of California?

Mr. MURPHY. Yes, that it would be a sort of pilot test case in California, and it was suggested that it be on a bipartisan basis. I brought it to the committee on our side. I had suggested this authorization. My understanding is that it was working very well and was practical, and would give such time to do what the Senator is talking about, that is, to cut out the duplications. I have been told that it has been lifted out of the bill. I will give the details to my colleague later on.

Mr. COTTON. I would appreciate that. I do not know of any appropriation that was adjusted for it.

Mr. MURPHY. It was a small appropriation last year.

Mr. COTTON. I thank the Senator from California. I shall be happy to have that information.

Now, Mr. President, in these preliminary remarks which I have tried to lay down, as has been so frequently said, I talk about the problem but I have not given any solutions.

In closing, I want to say that as far as the medical features are concerned, every dollar is justified and that every dollar we added to it is also justified.

It has been interesting to note through the years, especially during the long debate we had on the tax bill recently, that the contributions given to research from individuals and foundations have in large measure dried up. Those contributions are now going into the sociological fields. That is undoubtedly good. Some of them are going into almost quasi-political fields. But the financing of heart, stroke, and cancer research, the financing and research that is being made in the area of mental diseases, the Federal Government has to carry that load with very little help from other sources. That part of the bill is absolutely justified.

I want to say frankly to my colleagues in the Senate, that I never was so frustrated in all the years I have served on the Appropriations Committee as I have been these past few weeks working on this bill. We have not had the authorization. The budget has been slow in giving us some of its recommendations. We have had an avalanche of people demanding new departments and new programs, right and left, forwards and backwards, extending into every nook, corner, and crevice of our living.

The task of determining priorities, the task of detecting duplications, has been more difficult than ever before. Although I compliment my colleagues on the subcommittee and on the committee for working long hours, speaking for myself, I am not proud of our accomplishments.

So far as I am concerned, I think that I have failed in measuring up to what we might have done. I have never seen so many difficulties and roadblocks placed in our path.

Mr. HATFIELD. Mr. President, will the Senator from New Hampshire yield?

Mr. COTTON. I yield.

Mr. HATFIELD. Mr. President, I wish to commend the able chairman of the Appropriations Subcommittee, Senator WARREN G. MAGNUSON, and Senator NORRIS COTTON, the ranking GOP member, and their hard working colleagues on that committee, for their herculean efforts in wrestling through this HEW appropriations bill.

I most particularly appreciate their efforts to appropriate additional money for the pressing needs of educating the young people of this country.

It is my undesrtanding that the committee voted not only to include the almost $1 billion which the House appropriated in July, but, in addition, raised the amount by $250 million. We are dealing with an education bill which is nearly $4½ billion—roughly the cost of building and maintaining four of our 15 aircraft carrier task forces, which are of doubtful value.

This is a mistaken priority of the administration when contrasted with the obvious value to the strength of the Nation by investing additional funds for an educated citizenry.

I am pleased that the committee allowed almost $500 million for vocational education—funds which were cut back by the administration to $279 million in their budget request.

I pointed out yesterday that the current cost over-run for the ABM system is currently $277 million more than anticipated.

Perhaps the administration could have used this money to better effect by raising the vocational education budget request to $500 million—more nearly in line with the authorized bill—if they were not spending so much money on nonproductive military armament.

The administration also allowed only $5.75 million for the training of vocational teachers. This at a time when our community colleges are doubling enrollments and the new thrust is to upgrade vocational education training to meet space-age needs.

We should produce 20,000 additional vocational education teachers this year. The committee action in raising appropriations from $95 million to $125 million for the Education Professions Development Act will help.

I trust that the Bureau of Education Professions in the Office of Education will use the additional funding which Congress may vote to provide additional money for training of vocational education teachers.

I commend the Senators on this committee for raising the amounts to $20 million for dropout prevention, and to $25 million for bilingual education. My State, which is experiencing an increase in school dropouts, is especially desirous of this help. We can, as well, spend the additional funds for bilingual education. Oregon, an agricultural State, welcomes almost 30,000 migrant workers each year; the State has pioneered in education for migrant children of Mexican American parentage, but we only have half the money needed this year for this work at the State level.

I am pleased that $125 million was allowed for college construction. Community college presidents in Oregon have been especially in need of this Federal aid, for they are being pushed by the State to expand to meet the burgeoning demand for enrollments throughout the State and have been hampered by the lack of construction money at the Federal level.

I am grateful for the additional money for student assistance. My office has received countless letters from the colleges in my State telling the unhappy story of students forced to drop out of school for lack of assistance, at the very time the Federal Government has encouraged them to seek bright, but poor, youngsters for higher education.

It is my hope that the Senate conferees can retain these amounts in conference. I just wanted to thank my colleagues from Washington and New Hampshire and the other members of the committee for their efforts and to express my gratitude and that of the young people and educators of my State for increasing appropriations for education—action which will go much further toward internal stability and strength than all the billions spent for the ABM systems or nuclear aircraft carriers.

The committee should be praised also for restoring funds to health research and training doctors and nurses.

Mr. President, I want to add my further thought that even though Senators may be expressing frustrations at this point as to what the committee would like to have accomplished and

what they think the committee has not accomplished, when history is written I am sure there will be demonstrated the great courage shown by the two Senators and their colleagues on the subcommittee, at a time when pressure for the expenditure of money in other areas of Government happens to be so great. So I am very happy with what the committee has done. We all would like to see more, but what the committee has done certainly bespeaks the dedication its members have to the cause of education in this country.

Mr. COTTON. Mr. President, I thank the Senator for his very kind words and also for the fine statement he made about at least some of the problems and priorities that we tried to deal with.

I am not ashamed of what this committee has done, because this country cannot afford to economize in educating its youth, in improving the health of its people, and in keeping the wolf from the door of the elderly, the needy and disadvantaged. That is what the bill does.

When I spoke about being frustrated and feeling a sense of guilt, it was because I had a feeling—which I am sure was shared by other members of the committee—as we sat day after day and far into the evening, that we were traveling through such a maze of needs and so many paralleling programs and so many contesting priorities, that whatever we did and however much we spent, we were leaving a job that had a lot of rough edges.

I close my remarks with the comment that we had the benefit and the cooperation of a fine and able staff. At this point I want to mention one man for the work he has done. He stood by the side of our beloved friend, Lister Hill. I refer to Mr. Downey, who has been on the staff of this subcommittee for many years. I do not want this debate to be closed without saying how much I miss working with Lister Hill, as I did through the years; and if I have come to get a little vision of what the vistas are that open up in this bill, in spite of our stumblings and gropings, it is because I had the opporunity to serve with that dedicated man.

Because I have served as ranking minority member for years on the Committee on Commerce, I have again seen the efficiency and the keenness of our chairman, the distinguished Senator from Washington, whose mind is like a steel trap, and who goes to the point every time a witness testifies.

I compliment the young man, his assistant, Mr. Dirks, who has been invaluable, as well as my own assistant on the minority side, Mr. Kennedy.

I will now subside and hope we can expeditiously deal with the amendments that will be presented.

Mr. MAGNUSON. Mr. President, I did not want the Senator from New Hampshire to subside. I was feeling better all the time he was talking.

Mr. WILLIAMS of Delaware. Mr. President, both the chairman of the subcommittee, the Senator from Washington (Mr. MAGNUSON), and the Senator from New Hampshire (Mr. COTTON) have made a rather detailed explanation of the bill which momentarily is expected back from the printer. Once again I want to express my regret, and I am sure they share it, that the bill was not before us prior to this late hour so we could study it in more detail before we were asked to act on a $20 billion bill. I do not question the many reasons that could be advanced for that situation, some of which were delays by the administration, some by the legislative committees in getting authorization acted upon; and perhaps equally important the Appropriations Committee itself must accept some responsibility for this undue delay.

Why we are caught in this situation is all immaterial. I still say I hope it does not happen again, because I do not believe it is good business to ask the Senate to deal with a $20 billion measure, such as we were asked to do this morning, before the official bill was actually back from the printer. Up to this moment all that we had was the committee print.

Think of it, the Senate being asked to vote on a $20-billion bill hours before it is even printed.

Never before have I witnessed such irresponsible action and it is all so unnecessary.

However, now that we have had a detailed explanation of the bill and in the couple of hours intervening, Senators have had a chance to examine it. I am not going to object to the procedural request that we consider the amendments en bloc. However, I would suggest that the request be made only after we have a live quorum.

I understand the bill will be back from the printer by the time the quorum call can be completed. It is now after 2 p.m. and for 3 hours the Senate has been discussing this $20-billion bill which is just now being made available for Senators. I emphasize this point to illustrate just how irresponsible the Senate is acting here today.

I am going to suggest the absence of a quorum.

Mr. MAGNUSON. Mr. President, before the Senator does that, let me say that there was a combination of reasons why this situation developed. The bill went to the printer. I hope to get copies of the bill before us. I do not know how long it will take. The bill should be here in about an hour. I appreciate what the Senator has said.

Mr. WILLIAMS of Delaware. I repeat, it is an unfortunate situation that the Senate technically has been considering a $20 billion bill 3 hours before it was back from the printer.

Mr. MAGNUSON. It would have been much better the other way.

Mr. WILLIAMS of Delaware. I hope in the future we can have bills lay over for a day or two so Senators will have an opportunity to study them.

Mr. MAGNUSON. I would certainly prefer that, in self-defense.

Mr. WILLIAMS of Delaware. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk called the roll, and the following Senators answered to their names:

[No. 242 Leg.]

Allott	Hansen	Montoya
Bellmon	Hart	Murphy
Brooke	Hartke	Muskie
Byrd, Va.	Hatfield	Nelson
Byrd, W. Va.	Holland	Packwood
Cook	Hruska	Pastore
Cotton	Inouye	Pearson
Dominick	Javits	Pell
Eastland	Magnuson	Prouty
Ellender	Mathias	Randolph
Fong	McCarthy	Ribicoff
Griffin	McGee	Stennis
Gurney	McIntyre	Williams, Del.

Mr. BYRD of West Virginia. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Georgia (Mr. RUSSELL), and the Senator from Missouri (Mr. SYMINGTON) are necessarily absent.

I also announce that the Senator from Washington (Mr. JACKSON) is absent because of a death in his family.

Mr. GRIFFIN. I announce that the Senator from Kentucky (Mr. COOPER) is absent because of illness in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The PRESIDING OFFICER. A quorum is not present.

Mr. BYRD of West Virginia. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from West Virginia.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

After some delay, the following Senators entered the Chamber and answered to their names:

Aiken	Goldwater	Saxbe
Allen	Goodell	Schweiker
Baker	Gore	Scott
Bayh	Gravel	Smith, Maine
Bennett	Harris	Smith, Ill.
Bible	Hollings	Sparkman
Boggs	Hughes	Spong
Burdick	Jordan, N.C.	Stevens
Cannon	Jordan, Idaho	Talmadge
Case	Long	Thurmond
Church	Mansfield	Tower
Cranston	McClellan	Tydings
Curtis	McGovern	Williams, N.J.
Dodd	Metcalf	Yarborough
Dole	Miller	Young, N. Dak.
Eagleton	Mondale	Young, Ohio
Ervin	Moss	
Fannin	Percy	
Fulbright	Proxmire	

The PRESIDING OFFICER. A quorum is present.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the committee amendments to H.R. 13111 be agreed to en bloc, that the bill as so amended be considered as original text for the purpose of further amendment, and that no points of order will be waived.

Mr. JAVITS. Reserving the right to object, Mr. President, I should like to make a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. JAVITS. We originally discussed the possibility of reserving from this unanimous consent request, sections 407, 408, and 409. My parliamentary inquiry is as follows: If the committee amendment on section 407, section 408, or section 409 is not agreed to, do we then revert to the House text as stricken out in the bill?

The PRESIDING OFFICER. If the Senate does not agree to the committee amendment to sections 407, 408, and 409, the House language would come back.

Mr. JAVITS. Then, in order to remove the House language from the bill which will be submitted to the Senate for final vote, it will be necessary to strike the House language?

The PRESIDING OFFICER. That is correct.

Mr. JAVITS. On the other hand, if the unanimous-consent request is granted, that immediately removes the House language from the bill, does it not?

The PRESIDING OFFICER. That is correct.

Mr. JAVITS. And then the motion to deal with the Senate language or not agree to it would be final?

The PRESIDING OFFICER. I am advised that if the Senate language is put in on this basis, then a motion to strike it out would be in order.

Mr. JAVITS. Or a motion to amend or modify.

The PRESIDING OFFICER. That is correct.

Mr. JAVITS. On that basis, Mr. President, and for the information of the Senate, because I regard the House language, from the point of view of the opponents of the Senate amendments, worse than the Senate amendments, I shall not object.

The PRESIDING OFFICER. Is there objection?

Mr. STENNIS. Reserving the right to object, Mr. President, I wish the Chair would state the ruling again.

We have before us now a bill with a Senate amendment. The question was, if there was a motion to strike the Senate amendment—was that the question?

Mr. MAGNUSON. Yes.

Mr. STENNIS. And if that should prevail, what would become of the House language?

The PRESIDING OFFICER. If the request of the Senator from Washington is agreed to, the House language goes out and the Senate proposed amendment goes into the bill as original text for the purpose of further amendment.

Mr. MAGNUSON. If the request is agreed to, the Senate language will be before the Senate and a motion to strike will be in order. Is that correct?

The PRESIDING OFFICER. That is correct.

Mr. STENNIS. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. PASTORE. Why does not the Senator amend his unanimous-consent request to take into account all amendments but sections 407, 408, and 409?

Mr MAGNUSON. For the simple reason that I am trying to accommodate too many people. I had that in my request at the request of the Senator from New York, and he now says he would rather make the request to cover the bill, so we would have a simple vote up or down.

Mr. PASTORE. That is right. But in view of this new development, I think the Senator from New York will even revise that.

Mr. JAVITS. I cannot revise my thinking. It is a matter of practicality. That is the only consent we could get.

Mr. MAGNUSON. If I exempt sections 407, 408, and 409, the Senator will object.

Mr. JAVITS. No, I will not.

Mr. PASTORE. No, he will not. Try it.

Mr. STENNIS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. MAGNUSON. Mr. President, I will state it again, so we can get the bill going and get to the money items. Twenty-five thousand school districts in this country want to know about this bill.

I ask unanimous consent that the committee amendments to H.R. 13111 be considered en bloc; that the bill as so amended be considered as original text for the purpose of further amendment; that no points of order will be waived; and that sections 407, 408, and 409 be exempt from this unanimous-consent request.

Mr. JAVITS. Reserving the right to object, Mr. President—and I will not object—I have no desire to impede the Senate. I wish to facilitate, not to delay, this procedure. I thought the other was better. It was generic and would cover everything. But if there are Members who feel strongly about it, the Senate can work its will adequately.

Mr. MAGNUSON. I appreciate that. I want to get to all these money items. Some of them are critically important. Some people have strong feelings about them.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. STENNIS. Mr. President, the Senator from Washington is handling the bill, and he knows of the special interest in those sections, two of them.

Mr. MAGNUSON. Three of them.

Mr. STENNIS. The two in which I am interested.

I think it is better that we have time for a little conference with the Parliamentarian before the unanimous-consent request is put.

Mr. MAGNUSON. I have put the unanimous-consent request.

Mr. ALLEN. Is the Senator from Washington including sections 407, 408, and 409?

Mr. MAGNUSON. I exempt sections 407, 408, and 409.

Mr. ALLEN. I object to that. If all the House amendments are not going to be accepted, and we work from the committee amendments as a basis for further amendments, then I will object. I see no reason for excepting sections 407, 408, and 409.

Mr. MAGNUSON. I kept them in, but then the Senator from Mississippi objected.

Mr. ALLEN. The request of the Senator from New York was that the sections be kept out of the unanimous-consent request.

Mr. MAGNUSON. That is correct. And then the Senator from Mississippi objected.

Mr. ALLOTT. That is the same request I made this morning.

Mr. ALLEN. Why not take the committee amendments en bloc, and work from the committee amendments as a basis for further amendments?

Mr. MAGNUSON. That is what I would like to do.

Mr. ALLEN. That is what I would agree to.

Mr. MAGNUSON. The Senator from Mississippi objected to that.

Mr. ALLEN. He has never objected to that. He objected to the request of the Senator from New York.

Mr. PASTORE. Mr. President, I think we ought to start all over again.

Mr. MAGNUSON. Mr. President, I ask unanimous consent to withdraw my unanimous-consent request, and I am going to put this question.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. This is the way we generally do this: I ask unanimous consent that the committee amendments be agreed to en bloc, that the bill as thus amended be considered as original text for the purpose of further amendment, and that no points of order be waived. The effect of that would be to put the amendments before the Senate, and a motion to strike would be in order. That is all there is to it.

The PRESIDING OFFICER. Is there objection?

Mr. STENNIS. No objection, Mr. President.

Mr. ALLEN. We are not excepting sections 407, 408, and 409?

Mr. MAGNUSON. That is correct. I did not do that in the first place, and they objected. Earlier, the Senator from New York objected unless I put them in.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The amendments agreed to en bloc are as follows:

On page 2, line 9, after "1971", insert a colon and *"Provided,* That the amounts appropriated herein for title II, parts A and B of said Act which are available for expenses of programs authorized under the provisions of subsections 123(a)(5) or (8) of the Economic Opportunity Act of 1964, as amended, shall not be subject to the apportionment of benefits provisions of section 301 of such Act."

On page 2, line 23, strike out "$35,325,000" and insert "$36,907,000 to remain available until June 30, 1971".

On page 3, line 11, after the word "by", strike out "title XV of the Social Security Act, as amended," and insert "title 5, chapter 85 of the United States Code,".

On page 3, line 20, after the word "by", strike out "title XV of the Social Security Act, as amended," and insert "title 5, chapter 85 of the United States Code,".

On page 5, line 15, after the word "title", strike out "XV of the Social Security Act, as amended (68 Stat. 1130)" and insert "5, chapter 85 of the United States Code,"; in line 16, after the amendment just above stated, strike out "$630,772,000" and insert "$657,700,000"; and, in line 19, after the word "which", strike out "$12,000,000" and insert "$15,000,000".

On page 7, line 12, strike out "$9,585,000" and insert "$10,426,000".

On page 7, line 20, strike out "$12,050,000" and insert "$12,300,000".

On page 9, line 19, after the word "shall", strike out "be" and insert "remain available until December 31, 1975,".

On page 12, line 13, strike out "$72,007,000" and insert "$72,698,000".

On page 12, line 20, after "$93,800,000", insert a comma and "of which $21,900,000 shall remain available until expended to carry out section 104 of the Clean Air Act".

On page 13, after line 9, insert:

"BUILDINGS AND FACILITIES

"Such unexpended balances (including balances obligated but not disbursed) as the Secretary of Health, Education, and Welfare may determine to be available as of June 30, 1969, in the appropriation for "Buildings and facilities, Public Health Service", for Consumer Protection and Environmental Health Service activities, shall be transferred to an account under this head. There shall be merged with such account the unexpended balance (including any balance obligated but not disbursed) as of June 30, 1969, in the appropriation for 'Food and Drug Administration, buildings and facilities'."

On page 14, line 7, after "1966", strike out "(Public Law 89–973)" and insert "(Public Law 89–793)"; in line 12, after "1942", strike out "$360,302,000" and insert "$385,000,000"; and, in the same line, after the word "which", strike out "$42,500,000" and insert "$52,200,000".

On page 15, line 14, after the word "Act", strike out "$207,143,000" and insert "$214,033,000".

On page 15, line 25, after the word "Act", strike out "$76,000,000" and insert "$100,000,000"; on page 16, line 1, after the word "which", strike out "$50,000,000" and insert "$73,500,000"; and, in line 3, after "IX", insert "and $24,771,000 shall be for development, assistance, and chronic disease control activities".

On page 17, after line 10, insert:

"DISTRICT OF COLUMBIA MEDICAL FACILITIES

"For grants of $3,500,000 and loans of $6,500,000 for nonprofit private facilities pursuant to the District of Columbia Medical Facilities Construction Act of 1968 (Public Law 90–457) to remain available until expended".

On page 18, after line 19, insert:

"BUILDINGS AND FACILITIES

"Such unexpended balances (including balances obligated but not disbursed) as the Secretary of Health, Education, and Welfare may determine to be available as of June 30, 1969, in the appropriation for 'Buildings and facilities, Public Health Service', for Health Services and Mental Health Administration activities, shall be transferred to an account under this head. There shall be merged with such account the unexpended balance (including any balance obligated but not disbursed) as of June 30, 1969, in the appropriation for 'Saint Elizabeths Hospital, buildings and facilities'."

On page 19, line 21, after the word "Act", strike out "$180,725,000" and insert "$200,000,000".

On page 19, line 25, strike out "$160,513,000" and insert "$182,000,000".

On page 20, line 3, after the word "Act", strike out "$29,892,000" and insert "$32,000,000".

On page 20, line 9, after the word "diseases", strike out "$137,668,000" and insert "$155,000,000".

On page 20, line 15, after the word "stroke", strike out "$101,256,000" and insert "$112,700,000".

On page 20, line 20, after the word "diseases", strike out "$102,389,000" and insert "$105,000,000".

On page 21, line 5, after the word "anesthesiologists", strike out "$154,288,000" and insert "$175,000,000".

On page 21, line 11, strike out "$73,098,000" and insert "$78,000,000".

On page 21, line 15, after the word "disorders", strike out "$23,685,000" and insert "$25,000,000".

On page 22, line 3, after the word "research", strike out "$73,658,000" and insert "$79,658,000".

On page 22, line 18, after the word "Act", strike out "$218,021,000" and insert "$250,000,000".

On page 23, line 15, after the word "Act", strike out "$10,722,000" and insert "$11,887,000".

On page 23, line 21, after the word "facilities", strike out "$126,100,000" and insert "$160,000,000".

On page 24, line 12, after the word "provided", strike out "$1,000,000" and insert "$1,900,000"; and, in line 13, after the word "expended", insert a colon and *"Provided,* That such unexpended balances (including balances obligated but not disbursed) as the Secretary of Health, Education, and Welfare may determine to be available as of June 30, 1969, in the appropriation for 'Buildings and facilities, Public Health Service' for National Institutes of Health activities, shall be merged with this appropriation."

On page 26, line 22, after the word "of", strike out "$60,700,000" and insert "$65,700,000".

On page 27, line 6, after the word "and", where it appears the first time, strike out "titles III–A and" and insert "title"; at the beginning of line 8, strike out "$364,616,000" and insert "$315,876,000"; in line 12, after "1965", strike out "$78,740,000 shall be for equipment and minor remodeling and state administrative services under title III–A of said Act of 1958;"; in line 18, after "1965", strike out "$5,000,000" and insert "$20,000,000"; and, in line 22, after the word "and", strike out "$10,000,000" and insert "$25,000,000".

On page 28, line 6, after the word "grants.", insert "For grants under title I–A of the Elementary and Secondary Education Act of 1965, $1,117,580,000 for the fiscal year 1971: *Provided,* That these funds shall not be available until enactment into law of authorizing legislation."

On page 28, after line 10, strike out:

"For carrying out title I of the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and the Act of September 23, 1950, as amended (20 U.S.C., ch. 19), $600,167,000, of which $585,000,000 shall be for the maintenance and operation of schools as authorized by sections 3, 6, and 7 of said title I of the Act of September 30, 1950, as amended, and $15,167,000 which shall remain available until expended, shall be for providing school facilities as authorized by said Act of September 23, 1950. For carrying out titles III and IV (except parts D and F), part E of title V, and section 1207 of the Higher Education Act of 1965, as amended, titles I and III of the Higher Education Facilities Act of 1963, as amended, titles II and IV of the National Defense Education Act of 1958, as amended (20 U.S.C. 421–429), and section 22 of the Act of June 29, 1935, as amended (7 U.S.C. 329), $859,633,000, of which $159,600,000 shall be for educational opportunity grants under part A of title IV of the Higher Education Act of 1965 and shall remain available through June 30, 1971, $63,900,000 to remain available until expended shall be for loan insurance programs under part B of title IV of that Act, including not to exceed $1,500,000 for computer services in connection with the insured loan program, $154,000,000 shall be for grants for college work study programs under part C of title IV of that Act (of which amounts reallotted shall remain available through June 30, 1971), including one per centum of such amount to be available, without regard to the provisions in section 442 of that Act, for cooperative education programs that alternate periods of full-time academic study with periods of full-time public or private employment, $43,000,000 shall be for grants for construction of public community colleges and technical institutes and $33,000,000 shall be for grants for construction of other academic facilities under title I of the Higher Education Facilities Act of 1963 which amounts shall remain available through June 30, 1971, $11,750,000, to remain available until expended, shall be for annual interest grants under section 306 of that Act, $222,100,000 shall be for Federal capital contributions to student".

On page 30, after line 23, insert:

"INSTRUCTIONAL EQUIPMENT

"For carrying out title III–A of the National Defense Education Act of 1958, as amended, and title VI of the Higher Education Act of 1965, as amended, $93,240,000, of which $78,740,000 shall be for equipment and minor remodeling and State administrative services under title III–A of said National Defense Education Act; $13,000,000 shall be for equipment and minor remodeling under section 601(b) of said Higher Education Act, and $1,500,000 shall be for the acquisition of television equipment and for minor remodeling under section 601(c) of said Higher Education Act: *Provided,* That allotments under sections 302(a) and 305 of the National Defense Education Act, for equipment and minor remodeling shall be made on the basis of $75,740,000 for grants to States and on the basis of $1,000,000 for loans to nonprofit private schools, and allotments under section 302(b) of said Act for administrative services shall be made on the basis of $2,000,000.

"SCHOOL ASSISTANCE IN FEDERALLY AFFECTED AREAS

"For grants and payments under the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and under the Act of September 23, 1950, as amended (20 U.S.C., ch. 19), $600,167,000, of which $585,000,000 shall be for payments to local educational agencies for the maintenance and operation of schools as authorized by the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and $15,167,000 which shall remain available until expended, shall be for providing school facilities and for grants to local educational agencies in federally affected areas as authorized by said Act of September 23, 1950: *Provided,* That this appropriation shall also be available for carrying out the provisions of section 6 of the Act of September 30, 1950."

On page 32, line 5, after the word "out", insert "section 504,"; at the beginning of line 8, strike out "$95,000,000" and insert "$120,000,000"; and, in the same line, after the word "which", strike out "$15,000,000" and insert "$21,500,000."

On page 32, line 12, after the word "amended", strike out "$21,737,000" and insert "$31,100,000".

On page 32, after line 20, insert:

"For carrying out titles III and IV (except parts D and F), part E of title V, and section 1207 of the Higher Education Act of 1965, as amended, titles I and III of the Higher Education Facilities Act of 1963, as amended, titles II and IV of the National Defense Education Act of 1958, as amended (20 U.S.C. 421–429), and section 22 of the Act of June 29, 1935, as amended (7 U.S.C. 329), $1,006,874,000, of which $175,600,000 shall be for educational opportunity grants under part A of title IV of the Higher Education Act of 1965 and shall remain available through June 30, 1971, $63,900,000 to remain available until expended shall be for loan insurance programs under part B of title IV of that Act, including not to exceed $1,500,000 for computer services in connection with the insured loan program, $154,000,000 shall be for grants for college

work-study programs under part C of title IV of that Act (of which amounts reallotted shall remain available through June 30, 1971), including one per centum of such amount to be available, without regard to the provisions in section 442 of that Act, for cooperative education programs that alternate periods of full-time academic study with periods of full-time public or private employment, $125,000,000 shall be for grants for construction of public community colleges and technical institutes and $75,000,000 shall be for grants for construction of other academic facilities under title I of the Higher Education Facilities Act of 1963 which amounts shall remain available through June 30, 1971, $11,750,000, to remain available until expended, shall be for annual interest grants under section 306 of that Act, $222,100,000 shall be for Federal capital contributions to student loan funds established in accordance with agreements pursuant to section 204 of the National Defense Education Act of 1958, and $12,120,000 shall be for the purposes of section 22 of the Act of June 29, 1935: *Provided,* That $7,241,000 shall be for payments authorized by section 108(b) of the District of Columbia Public Education Act, as amended (D.C. Code, sec. 31–1608)."

On page 34, after line 7, insert:

"VOCATIONAL EDUCATION

"For carrying out the Vocational Education Act of 1963, as amended (20 U.S.C. 1241–1391) (except part E of title I), and section 402 of the Elementary and Secondary Education Amendments of 1967, $488,716,000, of which not to exceed $352,836,000 shall be for State vocational education programs under part B and $40,000,000 shall be for programs under section 102(b) of said Vocational Education Act of 1963, including development and administration of State plans and evaluation and dissemination activities authorized under section 102(c) of said Act, and $10,000,000 for work-study programs under part H of said Act, not to exceed $2,800,000 for State advisory councils established pursuant to section 104(b) of said Act, $13,000,000 for exemplary programs under part D of said Act of which 50 per centum shall remain available until expended and 50 per centum shall remain available through June 30, 1971, $20,000,000 for consumer and homemaking education programs under part F of said Act, and $14,000,000 shall be for cooperative vocational programs under part G of said Act."

On page 35, line 11, after "(40 U.S.C. 390–395, 397–399)", strike out "$135,391,000" and insert "$155,625,000"; in line 23, after the word "Act", strike out "$5,500,000" and insert "$7,356,000"; and, on page 36, line 2, after the word "and", strike out "$4,000,000" and insert "$5,625,000".

On page 36, line 16, after "(20 U.S.C. 621–624)", strike out "$100,000,000, of which $29,190,000" and insert "$105,000,000, of which $34,250,000".

On page 37, line 2, after "1968", strike out "$85,750,000" and insert "$98,250,000"; and, in line 12, after the word "programs", insert a comma and "and $9,500,000 shall remain available under said Cooperative Research Act through June 30, 1971, for experimental schools".

On page 37, line 19, after "1961", strike out "$18,000,000" and insert "$12,000,000".

On page 39, line 1, after the word "That", strike out "no loans shall be made from this fund in the current fiscal year" and insert "loans may be made during the current fiscal year from the Fund to the extent that amounts are available from commitments withdrawn prior to July 1, 1970, by the Commissioner of Education".

On page 40, line 6, after the word "Act", strike out "$129,640,000" and insert "$100,000,000".

On page 40, line 21, after "12", strike out "and 13" and insert "13, and 17"; in line 22, after the word "amended", strike out "$499,783,000 of which $471,000,000" and insert "$464,783,000; of which $436,000,000"; and, on page 41, line 9, after "$25,000", insert a colon and *"Provided further,* That such grants to any State shall not be less than made to the State under section 2 for the fiscal year 1969."

On page 42, line 4, after the word "amended", strike out "$37,000,000, of which" and insert "$39,000,000, of which $2,000,000 shall remain available until expended for grants for facilities pursuant to part B of the Mental Retardation Facilities Construction Act, and".

On page 43, after line 3, insert:

"DEVELOPMENT OF PROGRAMS FOR THE AGING

"To carry out, to the extent not otherwise provided, the Older Americans Act of 1965, as amended, and for initial expenses of a White House Conference on Aging, $35,650,000 including not to exceed $4,000,000 for State planning and other activities to remain available until June 30, 1972, in accordance with the provisions of section 304 of the Act of 1965, as amended."

On page 43, line 14, after "1968", strike out "$5,000,000: *Provided,* That none of the funds contained herein shall be used to make grants, under Title I of said Act, in excess of the following: (1) $12,500 each to the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands, (2) $50,000 to each of the 50 States, the District of Columbia, and the Commonwealth of Puerto Rico" and insert "$15,000,000".

On page 45, line 2, after the word "distribution", strike out "$28,780,000" and insert "$31,673,000".

At the top of page 47, insert:

"CONSUMER CREDIT TRAINING

"For necessary expenses of the Bureau of Federal Credit Unions, with respect to consumer credit training, as authorized by section 21(f)(2) of the Federal Credit Union Act, as amended (12 U.S.C. 1766), $300,000."

On page 47, line 7, after the word "than", strike out "$901,500,000" and insert "$921,200,000".

On page 48, line 25, after "(68 Stat. 265)", strike out "$4,257,000" and insert "$4,332,000".

On page 49, line 11, after the word "Administration", strike out "$867,000" and insert "$1,106,000".

On page 51, line 12, after the word "exceed", strike out "$1,808,000" and insert "$2,060,000".

On page 58, line 12, strike out "$8,240,000" and insert "$8,412,000".

On page 59, after line 2, insert:

"ECONOMIC OPPORTUNITY PROGRAM

"For expenses necessary to carry out the provisions of the Economic Opportunity Act of 1964 (Public Law 88–452, approved August 20, 1964), as amended, $1,624,000,000, plus reimbursements: *Provided,* That this appropriation shall be available for transfers to the economic opportunity loan fund for loans under title III, and amounts so transferred shall remain available until expended: *Provided further,* That this appropriation shall be available for the purchase and hire of passenger motor vehicles, and for construction, alteration, and repair of buildings and other facilities, as authorized by section 602 of the Economic Opportunity Act of 1964, and for purchase of real property for training centers: *Provided further,* That this appropriation shall not be available for contracts under titles I, II, V, VI, and VII extending for more than twenty-four months: *Provided further,* That no part of the funds appropriated in this paragraph shall be available for any grant until the Director has determined that the grantee is qualified to administer the funds and programs involved in the proposed grant: *Provided further,* That all grant agreements shall provide that the General Accounting Office shall have access to the records of the grantee which bear exclusively upon the Federal grant: *Provided further,* That these fund shall not be available until enactment into law of authorizing legislation."

On page 60, after line 18, insert:

PRESIDENTIAL COUNCIL ON YOUTH OPPORTUNITY

SALARIES AND EXPENSES

For expenses necessary to carry out the provisions of Executive Order 11330, dated March 5, 1967, including hire of passenger motor vehicles, and services as authorized by 5 U.S.C. 3109, $300,000.

On page 61, after line 5, insert:

"PAYMENT TO THE CORPORATION FOR PUBLIC BROADCASTING

"To enable the Department of Health, Education, and Welfare to make payment to the Corporation for Public Broadcasting, authorized to be established by section 396 of the Communications Act of 1934, as amended, for expenses of the Corporation, $15,000,000, to remain available until expended."

On page 62, after line 16, strike out:

"SEC. 407. None of the funds appropriated by this Act shall be used to formulate or carry out any grant to any institution of higher education that is not in full compliance with section 504 of the Higher Education Amendments of 1968 (Public Law 90–575). No part of the funds appropriated under this Act shall be used to provide a loan, guarantee of a loan, a grant, the salary of or any remuneration whatever to any individual applying for admission, attending, employed by, teaching at, or doing research at an institution of higher education who had engaged in conduct on or after August 1, 1969, which involves the use of (or the assistance to others in the use of) force or the threat of force or the seizure of property under the control of an institution of higher education, to require or prevent the availability of certain curriculum, or to prevent the faculty, administrative officials, or students in such institution from engaging in their duties or pursuing their studies at such institution."

And, in lieu thereof, insert:

"SEC. 407. The Congress recommends the following limitation:

"That in any case where the Secretary of Health, Education, and Welfare determines that—

"(a) on more than two separate occasions—

"(1) disorderly conduct or persons on the property of an institution of higher education has interfered in any way with the right of students at such institution to carry out their regular educational activities; or

"(2) persons have taken unauthorized possession of any building, or part thereof, of such institution;

"(b) such institution has not punished any such persons who are students, has not prosecuted or tried to prosecute any of such persons who are not students, and did not request assistance from any State or local government law enforcement officials in terminating such disorderly conduct or unauthorized possession;

"That before grants, contracts, or renewal thereof with such institutions shall be entered into, the Secretary is authorized to require such institutions to submit a plan or program which, in the judgment of the Secretary, provides reasonable assurance that any disorderly conduct or unauthorized possession above described will not recur, or if recurring, will be dealt with effectively.

"This provision shall not include fellowships, scholarships, loans, or any other form of aid to the individual student."

On page 64, after line 12, strike out:

"SEC. 408. No part of the funds contained in this Act may be used to force busing of stu-

dents, the abolishment of any school, or to force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parents or parent."

And, in lieu thereof, insert:

"SEC. 408. No part of the funds contained in this Act may be used to force any school district to take any actions involving the busing of students, the abolishment of any school or the assignment of any student attending any elementary or secondary school to a particular school against the choice of his or her parents or parent."

On page 65, after line 2, strike out:

"SEC. 409. No part of the funds contained in this Act shall be used to force busing of students, the abolishment of any school or the attendance of students at a particular school as a condition precedent to obtaining Federal funds otherwise available to any State, school district, or school."

And, in lieu thereof, insert:

"SEC. 409. No part of the funds contained in this Act shall be used to force any school district to take any actions involving the busing of students, the abolishment of any school or the assignment of students to a particular school as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school."

Mr. MAGNUSON. Mr. President, as I understand it, the bill is open for amendment.

The PRESIDING OFFICER. The bill as reported by the committee is open to amendment.

Mr. BYRD of West Virginia. Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Senate will be in order.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. BYRD of West Virginia. Mr. President, I call up an amendment at the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be read.

The assistant legislative clerk read the amendment, as follows:

On page 12, line 20, strike out "$93,800,000" and "$21,900,000" and insert in lieu thereof "$116,900,000" and "$45,000,000" respectively.

Mr. BYRD of West Virginia. Mr. President, I offer this amendment on behalf of myself, the majority leader (Mr. MANSFIELD), the chairman of the subcommittee (Mr. MAGNUSON), the Senator from New Mexico (Mr. MONTOYA), the Senator from Delaware (Mr. BOGGS), all of whom are members of the Committee on Appropriations, together with my colleague from West Virginia (Mr. RANDOLPH), the Senator from Maine (Mr. MUSKIE), and the Senator from Indiana (Mr. HARTKE).

Mr. President, this amendment was offered yesterday in the Committee on Appropriations by the distinguished Junior Senator from Delaware (Mr. BOGGS). It was defeated on a tie vote. This morning I sought to resurrect the amendment. The sentiment of the committee appeared to be favorable and the committee was inclined to adopt the amendment, but for the fact that the committee report had been printed, and the committee bill had been printed, and if an amendment to a committee provision had been accepted at that point it would have necessitated changes in the committee report and the committee bill. Everyone knows the rigid timetable under which we are working. Therefore, in the interest of expediting the matter it was agreed that I would attempt to write the amendment in on the floor rather than in the committee.

Mr. President, the bill before us recommends an appropriation of $93.8 million, the same as the House allowance for air pollution control, a decrease of $2 million from the budget estimate and $5.067 million more than the funds available in 1969.

Within the total available for air pollution control activities approved by the House and recommended by the committee, it is directed that $21,900,000, $2,000,000 more than the House allowance, be devoted to research and development into new and improved methods for preventing and controlling air pollution resulting from fuel combustion. During 1970, the committee wants to assure that such research and development will include work on sulfur oxide emissions, including desulfurization of coal. Since House passage of the appropriation bill, the Congress has extended section 104 of the Air Quality Act for 1 year, through June 30, 1970. As originally requested in the President's Budget, the committee has restored a specific reference to section 104 in the appropriation language. Adequate funding of this provision is essential to progress toward the control of sulfur oxide emissions from stationary sources and motor vehicle pollution control.

I would like to make two references to the House committee report on the subject. The House argued that the air pollution control program was receiving too much emphasis in the budget and the House cut it back from $95.8 million to $93.8 million. The report stated:

It also appeared to the committee that the emphasis given this appropriation was out of balance with that given to other important programs of the department.

With reference to solid waste, the report stated:

It would be desirable if some funds could be programmed from other activities to increase the funds available for solid waste program. It appears that the budget did not give support to this program in proportion to its importance.

Since that report was written, this bill has been increased from $16.5 billion overall, as proposed by the administration, to somewhere over $21 billion, or an increase of circa 30 percent. About the only two major programs left behind, that have not been increased substantially, have been the programs to which I call attention.

I am proposing, therefore, with the assistance of those who are coauthoring the amendment with me, to bring these programs into line with the remainder of the budget; that is, that the program for air pollution control be increased to $116.9 million—an increase of $23.1 million. It should be understood that this money would be assigned to section 104 operations—Air Quality Act of 1967—which covers research in the burning of fossil fuel in vehicles.

Authorities in the field attribute about 90 percent of our air pollution problem to the burning of fossil fuel, with automobiles alone accounting for 60 percent of the nuisance. I believe that this section constitutes the best possible attack on air pollution and should be effectively funded.

The $23.1 million proposed by the amendment would provide the $45 million authorized under section 194; it would provide a total of $116.9 million for the overall air pollution control program—still only two-thirds of its authorized $179.3 million.

It is further proposed that $2 million be added to direct operations of the Bureau of Solid Waste Management, under the heading, "Environmental control." This would provide an amount of $16,872,000 for the Bureau, compared to its authorized $20 million. It would increase the appropriation for environmental control to $57,208,000.

This $2 million is urgently needed by the Bureau if it is to cope effectively with trash and garbage problems. It would be utilized in underwriting research by private industry into methods of disposing of or recycling waste. These contracts were funded, up until last year, at the rate of about $1.5 million a year. The level having dropped off to $1 million currently, the Bureau has no funds available to initiate new contracts. Two million dollars worth of worthy application which cannot be approved are in the Bureau's files. This amendment would permit continued research at a reasonable level.

The amendment proposed today—$23.1 million to provide full authorization of $45 million for section 104 operations—would accelerate the development of new and improved methods for preventing and controlling air pollution from fuels combustion. Special emphasis would be placed on the following areas:

First, construction of a prototype coal deep-cleaning—removal of sulfur pyrite—plant within a shorter time period;

Second, research and demonstration on the development of new, economical techniques for removing sulfur from coal; and

Third, development of unconventional power systems—for example, a family-size car. At the August 1969, meeting of the Environmental Quality Council the President requested acceleration of efforts to develop unconventionally powered vehicles which could be procured by Federal agencies and others to assist in the development of an economically viable market for such vehicles. Full authorization of section 104 would expedite this effort in fiscal 1970.

Mr. President, the amendment is offered for the consideration of the committee. I hope the chairman of the committee and the ranking minority member will be disposed to accept it. Before asking their reaction, I would like to yield to the Senator from Maine (Mr. MUSKIE) and the Senator from West Virginia (Mr. RANDOLPH), both of whom are very knowledgeable in this area and have rendered valuable service in this field.

I yield first to the Senator from West Virginia, my senior colleague.

Mr. RANDOLPH. Mr. President, the Senator from West Virginia (Mr. BYRD)

has in essence, but very clearly, stated valid reasons for the amendment presented by him, with the cooperation and cosponsorship of other members of the Committee on Appropriations and the Committee on Public Works, and additional colleagues who are interested in this needed effort.

I think it is important to recall that in 1967 the Senate unanimously passed the Air Quality Act initiating a new and systematic approach to this Nation's efforts to control and abate air pollution.

Substantial progress has been made toward the establishment of regional air quality standards for particulate matter and sulfur oxides. Fifty-seven of the Nation's largest metropolitan areas, affecting 97 million citizens or 70 percent of our urban population, will have initiated standard setting procedures by the summer of 1970.

But standards are not enough, implementation is required, and implementation requires adequate control technology. With sulfur oxide levels in the atmosphere increasing by 5 percent per year, a crisis is imminent; a crisis where air pollution episodes may become daily occurrences.

All of the projections for the energy needs of the United States in the next two to three decades, and all the projections for automobile production in the near future indicate that the quality of air of the urban centers of the United States will continue to be degraded unless these critical problems of eliminating the pollutants from the combustion of fossile fuels and from automobile emissions are solved. There is no higher priority for research and development in the field of air pollution abatement than this challenge. It is my hope that the executive branch will assume greater initiative in this area.

On November 25, the Senate approved the conference report on S. 2276 and authorized $45 million for research on controlling air pollution from fuels combustion and automobile emissions. This amount falls far short of the action needs for research funds in this field. For example, the National Air Pollution Control Administration estimates that it will require $8 million to develop and demonstrate the wet limestone process for controlling sulfur oxides through fiscal year 1974. And this is only one of the many processes awaiting development.

The Stanford Research Institute conducted an indepth study of the research and development needs to perfect control technology for sulfur dioxides. In its report, which was conducted under contract for the National Air Pollution Control Administration, the Institute recommended a systematic 5-year research and development program for sulfur oxides control which would cost approximately $250 million with a recomended expenditure for fiscal year 1970 of $56 million. The projected goal for fiscal year 1969 was $41 million, of which only $12.8 million was appropriated and obligated for this area, leaving the recommended program $28 million behind at the beginning of fiscal 1970.

This recommended level for the development of sulfur oxide control technology was validated by another study, conducted by the National Academy of Sciences. In its unpublished report to the President's Office of Science and Technology, the eminent panel of scientists recommended also a 5-year program for 1969 to 1974, with an average annual level of expenditures of $50 million.

Sulfur oxides are but one of the pollutants generated by fuels combustion, and for this one area of inquiry we should be spending in the neighborhood of $50 million a year, while the administration has requested for section 104 of the Air Quality Act only $21.9 million for fiscal year 1970.

This section 104, which was the result of an amendment I offered in the Public Works Committee to the Air Quality Act of 1967—I have discussed this amendment and its purpose with my colleague Mr. BYRD. It provides for the Federal research and development effort in fuels combustion and automobile emission and this is the main thrust—it is not just a timid approach that we have made. I stress that which has been said, but I repeat, that the automobile contributes 60 percent of all air pollution and as high as 85 percent in our urban areas, producing 90 million tons annually of pollutant materials, with industry producing 30 million tons a year, powerplants 15 million tons, space heating facilities 8 million tons, and waste incinerators 3 million tons. To develop the technology to control and eliminate this mounting volume of pollution we must have a much more vigorous Federal effort in research and development. Therefore, I support the amendment of my diligent colleague from West Virginia (Mr. BYRD), which I cosponsor, to increase the appropriations for section 104 from $21.9 million to the $45 million authorized by enactment of S. 2276 earlier this year. This action by the Senate this afternoon would be a significant step in the direction of meeting a national commitment to improve the quality of our environment.

Mr. BYRD of West Virginia. I thank my able senior colleague from West Virginia for his contribution.

Mr. MUSKIE. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD of West Virginia. I am happy to yield to the distinguished Senator from Maine (Mr. MUSKIE).

Mr. President, I ask for order in the Senate and ask that staff members be told to take their seats or leave the Chamber.

The PRESIDING OFFICER. The Senate will be in order and all staff members will take their seats.

Mr. BYRD of West Virginia. Mr. President, I ask the Chair to enforce this order during the remainder of the afternoon.

The PRESIDING OFFICER. The Chair instructs the Sergeant at Arms to carry out this order.

The Senator from Maine may proceed.

Mr. MUSKIE. Mr. President, I am privileged to cosponsor this amendment and would like to emphasize its long-range impact in the field of pollution control.

The Air Quality Act of 1967 dealt with the creation of air quality control regions, establishing air quality criteria, and developing air quality standards. These have to do with the mechanics of finally enforcing pollution control and achieving effective pollution control. In the long term, their effectiveness depends upon greatly expanded research.

In the amendment sponsored by the distinguished chairman of the Public Works Committee, Senator RANDOLPH, we undertook to set the research goals which have since been endorsed by the National Air Quality Control Administration. In its publication this year called "The Cost of Clean Air," that agency, in its first report to the Secretary of Health, Education, and Welfare, estimated a 5-year plan for expenditures on research ought to amount to $255 million.

Mr. President, in the Air Quality Act of 1967, we undertook to establish such goals for research. We have had disappointing results since that time.

For example, in 1968, following enactment of the Air Quality Act of 1967, authorization was for $35 million. Under section 104, the budget request was $16 million.

Mr. President, in 1969 the authorization reached the level of $90 million. The budget request was for $31.3 million. The appropriation was for $18.7 million. The 1970 authorization was cut back from the level of $90 million to $45 million. The appropriations have not kept pace with the authorizations, and so the budget request this year, as mentioned by the Senator from West Virginia, is $21.9 million, instead of approaching the $90 million level we had envisioned.

This has produced the following record in the two critical areas of pollution control; namely, sulfur oxides control and motor vehicle emissions.

With respect to the sulfur oxides, the expenditure for control research started at $9.3 million in 1968 and has reached a level of $13.3 million in the present budget request.

In the case of motor vehicle emissions, $1.9 million in 1968 to the level of $3.4 million in this year's budget request.

Obviously, we have not been successful in stimulating the kind of research effort without which the Air Quality Act of 1967 cannot hope to be effective.

It is as simple as that.

Mr. President, section 104 of the Air Quality Act of 1967 was an important feature of that landmark legislation. This provision, sponsored by the chairman of the Committee on Public Works, Senator JENNINGS RANDOLPH, placed special research emphasis on development of technology to control fuel combustion byproducts. Of particular importance was the concern for development of the technology to control automobile emissions and emissions of oxides of sulfur resulting from combustion of coal and oil.

Development of advanced technology to control sulfur oxides is important now. Across the Nation air quality standards are being set for particulate matter and sulfur oxides. Public hearings on standards have been held in numerous air quality control regions. Plans for im-

plementation of those standards are in the process of development.

Those plans for implementation will depend on the availability of technology, alternative fuels, and other methods of reducing air pollution. Control technology for oxides of sulfur, one of the two pollutants for which standards are being set, other than alternative fuels and low sulfur fuels is not available. It was primarily for this purpose that this section was enacted in 1967.

There is limited supply of low sulfur coal which will be available in most communities to meet standards now. But a major technological breakthrough will be required to assure compliance with the standards which have been proposed and which meet the Nation's energy demands at the same time.

Another area where more research is needed is in developing alternatives to the internal combustion engine and a more effective means of controlling the existing engine. Too little has been done in this area. The administration has been weak in its response to the need to develop this technology. The automobile industry has been guilty of delay.

The National Air Pollution Control Administration is charged with the responsibility to develop national emission standards for motor vehicles. Those standards are related to technical and economic feasibility. Without additional funds to stimulate research into control techniques for internal combustion engines and to stimulate the development of alternatives to internal combustion, upgrading of those standards will be delayed unnecessarily. The National Air Pollution Control Administration has the competence and the program to implement research in this area if the funds are provided.

According to first "Cost of Clean Air" report from the Secretary of Health, Education, and Welfare:

A 5 year (fiscal 1968–72) plan for this program (Sec. 104) called for expenditures by the National Air Pollution Control Administration of some $255 million. While actual expenditures may be much lower, this figure provides an indication of the magnitude of effort considered necessary in this area.

We simply cannot control or hope to control sulfur oxides, which so directly achieve higher mortality rates in cities like New York, Chicago, Los Angeles, and other cities across the country, unless we find ways to deal with these kinds of emissions.

Section 104—the research section and the funding of section 104 are critical to this effort. The same can be said of motor vehicle emissions. Motor vehicle emissions constitute something like 60 percent of the pollution load in this country.

Again, we are not going to deal with that one unless we develop the technology.

Thus, I applaud the amendment offered by the distinguished Senator from West Virginia.

Mr. President, I ask unanimous consent to have printed in the RECORD a letter which I addressed to the distinguished chairman of the subcommittee, the Senator from Washington (Mr. MAGNUSON), on November 25, 1969, covering section 104; and in addition, a statement indicating the areas of research which would be explored if the additional appropriation is approved by the Senate this afternoon.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

COMMITTEE ON PUBLIC WORKS,
Washington, D.C., November 25, 1969.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Appropriations Subcommittee on Labor, Health, Education, and Welfare, and Related Agencies, U.S. Senate, Washington, D.C.

DEAR WARREN: As you know, the Air Quality Act of 1967 is a far-reaching and critically important measure authorizing major Federal support for a national program of air quality enhancement. Substantial progress is being made toward the implementation of this program. However, our capacity to pollute exceeds our capacity to control pollution. For example, in the absence of control, sulfur oxide air pollution levels will continue to increase for the next ten years.

This situation need not continue. The Air Quality Act of 1967 provided adequate authority to develop necessary technology. However, appropriation and budget requests for that program have been inadequate. In 1969 the Administration requested $31.3 million for Section 104. Only $18.7 million were appropriated. For FY 1970 the Administration only requested $18.7 million for Section 104.

The effect of these reduced appropriations will be continued delay in the development of sulfur oxide and motor vehicle emissions control technology. Standards are now being set by the States under the Air Quality Act for particulates and sulfur oxides, but effective long-term implementation of the sulfur oxide standards may be delayed in the absence of technically feasible control systems.

Senate and House conferees have agreed to authorize $45 million to carry out Section 104 in FY 1970 but, as mentioned above, the Administration requested only $18.7 million. The House did not appropriate any funds for this section in the absence of an authorization.

As you know, research and demonstration efforts to control emissions from motor vehicles and to develop alternatives to the internal combustion engine are carried out with Section 104 funds. This effort only received approximately $4 million in 1969 for new propulsion systems as well as control methods applicable to existing systems. This is obviously inadequate.

During recent hearings before your Subcommittee, Mr. C. C. Johnson agreed with Senator Case on the current status of sulfur oxide control technology: "In other words, we are at a very primitive state of the art here." Air pollution control technologies must keep pace with the standards setting procedure by the states and the Federal program must be strengthened in this area.

Yet, at this crucial time, the Administration reduced the fiscal 1970 budget of the Consumer Protection and Environmental Health Service by 13 percent, or $30 million. Environmental quality must become a more important priority. If the Administration does not recognize this need, then the Congress, you must make up the slack.

Your efforts to strengthen this program by providing adequate funding for research relating to the development of new and improved methods to control fuel combustion by-products will assist in indicating Congressional concern.

We urge you to consider an increase in the Section 104 appropriation to the authorized level of $45 million, with a directive to emphasize development of sulfur oxide and motor vehicle emission controls technology.

If we can be of further assistance in this matter, please let me know.

Sincerely,

EDMUND S. MUSKIE.
HOWARD H. BAKER, Jr.
BIRCH BAYH.
THOMAS F. EAGLETON.
JOSEPH M. MONTOYA.
JENNINGS RANDOLPH.
WILLIAM B. SPONG, Jr.

PROPOSED APPROPRIATIONS OF $45 MILLION FOR SECTION 104
(Prepared by NAPCA for Senate Appropriations Committee)

The proposed amendment of $25,100,000 over the House action which provided $19,900,000 for Section 104 Research and Development and the 1969 carry-over of $1 million would be used to accelerate work in the areas of developing new and improved methods for the prevention and control of air pollution resulting from combustion of fuels. This will involve activities related to fuel desulfurization including emission cleaning processes such as the wet and dry lime stone and fluid bed combustion processes.

In the area of fuel desulfurization, projects to be supported will include mine sampling and equipment evaluation; detail plant and test program design; reject identification and utilization; procurement, construction, and operation of prototype plants; and project evaluation and control. Work on the wet and dry limestone injection processes will be accelerated, especially that which involves the testing and demonstration of wet limestone scrubbing. Construction of a coal-fired power plant will be initiated to test potentially feasible fluid bed combustion systems.

In addition to the above work on fuels, special emphasis will be placed on work related to motor vehicle emission and development of unconventional power systems. The National Air Pollution Control Administration is presently prepared to provide an additional $5 million for support of this effort should the necessary funds be made available.

In order to properly manage research and development activities of this magnitude, 100 additional positions are necessary. The existing staff has reached the point where any additional work load in terms of new or expanded programs could present serious problems in our ability to undertake such work and still adhere to sound project management and procurement practices.

Mr. MUSKIE. Mr. President, this money can be spent. It must be spent if we are to come to grips with the problem which I think is energizing the concern and, indeed, the excitement of American citizens by the millions from coast to coast.

The Senate, this afternoon, has the opportunity to indicate, by appropriations of relatively small amounts, its concern in this field.

Before I close, Mr. President, I should like to compliment the distinguished Senator from Washington (Mr. MAGNUSON) and the distinguished Senator from New Hampshire (Mr. COTTON) for the support and encouragement they have given us from their vantage point on the subcommittee.

Mr. BYRD of West Virginia. I thank the distinguished Senator from Maine whose consistent efforts in this field have been nationally recognized.

Certainly, my effort this afternoon is not an attempt to pre-empt in any way the work that he has done. I could not do it.

My senior colleague from West Vir-

ginia has also been a leader in this field, and has worked very effectively with the Senator from Maine (Mr. MUSKIE).

As a member of the Appropriations Committee I have been interested, and it is merely in this capacity that I have offered the amendment this afternoon, which has been co-authored by those to whom I referred earlier.

Mr. MUSKIE. The Senator from West Virginia (Mr. RANDOLPH) and I both recognize that the objectives laid down in the authorization legislation cannot possibly succeed unless we have partners equally motivated and equally energized on the Appropriations Committee.

So we welcome with enthusiasm the support we are getting from the Appropriations Committee in the persons of the distinguished Senator from West Virginia (Mr. BYRD) and the distinguished Senator from Delaware (Mr. BOGGS), who also serves on the subcommittee, and the distinguished Chairman and the ranking Republican member of the subcommittee Senator COTTON.

Mr. BYRD of West Virginia. The members of the committee which has jurisdiction over this field of legislation are, of course, providing the leadership. We are merely following their leadership.

I now yield to the distinguished Senator from Delaware (Mr. BOGGS).

Mr. BOGGS. Mr. President, I thank the Senator for yielding, and I want to commend both distinguished Senators from West Virginia and my good friend and colleague from Maine (Mr. MUSKIE) and other Senators who cosponsored the amendment today. I agree with everything they have said. Especially I want to pay my respects to the distinguished chairman of the subcommittee and the ranking minority member of the subcommittee for their interest and the able work they have done on this very difficult and complicated bill.

Mr. President, I am in full support of this amendment, which would provide an increase of $23.1 million for the National Air Pollution Control Administration.

This money would be devoted to operations under section 104 of the Air Quality Act of 1967. This section deals with research relating to the burning of fossil fuel, both in vehicles and from stationary sources.

This is a program which has interested us greatly on the Air and Water Pollution Subcommittee of the Public Works Committee, and we are anxious that it be funded as adequately as possible.

I have talked repeatedly with representatives of the National Air Pollution Control Administration, and they have assured me that this money is most urgently needed and could be expended effectively. It would go to, along with other things, research in abating pollution from stationary sources, where sulphur oxide is the most noticeable contributor. It also would go to research on control on emissions from the internal combustion engine and development of alternatives to that engine.

It has been established that the burning of fossil fuel represents about 90 percent of our urban air pollution problem, with automobiles alone contributing about 60 percent of this pollution. Section 104, I believe, is the very heart of our battle against air pollution, and should be funded accordingly.

This $23.1 million would bring section 104 to its authorization of $45 million. It would provide the total air pollution control program with $116.9 million, still only 65 percent of its authorized $179.3 million.

Air pollution is a problem which affects each of us every day. We still are far behind in our efforts to control it; and I believe we can do no less than to provide this really minimal funding.

There has been comment in discussions about this program about possible overlapping with programs of the the Bureau of Mines in the Department of the Interior. I would like to try to explain that situation.

The Department of Transportation currently is conducting a research project on reduction of emissions from buses. This is a very important project, but does not conflict with the National Air Pollution Control Administration's project which deals primarily with passenger cars, the largest single air polluter.

The Bureau of Mines is conducting research in this area, but it is primarily with funds provided by the National Air Pollution Control Administration. The results of the Bureau of Mines research is fed back to NAPCA and is correlated with the administration's own findings.

I also would like to point out that the President's Environmental Quality Council is concerned with problems of possible overlapping of these programs and is working to establish a unified Federal plan to combat air and water pollution. Secretary Robert H. Finch of the Department of Health, Education, and Welfare, is the chairman of a special air pollution committee of the council which is coordinating efforts in this area.

This amendment, as has been so well pointed out, would accomplish the funding of the program to which I have referred. I am hopeful the manager of the bill, the distinguished Senator from Washington, will be able to accept the amendment.

Mr. BYRD of West Virginia. I thank the Senator, and I want to express appreciation again for the efforts he made yesterday to get this amendment adopted in committee.

Mr. BOGGS. It was a close vote.

Mr. BYRD of West Virginia. It was a tie vote, and, by virtue of its being a tie vote, it was lost.

I do want to emphasize the interest of the majority leader, who is also a member of the Appropriations Committee. He is not on the floor at the moment, but he is interested in this amendment and is a coauthor. He spoke to me within the last 15 minutes about his interest in the amendment.

Mr. MAGNUSON. The letter the coauthor of the amendment sent us was very interesting. It is a subject in which his interest has been paramount.

Mr. President, I have no objection to this amendment.

I thought it might be of some interest to point out that in the Commerce Committee we have had a long interest in what we call low-emission automobiles. The Senator from Maine and I have ridden together in electric cars, steam cars, and gas cars.

Last week, Henry Ford II held a press conference in New York. What has been said here by Senators today is correct. The automobile is the main villain in the piece as far as urban centers are concerned, and we must develop low-emission automobiles, even if it has to be done through law. Mr. Ford said his company would spend $31 million on vehicle pollution control next year, and $60 million in the next 2 years on cutting air and water pollution at Ford plants. In the last 10 years, Ford spent $6 million to curb pollution at its plants. They have even been able to develop a little white box to help garage men diagnose pollution problems that they are going to put to use as they roll down the assembly line.

I complimented Henry Ford for that. I hope the others will follow. My thought is that if private industry is going to do this much in the automobile field, and spend that amount of money, the Federal Government can easily spend the amount of money here involved.

I have no objection to the amendment.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. COTTON. I agree with the Senator. I am glad to have him accept the amendment and take it to conference, but the Senator from Washington also sits on the Appropriations Committee with respect to the Department of Transportation appropriations. The only thing I wanted to make sure of was that we are not starting more parallel programs. Does the Department of Transportation have any programs dealing with emission from automobiles?

I may invite the attention of the Senator from Mississippi (Mr. STENNIS) to this matter.

Mr. MAGNUSON. I recall that in the Department of Transportation appropriation $2 or $3 million was applied to research on low emission automoblies.

Mr. STENNIS. Yes.

Mr. MAGNUSON. I am sure I am correct in this, and if not, I will correct the RECORD. The purpose of that is to do some research in order that the Department may lay down some guidelines for the States for the purpose of legal procedure.

So the research of that Department is somewhat different. This research will be helpful, but I do not think there will be too much conflict.

Mr. COTTON. I hope it will not grow into a conflict.

Mr. MAGNUSON. Mr. President, I yield to the Senator from Kentucky.

Mr. COOK. Mr. President, I would like to associate myself with the remarks of the distinguished chairman of the subcommittee and the distinguished Senators from Delaware, West Virginia, and Maine on this point.

I ask unanimous consent, if it is agreeable to the Senator from West Virginia, that I may also be a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COOK. Mr. President, I really do not believe that there is any situation in the country today about which the people are not more concerned than this problem. I am delighted to say that I asked the distinguished Senator from Delaware, not too long ago, to go down to the University of Louisville and make a speech to the county officials of the State of Kentucky on this very subject. I am delighted he has spoken in favor of the amendment.

I thank the chairman for yielding.

Mr. MAGNUSON. I yield to the Senator from California.

Mr. MURPHY. Mr. President, I, too, would like to associate myself with—and, with the permission of the distinguished Senator from West Virginia, become a cosponsor of—the amendment.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the name of the Senator from California and also the name of the Senator from Virginia (Mr. SPONG) and the name of the Senator from Kentucky (Mr. COOK) be added as cosponsors of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MURPHY. Mr. President, the States that are represented so well and eloquently here have not been the States where the problem really started. It started in my State, in the California Basin. I had the privilege of serving on the committee with the Senator from Maine and have watched this matter begin. I am pleased with the great start toward solution of the problem made under his leadership. However, we are just not making progress; we are merely keeping up with the problem, and if we do not move faster, the problem will overcome us, and in certain areas of this great Nation it will become impossible to sustain life. Senators would not believe what we have seen in our bad days out there.

So I am pleased to find that my distinguished colleague from West Virginia has sponsored this amendment and has given me permission to cosponsor it.

I urge upon the distinguished chairman that I can think of nothing that is more important to the future of this great country than the job that needs to be done, and the need for this money to get on with a start toward the solution of air pollution as well as water pollution problems.

I thank the chairman and my colleague from West Virginia.

Mr. MAGNUSON. Mr. President, I yield to the Senator from Illinois.

Mr. PERCY. Mr. President, with the permission of the Senator from West Virginia, I ask to be made a cosponsor of the amendment.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the name of the Senator from Illinois may be added as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. Mr. President, my own city is known as the Windy City. We have always felt that the winds across the lake would protect the city, but I have noticed in recent months that hardly a day goes by when there have not been stories of some asphyxiating, noxious gases hanging over our city or pictures of our 100-story buildings with only 30 stories visible. The rest are covered by smog.

We have noticed considerable concern about the health hazard that this pollution is now causing in the city of Chicago. It is also causing the same hazard elsewhere. I was interested that the United Nations, in a San Francisco conference on the environment, indicated that by 1975 we might not be able to exist in some areas of this country. I was also interested to note the resolutions adopted by NATO and the speech given by the Assistant to the President, Mr. Pat Moynihan, on the need for getting together all the free nations of the world to work together on this problem of the environment.

These nations are going to look to this country for technical assistance and advice. Certainly industry must take the lead in providing this assistance. They must do the kind of job indicated by the insertions put into the RECORD by the distinguished chairman, the Senator from Washington. The fight against pollution is a partnership that must be worked out between the private sector and the governments—local, State, and Federal.

We, in the Federal Government, must do our share also and I commend the Senator from West Virginia and the other Senators who have joined in this colloquy to indicate our deep concern about the problem of pollution. We recognize that this is a matter of high priority and that we must take care of it now. I think we are helping to solve the problem by this amendment.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. PERCY. I do not have the floor.

Mr. MAGNUSON. I yield to the Senator from West Virginia.

Mr. RANDOLPH. Mr. President, I wish to emphasize what the articulate Senator from Illinois (Mr. PERCY) has just said about the partnership between government and industry, or industry and government. I think we have to consider neither of these entities as the junior partner. We need to have a complete understanding, and a realization of the urgency and of the challenge, between government and industry.

One industry for example, in West Virginia, the Weirton Steel Co., a subsidiary of the National Steel Corp., has recently expended more than $100 million on what is known as "the mill of the future." Air pollution control and abatement has been achieved in a very effective way. This is an enlightened contribution of industry which must be repeated a thousandfold throughout the Nation.

I emphasize again the concern expressed by the Senator from New Hampshire (Mr. COTTON) in indicating that we must be very careful not to spread ourselves too thin and overlap in this worthy effort. I think we would do great damage if we had programs too hydra-headed in nature; and I like the caution with which he has spoken. This work is a continuing commitment and challenge to those of us who have been especially active in the pollution control battle for many years within the Public Works Committee.

Mr. COTTON. Mr. President, I thank the Senator from West Virginia for speaking so kindly about me.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the names of the junior Senator from Indiana (Mr. BAYH) and the senior Senator from Nevada (Mr. BIBLE) be added as cosponsors of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPONG. Mr. President, I am pleased to be a cosponsor of this amendment. It is important that adequate funding be provided for research activity on the development of control technology for sulfur oxide and motor vehicle emissions.

Congress has adopted the concept of a Federal-State partnership in the basic legislation on air pollution. The long-term implementation of the sulfur oxide standards being set by the States could well be delayed unless adequate Federal funds are provided to help develop feasible control technology.

An appropriation of $45 million would demonstrate to the States that the Federal Government intends to keep pace with the standard-setting procedures of the States. I hope the amendment is adopted.

Mr. MONTOYA. Mr. President, today I cosponsor the amendment of Senator BYRD of West Virginia to appropriate $45 million for research on the combustion of fuels and motor vehicle pollution controls. As air pollution levels continue to rise in this country, there is an increasing need for adequate control technology that is economic. Section 104 of the Air Quality Act of 1967 provides for the development of such technologies.

Traditionally, when mention has been made of air pollution, thoughts have turned to Los Angeles and New York. However, in recent years there has been an awareness that air pollution is presenting a potential threat to all metropolitan areas and remedial actions must be directed at all sources of pollution.

It is not enough to apply control methods that comply with current laws and regulations; provision must be made for the development and demonstration of methods suitable to future needs also.

In my own State of New Mexico there is a utility utilizing the low sulfur coal deposits of the New Mexico and Arizona area to produce power to serve the growing energy needs of such metropolitan areas as Los Angeles, Phoenix, Tucson, and Albuquerque. In the process of generating this power, large amounts of particulate matter are being discharged to the environment. Much of this material is so fine as to not be captured or controlled by current technologies. This is one example of the need for an improved state of art in the control of particulate matter.

Automobile emission control is another area for improvement. The National Air Pollution Control Administration is spending an estimated $6 million on research to first, reduce the emissions from internal combustion engines, second, the

development of new power sources, and third, the development of new fuel types. It has been estimated that current control devices under development will never be able to reduce air pollution from motor vehicles far enough to offset projected increased numbers of cars. In the next 10 years, by the year 1980, the number of automobiles on America's roads will double. Even under the progressive California standards, it will be possible to eliminate only 60 percent of the total automobile emissions in that State. New and innovated approaches to the development of lower emission vehicles are clearly needed.

The Williams Bros. of Pennsylvania and Mr. Lear, the former president of Lear Jet, have made significant strides to perfect steam engines for automobiles. Mr. Lear is also developing steam engines for large transportation vehicles. These men have expended family fortunes on this notable and worthy effort and are to be commended.

This Nation must now build upon this experience by providing adequate funding of section 104 of the Air Quality Act. Natural gas has also been suggested as a fuel for automobiles and would reduce air pollution emissions.

It is also reported that if lead were removed from gasoline significant engine modifications could be made that would reduce automobile emissions. These are alternatives that can and must be investigated. They highlight the need for this funding.

The industries of this Nation could make a significant contribution in the reduction of automotive emissions. It is estimated that the operators of fleets of vehicles accounts for more than 50 percent of the vehicle pollution in urban areas or approximately 30 percent of the total urban air pollution problem. I call upon fleet vehicle operators to apply the latest available control technologies to further exert pressure on the automobile industry to reduce automotive air pollution. Industry's support in this regard would represent a significant public service.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. PASTORE. Mr. President, I should like the RECORD to show that the senior Senator from Rhode Island voted in the affirmative.

The PRESIDING OFFICER. The RECORD will so show. The bill is open to further amendment.

Mr. NELSON. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The ASSISTANT LEGISLATIVE CLERK. The Senator from Wisconsin (Mr. NELSON) proposes an amendment, for himself and the Senator from New York (Mr. JAVITS), as follows:

On page 59, line 7, strike the numeral and insert in lieu thereof "$2,048,000,000".

Mr. NELSON. Mr. President, I ask unanimous consent that the names of the following Senators be added as cosponsors of the amendment, together with myself and Senator JAVITS: Mr. SCOTT, Mr. BAYH, Mr. GRAVEL, Mr. WILLIAMS of New Jersey, Mr. CRANSTON, Mr. HART, Mr. MCGOVERN, Mr. RIBICOFF, Mr. PERCY, Mr. GOODELL, Mr. BROOKE, and Mr. YARBOROUGH.

Mr. CASE. Mr. President, if the Senator will yield, I think my name should be on there also.

Mr. NELSON. Yes; I am sure there are a number of other Senators who will wish to join as cosponsors.

Mr. JAVITS. Mr. President, if the Senator will yield, with the speed at which we have proceeded here, I am afraid we have missed some Senators who want to be on the amendment. As we go along, I am trying my best to keep up with them, if the Senator will accommodate us by permitting me to state their names from time to time.

Mr. NELSON. I agree. The bill just came out, and we did not have an opportunity to check with many Senators who would like to be cosponsors.

I ask unanimous consent that the names of the Senator from Maine (Mr. MUSKIE) and the Senator from Oregon (Mr. HATFIELD) be added as cosponsors; and I am sure we will have some further names.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, this amendment simply proposes to restore to the appropriation exactly the amount requested by President Nixon and the amount authorized by the Senate by a vote of 72 to 3 on the authorization bill.

Mr. President, the Office of Economic Opportunity, which has been given a very challenging assignment by the Congress, is in an extremely difficult position in regard to its appropriations.

We all know of the difficulties which have been encountered in our war on poverty. This is neither the time nor place to debate and attempt to resolve those difficulties. The important thing to emphasize today is that every single difficulty we have encountered in the Office of Economic Opportunity is aggravated by the uncertainty of appropriations.

I might point out that the appropriation bill before us appropriates for only 10 months, and it will require that there be a supplemental appropriation immediately afterward for 2 months. One of the very serious difficulties with that is that the Headstart programs, for example, and the summer programs involving some 400,000 young people, have to be authorized, developed, and started prior to the time that it would be possible for Congress to pass a supplemental appropriation.

We all, of course, want capable people with good professional backgrounds working in the poverty program. You cannot recruit and hold such people in a program which has no assurance of funding.

We want good administration. A good administration cannot be obtained in a program which must live in an atmosphere of financial confusion and uncertainty.

We want fresh and creative thinking, to find new ways to deal with the age-old riddle of povery in an affluent nation. It is impossible to innovate and develop creative new programs without an assurance of appropriations.

The appropriations difficulty in which OEO finds itself today is a result of an unfortunate chain of circumstances. There is no need for faultfinding or ascribing blame to anyone.

The simple fact is that the appropriations authorization for this agency expired on June 30 of this year. Both Houses of Congress have been working diligently to extend the authorization. We hope to complete that task within the next day or two.

The Appropriations Committee has been considerate in considering OEO appropriations in advance of final passage of the authorizing legislation which occurred in the House only last Friday.

However, it seems clear today, as we rush toward final action on both the appropriations and authorizing legislation, that the amount which the Appropriations Committee has been able to include in the Labor-HEW appropriations bill will cause serious problems unless the Senate increases it to the level requested by the administration and endorsed by both Houses in the authorizing legislation.

The spending level for OEO for fiscal 1969 was $1.948 billion.

Inasmuch as the agency has been operating since June 30 without any new authorization or appropriation, this has been the appropriations level under which it has operated for the 5½ months.

The administration, after careful review, requested a funding level of $2.048 billion for fiscal 1970—an increase of $100 million over the previous year's spending.

This is precisely the amount which the Senate authorized on October 14 when it passed the OEO authorization bill by a vote of 72 to 3.

The House authorized an even higher amount—$2.343 billion—when it passed its OEO authorization bill last Friday, December 12.

The Senate-House conferees will meet tomorrow, Wednesday, December 17, at 2 p.m., to resolve the differences in the Senate and House bills. Very few substantive issues remain to be resolved, and we should be able to come to quick agreement on authorization legislation.

With the authorization problem thus virtually resolved, it would be unfortunate to throw this agency back into an atmosphere of confusion and uncertainty by cutting its appropriation below the 1969 level, and below the level on which the agency has been operating for the past 5½ months.

Mr. President, one of the most important aspects of the war on poverty involves working with hundreds of thousands of people all over the country—political and civic leaders, religious organizations, farm organizations, and educational institutions. These are busy, responsible people. We cannot operate a war on poverty without them; yet we cannot expect them to take the war on poverty seriously and to give it their full commitment of time and sometimes of matching funds, if we are not seri-

ous about the program ourselves. Before we recruit civic and community leaders into a program, we have to be able to tell them that there is a program, that there are appropriations for it, and that it is going to run for a certain reasonable period of time.

Certainly at this late date—5½ months into the fiscal year—we should be willing to give this agency the assurance that it will have appropriations to continue operating until June 30, 1970.

Certainly that is the least that the Congress can say to the hundreds of thousands of people, and to the thousands of very fine organizations and institutions which we want to join with us in fighting poverty.

Mr. President, we had 217,000 children enrolled in Headstart full-year programs in 1969. We had another 447,000 children enrolled in summer Headstart programs. These programs are continuing in public schools, in some private schools, and in community centers all over America.

I might add parenthetically, as I mentioned earlier, that if they have to wait on a supplemental appropriation, it is almost a certainty that the supplemental will not be passed in time for them to plan with any certainty for the summer programs.

These programs cannot be stopped and started on short notice. Do we want to go on serving more than 600,000 preschool children through the Headstart program—as we voted to do, and as the House voted to do, in the authorizing legislation? Then the very least we can tell the people who are operating these programs is that you will have a program until June 30, 1970.

We have roughly 1 million training opportunities in our manpower training programs. Very close to half the entire OEO budget—almost $900 million—goes for work and training programs which are operated by the U.S. Department of Labor. The Labor Department negotiates thousands of contracts with public and private agencies, with business corporations, with State, local, and Federal agencies to carry on these manpower training programs. They offer hope of taking young men off the streets and giving them the training in a skill which will enable them to be self-sufficient. These programs cannot be turned on and off. Certainly if we want the cooperation of all these agencies and organizations, we must be able to tell them at the very least that they will have a program, with appropriations, until June 30, 1970.

The same argument can be made for the other programs—for the network of health centers which we have in 50 some communities, for the emergency food and medical services programs which are operating in more than 1,000 counties, for the family planning clinics, for the senior opportunity centers, for the rural loan program, for the migrant worker program.

If we expect these programs to continue to operate, we have to give them the appropriations which they require and which we ourselves have authorized.

Mr. President, the Appropriations Committee is quite right and on sound ground in wanting to conduct a careful review of the OEO programs. The members of our Employment, Manpower and Poverty Subcommittee agree 100 percent with the need for careful review of OEO programs.

But simply because of the unavoidable delay in the enactment of authorizing and appropriations legislation, this review should now be aimed at fiscal 1971, which will be upon us before we know it.

I think all of us would have preferred it if such a review could have been carried out for fiscal 1970 spending, but we face the reality of the calendar. The time has run.

If this agency is to be operated on a sound, professional basis, emphasizing good administration, it is not too early to begin as soon as the Congress returns in January a painstaking review of OEO appropriations requests for the next fiscal year which begins July 1, 1970—just over 6 months away.

For these reasons, Mr. President, I am offering an amendment to strike out the OEO appropriations figure of $1,624,000,000—the figure recommended by the committee—and inserting in lieu thereof the amount of $2,048,000,000.

This is the amount recommended by the President and the amount authorized by the Senate in bill S. 3016, which passed the Senate on October 14 by the vote of 72 to 3.

Mr. President, I ask unanimous consent to have printed in the RECORD a fact sheet on OEO appropriations.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Nelson fact sheet on OEO appropriations

Appropriations Committee recommended (calculated as 10 months of the fiscal 1969 appropriation)	$1,624,000,000
Funds available during fiscal 1969 (this expired June 30 but spending has continued at that level under a continuing resolution)	1,948,000,000
Fiscal 1970 budget request by President Nixon	2,048,000,000
Fiscal 1970 authorization by Senate	2,048,000,000
Fiscal 1970 authorization by House	2,343,000,000

Mr. COTTON. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. COTTON. Mr. President, does the fact sheet the Senator has just had printed in the RECORD tell us exactly how this $2 billion is going to be spent, what the programs are, and how the money is to be allocated?

Mr. NELSON. The fact sheet I was referring to does not. It is a lump-sum appropriations sheet. It states what the Appropriations Committee recommended for 10 months—$1,624,000,000. It states that the fiscal 1969 funds available were $1,948,000,000.

The fiscal 1970 authorization by the President was $2,048,000,000.

The fiscal 1970 authorization by the Senate was $2,048,000,000.

The fiscal 1970 authorization by the House was $2,343,000,000.

The authorization bill we passed, as the Senator knows, being a member of the Appropriations Committee, earmarked a substantial portion of the $2,048,000,000 that we acted upon in the authorization bill.

Mr. COTTON. Mr. President, it is my understanding with respect to Headstart, and Upward Bound, that there is not the slightest danger of their being discontinued.

The purpose of the subcommittee, as I understand it, was to appropriate, even without the authorization, enough money so that those programs would not lapse and to provide an additional amount to tide them over until we could get some evidence before the committee and put the item into the supplemental.

Perhaps the distinguished Senator has in mind exactly how this money is to be spent, but if he has, I am afraid he is the only one.

I cannot make out, from what the President has said or from what anyone else has said, exactly how these are allocated.

The fact remains that the Appropriations Committee of the Senate—the subcommittee and the full committee—has not had one word of testimony about the program for which we are asked to appropriate for the remainder of fiscal 1970. I cannot imagine anything more irresponsible than a member of the Appropriations Committee of this body voting to appropriate a cool $2 billion until we have had some evidence about what the money is going to be used for. That is why I thought we were going a long, long way when we appropriated $1.624 billion without a single word of testimony.

I do not want to throw a roadblock in the way of any program. The President said this is going to be an experimental agency. We all know that we are going ahead and financing Headstart and Upward Bound and some of these very fine programs, and I support them. But to appropriate a cool $2 billion without hearing one word of testimony on how the money is going to be spent is, to me, the height of irresponsibility. The other Members of the Senate can take it if they wish, but I would not have the nerve to continue to serve on the Appropriations Committee if I cast such a vote without more information.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. COTTON. I yield.

Mr. JAVITS. 173 pages of justification were submitted to the Appropriations Committee. The budget submission, which is before me, is dated November 1969. It details with the greatest itemization. For example, I look now at page 83 of the summary, which shows exactly what was done in 1969 in these very things—Headstart, Follow Through, Special Impact, Health Services, Addiction, Mental Health, Family Planning, Emergency Food. The increases and the exact basis therefor are given. The Budget Bureau went along with them.

I have served on the Appropriations Committee, too. I appreciate the fact that the members of the committee are unbelievably overwhelmed. But where information has been submitted, if it has not been consulted or digested or dealt with by the committee, I do not think

the agency can be taxed. I know—because we all have experienced it—what happens when you go for a 4-month program, which is what is being done. There must be cancellations now, because people cannot tool in and tool out that quickly, and then the fat is in the fire in city after city. The problem is not so much that the committee does not have the material but that it has not had an opportunity to digest it.

Mr. COTTON. I have served on the Appropriations Committee with my friend the Senator from New York. One of the things I admire most about him is that he is so thorough and careful and always armed with the facts before he takes a position. I doubt very much if the Senator from New York would serve on that committee and not have an opportunity to ask a question about anything in this book.

Mr. JAVITS. May I say this. The Senator from New Hampshire did serve with me, and I admire him and respect him, and there is no question of his fidelity and unbelievably hard work, and of that of the chairman. We are advised that is the only way we can put it before the committee, that this justification was submitted, that Mr. Rumsfeld was there, that he just was not asked any questions about it.

Mr. MAGNUSON. Let us get this straight. In the first place, the committee has a general rule—it is not the law—that unless it is something unusual, we do not appropriate money and have no right to appropriate money, until it is authorized. OEO has not even been authorized as yet.

For a long time, the committee felt, on the best advice we could get from the House, that there probably would not be any authorization. We did not know until last Friday that the House even was going to pass it. I understand that there will not be too much trouble in conference. We kept having Mr. Rumsfeld over, and we said, "Can't you get your ex-colleagues over there to move, so that we can get at this thing?"

He submitted this. We did not know what was going to happen. So when it did happen, we said we thought that in a rare case, an exception to the rule, the Senate having authorized the $2.048 billion, we could go ahead, subject to authorization. But then we got thinking, what are the priorities? I have read a good deal of this. Has the Senator read it all?

Mr. JAVITS. I have read it all.

Mr. MAGNUSON. I have read a good deal of it. It became a little confusing to me.

We put it all in the record. It is in the record, every bit of it, for anybody to see, in the blue books. Then we took a dim view about what was going on downtown. Some people down there did not want any OEO at all. Not much help was given to them on the House side, from what I have heard and read, which seems to be very reliable.

Mr. JAVITS. Until they won.

Mr. MAGNUSON. Until they won.

Mr. JAVITS. That is right. And that is what counts.

Mr. MAGNUSON. So we did not know whether they were going to send something up. But they took the Senate figure. We asked them, "What about this?"

Well, here it is.

We also took a dim view of this. Here is HEW administering Headstart but not putting it in the HEW budget. The Senator knows the old game: You do not want it in your budget; let somebody else pay for it.

So they want OEO, which has enough problems of its own, I think—enough argument about it—to pay for Headstart instead of putting it where it belongs, in the HEW education budget.

The Department did not want to put Job Corps in its budget. But it is going to administer it. There were a couple of other smaller programs such as Upward Bound.

We are in this position. As is true with the Senator, we do not want to see this program out because of the failure of authorization, and Mr. Rumsfeld was over here. He must have had 25 people with him, waiting to testify, and the bill had not even been passed. We have to exercise some responsibility for $2 billion. No one has been a better supporter of OEO than the Senator from Washington.

We asked him this—perhaps the Senator can clear it up—here is $180 million for Job Corps that is going to be taken out of the OEO appropriation and turned over to the Labor Department. Is that the correct figure?

Mr. NELSON. Yes.

Mr. MAGNUSON. That is one program. Here is New Careers, which is still in the OEO. Is that correct?

Mr. NELSON. Yes. It is in the OEO budget.

Mr. MAGNUSON. New Careers is going to take $91 million, as I understand it, and Main Stream is not in there.

They have a great item in here—"Other work and training, $604 million." There is some explanation of what they mean by "Other work and training," but it covers many priorities and some programs that have been under severe criticism—not from me, but from others.

Headstart is going to turn over to HEW $338 million of their hard-earned appropriation and authorization from OEO that should have been in the HEW budget.

So we get down to Follow Through, $32 million. Legal Services—that is still in OEO.

Mr. NELSON. That is correct.

Mr. MAGNUSON. Health Services, in which there is some education in the rehabilitation programs and all the other programs in rehabilitation; Community Health Centers. That is all right. Emergency food and medical service, $30 million. Family planning, $15 million.

That is in OEO. The Senator mentioned that. But the Senator from New Hampshire and I would like to know what is the $34 million for migrant workers? We have a good amount elsewhere in this bill.

Mr. MONDALE. Mr. President, will the Senator yield there?

Mr. MAGNUSON. I shall yield in just a moment. We do not want two identical items in two places in the bill.

Mr. MONDALE. As the chairman of the Subcommittee on Migratory Labor, this is a modest program which reaches fewer than 10 percent of the migrants, and helps them with education and training, reemployment and adjustment assistance, and housing and sanitation.

Mr. MAGNUSON. That is exactly what we have in here.

Mr. MONDALE. This is a long standing program, that is about 6 years old, but it reaches fewer than 10 percent of the migrants intended to be served. It is a program that is desperately needed if we are to reach the poorest and the most desperate sector of American life.

Mr. MAGNUSON. For migrant health we have $15 million, is it the same as this?

Mr. MONDALE. No, there is a difference between the $15 million provided under the Migrant Health Act as part of the HEW appropriation, and the $34 million provided for title III B of Office of Economic Opportunity.

Mr. MAGNUSON. What is the difference?

Mr. MONDALE. They are separate and distinct programs. The migrant and seasonal farmworker program of OEO is a modest program.

Mr. MAGNUSON. Will the Senator speak a little louder.

Mr. MONDALE. The OEO migrant program deals with training and education, health, housing and sanitation problems, community organization problems and tries to assist migrants to join together in programs to assert their points of view. It involves modest programs affecting the streams of migrant workers that move from the South to the North, along the east coast stream, from Texas to the North; and on the west coast, to phase them into local community programs and resources where needed.

Mr. MAGNUSON. We have taken care of health.

Mr. MONDALE. That is correct. Health care programs for migrant workers are considered as part of the Migrant Health Act appropriation under HEW. I can get very specific figures on this program if the Senator would like to have them.

Mr. MAGNUSON. They just gave them to me.

Then, in addition, we have in rehabilitation $2 million and, then, we just put in $25 million for bilingual education.

Mr. MONDALE. Bilingual education is an entirely different HEW program under the Office of Education. That amount goes for public school programs.

Mr. MAGNUSON. But it is partially for migrants.

Mr. MONDALE. No, it is not limited just to migrants. It is for the benefit of millions of American children—Puerto Ricans, Americans, and some Indians.

Mr. MAGNUSON. We know that figure. That is why we put it in.

Mr. MONDALE. Only a small portion of bilingual education money goes to migrants.

Mr. MAGNUSON. But this is education and they mention that. I do not know. I

do not want any avoidable duplication here.

Mr. NELSON. Mr. President, will the Senator yield?

Mr. MAGNUSON. I shall yield in just a moment. I would like to get down to another figure. After we have taken $338 million of this money for Headstart and turned it over for HEW for them to operate, and $180 million for the Job Corps, that is close to $525 million. Now, they have these other items. But under title II—not earmarked, this is from the OEO—there is $427 million. This is what we would like to know. What is it for?

Mr. COTTON. Mr. President, will the Senator yield to me for 1 minute?

Mr. MAGNUSON. I yield.

Mr. COTTON. I thank the Senator. I wish to make a suggestion. I want to appeal to my friend on the amendment he offered. We are interested in this program. The members of the House committee have said to me that Mr. Rumsfeld made a tremendous impression on that committee when he testified. I regret we did not have an opportunity to hear him testify. But now the House has no appropriation at all so it is open-ended.

If we go over to conference, whether we go with $1 billion or $1.5 billion, whatever we go with, there is no ceiling on it in conference. Am I correct?

Mr. NELSON. My understanding is that they have zero money for OEO for 1970 in the House appropriations bill.

Mr. COTTON. The Senator is talking about the second year, 1971?

Mr. NELSON. Is the Senator talking about the authorization section?

Mr. COTTON. Yes. They have no authorization section yet so they have no appropriation. They are open-end. The House is not instructed.

Mr. NELSON. For 1970 the House has authorized $2.343 billion.

Mr. COTTON. The House appropriation does not have anything. The appropriation bill came here with nothing in it because it had not been authorized.

Mr. NELSON. I assume that is correct.

Mr. COTTON. If that is the case, if they have nothing and if the Senate had $1, we can go anywhere up to the authorization. In other words, it is not as though the House had $1 billion and the Senate a half billion dollars and you had to arrive at a figure between them. The conference committee right now, without the Senator's formal amendment, can appropriate all they want within the authorization, if the Senator gets his amendment and the Senate votes to appropriate the entire authorization.

I read that book and there are some things in there I could not accept and yet the Senator is asking for the full authorization. We have to go over and defend everything in that book upon which we have no evidence. Yet, I think that the Senator will find that the conference committee would go well up toward the authorization if they would give them that opportunity.

Mr. NELSON. Mr. President, if the Senator will yield, I would like to say that I am very aware of the difficulty under whch the appropriations conferees operate when the authorizing committees have not completed their work. In the case of the authorizing subcommittee of which I am chairman, we did have the bill out and passed by the Senate by October 14.

Mr. MAGNUSON. And the Senate established priorities.

Mr. NELSON. Yes. We established and earmarked priorities in the bill. I realize the great problem of the Committee on Appropriations and I would guess the Subcommittee on Appropriations acted on this bill a few hours before the House voted the OEO authorization late last Friday night. However, what they have done in the House has been, in effect, to extend the OEO authorization for 2 years with some added authorizations bringing it slightly above to the President's budget figure of $2.048 billion. On the House side, they added $295 million to the authorization, for a total of $2.343 billion.

Mr. MAGNUSON. On the authorization. But what will the House Committee on Appropriations do?

Mr. NELSON. I do not know.

Mr. JAVITS. Mr. President, will the the Senator yield in connection with the House Appropriations Committee?

Mr. NELSON. I yield.

Mr. JAVITS. I just talked with the Parliamentarian and under the circumstances we face where the House did not deal with the matter at all and the Senate is dealing with a matter not dealt with by the House, the ceiling becomes whatever the Senate does. We can negotiate between zero and that ceiling. I know the Senator's feelings, and the feelings of the Senator from New Hampshire, and I would be the first to testify to their good will, good faith, and their desire to do everything they can in conscience do for this program. I have lived with them both in this particular case, and I can testify to it myself. But the Senate does not have the room, unless we give it by this amendment. This is why we had to move.

Mr. COTTON. But if the Senator gives us the total appropriation, we go over there honor bound to fight for the total authorization.

Mr. JAVITS. That is true. I have faced that hard road myself with the House, but the only time one gets stuck that way is when the House comes over and says, "We will take it." But I think, as practical men, we can guarantee that the House will not.

Mr. MAGNUSON. One thing, and I shall not talk any more about it, if this had been totally authorized here—the law authorization—which is $2.048 billion, which was the budget item, the committee would not have given you that full amount anyway.

Mr. JAVITS. That is true.

Mr. MAGNUSON. Because there would be some programs that could wait or someone would have objection to. I imagine the best—I am guessing—I am only one member—but I am guessing that the best one could have gotten was last year's amount.

Mr. JAVITS. Last year's amount was $100 million less than the $2.048 billion.

Mr. MAGNUSON. If you had got that, you would be doing pretty well in the committee. I see some committee members nodding their heads.

Mr. JAVITS. But that would be the eventuality. If you carry it over with the ceiling of $1,624 million; that is what we have to fight against, as a matter of conscience.

Mr. MAGNUSON. The Senator did not get my suggestion, did he?

Mr. JAVITS. I got the suggestion.

Mr. MAGNUSON. I thought a word to the wise should be sufficient.

Mr. JAVITS. I got the suggestion. When you go over there, you are still going to have to compromise.

Mr. MAGNUSON. Not necessarily, if they authorize much more, they will take this.

Mr. PERCY. Mr. President, will the Senator from Wisconsin yield to me?

Mr. NELSON. I yield.

Mr. PERCY. Mr. President, I should like to address myself to this question of funds for OEO. I have high regard for my colleague from the State of Washington and recognize that he faces a practical problem here.

Sometimes, when we look at the details on the economic balance sheet, we also have to look at a number of other things such as what do the figures symbolize. This is the case with money for OEO.

It would be a perfectly dreadful thing if yesterday we approved $69 billion in a Defense budget—and if we are going to approve the SST——

Mr. MAGNUSON. That is a small amount.

Mr. PERCY. We did not give great consideration to money for OEO. What will the people of our country think if we find a way to give an agency which has been in existence for 5 years, which now has a colleague from Congress whom I admire and respect as its head, which deals with the poor, funds for only 10 months? What will they think if we have not faith enough to give OEO the full amount, if we cannot find a place to spend $2 billion for the 25 million poor of this country?

I believe that is the essence of what we have to consider. Do we have enough faith?

Second, are we going to put the administrator of the program and his top people in a position that all they will be doing is constantly coming back to Congress defending their programs day in and day out?

I remember when the OEO program was in the branch of Government administered by the opposition party, the Democratic Party, and Sargent Shriver came over to see me one day. I said to him, "How can you afford so much time on the Hill? How much time do you spend on the Hill?"

He looked back at me and said, "When I look at my days and weeks, I find that I am up on the Hill at 9 o'clock in the morning, Monday through Friday, and I get back to my office at 6 o'clock at night. Then I say to myself and my staff, 'Now, what can I do for the poor?' "

I think we are placing Mr. Rumsfeld almost in the same position. We are saying that we cannot even authorize an

appropriation for 1 year for a program we all have faith in and that the President of the United States has said he must have.

Just the other day, we held hearings for one solid week in the Small Business Committee of the Committee on Banking and Currency. We listened to businessmen, agency heads and secretaries of departments come over and say what they are doing to implement the President's program for black capitalism and minority enterprises.

Mr. President, I should like to read something I just happened to pull out about an agency which I know enough about—the Chicago Economic Development Corp. It is a marvelous organization, aimed at complementing privately the national bipartisan objectives; namely, making the minority groups in this country, Spanish speaking, blacks, American Indians, whoever they may be, part of the economic fiber of this country.

Mr. Garland Guice testified as to how they were operating their agency, and he said:

> This has been the agency most helpful for us. We have got some small funds from the Department of Commerce, we have got some small funds from the Small Business Administration, but we would be out of business if our funds relied on those two agencies. *OEO has been the agency which has most supported our operation in the past years.*

Mr. President, here is a program that is a new program, started by the Democrats last year under Howard Samuels, and carried forward now with great energy by the OEO. It is a program where the OEO is the experimenter, the innovator, the one that pioneers and finds a way, by using the money, to do the job that is needed, while others are merely talking about structuring the job.

I have been around the country studying health centers, which try to bring health care closer to the people where it is needed most and not through the county hospitals which are hard to get at, such as those in Los Angeles or Chicago.

What agency did we find that really did the best job with health centers?

It was the OEO with Neighborhood Health Centers. They were the pioneering group in this field which paved the way for us to make possible major legislation under the Hill-Burton Act.

Certainly, now that the President is talking about day care centers under his reform bill for welfare——

Mr. MAGNUSON. Yes, but they did not ask for any day care centers.

Mr. PERCY. These are the people who have been experimenting how to set up day care centers. I think that this agency knows as much about day care centers as any agency of Government.

Mr. MAGNUSON. One of the best programs in the business.

Mr. PERCY. Absolutely. I concur completely with my distinguished colleague from Washington. But here is a program that now, in the next 2 years, will get a tremendous push from the administration. I hope it will be bipartisan program and that it will be bipartisanly supported. It will take welfare mothers tied down with children and educate them, let them learn a skill, and stand on their own feet and have dignity to earn their own living. It will give mothers a place to put their children.

We are one of the few civilized countries in the world which has no real provision for the care of the children of working mothers. Every other country does it. Eastern and Western Europe do. We are just now beginning.

OEO has paved the way. It has experimented with day care and has led the way in this area. Certainly in job training programs, in which I am very much interested, it has also led the way OEO has worked in connection with the National Alliance of Businessmen, where men such as Henry Ford and Donald Kendall are pulling new companies into their organization to find jobs for the poor.

Certainly, the Department of Commerce works with them, but it is the OEO which is providing that kind of help, too.

Mr. Kendall mentioned that in one city, Sacramento, Calif., 20 percent of that city's population lives in the ghetto. In Sacramento, this 20 percent pays 12 percent of its taxes, and accounts for 36 percent of its fires, 42 percent of adult crimes, 76 percent of its tuberculosis cases, requires 50 percent of its public health services, and 41 percent of its police costs.

NAB is working in this city with these people. OEO has helped support and fund their program from one city to another.

OEO is not just the major cities. OEO, with $52 million, has set up community centers which are rurally oriented. Marketing cooperatives have been set up in rural communities to help rural people in depressed areas find ways to lift themselves by their own bootstraps.

The fact is that I do not know how they have been able to do so much with their money.

In our own select committee on food and hunger and human needs, the Bureau of the Budget has said that if we are to close the hunger gap, we will require $2.930 billion this year for food alone. It is OEO that we turn to, which knows more about emergency food and medical attention for the poor than anyone else, which has worked cooperatively and harmoniously with the Department of Labor, HEW, and other agencies of Government in this area. It has been the catalyst, and the people concerned in this field have turned to OEO for help.

Certainly, in most of these areas, I think we can say that it has been the agency that, with only 5 years' experience, has pioneered and innovated. Now, with much tighter control, it can concentrate on evaluation and experimentation.

I would say this agency deserves a vote of confidence, and not to be held back with reluctance or with great concern. We are talking about a pittance, $2 billion, when we are talking about the poor and human needs in America. When contrasted with $69 billion for the Department of Defense, and certainly when contrasted with the billions of dollars for space, I certainly think we can find it in our hearts to have faith in this agency, in Donald Rumsfeld, and in his dedicated group, and certainly in the President of the United States and this administration, which has given this agency a charter.

Mr. MAGNUSON. Mr. President, there was no discussion in the committee about the fine programs the Senator has so eloquently talked about. I voted for every OEO program.

Mr. MAGNUSON. There was nothing said about the merits of the programs, or the goals.

Mr. NELSON. May I say something?

Mr. MAGNUSON. Not yet.

Mr. NELSON. Mr. President, I did not even yield time.

Mr. COTTON. Mr. President, are we on a time limit?

Mr. MAGNUSON. No.

We were faced, like the cashier of a bank, with a real money problem.

Let me say again that very seldom does the Appropriations Committee allow the full authorization. I am hopeful we can work this matter out. We want some flexibility. It is too bad this happened in the House. Nobody down there is going to vote against OEO as such.

We said, in effect, that when the first supplemental bill comes up in January, the administration will have the program ready, and that we will accept it if the administration puts it in the supplemental bill, because there has been a little heel dragging down at the lower end about OEO. I can give the Senator chapter and verse on that.

Mr. NELSON. Mr. President, may I remind the Senator from Washington on this point? The Senator raised the point that nobody has been before the Appropriations Committee to explain the details of this authorization and appropriation. I appreciate that they were not there this year, but the Senator, who is very familiar with these programs, has conducted hearings every year for 4 years. There is not a single new program in this year's authorization or in the appropriation. So every single program going on is a program that the distinguished Senator from Washington conducted hearings on in the last Congress. And last year the Senate appropriated $2.088 billion—$40 million more than the President of the United States asked for this year, and $40 million more than we authorized on the floor this year. So last year we appropriated $2.088 billion, and all we are asking for now is an appropriation of $2.048 billion, which is $40 million less.

I am down here carrying water for the President of the United States. I am happy to do it, even though he is not of my party.

I supported $290 million more in the authorization that we were able to get on the floor, and $290 million more than the President asked for; but I think the President's request of $2.048 billion is the minimum that we ought to appropriate here.

The essence of the argument here—and it is not the chairman's fault—is that this ends up being a 4-month supplemental appropriation, which expires in April, so to speak, with 2 months appropriations hanging in limbo, with all the problems that that creates for this administration, which I do not think we ought to create for it.

Mr. MAGNUSON. We will have the administration's position clear by next year sometime, because there have been a lot of changes.

I want to correct a figure. Last year they spent $1.948 billion.

Mr. NELSON. That is the figure I have used.

Mr. MAGNUSON. Yes.

Mr. NELSON. I said we appropriated $2.088 billion, which is $40 million more than is in the proposal before us.

Mr. JAVITS. That is right.

Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. JAVITS. I think as long as the Senate is interested in the details of this matter, it is very important to point them out.

For work and training programs, Job Corps, school in summer, comprehensive employment, special impact, work experience, and foster grandparents, the authorized amount is $871 million.

For the community action programs, which includes Headstart, legal service, and other programs, $1.078 billion.

For the other miscellaneous programs, like migrant workers, rural areas, VISTA, and administration of the program, it generally comes to about $100 million.

That is the anatomy of what is being requested in this appropriation.

It seems to me that the argument of the Senator from Wisconsin (Mr. NELSON) upon that is conclusive. There are no new programs involved; it has been an ongoing program.

With the parliamentary situation that the ceiling will be whatever the Senate appropriates, we must go to this higher figure.

The juxtaposition between what we are doing in war and war preparation and many other things is certainly a fair appeal to conscience in terms of the clients of this program.

If the Senator will yield for that purpose, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. JAVITS. I say to the Senator in conclusion, Mr. President, that as a matter of common decency, the ceiling for the Senate negotiators should at least be the budget figure, which is the figure authorized by the Senate committee and, as the Senator from Wisconsin has very eloquently pointed out, is $40 million less than what the Senate appropriated in money the last time out, with a program that is infinitely more expensive, as we know, to administer.

Mr. NELSON. I agree with the Senator. I would just like to say to the Senator from Washington that the part that really worries me about a figure the same as was agreed upon between the House and the Senate and adopted for this year is that if we took the $1,948,000,000, and if the $1,600,000,000-plus that was appropriated is to be ten-twelfths of that and, therefore, we are going to end up appropriating exactly what we spent this year, then we may very well be in a position, with the House of Representatives, where we have got to compromise at a figure less than the operating budget for this year; whereas, if we took the President's recommendation of $2,048,000,000, at least we would have some bargaining room.

Last year we started out with $2,088,000,000, and ended up compromising on this year's figure of $1,948,000,000.

Mr. MAGNUSON. Mr. President, one other thing is true. We have got to face this: With the conference starting tomorrow, suppose we should split the difference with the House of Representatives, their authorization would be higher than the $2,048,000,000. Assuming what usually happens, there would be a difference of about $100,000,000, or somewhere in there, as was true on the authorization.

Mr. NELSON. Then that has to come back to the Senate.

Mr. MAGNUSON. So the appropriation might—we do not know—end up less than the authorization.

Mr. BYRD of Virginia. Mr. President, will the Senator yield to me so that I might ask some questions of the chairman of the committee?

Mr. NELSON. I yield the floor.

The PRESIDING OFFICER. The Senator from Washington has the floor.

Mr. MAGNUSON. Mr. President, I yield to the Senator from New Hampshire.

Mr. COTTON. Mr. President, I shall be very brief. This information sheet, which I am frank to say I have never had the opportunity to see until just now, if I read it correctly, after listing some of these appropriations, has here, unearmarked, under the authorization, $427.9 million.

That is not far from half a billion dollars, which is not even earmarked.

Mr. NELSON. Let me give the Senator the explanation of that. This table to which he refers is the budget request of the administration. They submitted to the committee in detail how they proposed to use that money.

Mr. COTTON. Submitted it to what committee?

Mr. NELSON. To the Poverty Subcommittee of the Committee on Labor and Public Welfare, and to the committee over on the House side. The particular money to which you referred is to be spent for Community Action, local initiative programs, program direction, technical assistance, State economic opportunity offices, research, pilot programs, and evaluations.

That is what the unearmarked money is to be spent for. By not earmarking, we give them some flexibility.

Mr. COTTON. Well, it is very nice of the Senator to tell us that. It is helpful to know. But let us just look at the situation that presents itself to us, from a parliamentary standpoint.

The mistake that the Appropriations Committee of the Senate made was in appropriating one single dollar, because, when we tried our best to be fair and understanding, we opened ourselves up to this; and we deserved to get it in the neck, because we were interested, and reasoned as follows: The top authorization, the top request, is $2.048 billion——

Mr. NELSON. May I say to the Senator that I have not in any way been critical of the Appropriations Committee.

Mr. COTTON. We talked it over, and we said, "There is no authorization as yet, we have had no hearings"—and I want to be absolutely fair on this; I think that was probably our fault. I think if we had not been so pressed, hour after hour and night after night, we should have found time, had Mr. Rumsfeld come up with his people, and listened to him, even though we had not received the authorization. I wish we had.

But we have been operating for the last 6 weeks night and day. We certainly wanted to be fair, and not suppress this program by leaving them with no money until the passage of a supplemental.

So we said, "If we give them $1.6 billion out of the $2.048 billion, then it gives the Appropriations Committees a chance to obtain the necessary evidence, and the rest of it can wait for a supplemental appropriation without doing anyone any harm."

We were trying to be fair. We were trying to be generous. There is not a person in this Chamber, I do not believe, who thinks that, with $1.6 billion in their hands, and with a supplemental coming along, they could not operate. When you talk about planning for next summer, the supplemental hopefully would be enacted before we adjourn, and certainly if we do not get a supplemental through before we adjourn, it has got to come through very quickly after the new year starts. Then there will be an opportunity to review the whole thing and get the evidence.

But no; the Senator wants to do something that has never been done before, I would wager, in the history of the Senate or of the other body. Suppose we vote the entire appropriation, without one word of evidence, without a chance of examining one single witness, what does the Senator get? Some $400 million more than we are giving them; and all the information I had, until the Senator from Wisconsin started illuminating the situation just now, was a sheet here showing that there was $427.9 million not earmarked.

It is ridiculous, Mr. President, to say that we have ruined this program. It is ridiculous to say that we have not been generous. What do they want to do? Do they want to pass the whole authorization without our being given a chance to weigh any one of these programs? There are two or three of them I have grave doubts about. Do we want to send conferees over to the conference with the House of Representatives, absolutely honorbound to hold out for the full amount?

I have served on this committee a good many years, and this is the first time I have ever seen such a proposition put before us. We have done something beyond what we were supposed to do and leaned over backward trying to be fair, so as not to stifle the program.

Mr. PERCY. Mr. President, I wish to comment briefly on the discussion we had today on the OEO appropriations and the points the senior Senator from New Hampshire made.

Senator COTTON was rightly concerned about the unusual situation confronting the Senate in voting funds for OEO. It is unusual for us to be appropriating money

when the authorization bill has not yet been approved. While I feel it is vital to approve this appropriation today for a full 12 months, I do understand the Senator's concern.

I commend him for his diligence and the fine work he has done on this difficult bill. He has a life long regard and devotion to the cause of justice, of concern for the poor and disadvantaged, the handicapped and the aging.

I join him in expressing the hope that we will resume regular procedures in the next session of the 91st Congress and all future sessions.

At this time, I would particularly like to commend and express appreciation to Senator Cotton and the other members of the Appropriations Committee for incorporating into this bill my amendment to fund title III of the Older American's Act at the authorized level of $20 million. In so doing, they have recognized the special needs of our senior citizens and provided the funds needed to help meet them.

The PRESIDING OFFICER (Mr. BAKER in the chair). The question is on agreeing to the amendment of the Senator from Wisconsin. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Georgia (Mr. RUSSELL), and the Senator from Missouri (Mr. SYMINGTON) are necessarily absent.

I also announce that the Senator from Washington (Mr. JACKSON) is absent because of a death in his family.

I further announce that, if present and voting, the Senator from Washington (Mr. JACKSON), and the Senator from Massachusetts (Mr. KENNEDY) would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from Ohio (Mr. SAXBE) is necessarily absent.

The Senator from Kentucky (Mr. COOPER) is absent because of illness in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from Ohio (Mr. SAXBE) would vote "yea."

The result was announced—yeas 60, nays 32, as follows:

[No. 243 Leg.]

YEAS—60

Aiken	Harris	Muskie
Baker	Hart	Nelson
Bayh	Hartke	Packwood
Boggs	Hatfield	Pastore
Brooke	Hollings	Pearson
Burdick	Hughes	Pell
Case	Inouye	Percy
Church	Javits	Prouty
Cook	Jordan, Idaho	Proxmire
Cranston	Mansfield	Randolph
Dodd	Mathias	Ribicoff
Dole	McCarthy	Schweiker
Dominick	McGee	Scott
Eagleton	McGovern	Smith, Ill.
Fong	McIntyre	Spong
Fulbright	Metcalf	Stevens
Goodell	Mondale	Tydings
Gore	Montoya	Williams, N.J.
Gravel	Moss	Yarborough
Griffin	Murphy	Young, Ohio

NAYS—32

Allen	Ellender	McClellan
Allott	Ervin	Miller
Bellmon	Fannin	Smith, Maine
Bennett	Goldwater	Sparkman

Cotton	Jordan, N.C.	Williams, Del.
Curtis	Long	Young, N. Dak.
Eastland	Magnuson	

NOT VOTING—8

Anderson	Kennedy	Saxbe
Cooper	Mundt	Symington
Jackson	Russell	

So Mr. NELSON'S amendment was agreed to.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. SCOTT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. JAVITS. Mr. President, I ask unanimous consent that the names of the Senator from Kansas (Mr. PEARSON) and the Senator from Kentucky (Mr. COOK) be added as cosponsors of the amendment.

The PRESIDING OFFICER (Mr. GRAVEL in the chair). Without objection, it is so ordered.

CHRONIC DISEASE CONTROL PROGRAM

Mr. HART. Mr. President, I want particularly to commend the chairman of the Subcommittee on Appropriations for the Departments of Labor and Health, Education, and Welfare—as well as the other members of the committee—for restoring the $24 million cut by the House in the regional medical programs, and for earmarking $24,771,000 under this program for support of the chronic disease control program.

As pointed out on pages 22 and 23 of the committee report, the fiscal 1970 appropriation for the chronic disease program was combined with that of the regular medical program in accordance with the reorganization of health programs in the department.

This action and the subsequent cut by the House of $24 million below the 1970 budget estimate placed in jeopardy the Nation's first regional medical arthritis control program, a collaborative project of the University of Michigan in Ann Arbor and the Henry Ford Hospital in Detroit. For the first year of a planned 5-year program, $450,000 had been made available.

The committee is to be commended for recognizing the importance of the chronic disease programs and for providing the funds to maintain them at their previous operating level.

Hopefully our colleagues in the other body will be persuaded of the wisdom of this action and will accept this relatively small increase.

By way of background material, and in the interest of broader understanding of this health service, I ask unanimous consent to insert in the RECORD at this point the revised summary of testimony of Dr. Ivan F. Duff before the subcommittee.

There being no objection, the summary was order to be printed in the RECORD, as follows:

REVISED SUMMARY OF TESTIMONY OF IVAN F. DUFF, M.D., CONCERNING THE REGIONAL ARTHRITIS CONTROL PROGRAM IN MICHIGAN

Mr. Chairman, I am Ivan Duff, a Professor and Internist at The University of Michigan Medical School. Mr. Hulce, President of the Michigan Chapter of the Arthritis Foundation (and who spoke briefly last evening at these hearings) and I, with the request that our full testimony be entered in the record, would like to present a brief revised summary as follows.

Since July 1, 1969, I have been in charge of the development of the nation's first Regional Medical Arthritis Control Program which is located in Michigan. This is a collaborative project utilizing the core resources of The University of Michigan and the Henry Ford Hospital in Detroit.

Two days ago, Senator Smathers and Dr. Clark impressively documented for this Committee the need for research support toward a cure of arthritis to alleviate the plight of the millions of arthritics and the staggering costs of these chronic diseases to the nation. Theirs was a request for funds for the National Institutes of Health.

Our ongoing program, since it is directly concerned with the delivery to arthritics of medical services, is a part of the Regional Medical Programs Service. We wish to testify concerning a very important matter, mainly the decision by officials of the Department of Health, Education and Welfare to reduce the activities of five of the eight chronic disease programs during fiscal year 1970 and to phase out several programs including the country's pilot Arthritis Control Program.

The basic concept of our program grew out of the 1965 Surgeon General's Workshop on Prevention of Disability from Arthritis. In essence, this is a program to demonstrate that crippling from arthritis can be delayed or prevented by a method of delivery of medical care which provides for early diagnosis, comprehensive evaluation of the patient's total problem, efficient and knowledegable use of today's treatment measures, and provision for continuing medical and social support. The working design of our program includes analysis of social and economic benefits, direct medical costs, as well as objective criteria for measuring physical benefit.

The original plan called for the establishment and support of nine centers, to be located in Public Health Service districts. However, in 1968, the 90th Congress made an appropriation of $500,000 for a single arthritis demonstration center program to the National Center for Chronic Disease Control—That center, September, 1968, was merged with the Regional Medical Programs Service.

In January, 1969 the Diabetes and Arthritis Control Programs, Division of Chronic Diseases, announced the availability of funds on a competitive basis for the nation's pilot demonstration program. On June 18, 1969 the Public Health Service announced that this award had been made to Michigan; on July 1, the program was activated.

The merger of the Division of Chronic Diseases into the Regional Medical Programs Service, which as you know, is concerned with heart, cancer and stroke and "related disorders" puts the authorized pilot Arthritis Control Program, which happens to be located in Michigan, in a situation of jeopardy. Our concern is what is to happen to this nationally important ongoing program intended to be of five-years duration, after July 1, 1970, in view of the public announcement of the reduced activities of the Arthritis and Diabetes Chronic Disease Programs

and it follows our program—after only one year of operation.

Mr. Chairman, we would make the point that the merger of our program vitally concerned with the delivery of medical services, with the Regional Medical Programs Service, carried with it the obligation for continued support. Our concern is for visible evidence of this in the form of continued support by the Health Services and Mental Health Administration and the Director of the Regional Medical Programs Service.

In appealing for ongoing funding in the fiscal year 1970, to permit this program's continuation, I would like to briefly summarize our progress to date:

1. In five months of operation we have demonstrated that the participation of many health related disciplines can be obtained in the formulation and operation of such a project. This program is the product of successful collaboration between physicians with an interest in arthritis and rehabilitation, physical and occupational therapists, public health nurses, social workers, behavorial scientists, specialists in research design, statistics, data retrival, analysis of program direct costs and benefits and measurement of social costs.

2. We have demonstrated that cooperation of patients can be obtained. Out contemplated goal at the end of five years was about 600 rheumatoid patients; since admission to the program of the first patient early in September 1969, 34 eligible adults and three children with rheumatoid arthritis have been entered into the study. On pages 7–9 of my formal testimony are two case reports to document the plight of arthritis victims and what we can do; in other words, Senator Magnuson, we have something to deliver and we are making delivery.

3. We have demonstrated that such a program can be truly regional—two-thirds of the peoples in Michigan reside in the Detroit-Ann Arbor-Grand Rapids area. There is a real potential for expanding this to a state-wide program through the network of active patient service teaching clinics for physicians, now operative in eleven key locations throughout Michigan. It was to the role of the Michigan Arthritis Foundation, which by supporting these clinics in a total of $100,000 a year, implements the yield of the Regional Arthritis Control Center, that Mr. Hulce (President of the Chapter and an executive of the Ford Motor Company) testified in part last evening.

4. Since its conception, it was clear between us and our contract officers, that this program would require a minimum of five years to achieve its objectives. In the first few months of its operation, much of the time has been involved recruiting personnel and with standardization of the many procedures involved in data collection and plans for analysis of a multidisciplinary project. More rapid development of actual operations can be anticipated now that this "tooling up" process is underway.

Senator Magnuson and gentlemen, we are appearing before you to respectfully seek renewal of recognition by the Congress of the importance of their and our pilot Arthritis demonstration center program and to request ongoing appropriations for this program. If there is a question of adequacy of authorization under the Regional Medical Programs Service to carry out arthritis projects, we need to seek legislation authorizing expansion of the Regional Medical Prorgam Services to include this and other arthritis programs. Specifically, we request renewal of the budget appropriation in the amount of $500,000 for Health, Education and Welfare for fiscal 1970 for the nation's first Regional Arthritis Control Program located in Michigan.

Thank you for the opportunity of appearing before you, for your courtesy and for your interest.

PROGRAM

Mr. SCOTT. Mr. President, I rise to inquire of the distinguished majority leader as to his intentions with regard to the progress of this bill and future business today and thereafter.

Mr. MANSFIELD. Mr. President, as the distinguished minority leader knows, there are a number of other appropriation bills following the disposition of the Labor-HEW proposal. This is the one, however, which may well take up most of the time. We also have a mistletoe gathering in which we are all interested to some degree. I would hope it would be possible that we could stay very late tonight. Whether or not we can finish this bill, I am not at all certain. I would say that the odds are against us; but if we do not try, we will never know.

At this time, I ask unanimous consent that there be a time limitation of 1 hour on all amendments, except as to sections 407, 408, and 409, the time to be equally divided between the sponsors of the amendments and the manager of the bill.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. Mr. President, I repeat, in response to the question raised by the distinguished minority leader, that we are going to be in session very late tonight, because we really do not have much choice. I know that many of us are tired, especially the members of the Appropriations Committee, who have been doing superhuman work over the past several weeks and especially during the past day or so.

With that word of cheer, I will yield the floor.

Mr. SCOTT. The majority leader has made me happy once again [laughter].

DISTRICT OF COLUMBIA APPROPRIATION BILL, 1970—CONFERENCE REPORT

Mr. PROXMIRE. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 14916) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending June 30, 1970, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The assistant legislative clerk read the report.

(For conference report, see House proceedings of December 15, 1969, p. 39093, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. PROXMIRE. Mr. President, I urge that the conference report be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

The PRESIDING OFFICER. The clerk will state the amendments in disagreement.

The assistant legislative clerk read as follows:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 1 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed, insert: "$104,169,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 5 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed, insert: "$38,769,000."

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 7 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed, insert: "$129,556,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 10 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed, insert: "$17,406,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 11 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed, insert: "$136,234,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 13 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed, insert: "$32,707,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 14 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed, insert: "$120,682,300".

Mr. PROXMIRE. Mr. President, I move that the Senate agree to the amendments of the House to the amendments of the Senate numbered 1, 5, 7, 10, 11, 13, and 14.

The PRESIDING OFFICER (Mr. GRAVEL in the chair). The question is on agreeing to the motion of the Senator from Wisconsin.

The motion was agreed to.

Mr. PROXMIRE. Mr. President, I have a brief explanation and then I will yield to the Senator from Missouri (Mr. EAGLETON) briefly.

Mr. President, the total sum approved by the conferees is $650,249,600. This amount is $6,815,000 under the Senate bill, $32,856,700 under the House bill, and $102,694,700 under the budget estimates for fiscal year 1970.

The Federal payment to the general fund of the District of Columbia was fixed at $104,169,000. The Federal loan authority is $60,263,000.

Included in this record budget are substantial numbers of new personnel and programs which I hope will make the government of the District of Columbia more responsive to the needs of its citizens and improve the quality of life here in the Nation's Capital.

Mr. President, I ask unanimous consent that a summary of the bill be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF BILL (H.R. 14916)

Agency and item	New budget (obligational) authority, fiscal year 1969 (enacted to date)	Budget estimates of new (obligational) authority, fiscal year 1970	New budget (obligational) authority recommended in House bill	New budget (obligational) authority recommended in Senate bill	New budget (obligational) authority recommended by conference action
(1)	(2)	(3)	(4)	(5)	(6)
FEDERAL PAYMENT TO THE DISTRICT OF COLUMBIA					
General fund	[1] $89,365,000	[2] $110,000,000	$107,000,000	$109,206,000	$104,169,000
Water fund	2,098,000	2,504,000	2,504,000	2,504,000	2,504,000
Sanitary sewage works fund	1,184,000	1,424,000	1,424,000	1,424,000	1,424,000
Total, Federal payment to the District of Columbia	92,647,000	113,928,000	110,928,000	113,134,000	108,097,000
LOANS TO THE DISTRICT OF COLUMBIA OR CAPITAL OUTLAY (FROM THE U.S. TREASURY)					
General fund	[3] 65,125,000	[4] 111,736,000	74,735,000	57,235,000	57,235,000
Highway fund	8,000,000	700,000	700,000	700,000	700,000
Water fund	1,250,000	170,000	170,000	170,000	170,000
Sanitary sewage works fund		2,158,000	2,158,000	2,158,000	2,158,000
Total, loan appropriation to District of Columbia	74,375,000	114,764,000	77,763,000	60,263,000	60,263,000
The Commission on Revision of Criminal Laws of the District of Columbia		150,000		150,000	150,000
Grand total, Federal funds	167,022,000	228,842,000	188,691,000	173,547,000	168,510,000
DISTRICT OF COLUMBIA APPROPRIATED FUNDS					
General operating expenses	[5] (35,405,500)	[6] (44,091,000)	(39,209,000)	(40,471,000)	(38,769,000)

[1] Includes $10,365,000 in 2d supplemental, 1969 (Public Law 91-47).
[2] Includes $20,000,000 requested in H. Doc. 91-196.
[3] Includes $7,902,000 in supplemental, 1969 (Public Law 90-608).
[4] Includes $18,736,000 requested in H. Doc. 91-50 for fiscal year 1969, and reflects decrease of $515,000 proposed in H. Doc. 91-99 and includes $6,000,000 requested in H. Doc. 91-140.
[5] Includes $1,049,500 in supplemental, 1969 (Public Law 90-608), and $975,000 in 2d supplemental, 1969 (Public Law 91-47). Also includes $1,611,000 for Corporation Counsel appropriated under "Public safety."
[6] Includes $847,000 requested in H. Doc. 91-99.
[7] Includes $68,000 in supplemental, 1969 (Public Law 90-608) and $10,034,000 in 2d supplemental 1969 (Public Law 91-47). Excludes $1,611,000 for Corporation Counsel, now under "General operating expenses."
[8] Includes $10,060,000 requested in H. Doc. 91-99.
[9] Includes $13,931,000 in 2d supplemental, 1969 (Public Law 91-47).
[10] Includes $1,204,000 requested in H. Doc. 91-99.
[11] Includes $322,000 in 2d supplemental, 1969 (Public Law 91-47).
[12] Includes $563,000 requested in H. Doc. 91-99.
[13] Includes $2,548,000 in 2d supplemental, 1969 (Public Law 91-47).
[14] Includes $2,054,000 requested in H. Doc. 91-99 and $2,200,000 requested in H. Doc. 91-140 and $1,369,000 requested in H. Doc. 91-196.
[15] Includes $163,000 in 2d supplemental, 1969 (Public Law 91-47).
[16] Includes $35,000 requested in H. Doc. 91-99.
[17] Includes $479,000 in 2d supplemental, 1969 (Public Law 91-47).
[18] Includes $403,000 requested in H. Doc. 91-99.
[19] Includes $3,179,000 in 2d supplemental, 1969 (Public Law 91-47).
[20] Includes $27,900 in supplemental 1969 (Public Law 90-608), and $50,000 in 2d supplemental, 1969 (Public Law 91-47).
[21] Requested in H. Doc. 91-196.
[22] Includes $49,000 requested in H. Doc. 91-140.
[23] Includes $18,736,000 requested in H. Doc. 91-50 for fiscal year 1969, $8,928,000 requested in H. Doc. 91-99, and $18,275,000 requsted in H. Doc. 140.
[24] Includes $10,590,000 in supplemental, 1969 (Public Law 90-608).
[25] Excludes $2,286,000 requested in H. Doc. 91-196.

Mr. EAGLETON. Mr. President, will the Senator from Indiana yield to me for 2 minutes on the same subject?

Mr. HARTKE. I yield 2 minutes to the Senator from Missouri without losing my right to the floor.

The PRESIDING OFFICER. The Senator from Missouri is recognized.

Mr. EAGLETON. Mr. President, I would be less than candid if I did not express some disappointment in this conference report, especially in the recommended Federal payment of $104.1 million. I had expected that the figure would be somewhere between the $107 million approved by the House and the $109 million passed by the Senate. I do not consider this to be a "compromise" in the usual legislative sense of that word when the final figure is $3 million below the lowest amount approved by either House.

Mr. President, I repeat that I am somewhat disappointed and I believe important District programs will suffer as a result. However, there is some comfort in the fact that the Federal payment is still $4 million more than was first recommended to the Senate.

Mr. President, I wish to pay due respect to the senior Senator from Wisconsin (Mr. PROXMIRE) in seeing that indispensible and vital programs were spared further cuts. For example, a considerable part of the previously mentioned reduction was made up by not funding authorized but vacant personnel positions. For example, another $1 million was saved by eliminating a planned increase in jurors' fees. These actions will make the reduction less painful to bear although they cannot entirely remove the sting.

Nevertheless, I congratulate the senior Senator from Wisconsin (Mr. PROXMIRE) for his conscientious leadership in this regard. He and I disagreed on some aspects of the budget but I believe we both have the best interests of the District of Columbia as our goal.

Mr. PROXMIRE. Mr. President, I thank the Senator from Missouri, who has been most helpful. I think he permitted us to reach a better decision than we could have otherwise. The Eagleton amendment was agreed to in conference because it was already accepted by the House.

I yield to the Senator from West Virginia.

Mr. RANDOLPH. Mr. President, I am grateful to my colleague for yielding to me that I may comment on a particular portion of the remarks of the Senator from Missouri (Mr. EAGLETON).

The Senator from Missouri expressed appreciation for the appropriation in the District of Columbia conference bill to improve the jury system and assist in law enforcement.

Mr. President, I recently received a letter from a very splendid citizen of the District of Columbia who was called for jury duty. This young woman—I know her personally—is a schoolteacher. She is a person genuinely interested in good government and desirous of meeting her obligations as a citizen. But she had the very unpleasant and dissillusioning experience. While being available day after day and drawing $20 per diem, she actually served on four cases, involving approximately 6 days. Because of her interest in the processes of government, she has taken the time to write of her experience. Her comments are constructive.

I ask unanimous consent that the letter be printed in the RECORD, without using the name of the person.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DECEMBER 7, 1969.

DEAR SENATOR: Having completed jury duty service at the U.S. District Court, Washington, D.C., for the month of November, 1969,

I wanted to register my dissatisfaction and complaints.

I looked upon the summons to jury duty as a challenge, a completion of a civic duty, and provision for an insight into the judicial system. I was disillusioned—greatly so. Out of one month of jury duty, I participated in a total of four criminal cases; at the outside this totaled six days. As I was there for a total of twenty-two days, that meant sixteen days of not being in court.

During this time, three days could go by at a time without my being called to be questioned as a prospective juror. The result—Boredom. I read volumes of books, talked with many people, and felt useless and uninterested in the process of justice, even at $20.00 per diem. Often there would be 80 to 100 others doing the same thing, sitting and waiting. This could be a potential labor force, organized to organize the jury panels.

Since there are basic questions used to disqualify jurors, a form could be used to establish a juror's qualifications before entering the courtroom. A standard question in civil cases is "have you been awarded money from being in an accident?" This was true in my case, with the result I never sat on a civil case. By having a more efficient pre-selection process, jurors would be more readily available for panels for which they would be qualified.

Whatever the cause, nothing can justify the hours I spent sitting and waiting. If lawyers and judges were required to do this for sixteen days in the jury lounge, something would be changed.

Thank you for your attention.

Sincerely,

——— ———.

Mr. PROXMIRE. I thank the Senator.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed, without amendment, the joint resolution (S.J. Res. 54) consenting to an extension and renewal of the interstate compact to conserve oil and gas.

The message also announced that the House insisted upon its amendment to the amendment of the Senate to the bill (H.R. 4293) to provide for continuation of authority for regulation of exports, disagreed to by the Senate; agreed to the conference asked by the Senate on the disagreeing votes by the two Houses thereon, and that Mr. PATMAN, Mr. BARRETT, Mrs. SULLIVAN, Mr. REUSS, Mr. WIDNALL, Mr. MIZE, and Mr. BROWN of Michigan were appointed managers on the part of the House at the conference.

The message further announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 14916) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending June 30, 1970, and for other purposes; that the House receded from its disagreement to the amendment of the Senate numbered 4 to the bill, and concurred therein; and that the House receded from its disagreement to the amendments of the Senate numbered 1, 5, 7, 10, 11, and 13 to the bill, and concurred therein, severally with an amendment, in which it requested the concurrence of the Senate.

DEPARTMENTS OF LABOR AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATIONS, 1970

The Senate resumed the consideration of the bill (H.R. 13111) making appropriations for the Departments of Labor and Health, Education, and Welfare for the fiscal year ending June 30, 1970, and for other purposes.

Mr. HARTKE. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 15, line 15, insert the following: strike "214,033,000" and insert in lieu thereof "$224,033,000, of which $100,000,000 shall be available for grants pursuant to sec. 314 (d), not less than $10,000,000 of which shall be available only for the purchase of rubella (German measles) vaccine.

The PRESIDING OFFICER. We are now operating under the unanimous consent agreement; 30 minutes to each side.

Mr. HARTKE. Mr. President, rubella, commonly known as "German measles," is an infectious virus disease. Once viewed as an innocuous childhood illness, rubella is now known to cause congenital abnormalities, and even death, in infants born to mothers infected with the disease while pregnant. During the 1964 rubella epidemic an estimated 50,000 spontaneous abortions and stillbirths occurred, and more than 20,000 infants were born blind, deaf, mentally retarded, or with heart disease. Additionally, recent studies prove that after being exposed to rubella in the womb, even those children who appear normal at birth are likely to develop serious hearing and speech defects as they grow older.

Since rubella is a cyclic disease, with epidemics occurring every 7 years, it is expected that the next major outbreak will strike early in 1971. To prevent a recurrence of the 1964 tragedy, it is absolutely essential that the immunization program currently being conducted by the public health service's national communicable disease center be made as effective as possible. Presently, however, this program is dangerously underfunded. Brief reference to the background of the program will be sufficient, I believe to bear out my contention that it needs a dramatic increase in funding.

In February of this year, the National Communicable Disease Center—NCDC—reported to the Congress that a vaccine had been developed which was effective against rubella. The Congress responded to this good news by approving a supplemental appropriation of $9.6 million with which to launch a nationwide rubella vaccination program. It was then decided by the Public Health Service advisory committee on immunization practice, in close cooperation with the American Academy of Pediatrics, that the vaccine should be used for children between the age of one year to puberty. Since this age group is the primary carrier of rubella, the decision was reached to immunize children ages 1 to 13 rather than the mothers themselves. In this fashion, it was hoped that a wall of immunity would be formed around women of child bearing age. It was determined that the vaccine should not be administered to women of child-bearing age because the effect of the live vaccine on pregnant women is not yet fully known.

The Census Bureau estimates that there are today at least 57 million children between the ages of 1 and 13 in this country who should be vaccinated pursuant to the NCDC guidelines. Under the NCDC program, the Federal Government, in cooperation with State and local public health officials, hopes to vaccinate at least 75 percent of this gigantic population pool before the anticipated 1971 rubella epidemic breaks out. Officials at NCDC appear confident that if this percentage can be reached, that is, if approximately 43 million children can be vaccinated in the next year, another tragic outbreak of rubella will be averted. Within this age group initial vaccination priority will reportedly be given to children in kindergarten and the early grades of elementary school.

These guidelines were set in February, and the live vaccine was licensed in June. Since that time, what action has been taken to vaccinate these 43 million children and thereby protect the 800,000 women, who it is estimated, will become pregnant during 1971 but who have developed no immunity to rubella? By my estimate—and the estimate of others—far too little.

The Office of Information for Health Services and the Mental Health Administration within HEW informs me that to date $19.2 million has been spent on the rubella program. This figure was arrived at by adding the $9.6 million supplemental appropriation for fiscal year 1969 to the additional $9.6 million already committed under the fiscal year 1970 appropriation request of $16 million.

Of this amount of $19.2 million, I am told that only $4.75 million has been expended for the purchase of vaccine. The remainder, approximately $14.5 million has been spent on organizational, supervisory, and equipment costs. Although amazed that this $19.2 million figure should yield so little for vaccine, I am prepared to accept its correctness. I am assured, however, that virtually all of the uncommited portion of the $16 million appropriation for fiscal year 1970, approximately $6.4 million, will be used to purchase vaccine. If this proves to be true, the NCDC will have available to it approximately $11.2 million for the purchase of vaccine during this fiscal year. Officials at NCDC estimate that this will be sufficient to purchase 8.6 million immunization shots. Their estimate is based upon the projected cost of the vaccine which they predict will be in the neighborhood of $1.25 per shot. Put differently, the Federal Government will have funds sufficient to immunize less than 9 million out of the necessary 43 million children

in the 6 months remaining before the end of this fiscal year.

Rather than being alarmed that Federal funds will have resulted in the immunization of less than 25 percent of the target population, with only 6 additional months remaining to the start of 1971, officials within NCDC and HEW appear to be content with the projected progress of the program. When criticized for their failure to request a larger appropriation for their program, they respond that this is a cooperative venture entered into by the Federal and State Government and that the States should be required to pay their fair share. What that "fair share" should amount to, however, has never been accurately determined. When the rubella program was first conceived in February, HEW officials contemplated that the Federal Government would assume no more than 30 percent of the program's cost. Now these same officials estimate that the Federal Government might be forced to assume as much as 50 percent of the cost. This increase in their estimate of what the Federal role should be was apparently caused by recent criticism directed at the program in the newspapers and on television.

On October 26, the Washington Post published a most incisive article written by William Hines of the Chicago Sun Times. In this article Mr. Hines contended that—

> Thousands of American women may bear dead, deformed or retarded children in 1972 because a nationwide immunization campaign against rubella is not getting off the ground, except in a few states, New York and the District of Columbia.

Hines further contended:

> The reason for this slow-down seems to be the economy drive that is touching virtually all non-military echelons of the Federal Government.

He then quoted an unnamed official within NCDC who when asked whether financial restrictions were not posing an otherwise avoidable risk to thousands of unborn children answered:

> I don't think you can argue with that. It's obvious that if you had the money you could do a whole lot to cut way down or even eliminate rubella.

However, Dr. James H. Cavanaugh, Assistant Secretary for Health in the Department of Health, Education, and Welfare took exception to the position that additional funds for the rubella program in this fiscal year would serve any useful purpose. In an interview he had with Mr. Hines, Dr. Cavanaugh stated that any additional funding above the $25.6 million figure which HEW had requested for fiscal years 1969 and 1970 could not be used efficiently. He asserted at that time that a shortage of vaccine and personnel to administer it ruled out any increase in the appropriation for fiscal year 1970. With respect to the vaccine question Hines noted comments by drug industry officials which indicated that more than enough vaccine would be available if the Federal Government would only license additional producers.

At the time Hines wrote his article there was only one licensed company, Merck, Sharp & Dohme, within the last week an additional company, Philips Roxane Laboratories, has also been licensed. Sources at Philips Roxane indicate that they presently have in stock more than 8 million doses of rubella vaccine and possess the capability of producing 1 million more per month. This is in addition to the estimated capability of Merck, Sharp & Dohme which has been set at 1.5 million doses by its officials. The two companies have, then, a combined capability to furnish 23 million doses of vaccine by the end of this fiscal year but HEW has requsted, and the Appropriations Committee has approved, funds sufficient to purchase only 8.6 million doses. Clearly, then, HEW and NCDC are faced not with a shortage of vaccine but a surplus of more than 14 million shots.

What is to happen to this vaccine? Will it be allowed to sit in pharmaceutical company warehouses or will it be used to prevent rubella? HEW's answer has been that any vaccine surplus will be easily absorbed by official and private sources within the States. This answer is based on the HEW presumption that State and private sources should—and more importantly, will—shoulder at least half the cost of the immunization program. In view of its importance, the correctness of this presumption must be examined. And examined it has been in a series of investigative reports by Paul Friedman and Jim Gaver of NBC news. Their conclusions, I believe, merit very close attention. Based on conversations they had with U.S. Public Health officials in each of the 50 States they found that the individual States were not acting to accept their responsibilities under the program. Specifically, there are only 11 States in which health authorities indicated that by 1971 they will have vaccinated more than 75 percent of the children ages one through puberty. As I mentioned earlier a vaccination program reaching 75 percent is considered reasontably effective by most public health authorities. They then noted that outside these 11 States, the picture became very bleak.

In eight States the expectation was that between 50 and 75 percent of the applicable children would be vaccinated. In 26 of the States—more than half—the estimate was that less than 50 percent of the children would be vaccinated by the time of the next rubella outbreak. NBC news reported that these States included some of the largest "young populations"—such as California, New York, Illinois, Ohio, and Pennsylvania. Of these 26 States, 14 reported that they would vaccinate fewer than a third of their children. NBC then reported that in the five remaining States health officials were just beginning to think about rubella vaccination programs and that no program was actually in progress. NBC concluded its report by noting that their figures were "obtained by speaking with health officials in each of the 50 States, who told it how much they think they will be able to do using Federal, State, and private funds—plus what they think private doctors will do. Adding everything up, a generous estimate is that 20 million children in the one to puberty age group will be vaccinated by the spring of 1971. That is 20 million, not the 40 million estimated by the Department of Health, Education, and Welfare. Twenty million vaccinations are not likely to stop another outbreak of rubella, with its resulting tragedies."

Mr. President, this expected failure of most States to pay for at least 50 percent of the program's cost raises a question of utmost seriousness. If the States are unable to meet the standards set down by the Federal Government will the Federal Government through HEW and NCDC eventually have to assume a larger share of the cost? Obviously, the answer to this question must be in the affirmative.

At their recent meeting held in Washington just last week, the Association of State and Territorial Health Officers called upon the President and the Congress to increase the Federal funds available under the rubella vaccination program. Without an increase in Federal assistance the association declared that the States would not be able to shoulder their responsibilities under the program. Needless to say I agree with the sentiments expressed by the association.

Mr. HARTKE. Mr. President, I ask unanimous consent that the report of December 10, 1969, be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

ASSOCIATION OF STATE AND TERRITORIAL HEALTH OFFICERS,
Washington, D.C., December 10, 1969.

It is recommended that since rubella may cause damage to an unborn infant if the mother gets this infection during the early months of pregnancy; since health officials estimate that more than 20,000 rubella babies were born in the United States as a result of the 1964 epidemic; since many of these children were born blind, deaf, mentally retarded, undersized, or with serious heart defects; since a rubella baby represents untold sorrow for its family and may cost as much as $65,000 for education and training; since a rubella vaccine which has now been licensed can prevent another epidemic of such tragic consequences; and since widespread administration of this new vaccine to most of the children in the 50 States will not be possible without the support of additional Federal funds; therefore, the Association of State and Territorial Health Officers calls upon the Congress and the President of the United States to support legislation that will provide funds for the immunization against rubella of all eligible susceptible boys and girls between the ages of one year and puberty in the United States, as quickly as possible commensurate with the availability of licensed vaccine, but prior to 1971.

Mr. HARTKE. Mr. President, if at least 75 percent of the 43 million children estimated to be between ages 1 to puberty are to be immunized, the Federal Government must immunize more than 8.6 million of them in the next 6 months. In my opinion the NCDC must take upon itself the responsibility of vaccinating at least an additional 14 million children before July 1970. To do less, in my opinion, would be to cruelly gamble with the fate of thousands of children who will be conceived in 1971.

The simple truth is that we have the means now at hand to stamp out a

disease which is the No. 1 cause of mental retardation among children. We have the means now at hand to stamp out a disease which has caused blindness and deafness in thousands of infants and children.

In view of the terrible damage worked by this disease, I do not think we can do less than our very utmost to curb rubella.

For that reason I am introducing an amendment to H.R. 13111 which would provide at least an additional $15 million for the fight against rubella. Specifically, my amendment would increase the appropriation under 314(d) from $90 million to its authorized limit of $100 million. Since 314(d) has a matching fund requirement, I anticipate that at least $5 million more would be added to the Federal figure by State contributions. Since administration, supervision, and equipment costs have largely been provided for, I contemplate that the entire $15 million figure will be used for the purchase of vaccine. In view of the vaccine surplus which will likely result by the end of this fiscal year, I believe it imperative that the entire amount generated by my amendment be used to purchase vaccine.

I might point out it has been estimated it costs $68,000 to educate one retarded child or one crippled child. On the basis of this $10 million investment in vaccine, it will provide for a saving of the money required to educate retarded and crippled children of over $1.3 billion, not counting the $50,000 children who died in 1964 alone due to stillborn or premature abortions.

Mr. MAGNUSON. Mr. President, the committee heard a great deal of testimony on this matter. The health people, of course, are quite pleased with the results of using this vaccine, but as I understood from the testimony, German measles runs in cycles and is particularly dangerous to pregnant women. We do not know when the next cycle will occur, but the best estimate is late 1970 or 1971. Thus, the more youngsters that can be inoculated and the more women that can be examined for it so that they will not get it, the better.

I have no objection to the amendment. I wish, however, that the Senator from Indiana would modify his amendment. He states:

Not less than $10 million of which shall be available only for the purchase . . .

Now, this program requires not only the purchase of rubella but also requires some aid in the community health centers and clinics for inoculations. In other words, the whole process, if it can be accomplished, would be better.

Mr. HARTKE. Mr. President, I ask unanimous consent to amend my amendment in that fashion.

Mr. MAGNUSON. There is no use getting it all unless we can put it someplace. There is only one company licensed to do it now. Two, I believe, but we will need more.

If the amendment would read:

Strike 214,033,000 and insert in lieu thereof, 224 million, of which 100 million shall be available for grants pursuant to section 314(d).

Mr. HARTKE. I have so asked unanimous consent that it be modified accordingly.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. Colloquy on the floor will be sufficient to put it in the conference report, that it is for this purpose.

Mr. HARTKE. I thank the Senator.

The text of the amendment of the Senator from Indiana as modified is as follows:

On page 15, line 15, insert the following: strike "214,033,000" and insert in lieu thereof "$224,033,000, of which $100,000,000 shall be available for grants pursuant to sec. 314(d).

Mr. HARTKE. Mr. President, I yield back the remainder of my time.

Mr. MAGNUSON. I yield back the remainder of my time.

The PRESIDING OFFICER. All time on the amendment has now been yielded back.

The question is on agreeing to the amendment of the Senator from Indiana as modified.

The amendment as modified was agreed to.

Mr. MURPHY. Mr. President, I send to the desk an amendment adding $20 million for the manpower development and training activities to be used under title V, supplementary State programs, of the Manpower Development and Training Act, and ask that it be stated. I will explain it briefly. The cosponsors of the amendment are as follows: Senators GOODELL, JAVITS, CRANSTON, GRIFFIN, and FANNIN.

The PRESIDING OFFICER. The amendment will be printed in the RECORD

The assistant legislative clerk proceeded to read the amendment.

Mr. MURPHY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and the amendment will be printed in the RECORD at this point.

The amendment offered by the Senator from California (Mr. MURPHY) is as follows:

On page 2, lines 8 and 9, strike out "$655,605,000" and insert in lieu thereof "$675,605,000".

On page 2, line 15, before the period insert a colon and the following: "*Provided further*, That of the amounts appropriated herein $20,000,000 shall be available only for carrying out the provisions of title V of said Act".

Mr. MURPHY. Mr. President, my colleagues will recall that we considered the extension to the Manpower Development and Training Act in the closing days of the last session. As a result, there was considerable pressure to extend the act without any amendments. Notwithstanding this pressure and the time problem, the Congress adopted my amendment adding the new supplementary State program to the Manpower Act. This, incidentally, was the only major new amendment added last year. I believe this indicates the importance of the program. The supplementary State program is designed to encourage State initiative, creativity, and coordination in an effort to improve manpower programs. Under this program, a State may receive Federal matching funds not to exceed 75 percent "for the purpose of supplementing, coordinating, and improving the effectiveness of, or correcting imbalances among, the services available from all Federal manpower and related programs seeking to improve the ability of disadvantaged persons to move into productive employment."

Although enacted late in the last session, States have responded enthusiastically to the new program. Thirty States have already expressed interest in the program. Of those expressing an interest, 24 have said that they have State matching funds available. H.R. 13111, the Labor-HEW appropriation bill which we are now considering, when passed by the House, failed to fund this important program. The reason given was "that grant programs in this area should be consolidated rather than proliferated." Mr. President, no one has been more concerned than I with the twin problems of program proliferation and inadequate coordination. As the ranking Republican on the Senate Labor and Public Welfare Subcommittee on Manpower, Employment, and Poverty, these problems have received my continued attention. When I introduced the supplementary State program amendment I spoke in some detail on the proliferation of programs and lack of coordination.

Concern over program proliferation and inadequate coordination has been a recurrent theme sounded by experts, advisory committees, and congressional committees. In the Senate report accompanying the 1968 manpower amendments, the Senate Labor and Public Welfare Committee sharply criticized the "plethora of different and largely uncoordinated federal manpower programs" which "do not result in any comprehensive manpower policy." Instead, the committee said "individual acts were written, considered and amended in rapid succession to meet current crises, real or imagined, with little attention to their interrelations." Although very critical of program proliferation and inadequate coordination, the Senate Labor and Public Welfare Committee and the full Senate adopted my amendment obviously feeling that the supplementary State program would help pull together and improve the total manpower effort. The 1969 report of the Department of Health, Education, and Welfare on the Manpower Development Act also spoke of the program's potential. I quote:

The new Title V program in the 1968 Amendments to the Manpower Development and Training Act provides potential to the states to strengthen their capabilities to plan and coordinate manpower programs.

Thus the title V program in the judgment of the Congress, the Department of Labor, the Department of Health, Education, and Welfare, and the States has a great potential in helping to remedy some of the existing defects in the present manpower programs. Title V encourages state initiative and innovation towards meeting these defects. Under the title V program, we should see:

Better coordination as States move to

tie together manpower programs at the State and local levels;

Improved services for the program's participants as existing program gaps are filled and imbalances corrected;

New ideas and approaches by the States based on local and State experiences as the States move out and chart new directions in the manpower field.

No greater example of the program's potential can be found than my State of California where we have attempted to put together the various pieces of the manpower effort in a logical coordinated manner. In California, last year, the State legislature passed a package of bipartisan measures designed to deal with the problems of the disadvantaged in an imaginative way. This legislation has been signed into law by Governor Reagan. I want to emphasize the bipartisan nature of this effort. Some have remarked that the cooperation by the two political parties in California during last year, an election year, was almost a "miracle." I personally attribute this meeting of the minds to the realization of the importance of the problems confronting California and the country and determination by the State legislature and executive branches to shape programs to match the dimensions of the problems. California rightly has placed the problems of the people before the politics of the parties. This bipartisan effort is a tribute to the high level of State government in California.

One of the bills in the bipartisan package, assembly bill 1463, established a new State Department of Human Resources and Development designed to coordinate the various State programs aimed at the disadvantaged. The State of California hopes to provide the hard-core unemployed with a "unbroken sequence of services from intake through placement in a job and periodic followup and evaluation" so that we will know exactly what is being done and what progress is being made. It is the intent of all of us to try to break the barriers of the bureaucracy that tie up the getting of needed services to our people. Presently, we too often force people into existing programs. California hopes to make the individual the focus and tailor programs to fit the individual for employment rather than force an individual into a program. In other words, California hopes to personalize programs so they serve the needs of the individuals rather than force the individual to conform to the requirements of the program. To do this, a new civil servant, a "job agent" would be created and assigned the task of securing the necessary training needed by his disadvantaged unemployed client in order to make him employable. To accomplish this, California needs a little flexibility in the use of highly categorical Federal aid funds. The title V program would provide this flexibility and thus encourage California and other States to be creative.

I would also point out that many other States have started to reorganize their State structures to create departments similar to the California Department of Human Resources and Development.

Too often, however, creative State efforts are thwarted by restrictions and regulations of Federal laws. On July 15, 1968, I outlined in some detail the problems that California was having in implementing its program. Other States have relayed to me similar frustrations as they attempted to embark on a new course in the manpower field.

In the bill before us and the report accompanying it, it is my understanding that no funds have been provided for this important title V program. In my quick reading of the report, I see no rationale given for not funding the program. Perhaps the committee shared the views of the House, but I believe that my statement today refutes that position.

Mr. President, the problems of our country are so immense and diverse that initiatives and cooperations by all levels of government as well as the private sector is needed. We hear a great deal of criticism regarding the States. I realize that all the criticism is not without justification. Yet, I know too well that all the brainpower in this country is not centralized in Washington.

If there is one thing that is becoming clear, it is that Washington cannot prepackage "canned solutions" to solve all the local and State problems. There are too many local communities and the distances from Washington to them are too great for Federal foresight to make a Federal program work everywhere. Hindsight and experience clearly show us this.

The same is also true of program fragmentation and inadequate coordination. Steps taken at the Federal level toward consolidation and coordination must be accompanied by similar strides at the State and local level or we will not accomplish our purpose. For program proliferation, multiplicity of funding, and lack of coordination are not problems solely peculiar to Washington. To the contrary, these problems seem to multiply at the local level. Secretary Shultz and the administration recognize that "making sense" out of the present "manpower maze" requires leadership at all levels. The Secretary of Labor's reorganization of the Labor Department and the administration's manpower proposals evidence such leadership at the national level. The Secretary also recognizes that planning, coordination, and reorganization at the State and local levels are even more important for, after all, this is the action level where in the final analysis the success or failure of our programs will be determined.

Mr. President, for the Congress to slam the door on the enthusiastic response made by the States to title V's invitation to them to be creative in the manpower field would be a blow to all our efforts to not only improve our manpower programs, but also to strengthen the States' roles and their responsibilities. I, therefore, strongly urge the adoption of my amendment providing the $20 million recommended by the administration to support this program.

Mr. President, I ask unanimous consent that a summary of the package of the bipartisan measures passed by the California Legislature be printed in the RECORD, along with a copy of a letter which Governor Reagan wrote to the members of the Appropriations Committee in support of my program.

There being no objection, the summary and letter were ordered to be printed in the RECORD, as follows:

BIPARTISAN JOB DEVELOPMENT AND TRAINING PACKAGE—SUMMARY

Preface

These bipartisan bills, which represent the most comprehensive effort developed by any state to deal with the problems of job training and development in economically disadvantaged areas, are supported by Governor Reagan, Lieutenant Governor Finch as well as legislative leaders of both parties.

AB 109—(Campbell)—California Job Development Corporation law

This bill authorizes the creation of regional non-profit California Job Development Corporations to provide loan capital and management assistance to create small business opportunities and create jobs in economically disadvantaged areas.

It would:

1. Set up a State Executive Board to set guidelines for the operation of regional corporations.

2. Provide that members (financial institutions, businesses, non-profit corporations) commit loan capital or other resources to the corporation as a condition of membership.

3. Provide $1 million for "start-up" loans for regional corporations and for regional guarantee funds to back up loans.

4. Require that persons who receive small business loans maintain a consulting relationship with the corporation for two years, to avoid business failures.

AB 1463—(Unruh) Creates Department of Human Resources Development

This measure:

1. Fixes responsibility for the delivery of services to the chronically unemployed, by establishing a single agency (the Department of Human Resources Development) to provide a full-range of needed services to the hard-core unemployed on an individualized basis.

2. Creates a new kind of civil servant—a "job agent"—who is held responsible for getting the necessary services to each client and following through until his client is on a job. The job agent develops a "plan" for each client and a timetable for providing those services. He may contract with public or private agencies in providing these services, be they education or vocational training, medical services or housing for the client.

3. Consolidates a number of existing state agencies dealing with employment and poverty problems into the new agency, including the Department of Employment, the Multi-Service Center program, and the State Anti-Poverty Office. The several scattered funds supporting these programs are consolidated within one "Manpower Development Fund".

4. Designates target areas within the state with the most serious unemployment problems and requires the department to focus its prime attention on those areas and their unemployed residents.

AB 1777—(Monagan) Pooled money investment fund

This bill would:

1. Provide an incentive for banks to make high risk loans in urban poverty areas as members of a California Job Development Corporation.

2. Permit the Pooled Money Investment Board, consisting of the State Controller, Treasurer, and Finance Director, to increase the amount of state surplus money available for time deposits and place the money in banks which are members of CAL-JOB

corporations and have made loans to such corporation or to corporation-approved borrowers.

3. Declare the intent of the Legislature that the Pooled Money Investment Board give due regard to assisting such efforts as the CAL–JOB program established by AB 109 in administering its investment program.

It is anticipated that utilization of reserve funds to provide incentives could also bolster the entire state economy, as any new money made available to banks would be used and reused, having a "multiplier effect" of roughly two and one-half times the amount deposited.

AB 1046—(Unruh) Small Business Assistance program law

This bill:

1. Creates a two-year pilot program, to be administered through the CAL–JOB Executive Board formed by AB 109, whereby the state will contract with private non-profit associations to provide technical business assistance to small businessmen who live in and desire to locate their enterprises in specified disadvantaged urban areas.

2. The bill appropriates $150,000 and requires the CAL–JOB Executive Board to report to the 1970 Legislature on the effectiveness of the program.

AB 1966—(Veneman) tax incentive for job training

This bill would:

1. Provide a tax incentive on a two year pilot basis for employers to hire long-term unemployed persons, with priority to recipients of public assistance. It is limited to 2,500 certified trainees per year or a revenue loss of no more than $300,000 per year.

2. Permit an employer to deduct from his gross income an amount equal to 50 percent of the training costs and wages paid an approved trainee, providing the term of employment is at least six months. It is anticipated that the resulting loss of tax revenue to the state would be offset by savings in public assistance expenditures on a minimum three to one dollar ratio. Employers would realize a tax saving up to seven percent of wages and training costs expended. This should encourage small and medium size employers, who account for most of the California labor force, to participate in training unskilled and unemployable workers.

3. Protect against potential abuse by providing that both the employer and trainee would have to be certified by the Administrator of the Health and Welfare Agency before the tax incentive could be claimed.

4. Appropriates $50,000 for administrative costs.

AB 1464—(Ralph) Elimination of discrimination in apprenticeship programs

This bill requires the Joint Apprenticeship Council, which sets guidelines for apprenticeship programs, to insure that selection procedures are impartially administered without discrimination. It requires that complaints alleging discrimination be filed with the Fair Employment Practices Commission, but that the Division of Apprenticeship Standards investigate the complaint, holding at least one open hearing and act upon it within 60 days. Cases may be reassigned to FEPC upon their request at which time they would act upon it within 30 days.

STATE OF CALIFORNIA,
GOVERNOR'S OFFICE,
Sacramento, December 8, 1969.

Hon. WARREN G. MAGNUSON,
Chairman, U.S. Senate Appropriations Subcommittee on the Departments of Labor and Health, Education, and Welfare, Senate Office Building, Washington, D.C.

DEAR SENATOR MAGNUSON: As passed by the House of Representatives, the Labor-HEW appropriations bill (H.R. 13111) would not fund the new "Supplementary State Programs" under Title V of the Manpower Development and Training Act (MDTA). I feel that MDTA Title V, newly enacted by Congress in 1968, is vitally important to developing more effective, coordinated manpower services in the states, as we are attempting to do in California. I ask your support in the Appropriations Subcommittee on the Departments of Labor and HEW to restore the $20 million Title V appropriation originally requested by the Administration to help the states move ahead in dealing with our critical manpower problems.

In the House, the appropriation was eliminated in the belief that the MDTA Title V program was simply another in the long series of proliferated manpower programs about which we are all concerned.

I can understand this point of view, and I certainly would not be urging this appropriation if I felt that it would only add to the complicated system of manpower programs we now administer. I am supporting this program, however, because I believe it will provide the vehicle for us to learn how to more effectively administer a manpower program, how to modify the existing proliferation, and ultimately make our programs more efficient and economical.

Title V was added to MDTA on the motion of Senator Murphy to give the states a flexible tool to deal with the problems posed by the rigid requirements of the existing categorical manpower programs. If funded, Title V will give the states the resources to coordinate and fill the gaps in the existing programs and to respond flexibly to the individual needs of the hardcore unemployed and underemployed. Because of the generalized nature of Title V, it will also enable the states to begin implementing the innovative, responsive manpower programs envisioned in President Nixon's proposed Manpower Training Act.

Twenty-four states want to carry out programs under this title and have matching funds available to do so in the current fiscal year if federal funds are appropriated. As an example, the California Legislature, in its recently completed session, appropriated $1 million to be used as matching funds under Title V. We also have developed a proposal which is ready for submittal as soon as funds become available.

For your information, I have enclosed a reprint from the Congressional Record giving Senator Murphy's views on Title V and outlining the new California manpower program.

Sincerely,

RONALD REAGAN,
Governor.

NOTE.—This letter went to all of the members of the U.S. Senate Appropriations Subcommittee.

Mr. MURPHY. Mr. President, I would like to point out that this administration has requested the same amount, $20 million. It would enable us to implement the title V program—adopted by the Congress in 1968.

I respectfully request that the distinguished chairman of the subcommittee consider it and accept it. I can assure him it is an excellent program.

Mr. MAGNUSON. Mr. President, I am familiar with the program, and I thoroughly agree with the Senator from California that, somewhere, we have to secure coordination in all these matters. That has been the whole problem downtown, with this bill, and with the authorizations. I would hope this would be a pilot plan for getting coordination.

Mr. MURPHY. If the Senator will yield for a moment, that is exactly what it is designed to be. It is designed to demonstrate what States can do if we only give them the opportunity. The experiments they undertake can have national implications. The germination of the idea started California on a bipartisan basis, because the State is so large and it had so many programs that one just could not find out what was going on. There was duplication. There was competition. This program seeks to end this waste and allow States to examine manpower efforts at the local and State levels, and tie these activities together with the Federal programs, I am convinced that title V will help bring about greater effectiveness and greater coordination of our manpower programs.

The amendment will streamline State efforts and improve services to the program's intended beneficiaries. The program is a vote of confidence to the States. It should be adopted.

Mr. MAGNUSON. Mr. President, if the Senator will bear with me, as far as I am personally concerned, I think it is a good amendment. I am sure if we had considered it in committee, we would have accepted it. But the Senator from New Hampshire is not here right now.

Mr. MURPHY. I spoke to the Senator from New Hampshire earlier. He implied that he would not object to it. I think he is in the cloakroom.

Mr. MAGNUSON. I would like to yield back the balance of my time. I am sure it will be all right. I will talk with the Senator from New Hampshire. With that condition, I will be glad to take it.

Mr. MURPHY. Mr. President, I yield back my time.

The PRESIDING OFFICER. All time on the amendment has been yielded back. The question is on agreeing to the amendment of the Senator from California.

The amendment was agreed to.

Mr. MAGNUSON. Mr. President, the Senator from California and I have had a little arrangement. I may ask to reconsider the amendment when the Senator from New Hampshire comes back. I am sure it will be all right.

EXTENSION OF VOTING RIGHTS ACT OF 1965—REFERRAL TO COMMITTEE ON THE JUDICIARY WITH INSTRUCTIONS

Mr. SCOTT obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator yield briefly?

Mr. SCOTT. I yield.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that H.R. 4249 be referred to the Committee on the Judiciary with instructions to report back not later than March 1, 1970, and that at the conclusion of morning business on March 1, 1970, or the first legislative day thereafter, H.R. 4249 be made the pending business.

Mr. SCOTT. Mr. President, reserving the right to object, will the Senator identify the bill?

Mr. MANSFIELD. Yes; it is the voting rights bill.

Mr. SCOTT. May I inquire whether agreement has been reached with the Senator from Michigan?

Mr. MANSFIELD. Yes, and the Senator from North Carolina.

Mr. SCOTT. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL 9 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, if the Senator will yield further, I ask unanimous consent that when the Senate completes its business late tonight, it stand in adjournment until 9 o'clock tomorrow morning.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

DEPARTMENTS OF LABOR AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATIONS, 1970

The Senate resumed the consideration of the bill (H.R. 13111) making appropriations for the Departments of Labor and Health, Education, and Welfare for the fiscal year ending June 30, 1970, and for other purposes.

Mr. MAGNUSON. Mr. President, are there further amendments?

Mr. SCOTT. Mr. President, I have an amendment, which I send to the desk and ask the clerk to state.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read the amendment as follows:

On page 64, line 18, in lieu of "no" insert the following: "Except as required by the Constitution no".

On page 65, line 8, in lieu of "no" insert the following: "Except as required by the Constitution no."

Mr. SCOTT. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCOTT. Mr. President, may I ask the distinguished majority leader to yield further?

The PRESIDING OFFICER. The Senator from Pennsylvania has the floor at this time.

LEGISLATIVE PROGRAM

Mr. SCOTT. Mr. President, I will now address a further question to the distinguished majority leader. As I understand it, the future order of business would be to take up the transportation appropriation bill, the foreign aid appropriation bill, and the supplemental bill.

Mr. MANSFIELD. That is all.

Mr. SCOTT. And that is all the business, except we would be waiting for conference reports. Is that correct?

Mr. MANSFIELD. Yes, with the exception that if something noncontroversial comes up on the calendar, we will take it up, but I want to concentrate on appropriation bills and see if we can beat the Presidential deadline and get out of here.

Mr. SCOTT. Very well.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. MAGNUSON. I did not know there was a presidential deadline.

Mr. MANSFIELD. Well, the President said he would call us back if we did not complete all our appropriation bills. Oh, yes, there will be the tax bill conference report.

Mr. MAGNUSON. I want to have a deadline for appropriations and authorizations and what they send up here.

DEPARTMENTS OF LABOR AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATIONS, 1970

The Senate continued with the consideration of the bill (H.R. 13111) making appropriations for the Departments of Labor and Health, Education, and Welfare for the fiscal year ending June 30, 1970, and for other purposes.

Mr. MAGNUSON. Mr. President, I want to ask this question with the indulgence of the Senator from Pennsylvania. There are no more of what I would call money amendments pending. We do not have any here that we know of. No Senator has notified me of any. So it is logical to proceed with the general language of sections 407, 408, and 409.

Mr. SCOTT. Yes.

Mr. MAGNUSON. If there are any last minute money amendments after this is over, I do not think the committee will look very favorably upon them, because we have gone all afternoon on them.

Mr. JAVITS. Mr. President, will the Senator yield to me?

Mr. MAGNUSON. I yield.

Mr. SCOTT. Mr. President, I will be glad to yield for a question, but I do not want to suspend the amendment.

Mr. JAVITS. Mr. President, will the Senator yield to me?

Mr. SCOTT. I yield.

Mr. JAVITS. Not to displace anything, but to have a momentary colloquy. The only other money amendment I had in mind was directed to the very important summer job problem. I have determined in my judgment, to rest with the committee, because I have such a feeling for the Senator from Washington in this respect, who helped me immeasurably to get the little bit of money that we did before. He has provided money which will bring it up to 1969. The only thing I would like to say is that the Conference of Mayors feels very strongly that they need at least $50 million more to meet the need of the cities next summer. In the interim, between now and the next supplemental or the January supplemental bill, I will do my utmost to see if they can make that case, basically and factually, and stand back of it.

The only reservation I would like to interpose is that the Appropriation Committee will recognize that we are not waiving anything here. We have great faith in the chairman of the committee. We know he is not the chairman of the Supplemental or Deficiency Committee. Nevertheless, he is a very important member, and so are the members of his committee.

I just want the Senator to bear in mind that we are going to proceed in good faith ourselves when we must make our case. We will come to the Appropriations Committee, and, if need be, to the Senate, and ask for the Senate's help.

Mr. MAGNUSON. I shall be looking forward to it, because, as the Senator knows, to me that is a fine program, and the only problem we have is whether they can justify the figures they come up with.

Mr. President, I yield now to the Senator from Texas, who has a very minor, short amendment, which will not require over 2 or 3 minutes.

Mr. SCOTT. Mr. President, if I may do so without losing my right to the floor, I shall be happy to yield to the Senator for that purpose.

The PRESIDING OFFICER. The Chair advises the Senator from Washington that there is an amendment before the Senate. The Senate cannot take up another amendment except by unanimous consent. Is there such a request?

Mr. SCOTT. Mr. President, I ask unanimous consent that, without losing my right to the floor or the right to pursue my own amendment immediately thereafter, my amendment may be temporarily laid aside for the purpose of the offering of an amendment by the Senator from Texas (Mr. YARBOROUGH) and action thereon.

Mr. DOMINICK. Mr. President, reserving the right to object, suppose we have a yea and nay vote on the amendment of the Senator from Texas; is the Senator's right to the floor protected on that? I do not know whether we shall have a yea and nay vote or not.

The PRESIDING OFFICER. Under the unanimous consent agreement, it will be protected.

The amendment of the Senate from Texas will be stated.

The assistant legislative clerk read the amendment, as follows:

On page 22, lines 18 and 19, strike out "$250,000,000" and insert in lieu thereof "$251,200,000".

Mr. YARBOROUGH. Mr. President, this amendment would add $1,200,000 to the bill. It would provide additional money for schools of public health. There are now 16 schools of public health in universities in the United States. The last one formed was at the University of Texas at Houston.

The sum for the support of such schools now in the bill is $9,471,000. That sum does not include any money for that newly established school of public health. In addition, there are four other States that have schools of public health in the planning stage. Those States are Alabama, Illinois, Ohio, and Washington.

Mr. President, these are badly needed institutions. There are hundreds of positions open in the field of public health, with no one there to fill them. The distinguished Senator from Hawaii (Mr. INOUYE), who was here a moment ago, wishes to join in offering this amendment, because he thinks a school of public health is being planned for the University of Hawaii.

This is a very modest amendment, to provide badly needed funds to support this school for training in the field of public health, and I hope that the distinguished manager of the bill will accept the amendment.

Mr. MAGNUSON. Mr. President, as far as I personally am concerned, I think that had this amendment been presented

to the committee, we would have accepted it. We heard a great deal of testimony about the need for trained people in this field.

Our hearings have indicated that these dedicated people have done everything they could, and if there is a crisis in health care in this Nation, it is due to failures in the delivery of health services to the people.

The Senator's amendment will help to provide more of the necessary people to do that kind of job, which there are now too few people to do; in fact, there seem to be too few who aspire to that kind of work.

Mr. YARBOROUGH. There have been too few schools.

Mr. MAGNUSON. I am willing to accept the amendment, and I yield back the remainder of my time.

Mr. DOMINICK. Mr. President, how much money is involved in this amendment?

Mr. YARBOROUGH. $1,200,000. Under the bill as now constituted, the amount provided for schools of public health is $9,471,000. That figure was arrived at before this school in Houston opened. There are four additional schools in the planning stage now, in addition to the ones in existence already.

Mr. DOMINICK. The ones in the planning stages have not been provided for in the bill; and the one in Houston is all that the amendment would cover?

Mr. YARBOROUGH. Only the one in Houston.

Mr. DOMINICK. The use for all the other funds provided has already been planned?

Mr. YARBOROUGH. Of course, it is not earmarked for the particular schools. But the ones in the planning stages cannot even get any of this $9,471,000. It is already earmarked for use.

Mr. President, I hope that the amendment will be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Texas.

The amendment was agreed to.

The PRESIDING OFFICER. The Senator from Pennsylvania has the floor.

Mr. SCOTT. Mr. President, my amendments to sections 408 and 409 are identical as to each section, and are being considered en bloc.

Mr. STENNIS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order. The Senator will suspend until order is restored.

The Senator from Pennsylvania may proceed.

Mr. SCOTT. In addition to myself, the amendments are being offered on behalf of the distinguished Senator from New Jersey (Mr. CASE), and the distinguished Senator from Rhode Island (Mr. PASTORE); and I also ask unanimous consent to add as cosponsors the names of the distinguished Senator from Kansas (Mr. PEARSON) and the distinguished Senator from New York (Mr. JAVITS).

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCOTT. These amendments involve the addition of a single line only at the beginning of each section, which would read, "Except as required by the Constitution,"

The issue, in its simplest terms, is this: Will we or will we not abide by the Constitution of the United States and the decisions of the highest court in this land? If we are prepared to ignore the Constitution, the Whitten amendments might be tempting to some, though not to me. If we are to abide by the Constitution, we must render the Whitten amendments consistent with the Constitution.

I believe we must alter the amendments to fit the Constitution, for I am not about to try to change the Constitution to fit the concept visualized by the drafters of those amendments.

I suggest that there is a proper way to deal with what is sought to be accomplished, which would be for those who favor those amendments to submit a constitutional amendment. Meanwhile, to the end that we may abide by the Constitution, I support language, which would precede each of the amendments, such as I have read. Then we continue with the remainder of each section.

If there is any question in any Senator's mind as to the propriety of the Whitten amendments, as reported out of the Appropriations Committee today, the October 29, 1969, decision of the Supreme Court in Alexander against Holmes County Board of Education should dispel that question.

Since that decision, the President of the United States has declared that his administration was committed to enforcing the order of the Supreme Court. The lower courts must, without question, enforce the will of the court. Is Congress, then, going to turn the course of justice to a new direction? The answer, I think, is clearly "no," and we are indeed fooling ourselves if we believe we can change it.

What we are inevitably going to do, if we leave the Whitten amendments intact, is produce a double standard of law enforcement which will leave every school district in absolute confusion as to what its obligations are under the law.

The Whitten amendments would permit so-called freedom-of-choice methods of desegregation, while the courts have, for all intents and purposes, outlawed them as insufficient to meet the tests of the Constitution. These amendments would curtail the ability of HEW effectively to work with the school districts to come up with effective desegregation plans, although the burden of the law is still there to produce such an effective plan for desegregation. The Whitten amendments would permit the blatant subsidy of discriminate segregation, although the laws of Congress and the decision of the court have clearly outlawed that kind of subsidy. In short——

Mr. DOMINICK. Mr. President, will the Senator yield for some questions?

Mr. SCOTT. If I may finish this paragraph, I shall be happy to yield.

In short, what HEW would not be able to do, the courts would still be forced to do.

I yield to the Senator from Colorado at this point.

Mr. DOMINICK. I should like to ask the distinguished Republican leader a question or two on legislative interpretation here.

It is my understanding in any court case that the presumption is in favor of constitutionality. It is also my understanding that if something is unconstitutional, then it gets knocked out. So, what do we gain by putting in the words that are provided, as I understand it, in the amendment of the Senator, and leaving the remainder of the sections in?

Are we not just exercising ourselves in a little verbage without really accomplishing very much one way or the other?

Mr. SCOTT. I am afraid that would not be the result if we were to accept the language of section 408 and section 409 as written. Because, as written, that would require the Office of Health, Education, and Welfare to withhold funds under certain circumstances where the decisions of the courts and the administrative decisions of the Department of Justice are to the contrary.

In other words, the Department of Justice has, by the direction of the President, undertaken a course of action which would govern the use of Federal funds in desegregation matters. And if this amendment were to be agreed to in this form, the Department of Health, Education, and Welfare would be instructed that it could not use the funds for the same purpose that the Department of Justice would, in fact, be instructed by the President to use the funds for. In other words, we would have one department of the Government unable to use funds because of this restriction in the law, if it is allowed to remain.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. SCOTT. I have already yielded to the Senator from Colorado.

Mr. PASTORE. Will the Senator yield on this very point?

Mr. SCOTT. I yield.

Mr. PASTORE. Mr. President, I think there is a little more to it than just that. As I read the amendment adopted by the committee, the amendment amounts to a modification of a Supreme Court opinion that determined the constitutional rights of the individuals involved.

Mr. SCOTT. The Senator is correct.

Mr. PASTORE. What we are really trying to do here is to reaffirm the constitutionality of the right of the individual as interpreted by the court, irrespective of the practicalities of the hardships that may be involved in certain units. That is what it amounts to. We have to talk frankly here.

The purpose of the amendment as reported by the committee was to create a slowdown that the Supreme Court said cannot take place because it violates the constitutional rights of the persons who are being asked to slow down.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. DOMINICK. Mr. President, I appreciate the comments made by the Senator from Rhode Island. I do not know what I will do on the particular amendment. That is not the point. I have not decided that yet.

What I am saying is that I am not sure that adding the language adds anything one way or the other, because either a thing is constitutional or it is not. And saying, "except as provided in the Con-

stitution" does not seem to me to add a word of substance to the amendment.

Mr. SCOTT. It adds everything of substance, I add respectfully, because we adopt a requirement that notwithstanding any language which falls under the interpretation of the statutory language, the administrators of the Health, Education, and Welfare Department are compelled to abide by the Constitution, which means to abide by the decision of the Supreme Court in interpreting the Constitution.

Mr. DOMINICK. But they are required to do that anyhow.

Mr. SCOTT. Not if we leave the language as it is now.

Mr. DOMINICK. Not with these funds.

Mr. SCOTT. Not with these funds. These words would attempt to exempt the use of these funds from the requirement of the Supreme Court decision, and would have all of the force of an act of Congress declaring that certain funds can be exempt from a Supreme Court decision.

Mr. STENNIS. Mr. President, will the Senator yield?

The PRESIDING OFFICER. The Senate will be in order.

Mr. ERVIN. Mr. President, will the Senator yield?

Mr. GRIFFIN. Mr. President, will the Senator yield briefly?

Mr. SCOTT. I yield.

Mr. GRIFFIN. Mr. President, I want to say again what the Senator from Rhode Island said, but in different words.

The key words, of course, in section 408 and section 409 are "against the choice of his or her parents or parent."

If a so-called freedom-of-choice plan under all circumstances were constitutional, then the argument of the Senator from Colorado would be correct. But the Supreme Court of the United States has said that in some circumstances and in some situations a so-called freedom-of-choice approach is not constitutional.

This language would, in effect deny the use of Federal funds to achieve the purposes required by the courts under the Supreme Court decisions unless we put in this qualifying language.

The Senator from Pennsylvania is merely inserting the language, "except as required by the Constitution." If it is required by the Constitution, then the funds can be used. If it is not required by the Constitution, then his amendment would not affect the language in the bill.

Mr. DOMINICK. Mr. President, will the Senator yield on the same point?

Mr. SCOTT. I yield.

Mr. DOMINICK. Mr. President, does that mean that the Secretary of Health, Education, and Welfare would be entitled to use the funds provided in the bill in order to foster lawsuits in any area of the country—Pennsylvania, Colorado, or wherever it may be—in order to require the schools to go into a busing system?

Mr. SCOTT. No. That is not my interpretation of the amendment. I think the contrary effect is intended here, that if we comply with the Constitution and with the directives of the President and with the procedures now in force in the Department of Justice, we are not fostering litigation, but we are attempting to avoid new litigation.

Mr. STENNIS. Mr. President, has the committee amendment been called up and submitted to the Senate for approval?

The PRESIDING OFFICER. All committee amendments have been agreed to en bloc, to be considered as original text for the purpose of amendment.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. STENNIS. Mr. President, I want to submit this proposition to the Senator from Pennsylvania.

The purpose and the meaning of the amendment has not been presented to the Senate. The consideration by the committee and the action by the committee has not been presented.

With all due deference to everyone, we are just backing into this matter as to what the amendment means without any explanation of the content or the history of it or of the purpose of the amendment according to the sponsor.

I submit to the Senator from Pennsylvania that the more orderly and, I think, the customary way of getting the matter before the Senate would be for someone to explain the amendment from the committee standpoint.

The amendment was adopted by the House. It was approved by the Appropriations Committee of the Senate by a vote of 13 to 8. And it was on a recorded vote.

Mr. PASTORE. The Senator is correct.

Mr. STENNIS. It has had no explanation on the floor. I very respectfully submit that there should be some chance for the committee to be heard and represented and to get the matter before the Senate. Then the Senator from Pennsylvania would certainly be in order.

This is a mighty important matter. We are talking about the constitutional rights of people. We are talking about the practice. And we are talking about schools. We are talking about children. We are talking about teachers. And we are talking about parents. If I obtain the floor, I am going to talk about parents everywhere, not just those who might be involved in a case.

So I implore the Senator to let us have a presentation of this matter, and then his amendment would be in order.

Mr. DOMINICK. Mr. President, will the Senator yield for a brief comment to explain my last question?

Mr. SCOTT. I yield.

Mr. DOMINICK. We have in Denver, Colo., a very complex and difficult situation. We had a school board which put in a forced busing system. Denver is one school district. This takes people from one side of the city to another, and it is for the purpose of overcoming racial imbalance, de facto racial imbalance, in certain sections.

Then there was a school board election, and the new people ran against forced busing. They won by an overall margin of over 2 to 1, about 4 to 1 in the Spanish-American areas, where the people were against forced busing. They reversed it and said, "We will have busing, but it will be done on a voluntary basis." The people who had been defeated in the election went to court and got a Federal injunction against implementing the new order of the school board. That case will come up in January or February.

That is why I asked the question as to whether or not the funds in this case could be used for the purpose of subsidizing either side in a situation of that kind. I think this is a highly touchy issue, just as the Senator from Mississippi has said. It involves people in deepest emotions.

Mr. SCOTT. I am prepared to reply to the Senator from Mississippi and the Senator from Colorado.

To the question, first, from the Senator from Colorado:

The section clearly states that "no part of the funds contained in this act may be used to force any school district to take any actions involving the busing of students."

Therefore, if the busing is voluntary and is accepted and agreed to by the participants, it does not seem to me that it would be forcing the school district to take the action in the Colorado matter.

Mr. DOMINICK. But it is not voluntary.

Mr. SCOTT. If it is not voluntary, it is governed by the present provisions of the Constitution, by the interpretations and decisions of the courts—the Supreme Court and the lower courts.

In reply to the suggestion propounded by the distinguished Senator from Mississippi: The amendment is at the desk. As soon as I finish my prepared statement, I would expect that opportunity would be given both to the Senator from Mississippi and the Senator from New Jersey, who wishes to comment on the history of the amendment in the committee, so that we may have the benefit of that. I have not much more to go on the prepared speech. At that point, I would be glad to yield for that purpose.

Mr. STENNIS. Mr. President, I have great respect and real affection for the Senator from Pennsylvania. I know he wants to do the right thing. But this is a highly important matter, as he has said; and unless there is some chance soon for those who favor this amendment—and the committee does favor the amendment—I will not be in any kind of agreement about limiting time. I want to have such an agreement, but I just have to fight the best I can, unless we are going to have a chance to present it in that way. The Senator is entitled to make his speech, of course.

Mr. SCOTT. The Senator is a good friend of mine, and I hope that he would not regard me as using too much time if I finish a page and a half of a prepared speech.

Mr. STENNIS. No. I say that the Senator should make the speech.

Mr. SCOTT. I am most anxious that we proceed

Mr. CASE. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. CASE. The Senator from Mississippi, in his deep concern about this problem, with which we are all concerned, has interrupted several times on this point. I think it is only fair to indi-

cate that the Senator has had two extensive hearings already, once in our subcommittee on several different occasions; and I think he will agree that most of us, especially those who are not entirely in agreement with him, were attentive to his remarks and attended the committee quite diligently. So I think that he has had already a great deal of attention paid to the concerns which he has expressed, and which I am sure he will express on the Senate floor, as is his right. I just think that it is not at all inappropriate for the Senator from Pennsylvania, on his own time and in his own way, to explain fully his views on this matter without interruption.

Mr. SCOTT. Yes. I do hope that the distinguished Senator would extend to me that opportunity; because, after all, I am a cosponsor of the amendment, so that I have some interest in it, and I am most anxious to conclude.

Mr. STENNIS. I just thought it appropriate to say now, before we backed into this matter and had a great deal of discussion, that it had not been presented.

I appreciate the Senator's position very much, and I want him to make his speech.

Mr. SCOTT. I thank the Senator. I am not known on the floor of the Senate as one who uses more time than the minimal amount to express his thoughts. I hope that is my reputation.

I repeat:

In short, what HEW will not be able to do, the courts will still be forced to do.

Indeed, it is quite possible, if not likely, that some legal challenge to our action would follow any passage of the Whitten amendments, perhaps within days, and it is equally likely that the Supreme Court could find the Whitten amendments to be inconsistent with the Constitution. This is not the sort of embarrassment I wish to see visited upon this body.

Let me assure Senators, however, that fear of embarrassment is not what moves me today to oppose the Whitten amendment and to back the amendment to Whitten which adds the words "except as required by the Constitution."

No, we have more than a high-flown legalistic argument at hand here. We have the effect upon thousands of children in formerly dual school systems who have begun to experience what could be called an equal educational opportunity for the first time in their young lives. There is no doubt in my mind, nor in the minds of any other experienced observer of the patterns of civil rights enforcement, what the effect of the Whitten amendment will be to undo completely several years of progress, untold hopes of children and their parents, and a reputation for fair play which had begun to be fixed by the Government of the United States.

As Secretary Finch said in his plea to members of the Appropriations Committee several days ago:

> Recalcitrant school districts would be encouraged to harden their positions, and districts which have complied with the law would be tempted to go back on their commitments. This could seriously jeopardize the substantial progress made in school desegregation.

I believe Secretary Finch is absolutely right.

The way out of the dilemma we face is quite clear. We must adopt the amendments to the amendments, which begin with the words, "except as required by the Constitution." It is language which has the full backing of Secretary Finch and of the Nixon administration. It is language which permits the upholding, not the destruction, of constitutional law as it applies to children in our Nation's schools.

It is the Constitution which governs this Nation, and it is just that it should be so. We are quite prepared to cite it, to quote it, to invoke it and to embrace it in the name of law and order. Well, what we are talking about here is law and order, and the proper process of Government. Will we abandon the Constitution in the name of civil rights, in the name of equal opportunity to read and write, even as we hold it loudly as ours in other areas of the law? I dearly hope we will not abandon it.

We may not all like all that the law and the decisions prescribe. Some do. Some do not. All must abide by the law or justice falters.

In keeping with our plain duty, let us amend these unfortunate amendments to conform to, rather than confront, the Constitution of the United States.

I submit that, in this body, which has many lawyers, I fail to see what possibly can be wrong to adding to an amendment, even if we accept the suggestion that has been made here that it does not change it, with which I greatly disagree.

But I cannot see anything wrong with adding to an amendment to this kind of bill the statement "except as provided in the Constitution." If the Constitution does not provide for it, well and good; if the Constitution does provide for it, well and good. But let us not change the rules in the middle of the process of securing free and equal treatment for all the children of the United States. Let us not say to the Justice Department, "You are bound by the Supreme Court decision," but say to HEW, "You cannot spend a cent of the money in compliance with Supreme Court decisions because Congress, in its majesty, said you cannot" which merely carries us back to court and possible litigation.

Therefore, Mr. President, I conclude that if it is wrong to add to an amendment the phrase "except in accordance with the Constitution" what is wrong with it entirely escapes me, although I am aware I will hear some argument to the contrary.

I yield the floor.

Mr. COTTON. Mr. President, despite the fact that the distinguished minority leader designated the Senator from New Jersey to make an explanation for the committee, I would like to be recognized at this time.

Mr. SCOTT. I am sorry. I did not see the Senator from New Hampshire.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. COTTON. Certainly. I yield.

Mr. STENNIS. Is it agreeable with the Senate that we have a quorum call so that Senators may know the matter pending before the Senate is being debated.

Mr. COTTON. I would be glad to do so, with the understanding that I do not lose my right to the floor.

The PRESIDING OFFICER (Mr. DODD in the chair). Does the Senator suggest the absence of a quorum?

Mr. COTTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. COTTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COTTON. Mr. President, for just a minute or two I think it might be well to review what happened in committee, not with respect to who was heard or how long they talked, or anything else, but just the development of this matter within the committee.

Of course, we were faced with the language in sections 408 and 409, the so-called Whitten amendment language. In the course of discussion about that language it was suggested—I believe I was the one who suggested it—that this language was dangerous any way one looked at it. This is what is stricken out now:

> SEC. 408. No part of the funds contained in this Act may be used to force busing of students, the abolishment of any school, or to force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parents or parent.

Then, section 409 continued with respect to Federal funds. Under that phraseology if a school district wished to cooperate, wished to integrate, wanted, of its own volition and accord to institute busing for any reason, this language would simply mean that district would be deprived of the use of any of the funds under this bill to help it do in a voluntary manner what it wished to do.

Mr. STENNIS. Mr. President, I hate to interrupt the Senator, but let us have order. Will the Chair please ask the Senator to suspend until the gentlemen who are at the desk complete their business there?

The PRESIDING OFFICER. The Senate will be in order.

Mr. COTTON. Mr. President, it was suggested, I think by the chairman of the subcommittee, that no part of the funds contained in this act may be used to force any school district to take any action involving busing of students, and so forth. In his original language was the expression that is in the amendment offered by the distinguished minority leader, the Senator from Pennsylvania, referring to the Constitution. In a compromise that was taken out.

Mr. President, the thing that troubled this Senator from the beginning was that clearly a majority of the committee felt very strongly against enforced busing of students. It was declared to be the intent of those who were supporting it that the inclusion of this proviso, or the edict against "the abolishment of any school, or to force any student attending any elementary or secondary school to attend

a particular school against the choice of his or her parents or parent" was simply meant as an adjunct to the primary thought which was the busing.

In other words, one way of forcing busing is to abolish the school; then, they have to bus. On the other hand, those of the opposite view who were opposed to the inclusion of this language in the legislation took the position that in reference to "the abolishment of any school, to force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parent or parents" were the three elements of integration and that they were included there in order to prevent integration, voluntary or involuntary.

Mr. President, I must confess, and I so stated in committee the primary thought here was whether or not there should be enforced busing. If section 409 had been cut out entirely, and section 408 had ended with a period after the word "students," so that it read:

No part of the funds contained in this act may be used to force any school district to take any actions involving the busing of students.

Then I think that the language would have adequately covered what was the opinion of a distinct majority of the committee and, certainly, in the opinion of the Senator from New Hampshire, what we tried to do a year ago in this bill.

A year ago the chairman settled the entire matter by suggesting that no part of the funds could be used for the busing of students for the purpose of overcoming any alleged racial imbalance. Everyone on the committee agreed a year ago that was the objective they had in mind. But, after the bill was passed, it is my understanding that the General Counsel, of the Department of Health, Education, and Welfare, made an interpretation which just knocked it out so that it was completely inoperative and any busing would be alleged to be for purposes other than racial imbalance. So that it was a completely ineffective provision. For that reason we are marching up the hill again this year, to try to agree on language that the majority of us on the committee would agree would do one thing; namely, prevent the use of money appropriated in the bill for enforced busing of students. That is about the situation we found ourselves in.

As a compromise, the reference to the Constitution was sought to be knocked out by the amendment of the distinguished Senator from Pennsylvania and was stricken out. The rest of the language was offered by the chairman of the committee. I simply add that, for my own part, I would have felt the matter greatly simplified, if we put a period right after the word "student," and then we have a distinct and clear-cut plain provision, that money in the bill cannot be used to force any school district to bus students.

Mr. DOMINICK. Mr. President, will the Senator from New Hampshire yield?

Mr. COTTON. I yield.

Mr. DOMINICK. In the authorization bill which we passed unanimously through the committee, there was a provision which once again repeated what I think the Senator is referring to; namely, that no portion of funds authorized under the act shall be used to require busing of students for the purpose of overcoming a racial imbalance.

Mr. COTTON. Exactly.

Mr. DOMINICK. There was unanimous adoption of that. It is my understanding that it is the feeling, because of the interpretation given to it, that this can be easily avoided where they do not use the funds for that purpose and use local funds instead to do it, or they say it is not just to overcome racial imbalance, that it is for getting a better quality of education or something of that kind, which is using it as a method by which those funds are then used.

My concern with this provision is a little bit in reverse. We have a situation in Denver where the school board in one district had required that the respective schools in that district be balanced on a racial basis. The people who put it in ran for election and were defeated. The new school board said that it shall be done on a voluntary basis only. The old school board went to the Federal district court and got an injunction against the new school board. Therefore, we are now in a required busing situation for racial imbalance, of de facto segregation, to overcome it—that is the best way to put it, I guess.

The thing that concerns me is whether these provisions in the act might lead a Secretary to determine that he could put funds in, in order to back up the position of the fellows who are the plaintiffs in court to prevent voluntary busing and to require required busing. That is what concerns me because as I read it, it says here—

No part of the funds contained in this Act shall be used to force any school district . . .

He uses the word "force"—

to take any action involving busing of students . . .

But it does not say that he cannot use the funds for the purpose of helping them. It says "force" them to do it, if they do not want to. Suppose that they do. Then, it is my understanding that we can use the funds for the purpose of helping them to do that. If so, I think that is wrong, because we are subsidizing what is going on in a legal suit for enforced busing.

Mr. COTTON. I think that the Senator has raised a very good point because we were considering the language—

No part of the funds contained in this Act may be used to force busing students, the abolishment of any school, or to force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parents or parent.

Mr. DOMINICK. Right.

Mr. COTTON. Mr. President, with all that in there, it befogs the central issue about busing. If all we want to do, is see to it that under the language of the Whitten amendment, if a school district in Alabama, North Carolina, or Indiana—wished—to bus its students, under the language in the Whitten amendment, they could not use any of the money to bus them voluntarily or involuntarily.

If the purpose is to see to it that no money in the bill is to be used, I do not know how we are going to make the Department of Health, Education, and Welfare carry out the will of Congress. It was just as plain last year—just as plainly expressed. I am not a great lawyer, just a country lawyer, but I can read English and it was clearly expressed that it should not be used for the busing of students to overcome racial imbalance. They just threw it out and said that was no good because there were other reasons for busing.

Mr. DOMINICK. Could I ask the distinguished Senator from New Hampshire another question on this? Let us suppose we have a school district that has decided it will put a program in effect which will require busing—involuntary busing. It would seem to me that, under that situation, this provision here would permit the use of funds to support that school district.

Mr. COTTON. That is right, and it should not.

Mr. DOMINICK. I think that is wrong.

Mr. COTTON. I think that is wrong, too. I think it should be so phrased, if it can be phrased, so that HEW cannot get around it. It should be so phrased as to make it clear that no money in the bill can be used for the busing of students, whether it is against the will of the local school district or not against the will of the local school district for busing students, because it is no use trying again on this matter of busing students for the purpose of overcoming racial imbalance because they have already indicated that did not mean anything.

On the question of the amendment of the distinguished Senator from Pennsylvania, which was originally in the language offered by the Senator from Washington on the Constitution, I did not feel that that either added or detracted much because if it is constitutional, nothing that we write into the statute can stop it, and if it is unconstitutional, nothing that we write into the statute can be effective.

Thus, it seemed to me that that was surplusage, and the best thing to do was to take it as it was.

Mr. DOMINICK. That is the point I made originally. I appreciate that coming up again. I just say that none of the money can be used to support busing. But there are problems in the rural areas where they wanted to be bused, where they need maximum support in order to get to school from the ranches, the farms, and all the other problems we have there. So we are caught in a trap. I think we are in a tough spot.

This is designed on a racial basis, as I see it, but it goes so broad that it covers not only a racial situation but a lot of other situations in the country.

Mr. COTTON. We had that feeling in the committee. I voted on conviction at that time, and will again. It seems to me that last year we said exactly what the committee meant. Both Houses of Congress ratified it, and HEW disregarded it.

It seemed to me that we should put it

in again, and the committee should inform the Secretary that if this was going to be thrown out this time, he would certainly lose some funds when the committee wrote up the next appropriation bill, because that is exactly what we wanted to do. We said it last year, and everybody agreed to it except HEW, and they simply gave Congress the back of their hand and said the language did not mean anything because the busing might be for other purposes.

Mr. DOMINICK. I thank the Senator for his very helpful colloquy.

Mr. COTTON. Mr. President, I yield the floor.

Mr. STENNIS. Mr. President, the Senator from Washington, who is handling the bill, has been called from the Chamber for some purpose. I really did not intend to try to get the floor or seek the floor at this time. He was going to make a statement, but we are unable to locate him. I feel that he will be back shortly.

Under those circumstances, Mr. President, I want to present to the Senate something of the background of this amendment and its purpose; what it proposes to do and what it does not do. I, at least, speak from the experience of one who has been through this matter for 2 or 3 consecutive years and who has dealt with the other amendments to which the Senator from Nebraska referred, the application of which did not turn out well.

As I see this matter, the basic purpose is really an attempt now to get a policy or an implementation that we will not go so far and will not destroy the public schools. In other words, affirmatively, I wanted to preserve the public schools throughout this Nation. I think we have gotten down to where it is a question now of preserving education rather than just an extreme application of the enforcement of civil rights or full integration.

Mr. President, no place in the Nation is there full integration except in those places in the South that have been proceeded against so very severely. I make no attack on the civil rights law. I make no attack on the courts. This is a limitation on the money being spent. It is a limitation on appropriated funds. There is no question about the Congress having the power to appropriate money under such limits as it may prescribe. The departments, the courts, and everyone else have to take it under those conditions.

I want to emphasize that this is no attack on the Court. The suggestion has been made here already that this was an attempt to try to get out from under a court order. I severely and fully deny that. Those of us who have worked on the amendment are far older than the cases that have been decided. In my humble opinion, it will not affect those cases one bit. The plans and everything else for them have already been formulated and prescribed, and there is a court order for their implementation. I wish this amendment would affect them, but that is an accomplished fact. This amendment looks to the future.

So it is not true that this sponsor of this idea intends to try to evade a court order.

I want to reply to the point made here that this proposal would take away from the courts some power to use these HEW staff members. I want to especially submit this to every fair-minded person. I have not felt that employees of an enforcement agency should be used by the court, anyway. They are working with an agency here that has zeal and money and power to withhold funds, or to do this, or to do this, or to do that. If the court wants someone to represent it, it should call someone under judicial authority, I think, rather than go to the prosecuting attorney's office and get one of the assistant district attorneys.

Anyway, I think that is largely beside the issue here. This matter goes to the very extreme basis of enforcement that just goes too far. I mean enforcement by HEW.

This proposal would say, "You cannot use the funds for getting up plans that would force a school district to bus children." They are not trying to do that anywhere except in the South, but they are adopting plans that cannot be carried out any other way except through busing, beyond the community—not in the community—from one end of the school district to the other, which sometimes is from one end of the county to the other. They are making plans that would force those school districts to abolish the schools—just abolish the whole thing—and bus them on in somewhere else.

The Supreme Court never has ruled out freedom of choice under proper conditions.

This amendment would stop them from drawing up plans that would force those children to be hauled and assigned around without the consent of their parents. That is exactly the pattern of operations now outside the South. HEW does not require any busing in the North or East. It does not require abolition of school districts. It does not deny giving a parent freedom of choice. They are not operating anywhere except in the South, and this on the thinnest kind of legal position.

They have taken the position that they go into what we call the dual system only, or de jure segregation, where it was one time unlawful.

Let us see about that. Until 1954, all desegregation laws, racial schools, dual schools, were legal everywhere. The Supreme Court of the United States had passed on it time and time again. As late as 1927 the Supreme Court of the United States, in a unanimous decision by the late Chief Justice Taft, joined by eight of his colleagues, unanimously decided that it was legal. And it came on down to 1954.

So if it is illegal now, it was illegal everywhere then.

Furthermore, it is not only the Southern States, but, as I have found out through research—a part of it came through the Civil Rights Commission; and that is certainly not a southern institution—eight States beyond the South, which happen to have 91 percent of the Negro school population—and anything I say here is no reflection whatsoever on any race, but those States do have 91 percent of that part of the student population outside the South—all every one of them, at some time had laws that permitted or required segregation of the races in the schools. Illinois was one of them. New York was one of them. That has all been researched out. I put it in the RECORD a number of weeks ago, and it has not been denied.

So these are just the hard facts of life. I have the figures here to show, in a few minutes, the extreme segregation in those areas of those States, which grew up in exactly the same way that segregation grew up in the South, under its segregation laws.

Still, apparently, there is something holy, something not high but holy, about those States. There is no effort made, except what I shall mention briefly in a few isolated instances, to enforce this law anywhere except in the Southern States.

And what is the penalty there? Mr. President, they have gotten it down to this: For the violation of these orders and these plans, it is down, now, to the point where it represents the death penalty for a lot of our schools. That is what is coming. I preach against it, to keep the public schools open regardless, but you will see that they are getting down to where they will not be able to operate, whereas, during the same time since 1954, schools all over Illinois, Indiana, Pennsylvania, New York, and New Jersey, many of them with 100-percent colored students, many more of them with 99 percent, 98 percent, or 95 percent—I shall give the figures in a minute—are going on with immunity, with nothing being done by HEW.

And I do not know of any of the governments in any of those States that propose stricter enforcement of the laws on mixing the races. I do not know of any bill proposed here regarding those States, to clear up those situations. Still, the penalty is put on the Southern States whose history is very similar, and I say that penalty is death.

Mr. President, it is just not right. We do not have any national policy here. We do not have a national policy about desegregating schools. We have a sectional policy only.

We have integrated down our way. We have made more headway. I find by the figures there has been more change in our States since the 1954 decision than in many of these Northern States, and I have the figures here to prove it.

That is why we are pleading here. We are pleading for something less than the death penalty. You are pressing this thing too far. We are just seeking to get adopted here the same formula that you are getting applied to yourselves. I have named the States; I shall not enumerate them again.

Let me state what has happened outside the South, very briefly, about this busing. That is what we are seeking to lessen. Look to New York—and I speak most respectfully of New York, but what have they done about busing? I say to New York, "You can integrate those schools in Harlem, if you really want to." The Federal Government can do it, or the State government can do it. Just put enough manpower and womanpower in there to do it, haul those children out to

the areas where the white schools are, and bring a like number of the white students in, and you will have them integrated. You can do that anywhere.

But what has New York done about it? Have they tried? No. They passed a law this year—on May 2, 1969—a State law which prohibited busing of children on account of racial imbalance; and furthermore, it guaranteed every parent that they would not have their freedom of choice infringed in connection with the selection of a school for their children.

It just happens that Mr. Allen was Commissioner of Education in New York, and he proposed the busing plan for the State. The legislature picked that subject up; they passed this law in the general assembly by a vote of 106 to 43—or very close to those figures—and Governor Rockefeller signed the law. I have copies of it here, if anyone wants to see them.

They absolutely prohibited busing. Someone will say it is unconstitutional. Well, if we grant that, it is still a mighty good reflection of how the fathers and mothers feel in the State of New York about busing their children from school to school, and denying those parents the God-given right and the American right to have something to say about where their children go to school.

I speak with great deference to any area. Look at Denver. Look at Denver, Colo.; I have the statistics on that. Mr. President, that is one of my favorite places. If I were going to leave Mississippi, I might go to Colorado, but I am not going to move.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. STENNIS. Let me continue.

They had an election out there, and I have the names of these parties here, but I want to pass on. They had an order for busing. Two people ran for the school board on an antibusing program. One day the New York Times predicted they would be resoundingly defeated, and the next day they they reported that those two candidates were elected by a 2-to-1 majority over those who had favored busing.

People simply do not like it. Many other Senators have told me here on this floor, "I am against that busing."

We can all see what is coming. So when Senators say, here, that we are trying to override the Court, or trying to get out of something, that is just not true. It is not true. We are trying to save the lives of our public schools. We are trying to save a remnant, anyway, of the authority for choice of the parents of our children.

I tell you right now, Mr. President, when you go in and pick up a little child—black, white, brown, or whatever he is—and haul him away from his family, many miles away, to attend a school 6 to 20 miles away from home, or whatever it is, and bring him back late at night, you have gone just about all the way with that child's mother, or his father.

I know what the reaction is going to be. I believe if this pattern is enforced outside the South, it will bring about a more modified policy. What happened in Chicago, in the great State of Illinois?

Three or four years ago, someone in HEW sent them some kind of a communication about integrating their schools. I do not have the exact substance of it. But here came a message back from Mayor Daly. As I remember, he came to Washington about it. Perhaps he just sent a telegram. Anyway, they swept it under the rug somewhere, I do not know where, and that is the last that has been heard of that case.

This year, about June, they sent them a message over there about integrating their faculty in Chicago. Here came word back that the faculty said they would not do it. They would not change their schools; they already had their contracts. The teachers' union fired back a salvo. The school board wired in here to someone asking for $48 million, saying that if they were going to have to integrate the faculty, it would cost $48 million extra. That is the last we have heard of that case.

Mr. President, there has been only one real administrative proceeding by HEW outside the South under this law involving this money, and that was a small school district up in Connecticut, a small district in Connecticut, a community, or a small village.

One case has been filed by the Department of Justice outside of the South alleging discrimination. And that case was filed the day before Mr. Finch testified here before the committee. That is the only proceeding I can possibly find outside of our area of the country.

Do you call that a national policy? Do you think that is enforcing a principle enunciated by the Supreme Court in 1954 on a national basis? Of course it is not.

I do not want anyone treated as we are being treated—not in any area. But, as long as it goes on in this way where we have a sectional application, we are going to get the hot end of the poker. And the Nation itself will not have a national policy.

Mr. SCOTT. Mr. President, will the Senator yield very briefly to allow me to ask for the yeas and nays?

Mr. STENNIS. Mr. President, I yield to the minority leader for that purpose.

Mr. SCOTT. Mr. President, I demand the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, I do not want to talk too long. But the Senator from Rhode Island (Mr. PASTORE), who is an excellent Senator and really a great man—I do not believe he is present on the floor—said something to the effect that regardless of the period of time that was imposed, these things had to be done.

Let me tell the Senate it is hard to believe some of these plans that are being forced on us now. This is a court order. By means of the plan that came about, 960 children are assigned in one of these districts in a high school building that has only five classrooms. A man whom I have known all my life—he is a superintendent—said:

I can only get in 300 of them under any kind of circumstances. There is not even room for the rest of them to get in the building out of the rain.

In another case, there were 396 high school students assigned in one high school under the plan. And all of them had a course in science of some kind. There were only two classrooms in that building that were equipped to teach science. The best estimate we could get was that it would take 4 to 5 months to put in the equipment. But they said to do it by December 31.

With respect to the other example I mentioned concerning the five classrooms, I said, "Get an architect to go out there. Get an estimate of how long it will take to build it and how much it will cost. Put that under oath so that he can swear to it."

The estimate was that it would cost $1.5 million and take 8 to 9 months to build the building. But the order said to do it by December 31 or be in contempt of court.

That is what we have to live with. I hope there will be some kind of modification of those orders. But there has not been any yet.

Do we want the children, the mothers, and the fathers to travel a road that is that hard? Where will the education come in under conditions such as those?

Mr. ERVIN. Mr. President, will the Senator yield for a question on that point?

Mr. STENNIS. I yield briefly for a question.

Mr. ERVIN. Mr. President, I ask the Senator from Mississippi if those who are ardent advocates of desegregation do not magnify the integration of the bodies of the schoolchildren above the enlightenment of their minds.

Mr. STENNIS. The Senator is correct. That is exactly the extent to which we have gone.

Mr. President, I am going to quote from the President of the United States. I will be very brief. I do it with the greatest deference.

We all know that I do not do it critically. I do not boast of any kind of voting record. But I have a voting record that backs the President here that is almost as good as any Senator, and more than some.

I have three statements the President made concerning this matter.

The President of the United States last year said in the New Republic that he backs the decision of the Court of 1954, but that he did not believe in the busing of the schoolchildren away from their homes and into a strange community to overcome a racial imbalance.

He made the same statement in his campaign last year in a television interview in North Carolina. And I know he meant it.

And he made the same statement again in the U.S. News & World Report, I believe it was. I will produce that a little later in the debate. I have read it many times.

They come here this afternoon and say this represents the administration. It has Mr. Finch's name on it. However, it

does not have the President's name. And I do not believe the President of the United States stands for treatment of the kind we are getting. He said he was against it. And I believe he is against it.

He may be hemmed in some by these very severe Supreme Court decisions. And I do not attack the Court.

We are just asking here for a little relief against the extreme application of these matters by the Department of Health, Education, and Welfare.

As I said, I do not think that will affect the cases that have already been decided.

Mr. President, I have some statistics here, and I will be brief with these.

I find that we have a situation in which we have 303,000 Negro students in the Illinois public schools, or 76 percent of the total enrollment in the State are Negroes, in 284 schools in 21 cities. And those 284 schools are from 95 to 100 percent segregated. That is the term that HEW uses. That means that from 95 percent to 100 percent are black students.

There are 265,000 or 66.5 percent of all the students in the State in the public schools that are in 246 schools, in 14 cities or districts, that are 99 to 100 percent Negro students; 246 schools in Illinois alone, all over the State, that have from 99 to 100 percent Negro students.

In the city of Chicago alone, there are 104 schools that have 100 percent Negro students.

Do you mean that as a national policy, to let those things go on year after year after year when they drag us by the head, and our children and the parents, too, in order to enforce a ratio of integration?

Do not say they are not doing it, because I have heard them use that term too many times.

Where the white student enrollment in Chicago is 219,000 or 37 percent of the total, and the Negro student enrollment is 309,000 or 50 percent of the total, only 9,628 or 4.4 percent of the Negro students go to the majority white schools. And only 25,000, or 11 percent of the white students attend schools that have a minority group enrollment of over 50 percent.

In Maywood, Ill., which has a total public school enrollment of 6,300, 48 percent of which are white, 47-plus percent Negro, 65 percent of those Negro students are in two schools which are between 99 and 100 percent Negro. Under the attitude taken toward us, they would say to us, "Abolish those two schools."

Indiana is one of those States that had laws permitting—some requiring and others permitting—separate schools until, I think, into the 1930's. There are 57 schools in Indiana where the Negro enrollment exceeds 80 percent of the total enrollment. Of these, the Negro enrollment in 49 is 90 to 100 percent, and the total enrollment of 40 of those schools, the Negro enrollment, is 99 to 100 percent.

The figures for Indianapolis are just as bad. In the white area there, 64 schools have 96 to 100 percent white students.

They brush that off by saying, "Well, historically, the South had enforced segregation. That State had it."

I already have referred to New York. I found this: New York had a law that permitted separate schools—I have a copy of it here. It provided for separate schools. That was the law, I think, in 1900. I cannot tell when it was passed, but I have the law that repealed it. The repealing law was not passed until 1938. Part of the segregation that has grown up in that great area resulted from that law.

Ohio has just about the same picture. There are 197 predominantly Negro schools, and of those, 154 are 90 to 100 percent Negro, and 105 are from 98 to 100 percent Negro. That is the figure for the State at large.

I have the figures for New Jersey, and I mention these with all deference to those who represent that great State. I find that under the law in that State separate schools for Negroes were maintained well into the 20th century, despite an 1881 statute prohibiting the exclusion of children from schools on the basis of race. In 1923 the State commissioner of education ruled that local school authorities could provide special schools for Negroes in their residential areas and allow the transfer of white students from these schools to white schools. That was as late as 1923.

My point is that this is a limitation on an appropriation bill. This will be a start, I hope, toward forming a national policy that we do not have now; and when we bring the whole country into the formation of this policy, it will be a livable one. I do not think it will change the law as to integration. But it will be a livable one. It is one in which the parents can live and work. It is one in which the children can be educated. It is one in which the teachers can live and work. And all will move forward in a fine, progressive way.

That is the basic reason behind this very small request for some limitation on these funds.

The identical matter was taken up in the committee, and the committee had the fullest consideration of it. On a roll-call vote, the committee voted 13 to 9 in favor of retaining that provision.

With all respect, I do not think it means a thing in the world, as the Senator from Colorado has pointed out.

Mr. President, I do not care to retain the floor any longer. I believe the facts speak louder than anything I can say.

I referred to statements made by President Nixon, and I will put them in the RECORD at the proper place.

Does the Senator from New Jersey wish me to yield to him?

Mr. CASE. No. Since I have been left temporarily in charge on this side, I wanted to see if someone else is ready to speak.

Mr. STENNIS. Does the Senator from Florida have a question?

Mr. GURNEY. No. I am ready to speak.

Mr. STENNIS. I yield the floor.

The PRESIDING OFFICER. The Senator from Florida is recognized.

Mr. GURNEY. Mr President, I should like to address myself to sections 408 and 409 of the bill. I support the present language in the bill and oppose the pending amendment.

Mr. President, I hesitate, in a way, to mix in this school desegregation issue, not because I am afraid of the controversy in any way. I am not a member of the committee. Time is running out on us in this session, and many Members of the Senate have a far greater knowledge of this subject than I do. But it does occur to me that my viewpoint is a bit different, perhaps, from that of some other Senators.

Florida is classified as a Southern State, and indeed parts of it certainly are. But other parts of it are more a melting pot of people from everywhere. Certainly, Miami, our largest city, is more a northern city than a southern city. A great deal of Florida is much like many Northern States in the composition of its population.

Then, too, I think my personal viewpoint on the matter might reflect the viewpoint of many of my northern colleagues, especially on this side of the aisle, if they should live in the South, as I do.

I was born and raised in New England. As a young man, I lived and worked in New York City, before I came to Florida. I think this is of some importance, because a man's attitudes are deeply affected, perhaps indelibly, by his beginning experiences.

But, last and certainly most important, this Senator can speak about this problem with practical experience. Many of those who will cast votes here tonight will do so with great conviction but really have not had anything to do with this problem at all.

There are 67 counties in the State of Florida, and this year we have active files on school desegregation matters in 43 of these counties. Twenty of them are in what I would call trouble with either HEW or the courts. Some have had their school moneys cut off, and many of the school boards have been in my office, in person, or on the phone, seeking our help to try to work out some of these matters. So, believe me, I am one Senator who has been in the middle of the school problem all year. As a matter of fact, one staff member of mine has spent, I would estimate, at least 4 solid months of his time, every day, doing nothing but working on school problems in the State of Florida.

These amendments certainly are simple and in understandable language. They say that Federal funds should not be used to force school districts to bus children. To close school buildings or schools, or to assign students against their choice—to a particular school. In quieter times, or on a less inflammatory issue, it is entirely possible this language would meet with the approval of the vast majority of the Members of this body. But these are not quieter times, and obviously this whole school controversy has stirred so much passion that we are losing sight of the basic, primary goal of our school system: Educating children, black and white.

I think it is time that we pause for a moment and reflect on what extraordinary changes have taken place in public education in America during the last 15 years, the years since the Brown against

Board of Education decision in 1954. That case stood for the proposition that the "separate but equal" school systems which found constitutional support in decisions such as Plessy against Ferguson in the last decade of the 19th century, were unconstitutional. The Court reasoned that it was inherently unequal for the States to set up or to maintain separate school systems, based exclusively on race. Leaving aside the constitutional arguments, it is a proposition which has behind it much moral strength. Tax moneys should not be used to discriminate against any citizen or class of citizens.

The constitutional underpinnings for this action were, of course, the 14th amendment's guarantees of the rights of citizenship, that is, that all persons born or naturalized in the United States were citizens of the United States and the State where they reside and that they had a right "to equal protection of the laws." The 14th amendment, properly construed, is, of course, a restraint on actions of the State governments:

> No State shall make or enforce any law which shall abridge the privileges or immunities of the citizens of the United States nor shall any State deprive any person of life, liberty, or property without due process of law, nor shall any person within its jurisdiction be denied the equal protection of the laws.

Such separate school systems, the Court reasoned, violated the 14th amendment "equal protection" clause. The rationale was that American students of the Negro race could not receive a proper education if they were forced to attend wholly black schools. The unstated hope was that Negroes would receive better education if only they could avail themselves of the opportunities offered by an integrated school system. The Court decreed unanimously that school systems would be desegregated "with all deliberate speed." It is interesting to note that Justice Black, who was one of the Justices who sat on the Brown case, recently stated that this preemptory language "all deliberate speed" had caused more trouble than any other single legal phrase in his memory. He regretted its inclusion and so do I.

In the chain of cases following Brown, however, this prohibition on State action, this negative, has been converted, by judicial fiat, into a positive and affirmative obligation to insure "desegregation." It is one thing for the Supreme Court to say that State X may not set up two separate school systems, one for white children and one for black children. No one argues that point anymore. Brown against Board of Education was right and sound law.

But, it is quite another thing for the courts to seek to impose novel and affirmative obligations on local school districts, such as the obligation to bus children from one locality to another to meet these arbitrary and dictated Federal standards of integration. I think the judicial intervention and bureaucratic meddling into matters of this sort have resulted in the sacrifice of sound educational goals to achieve a forced, and artificial integration.

The children, of course, are the pawns in a chess game that has become ludicrous and dangerous. They are shuffled about from place to place; they are expected to bear long, tiring, time-consuming, sometimes even dangerous, daily bus rides so that some arbitrary standard of integration can be achieved—a standard that has no soundness of its own, but exists only in the mind of the contriving bureaucrat who frames it.

Often the bureaucrat's chief claim to fame in this field of school desegregation is that he is dedicated to the abstract notion of integration. He may know nothing about the economic or social facts surrounding a particular school problem, and could care less. In other words, the solutions are as sound or as stupid as the official who fashions them.

In my view, this bureaucratic and judicial overreaching, this heavy-handed and meddling by the Department of Health, Education, and Welfare, in the school desegregation field, has brought about the chaos that we find today in the public educational systems throughout much of the Nation.

I do not think anybody in his right mind would argue that the racial situation in the public schools is better today than it was before Brown; it is immeasurably worse and in large measure it is worse because of the arbitrary, unsound, and often senseless mischief which has occurred in the intervening years.

I think the committee language brings back some rationality into this whole picture. Let me offer to Senators two specific examples of the abuses about which I am thinking.

The first case involves the Palm Beach School District in my own State of Florida. The Palm Beach County School System in 1968–69 year had a school population of 61,715 pupils, of whom 42,067 were white, 16,504 Negro, and 1,224 of other races, primarily Indians and Orientals. At the start of the 1968 school year, there were 91 schools in operation in the system, 15 of which were attended exclusively by Negroes, 12 exclusively by whites, and seven other schools were attended predominately by Negro pupils, with no white children in attendance. The Palm Beach School District had a plan for achieving further integration.

The plan, however, was not found acceptable by the Federal district court. A new plan was drawn up. It was found wanting by the Department of Health, Education, and Welfare. Another new plan was conceived by the Florida School Desegregation Consulting Center at the University of Miami—the so-called title IV plan and this plan was adopted in toto by HEW. HEW then threatened to cut off further Federal assistance to Palm Beach unless or until the title IV plan was adopted. Hearings were held; appeals taken; appeals denied.

One of the provisions of the HEW plan deserves to be mentioned: The plan decreed that substantial numbers of pupils were to be bused from the east coast to the Glades area near Lake Okeechobee in the central part of the State and vice versa, from the Glades to the coast. The distance is about 40 miles and the highway, in all candor, is not a highway. This is one of the most dangerous roads in the State of Florida. It is called "suicide alley" locally. There have been, according to the Palm Beach County sheriff's office, 18 to 20 fatalities on it just in the last year and a half. Accidents are commonplace on this old two-lane route: the area is sparsely populated and high speeds are the rule. The road has no proper siding in many places as it goes through the marsh land and is bordered by canals. It is dangerous in the best weather conditions; when it rains, it is murderous.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. GURNEY. I yield.

Mr. STENNIS. Mr. President, I suggest that we have a quorum call, and I have in mind a live quorum. There are only six or seven Senators in the Chamber. I think they should have notice that this debate is going on.

Mr. GURNEY. I yield to the Senator for that purpose.

Mr. STENNIS. Mr. President, I ask unanimous consent that the Senator may yield without losing his right to the floor so that I may suggest the absence of a quorum.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk called the roll and the following Senators answered to their names:

[No. 244 Leg.]

Aiken	Goodell	Moss
Allen	Gore	Murphy
Allott	Gravel	Muskie
Baker	Griffin	Nelson
Bayh	Gurney	Packwood
Bellmon	Hansen	Pastore
Bennett	Harris	Pearson
Bible	Hart	Pell
Boggs	Hartke	Percy
Brooke	Hatfield	Prouty
Burdick	Holland	Proxmire
Byrd, Va.	Hollings	Randolph
Byrd, W. Va.	Hruska	Ribicoff
Cannon	Hughes	Schweiker
Case	Inouye	Scott
Church	Javits	Smith, Maine
Cook	Jordan, N.C.	Smith, Ill.
Cotton	Jordan, Idaho	Sparkman
Cranston	Long	Spong
Curtis	Magnuson	Stennis
Dodd	Mansfield	Stevens
Dole	Mathias	Talmadge
Dominick	McCarthy	Thurmond
Eagleton	McClellan	Tower

Ervin	McIntyre	Williams, Del.
Fannin	Metcalf	Yarborough
Fong	Miller	Young, N. Dak.
Fulbright	Mondale	Young, Ohio
Goldwater	Montoya	

The PRESIDING OFFICER. A quorum is present.

Mr. GURNEY. Mr. President, at the time of the quorum call, I was talking about the Palm Beach school system, in which they were planning to bus pupils from Palm Beach to the Glades area, which would total somewhere between 3 and 4 hours a day.

This would have meant an 80-mile-per-day round trip for certain students. It would mean lengthening the school-day for these children by from 3 to 4 hours, depending on weather conditions. One might suspect the HEW people, in their hearts, really do not like schoolchildren and have in mind to punish

them by this bizarre idea. How could reasonable people, charged with responsibility of educating our young, seek to impose such an outrageous and irrational scheme on children? And what is to be gained by it? Nothing. Are the children better off? I doubt it.

They are certainly not safer. Certainly not better off in an educational sense—and certainly not in any general welfare sense—crammed in a crowded schoolbus for 3 or 4 hours a day. Why, then, do these bureaucrats insist on such crazy schemes? One can only speculate, for there is no reasonable explanation.

At any rate, my office tried to bring the parties together. After many sessions, HEW finally, but reluctantly, relented. The 80-mile-a-day busing scheme was shelved and a more moderate—a less insane—plan was adopted. Incidentally, the Southern Christian Leadership Conference charged and condemned me for political interference. I would have been derelict in my responsibility as a U.S. Senator if I had turned my back on this arrogant abuse of bureaucratic power.

Let me bring up another case, which involves the school district of Apopka, Fla.

Mr. President, Apopka is a community of about 5,000, near Orlando in central Florida. The Apopka School District encompasses a larger area and has approximately 3,500 students. Before the start of the 1968 school year, the Federal district court ordered that the school board produce an acceptable desegregation plan immediately. The board complied: The plan called for the creation of a new integrated junior high school, using an old elementary school. The old elementary school was, of course, inadequate. It had lacked enough classrooms, there were no science facilities, no cafeteria, no athletic facilities, no auditorium. Temporary portable classrooms had to be installed and they are there today in a pasture, near the small former elementary school.

The Phyllis Wheatley School, the former all-black high school, was abandoned as a high school and became an elementary school. About 1,200 pupils were involved in the various shifts. Busing was decreed. Selected—I do not know how they were selected; I expect by lot—black and white children were ordered to be carried from one end of the school district to the other. The plan satisfied no one; black student and white students alike boycotted the schools earlier this year. Both black and white parents were up in arms. Attendance fell precipitately. The issue again was clearly not integration or segregation. The issue was dissatisfaction with the absurdity of the plan: The people, black and white, resented the haste demanded by HEW and the courts; the additional costs; the busing; the inadequate classrooms; the lack of facilities; and especially were black parents and students angry beyond description here, because they had to give up their fine new high school.

As a matter of fact, they came to our office, and what did they say, loudly and clearly? That they were being discriminated against. That is what they said. They referred to the absurd plan proposed by the school board—I should not really say "proposed"; blackjacked by HEW and the court system.

As a matter of fact, one thing I did behind the scenes on that—and this is the first time I have said it publicly—was to actually get an emissary, somebody whom I trusted and who was trusted by both blacks and whites, to go in and cool off the situation so the boycott would not get out of hand and the whole community blow up. He was able to do this, and we got tempers cooled down and things under control. Finally, the school system started up again.

The loss of adequate facilities and their replacement with inadequate facilities heightened racial tensions at a time when harmony and good will were needed. The boycott was finally ended, and a temporary accommodation has been patched up. The situation, I regret to say, is still very tense. Much harm has been done, and no productive gains have come out of the whole sorry episode. And, of course, education, the primary purpose of a public school system, has been lost in the shuffle.

These are some of the real, hard problems some of us are dealing with every single day in the school desegregation field. Many Senators who will vote tonight on this question do not know anything at all about it because they do not have that situation, and they will vote, with great conviction here, for school integration and school desegregation without knowing anything about the practical problems involved in these school districts.

As I pointed out earlier, we have active files on school desegregation matters in 43 out of the 67 counties in Florida, and 20 of them are in real trouble.

This is what the amendment seeks to do something about, in a sensible way, so we can come to grips with some of these problems, and, indeed, carry out some of the recent campaign promises made in connection with the problem of education.

Let me give another example of this provision in practicality. I remember when I first came to the Senate this year, about a month after Congress began, we had a high school senior class visit here from Vero Beach, Fla. Many of my colleagues may be familiar with that fine place on the Florida coast. These were students from a Negro high school that had come to Washington. It was the senior class. I had my picture taken with them on the steps of the Old Senate Office Building. After the picture had been taken and I started to my office, about half a dozen senior boys came up to me and said, "Senator, may we talk to you a minute?" I said, "Sure. What's on your mind?" They said, "Senator, they are proposing to close our high school in Vero Beach, and we don't want that to happen, because here is where all the good in our community is generated, all around the high school at Vero Beach. If you can do something, Senator, to stop closing the doors of the high school, will you please do it?" Who were they? They were Negro, black, male students of that high school who were begging me to do something about it.

Here are some of the practical problems that many Senators in this Chamber know little about, because they have never dealt with them. These are some of the things on people's minds, on students' minds, on the minds of parents. They are problems we see every day and try to do something about, by bringing the school boards and HEW together, so they will sit down and converse, and indeed try to come up with plans that do not necessarily try to stop desegregation, but try to find solutions of the school problems of this country, so that we can get on with the business of education.

And so we can see what started out to be a lofty and highly idealistic exercise in "social engineering" by the Federal Government has ended in chaos, and in waste, and in inefficiency, and in some cases in violence on the local level. The money spent for this kind of thing in my judgment, could be better spent for legitimate educational purposes—for better training of teachers, textbooks, salaries, and better teaching aids.

We can find similar examples in other States besides Florida, particularly of the recent difficulties in the New York City school system. And, of course, we have here in the city of Washington an extraordinary problem. Since the 1954 court action which declared the congressionally enacted separate school systems for the District of Columbia to be unconstitutional, we have had a mass exodus of white residents from the District of Columbia to such an extent that we now have over 90 percent of the entire school population of the District being black. There are very few white students left in the District who can be "integrated" into a school system.

Now, how has the cause of desegregation be served here? Violence is so widespread that it has become, according to the local school board, almost impossible, at times, to conduct classes.

Senator STENNIS has pointed out in the last several weeks that the problem is not exclusively a Southern one. Very many of the school districts in the North, particularly in the States of Ohio, Indiana, New Jersey, Pennsylvania, Illinois, New York, and in California today, 15 years after the Brown against Board of Education, have not achieved the integration demands so stridently of southern school districts.

Very many schools of these northern and nonsouthern schools are entirely or substantially black. Integration, as decreed by the Federal courts and by HEW, has not been achieved in those States. We can see from this that we are dealing with a national problem. In the past it was very easy for the advocates of Brown against Board of Education to point the accusatory finger at the South.

What was needed, they said, was Federal prompting to insure that the Negro residents of the Southern States achieved the full measure of the rights guaranteed by them in the Constitution. It was always the "wicked southerner" who was to blame; the South had to be shown the way.

More and stronger Federal enactments were necessary, these people argued, because the South, acting on its

own initiative, would not desegregate or achieve any measure of integration voluntarily. The years have demonstrated, and Senator STENNIS' research has recently underscored the fact, that the problem is as real in the North as it is in the South. I think the time for accusations is over, Mr. President. Let us get rid of the name-calling and deal with the problem as temperately and as realistically as we can.

The vast majority of southern citizens are not racist monsters as they have been characterized in the press for these many years, any more than northern citizens are racists. The vast majority of southern citizens want for their children the same things as northern parents want for theirs—that is, a proper education, the best that we can provide in our local school systems. There is as great a body of good will in the South as there is in the North on this question. Let us not squander it. We have made substantial gains. Let us now consolidate them and make them lasting.

I think it is interesting to note that much of the criticism of the pace of integration and the extremes visited on local systems by HEW nowadays comes from our black citizens.

The people for whom the battle against segregation was mounted, are becoming disillusioned and alienated by the extremes to which it has been carried. They are just as irritated as anyone else when their children are forcibly bused from point to point for long daily trips. They recognize, as well as white citizens, that proper and legitimate educational goals have frequently been sacrificed in the integration game. So, we are not dealing here with a southern problem but with a national problem which is getting bigger and more explosive with each passing day. The concept of neighborhood schools is dying across the country.

The truism is that education should educate our children. The fundamental purpose and the reason for existence of our public school system is to educate our children.

The public education system is not in existence primarily to provide employment for social engineers, or for Federal bureaucrats, or integration specialists, with impractical ideas that downgrade education.

My great fear is that in increasing numbers middle-class parents, both black and white, are abandoning their faith in the public school system. As soon as they can muster the resources, they seem to be opting out of public education as fast as they can. They are turning, of course, to private school systems, and their loss is a substantial loss to public educational systems throughout the country.

We owe a great debt to the public educational system of our country. It has produced much that is good and valuable and lasting in our society. I would hate to see that system being crippled or seriously impaired by more of the nonsense that has been going on recently in busing, shutting down of useful schools and forced impractical integration for the sake of integration.

The separate but equal school system, the dual system of black and white schools, is dead. I agree with the Supreme Court in the Brown case. That idea was wrong and should have been struck down. But having washed and cleansed the baby, of segregation, let us not throw the baby out with the wash water. Let us not destroy the public education system in this country by forced impractical integration. It may be spectacular to steam into these dangerous waters full speed ahead and then go down with all integration flags flying, but, I really question whether this accomplishes very much.

We have an almost Orwellian state of affairs now: In the interest of making quality education available to our black citizens, we are destroying the quality of education. In the interest of freedom for our black citizens, we are enforcing coercion on all our citizens.

"Freedom," said George Orwell in his book entitled "1984," "is slavery and slavery is freedom." Let us not repeat the Washington, D.C., experience nationwide. Integration will be achieved completely in Washington probably as the last white student abandons the educational system here. And what will be the gain by this?

The committee amendments, in my judgment, would restore some rationality to this picture. Let us call an end to the school closings. We need more education in this country, not less. What is so extraordinary about giving children the right to attend the elementary or secondary schools that they choose? Why must we force children to attend distant schools in the interest of "freedom"? Why do we have to heighten racial tensions trying to improve race relations?

Why do we have to sacrifice education on the altar of integration schemes that no man in his right mind would suggest, except for this hysteria that seems to affect the bureaucratic mind in school problems. Most of all, why do we have to use our children, black or white, as pawns in this never-ending game of integration.

Mr. President, I know other Senators want to speak, and I probably have said more about this than I should have; but, in closing, I would like to say that it seems to me that in the whole problem of desegregation and integration, I do not think there is a Senator who will argue that we should not have integration. Brown against Board of Education was right and sound, and every one of us knows it. We also know there has been some heel dragging where I live in the South, but there has been just as much heel dragging in New England, where I was born and raised, in New York, and in Chicago, and all over school areas where there are Negroes and minority students. There has been just as much heel dragging there. The problem is just as acute there as it is in Florida or any of the other Southern States.

But the problems we have now, in the matter of busing, in the matter of closing schools, in the matter of forced integration tend to obscure the basic aims of education. And that is what Brown against Board of Education was all about: so that black students could get a decent education, just like white students. A lot of people thought it would be better if we had integrated schools in order to achieve that. I do not argue against that. But I do say that busing, closing useful schools, and wild schemes for forcing integration is to forget the basic concept of what Brown against Board of Education was all about, and that was to give black students a decent education.

I would say that the Members of the U.S. Senate, in seeking the views of the people they represent back home, would do well to realize that this is the basic problem. We had better try to do something about getting public education in this country back on the track. We cannot put the public schools out of business in an effort to integrate them by some of these impractical schemes.

Mr. HOLLAND. Mr. President, first I wish to compliment, without any reservation whatever, my distinguished colleague on his very fine speech.

I want Senators who are present to know something of the background of my colleague. He is a native of Maine, an academic graduate of Colby College in Maine, a law graduate of Harvard, one who has been in our State long enough to become acquainted with the conditions there, but one who, from no position whatever, could be called an extremist on this subject, and one who has been kind to people of all races and children of all colors. I wish the entire Senate had been here to listen to what he said, particularly to what he said about the difficulties in Palm Beach County—which is not a typically southern county at all—and in Apopka, which is an old southern community out from Orlando—in their efforts to try to get out from under unfair regulations by HEW, which gave affront to them, and which were taking away the chance for education of their children, whether they be white or colored. I repeat, I wish every Senator could have heard him.

Mr. President, I do not happen to be in the same situation as my distinguished colleague so far as my birth and education are concerned, because I am a native of Florida. I have seen it come along a good long way. I have worked for Florida in a great many ways, and for our Nation in some ways, and I think I am not an extremist in any sense of the word in this field.

Senators know that I fought for some 13 or more years for the anti-poll-tax amendment, before Congress would submit it to the States, and now it is a part of our Federal Constitution. That is not the work of an extremist.

Senators do not know that I insisted, as chairman of our local school board of trustees many years ago, on the building of the first big brick high school for colored pupils in my home town, which at that time was about 40-percent colored and is now about 30-percent colored. We built that fine 14-room building, and it is now the center of a complex, which has been the center of community life for the Negroes of my community, and they are distressed beyond measure right now, as were the colored pupils from Vero Beach mentioned by my colleague, at having their school, in effect, taken away from them, their center of community activity taken away from them, with their chance to continue their leadership, as they have been leaders for

years, in the fields of music, athletics, and preparation for college work of young Negroes who have attained distinction as teachers, as doctors, and as various other types of professional and businessmen.

Mr. President, they are sick at heart because now they have had their school taken away from them. Their school has become a school attended by children of both colors. One of my grandchildren is going there, though that school is over in the center of the Negro part of our town. They feel they have been deprived of the finest thing that they had in connection with their community life, just as the Negro boys from Vero Beach expressed themselves to my distinguished colleague when they visited Washington some while ago.

I wonder if Senators think that this business of freedom of choice, or ability to select the place where one sends his children to school, is not as dear to colored parents as it is to white. I wonder whether they realize that many colored people want their children to have a chance to grow up in what they think will be the finest possible circumstances. They have frequently come to me to say, "We want to continue our schools as they have been." Not just in my community, but in other communities in our State. I could give two or three examples, as has my colleague, of matters in which I have intervened, sometimes finding a humane attitude on the part of HEW employees, and sometimes finding the exact opposite, because they have not been understanding, in so many instances, and they have in so many instances imposed intolerable conditions.

Mr. President, I thought our subcommittee had worked this out rather fairly. We adopted an amendment to the so-called Whitten amendments offered by the distinguished Senator from New Hampshire (Mr. COTTON). We adopted it by a vote of 10 to 1, last Thursday or Friday. Somebody from that subcommittee went and advised the Secretary of HEW; so on Saturday, we all received wires—I say all; here is my wire, nine pages long, signed by Robert H. Finch, Secretary of Health, Education, and Welfare—complaining very greatly about what he called improper action on the part of our subcommittee in connection with these two so-called Whitten amendments, and with one other amendment.

Mr. President, this is a nine-page telegram. I shall not attempt to read it. I do ask unanimous consent that it be printed in the RECORD at this point as a part of my remarks.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.

HON. SPESSARD L. HOLLAND,
Sheraton Park Hotel, Washington, D.C.:

I would like to express my deep concern that the Labor-HEW Appropriations Subcommittee has approved provisions which would seriously undermine this department's responsibilities to public education. I refer specifically to the subcommittee's approval of the anti-civil-rights provisions which retain the essence of the House-passed Whitten amendments, and to the punitive amendments dealing with student unrest. This administration is unalterably opposed to both of these provisions.

The amendments dealing with school desegregation, as passed by the House of Representatives and as reported by the Senate subcommittee, would cripple the efforts of this department to enforce the mandate of the Supreme Court and to protect the constitutional rights of all Americans to an equal opportunity in education. The only districts which HEW deals with under title VI of the Civil Rights Act are those operating illegally segregated school systems. HEW's role is to assist these districts in working out practical, effective, and educationally sound desegregation plans which meet the requirements of the law. Sections 408 and 409 would seriously restrict the flexibility of HEW and local school districts in working out appropriate solutions. Recalcitrant school districts would be encouraged to harden their positions, and districts which have complied with the law would be tempted to go back on their commitments. This could seriously jeopardize the substantial progress made in school desegregation.

Accordingly, the administration urges the Senate Appropriations Committee to delete the amendments. In the event the committee chooses not to do so, the administration stresses the urgency of revising them so that their effect is consistent with the requirements of existing law. In this context, the committee at the very least should consider including appropriate language in the subcommittee provisions, such as the following:

Sec. 408. No part of the funds contained in this act may be used to force any school district to take any actions not constitutionally required involving the bussing of students, the abolishment of any school or the assignment of any student attending any elementary or secondary school to a particular school against the choice of his or her parents or parent.

Sec. 409. No part of the funds contained in this act shall be used to force any school district to take any actions not constiutionally required involving the bussing of students, the abolishment of any school or the assignment of students to a particular school as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school.

I also urge the committee to delete section 407 from the pending legislation.

The administration believes that the subject matter of this provision is already adequately covered by section 504 of the higher education amendments of 1968, which specifically spells out actions to be taken by colleges and universities in determining whether federal aid should be denied individuals who create campus disturbances. All operating agreements for the current fiscal year between participating colleges and the U.S. Office of Education require the institutions to "take such steps as are necessary and appropriate to assure that the financial assistance provided under this agreement is not made available to students where prohibited by section 504. . . ."

There are sufficient measures available to the Department to assure compliance with the law. The cutoff of funds to institutions which section 407 proposes is therefore unnecessary. Beyond that, the administration considers it undesirable and counterproductive. By requiring action against an entire institution, it would place a weapon in the hands of the small minority bent on disruption and penalize the innocent along with the guilty. By requiring me to pass judgment on an institution's "plan or program" for dealing with unrest, it not only would add an ill-defined administrative burden to my office but would impose on the campuses a federal presence fraught with dangerous implications for a society which cherishes academic freedom.

As the Attorney General and I said in a letter written to the late Senator Dirksen on July 17 at the request of the President, "The Federal Government must not be placed in the role of enforcer or overseer of rules and regulations for the conduct of students, faculty and other university employees." I fully realize that this session of the Congress is drawing to a close, and that many essential legislative matters remain to be resolved prior to final adjournment. I hope you will share my conviction that these amendments, as approved by the Senate subcommittee, raise issues of overriding importance, and that at this stage in our history the Federal Government cannot turn its back on the basic rights and freedoms inherent in the public educational system of this Nation.

One of the central purposes of our revision of the 1970 budget was to select opportunities for reform, where innovative projects funded in 1970 would help us increase program effectiveness in major social policy areas. I am therefore pleased that the Senate committee saw fit to restore our request for experimental schools, District of Columbia model school, and migrant health. However, other actions taken by the Senate committee raise serious economic policy questions. I indicated at the Senate Appropriations Committee hearing October 14 that the House additions to President Nixon's proposed 1970 budget for our department run counter to the need for economic restraint at this time and, in fact, would erode the purchasing power of the very persons intended to be aided. While we place high priority on the needs of the Nation's schools, hospitals, children, and needy aged, the administration—and the Congress through the outlay ceiling it enacted July 22, 1969—have indicated the necessity of expenditure restraint to curb inflationary pressures. The President said on August 12, 1969, that he regarded the House additions to the HEW appropriations as "inconsistent with the intent of the Congress a week earlier when it imposed a ceiling on spending for the current fiscal year." He said further:

"We must demonstrate the discipline to hold down inflation, which continues to work a special cruelty upon the very poor, those on pensions and fixed incomes, and home buyers who pay increasing prices and high interest rates.

"In the interest, therefore, of those who most need our help, we must act responsibly to hold down national government spending in the present economic environment.

"Present circumstances plainly require a point of predictable firmness and responsibility in dealing with these budgetary problems."

I know that the Congress, as well as the President, has the interest of all the American people at heart. It is therefore essential that in dealing with specific problems—or specific appropriations—we not lose sight of overriding economic trends which could make our actions self-defeating. I urge that you keep this in mind and not send the President a bill which might force him to make choices which were not made by the Congress.

With all good wishes, I am

ROBERT H. FINCH,
Secretary of Health, Education, and Welfare.

Mr. HOLLAND. When I got to my office Monday, I found a letter, with copies attached in exactly these same words, awaiting me, from the distinguished Secretary of Health, Education, and Welfare.

Mr. President, I have heard that this

administration does not twist arms. I wonder what was the purpose of the Secretary of Health, Education, and Welfare in wiring all of us in this long, exhaustive way, and in writing these long, exhaustive letters, and in finding fault with what our committee had done following the lead of a distinguished Senator from New England, who has been here a long time fighting for decent treatment of all people on the part of Congress. I wonder if that was arm twisting.

I wonder particularly if that Secretary was correct in saying he was speaking for the administration, when I know perfectly well what President Nixon said during his campaign repeatedly, as to his tolerant views in this particular field. That has already been mentioned. It is already in the RECORD. My colleague from Mississippi (Mr. STENNIS) has placed it there.

We all know that the President took then an exactly opposite position, and I do not believe that the Secretary of Health, Education, and Welfare was speaking for the administration, as he said he was. I shall never believe that, unless President Nixon himself tells me that he meant nothing by what he said last year when he was running, and that, to the contrary, he is now supporting the antithesis of what he said then to all the people of the United States, not just to the people of Florida, but to the people of New Mexico, the people of Pennsylvania—from which State the proponent of this amendment we are now talking about comes—and to all the people of this great Nation.

Mr. President, reference has been made to the fact that the State of New York, through its legislature, recently passed a statute in this matter. I had followed what happened in New York City. I knew that the Negro parents had complained very bitterly about the busing of their children to a distant district in New York City to accomplish better racial balance.

I read the New York Times day after day and followed the matter very carefully and put some of the articles in the RECORD at the time when it was going on.

That effort was abandoned. However, evidently fearing that it might become more general in New York, the New York Legislature passed, and Governor Rockefeller approved on May 2, 1969, this statute effective September 1, 1969, which is now the law of the State of New York.

Mr. President, I ask unanimous consent that the statute to which I have referred be printed in the RECORD.

There being no objection, the statute was ordered to be printed in the RECORD as follows:

CIVIL RIGHTS—DISCRIMINATION IN EDUCATION PROHIBITED

CHAPTER 342

An Act to amend the education law, in relation to prohibiting discrimination on account of race, creed, color or national origin in connection with the education of the children of the state

Approved May 2, 1969, effective Sept. 1, 1969.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. Section thirty-two hundred one of the education law is hereby amended to read as follows:

§ 3201. No exclusion *Discrimination* on account of race, creed, color or national origin *prohibited*

1. No person shall be refused admission into or be excluded from any public school in the state of New York on account of race, creed, color or national origin.

2. *Except with the express approval of a board of education having jurisdiction, a majority of the members of such board having been elected, no student shall be assigned or compelled to attend any school on account of race, creed, color or national origin, or for the purpose of achieving equality in attendance or increased attendance or reduced attendance, at any school, or persons of one or more particular races, creeds, colors, or national origins; and no school district, school zone or attendance unit, by whatever name known, shall be established, reorganized or maintained for any such purpose, provided that nothing contained in this section shall prevent the assignment of a pupil in the manner requested or authorized by his parents or guardian, and further provided that nothing in this section shall be deemed to affect, in any way the right of a religious or denominational educational institution to select its pupils exclusively or primarily from members of such religion or denomination or from giving preference to such selection to such members or to make such selection to its pupils as is calculated to promote the religious principle for which it is established.*

§ 2. This act shall take effect on the first day of September next succeeding the date on which it shall have become a law.

Mr. HOLLAND. Mr. President, I am not going to attempt to read it all. The first section declares the law as it was declared in the Brown case in 1954. But then the second section goes on—and I will read about eight lines of it—to say:

Except with the express approval of a board of education having jurisdiction, a majority of the members of such board having been elected, no student shall be assigned or compelled to attend any school on account of race, creed, color or racial origin or for the purpose of achieving equality in attendance or increased attendance or reduced attendance, at any school, of persons of one or more particular races, creeds, colors, or national origins; and no school district, school zone or attendance unit, by whatever name known, shall be established, reorganized or maintained for any such purpose, provided that nothing contained in this section shall prevent the assignment of a pupil in the manner requested or authorized by his parents or guardian.

Mr. President, the rest of the statute applies to religious schools. I have read all of the part that applied to public schools. I just wonder why freedom of choice, I wonder why the freedom of the parents to send their children to schools of their choice is recognized by the State of New York. I wonder why a statute passed by the Legislature of New York and signed by that great Governor, Governor Rockefeller, had no challenge made upon the right of selection of schools or freedom of choice there by the Department of Health, Education, and Welfare.

I am just asking the Senators to think about it a moment. Why is it that no challenge has been made in New York by this great Department of Health, Education, and Welfare which sends in the nighttime this nine-page wire to members of the Appropriations Committee? And some of them did not receive it until 4 o'clock the next morning. They were awakened because the directions were that it had to be personally delivered and had to be delivered that day if possible.

I wonder why it is that that Secretary has not challenged the State of New York in its using its sovereignty to say—and I am going to read this again—"provided that nothing contained in this section shall prevent the assignment of a pupil in the manner requested or authorized by his parents or guardian."

Mr. President, it could not be clearer that the great State of New York has recognized the right of selection by parents and guardians of the place at which their child shall attend school. And there has been no challenge made of that. But, Mr. President, they go down into the small community of Jackson County, Fla., named incidentally for Andrew Jackson——

Mr. ERVIN. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. ERVIN. Mr. President, are there any such weasel words in the statute of the State of New York such as those which are proposed to be inserted in the pending bill which say, "except as required by the Constitution."

Mr. HOLLAND. There are no such words. And may I say to my distinguished friend, the Senator from North Carolina, that it was the putting in of such vague words that got us in trouble last year.

Mr. ERVIN. Mr. President, I ask the Senator if that does not indicate that the members of the New York State Legislature, like the Senator from Florida and the Senator from North Carolina, know that it is perfectly constitutional to pass a law like the law passed in the State of New York and like the provisions contained in the pending bill.

Mr. HOLLAND. I think the legislature of the State of New York knew what they wanted to do. And they said it clearly and constitutionally.

I wonder why our National Government, that is so interested in the subject, has not imposed any challenge. There has not been the slightest effort in that great State where there are hundreds of schools, as has been stated by the distinguished junior Senator from Mississippi, where the Negro students comprise anywhere from 90 percent to 100 percent of the school population. And in many of them they constitute 100 percent of the school population.

Why is it that this question has not been raised there? Perhaps some Senator can answer that question. The Senator from Florida simply cannot do so.

Mr. President, some people ask, "Why is it necessary to do anything about these questions?" The reason that it is necessary to do something, as is attempted to be done by the provisions in the bill, is that HEW has been demanding the busing of pupils, has been demanding the abolishment of schools, has been denying freedom of choice, has been demanding just exactly these

things that are covered by the contested provisions. And the effort is to prevent the spending of the money appropriated by the bill for use by anybody to accomplish those purposes.

Mr. President, I do not know whether the Senators noticed this article in the Washington Post on Sunday. But it was apparently written down in the Department of Health, Education, and Welfare. And it states the facts so well—and perhaps that is unusual for the Washington Post—and so clearly that I read a part of the statement:

> The Whitten amendment would prohibit the Government from requiring any district to bus students, close down schools, or assign pupils against parental wishes. All three procedures now are used to help dismantle dual school systems in the South.

That just happens to be true. They are being used by HEW and the reason that we do not want them to be used is that by their being used, we are depriving children of the chance to get a decent education. We are destroying in some places the public schools. We are doing exactly the wrong thing, instead of the right thing, as many of my friends would want to do who oppose us on this matter.

The fact is that HEW is doing these three things. And that is why we have this wording against the forced busing of students and against the closing down of the schools or the assignment of pupils against parental wishes to accomplish integration.

That is why these amendments are placed in the pending bill.

Mr. President, one more short comment and I will be through.

We deprive children of their proper chance to get an education, but why should I have to say that to Senators who see what is going on in Washington? We ride the taxis every day with men, whether white or black, who tell us about what a sorry situation exists here in the school system of Washington, D.C.

The schools which, when I came to Washington, were about 50–50, or maybe not quite half colored, are now some 93 percent colored. Why? It is because the white people with children have moved into Maryland or Virginia or to more distant places. They have children, and many who are able to send them to private schools are doing that.

The proof is right here as to the dissatisfaction that this forced integration of schools has brought about. It is right here where we can see it every day.

Mr. President, I recently went down to visit a cousin of mine in Arvonia, Va. It is a pleasant town close to Prince Edward County, where they have established a large and entirely private white school. The children from Arvonia where I visited with my cousin are going to that private school 30 miles away, and the children who cannot go have to attend the little public school there, along with the colored children, and neither group is satisfied. The standards are going down, and the school and the community are being deprived of children, who are the finest children in the community.

That is not the only instance I can give. It is happening in many other places. It is happening in my State in several places.

I believe in the public school system. I have taught in the public school system. I have been the chairman of my local trustees in the public school system. I have been chairman of the State board of education in the public school system. I believe in public education. I just say to my friends in the Senate, well intentioned as they may be, that they are taking a part in the destruction of the public school system, as well as in the destruction of opportunity of thousands of children to get the type of education to which they are entitled and which their parents want them to have.

If you want to destroy in many places the public school system, if you want to have a bunch of demagogues coming to public office from various States—they will not be just Southern States; they will be from some of the great cities of the Nation outside of the South—a bunch of folks who will pander to this feeling of discontent, this feeling of great confusion that has arisen in the cities because of the imposition of this racial problem, just go ahead and vote to destroy these amendments, and you will destroy them if you put in the words referring to constitutional interpretation. We put words in last year that were intended to confine the problem to the establishment of racial balance in the schools. Do you know what the solicitor down there interpreted that to mean? He interpreted it to mean that so long as you did not assign the restoration of racial balance in the schools as your reason for acting but instead assigned some other reason, whether real or imagined, HEW could take that course.

Mr. President, with the solicitors down there interpreting what does constitute constitutional values in this field, we know in advance what will happen if this kind of vague and general wording is put into these amendments.

I hope that sections 408 and 409 will remain in the bill as they were worded, changed from the House versions, worded by the great Senator from New Hampshire (Mr. COTTON). I hope they will stay there in that form and that we will begin to get away from this crazy destruction of the public school system, which is going on right now, along with the destruction of the opportunity of countless thousands of children to get a good education.

I yield the floor.

Mr. ERVIN and Mr. EASTLAND addressed the Chair.

The PRESIDING OFFICER. The Senator from North Carolina is recognized.

Mr. ERVIN. I assure the Senator from Mississippi I will not talk very long.

I should like to give the Senate a picture of what is happening in the South in our schools, while no such events are occurring north of the Mason-Dixon line.

I think the best description of what is being done by the Federal courts to the schools of the South was given by a great judge from the State of Georgia, U.S. District Judge J. Robert Elliott, of the Middle District of Georgia. He gave this description in connection with an order that remanded a case to his court from the Circuit Court of Appeals of the Fifth Circuit. This circuit has laid down such foolish rulings as the one which demanded that the safety of schoolchildren must yield to the demands of segregation. It has declared that every black student must be given an integrated education, regardless of the expense it entails to the community and the inconvenience it imposes on the students. It has gone so far as to declare in one case that even though an action of a school board is wholly nondiscriminatory in nature, it is unconstitutional unless it results in substantial integration.

In describing what the Federal courts do, Judge Elliott said the following about the decisions of the court of appeals and of the Supreme Court dealing with school desegregation:

> A review of these decisions shows that it is intended that integration be brought about in some way by school administrators as the first order of business. Problems of money, problems of transportation, problems of finding competent teachers willing to staff completely integrated schools, problems of political and emotional ramifications and the myriad frustrating difficulties peculiar to public education, and even the substantial objections of those thought to be benefited, are either ignored or brushed aside. We are told not to be "color blind", but to be "color conscious". The three R's long thought to be the reason for the existence of the public school system have been eclipsed by the one big R—Race. Integration is primary. Education is secondary. And through it all is the clear implication that Federal Courts are competent to design, supervise and administer plans for the integration of all school systems within our jurisdiction regardless of the diverse and complex problems presented. As for myself, I disavow any such occult power and am convinced that a fairly administered freedom of choice plan is the best answer and that the "immediate total integration at any cost" approach must inevitably result in serious damage to the public school system. However, we are bound by the decisions of the Supreme Court and the Court of Appeals for the Fifth Circuit, so we will make one more drag of the judicial claw across this sensitive area.

That is what the Federal courts are doing.

Next I would like the Senate to consider what the Department of Health, Education, and Welfare is doing in this area despite the fact that there already are three statutes on the books which prohibit the Department from busing schoolchildren from one school to another in order to change the racial composition of the student bodies.

I hold in my hand a letter from a lady in North Carolina. I could read to the Senate hundreds of such letters, because not only hundreds of people, but thousands of people, are experiencing the same kind of Federal tyranny in every State of the South.

The woman to whom I have referred wrote me a letter dated September 16, as follows:

> There is much sadness in Warren County today. School began. It is the most unfair law that requires children to be hauled from school to school, not for the purpose of an education, but to have integration of the races. We built a new home four years ago,

that took our entire savings, and what we could borrow, in order that our children would be close to school. They walked two blocks to reach school. This morning they were put on a bus and hauled 5½ miles in the country.

When I arrived to register my little fifth grade girl in school, I found in her class of 115, 7 white children. The remaining 108 were unfamiliar faces of colored children.

The entire school has the ratio of 63 whites to 507 colored. This is the only school our children are allowed to attend in the county.

What good does it do, for education or anything else, to haul a little girl 5½ miles from her home when there is a school situated within two blocks of her home that she could attend, merely to mix her and six other little white children in her class with 115 black children?

The letter continues:

If freedom of choice had been allowed, this would not have happened in the same manner. The parents of both races could have sent their children to the school most convenient and best suited to their needs.

I must say a word in behalf of the colored people in our county. They, too, are being hauled all over the county with strange teachers and friends.

Then the writer proceeds further and says:

I realize this letter is too long, but I could go on and on. If you can't help us return to freedom of choice in Warren County, please do all you can to persuade our government to allow people to make their own choices in other counties and States. Don't permit what has happened to our county to happen in any other county or State in the United States.

Now, as I have stated, this kind of situation has been repeated under the tyranny of HEW thousands and thousands of times in every State in the South.

I hold in my hand another letter from a father in Raleigh, N.C. He says that he is the father of two sons of high school age. He states:

We live within four blocks of Brughton High School and my sons could easily walk this distance to school and come home to lunch but being assigned to Enloe as you can see where they are assigned means that they must walk four to four and a half miles to school.

I think it is a shame the children are subjected to such treatment and being forced to be herded around like cattle and shifted like pawns in a chess game.

Mr. President, I am not going to vote for this weasel-worded amendment. I am willing to stand up and say flatly that the Constitution of my country does not require, indeed, does not permit children to be herded around like cattle and shifted about like pawns on a chess board merely to mix the races in the schools.

Mr. President, these complaints do not come only from the white race but they come from members of the colored race, as well. A short time ago we had a school desegregation decree in the U.S. district court for the Charlotte school district. It produced an uproar among the people and resulted in a news dispatch being printed in the Washington Post of August 7, 1969, entitled "North Carolina Blacks Oppose Busing Plan."

Mr. President, I ask unanimous consent that the article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NORTH CAROLINA BLACKS OPPOSE BUSING PLAN

CHARLOTTE, N.C.—Many Negro parents here are up in arms over a proposal to bus their children to schools in predominantly white suburbs. Negro leaders vow to resist the one-way desegregation plan.

The Board of Education, complying with orders of U.S. District Judge James McMillan, has filed the plan in federal court. A court official said no hearing had been scheduled, but it was "very possible" one would be held soon. The plan call for closing seven all-Negro schools in the inner city and busing about 4,200 black pupils to outlying schools.

Most white parents have voiced no opposition. But a few months ago, when there were reports the plan would bus white pupils to all Negro schools, white parents bombarded the school board with protest petitions.

Charlotte Negroes have responded to the black busing proposal with a protest march, a candle-light vigil near the center of the city and calls for a boycott of white merchants. The Rev. George J. Leake, a Negro who ran third among six candidates for mayor in the city's nonpartisan primary this year, says if one-way busing is approved the Negroes of Charlotte "will resort to massive resistance and civil disobedience."

Negro parents and leaders have fought for more school desegregation. Courts have ordered it and most whites are resigned to it. But busing has fired the anger of black and white.

The white parents argued in their petitions that they had purchased homes within certain areas so their children could walk to and from school.

A white parent who fought busing of white students said, "We have no desire to fight desegregation. We welcome the Negro students. But, my God, why must our children leave the neighborhoods, the kids with whom they have played for years, with the feeling of belonging to an area.

"We don't oppose desegregation, we support it, but not at the sake of taking our children, yes, my children to a school across town, whether it is all white or all Negro."

Some Negro parents said in a public statement that it seemed strange that "black children could adjust to the transition of the school, neighborhood and teachers by submitting to busing while white children were too precious to move."

And, said the Rev. Mr. Leake, "why should the black students forget school tradition, mascots, honor programs, athletic prominence, school pride and self-pride with no assurance that they will receive anything in return."

Mr. ERVIN. Mr. President, the Department of Health, Education, and Welfare went down to Martin County, N.C., where the races were living there in peace and harmony, and it required them to start busing the children and herding them about like cattle and shifting them like pawns in a chess game, merely to produce a mixing of the races in the schools. It produced a boycott which was described in a column by Evans and Novak on March 28, 1969, entitled "Whites, Blacks Attack Finch's Plan to Desegregate North Carolina County's Schools."

Mr. President, I ask unanimous consent to have printed in the RECORD the article by Evans and Novak to which I have referred.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHITES, BLACKS ATTACK FINCH'S PLAN TO DESEGREGATE NORTH CAROLINA COUNTY'S SCHOOLS

(By Rowland Evans and Robert Novak)

WILLIAMSTON, N.C.—Despite the success of HEW Secretary Robert Finch in persuading the Martin County School Board to adopt an "acceptable" desegregation plan, thus freeing blocked Federal funds, the plan is already under withering fire from militant blacks and whites in this backcountry county seat.

School Board Chairman Leroy Harrison is now organizing an all-out publicity campaign to sell the desegregation plan to parent-teacher groups, civic organizations and white and black leaders. But for Harrison, who believes the economic future of the prosperous County depends on peaceful acceptance of the plan, the going is all uphill.

Moreover, it will be little short of a miracle if a 33.5 million bond issue for two new integrated high schools, up for a vote late this spring, actually passes. Resentment over high real estate tax rates killed the last two school bond issues. The new one now carries the extra burden of racial emotions arising out of the desegregation plan sponsored and approved by Finch's Health, Education and Welfare Department in February. That approval lifted Finch's conditional ban on $700,000 worth of Federal school aid—a cool 13 per cent of the County's total budget—ordered in his first decision last January in the South's hottest political issue.

The plan seems simple enough. In the 1969–1970 school year, the Board has agreed to assign 25 per cent of the 4000 Negro pupils to classes with the 3200 white pupils and exchange 50 black and white teachers.

Complete desegregation will start in the fall of 1970, with all high school students going into the two new schools to be financed by the bond issue.

But the plan is selling very hard. "Trouble is," one pillar of the community told us, "some of the whites still don't believe this will ever really come about."

White militants have already held secret meetings to explore the private school route as an exit from hated race-mixing. With no possibility of help from the State capital at Raleigh, the private school route poses almost insuperable financial burdens. Nevertheless, pledges of more than $100,000 have already been made and at least 200 families are said to have expressed solid interest.

If it goes that way, the bond issue cannot win, for the obvious reason that all the private-school families will fight it (the last school-bond issue failed by less than 600 votes).

Worse yet, however, is the cultural and economic split inside the white community that would follow establishment of a private school for well-heeled white families. As a local businessman told us: "That private school idea is just like an eatin' cancer. The rural white families couldn't stand it and it would just build up a whole other class."

But the possibility of a boycott by some of the whites in this tobacco-and-peanut county is no more dangerous to the desegregation plan than the threat of a similar boycott by blacks. The Negroes are furious that the plan involves only one-way traffic—the assignment of Negro pupils to white classrooms, but no white pupils to black classrooms.

Last fall, the School Board abandoned freedom of choice, which simply hadn't worked, because, for so many reasons, Negro

mothers refused to send their kids to distant white schools. So to increase the snail's pace of desegregation, the board assigned 700 Negro pupils to white schools. Result: An immediate black boycott.

With Negro pupil-assignment way up next fall, another black boycott is highly probable. One of the School Board's Negro advisers, Rosalie Hassell, refused to predict what would happen, but she attacked the HEW approved plan as "a bad plan that doesn't represent the Negro point of view," and told us she hadn't even seen it until after HEW's approval.

Against this array of forces, Harrison and the embattled School Board have now started their selling campaign. On their success depends not only the Martin County public school system but the outcome of Finch's first crisis in Southern school desegregation.

Mr. ERVIN. Mr. President, as I stated previously, HEW officials went to Hyde County in North Carolina and under the threat of denying Hyde County Federal funds they coerced the school board of Hyde County into closing two schools which the black children had been attending and required them to journey long distances to a school which was predominantly white. These HEW demands produced a boycott of the schools by the blacks in Hyde County.

I hold in my hand an article from the Charlotte Observer of September 1, 1969, entitled "New School Boycott Looms in Hyde."

I shall read one paragraph from the article:

Last year, Hyde County drew national attention as fewer than 100 of its 800 black pupils attended school. At issue was the proposed closing of two formerly all-black schools. All the county's pupils were to be assigned to a formerly all-white school for 1969–1970.

Mr. President, I ask unanimous consent that this article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW SCHOOL BOYCOTT LOOMS IN HYDE

(By Paul Jablow)

SWAN QUARTER.—Except for three notices from Raleigh tacked among the other messages, the bulletin board at Hyde County Courthouse is pretty much like those in other rural courthouses across North Carolina.

Each of the notices sets a special week of criminal superior court for the county, starting next week.

Normally, three weeks of criminal court would take care of the county's needs for a full year. But some 70 youthful demonstrators arrested in last year's school boycott must be tried as this remote, sparsely populated county continues to be a battle ground for school officials, civil rights organizers and the local residents themselves.

Last year, Hyde County drew national attention as fewer than 100 of its 800 black pupils attended school. At issue was the proposed closing of two formerly all-black schools. All the county's pupils were to be assigned to a formerly all-white school for 1969–1970.

With the Southern Christian Leadership Conference (SCLC) active in Hyde, the boycott was both the first of its kind in North Carolina and a switch in SCLC's tactics from pure integration.

Now, with the schools opening Tuesday, another boycott looms. Black leaders say it will be as large as last year's.

The new school superintendent, Richard Neil Singletary, says that it will be slight: "We should have 90 per cent of the pupils in school."

Most indications are that attendance by black pupils will be up considerably.

Despite a cast of characters virtually unchanged except for Singletary, the Hyde County school situation is different from last year.

There is a new integration plan, increased communication between the races and probably more flexibility by the white leadership. Whether these changes cut deeply into the problem may not be decided until midfall.

The county is entering the second year of a three-year desegregation timetable approved by the Department of Health, Education and Welfare (HEW).

Last year, black pupils in grades 1–3 were assigned to Mattamuskeet School in Swan Quarter, as the first part of a plan that was to have permanently closed down two black schools, O. A. Peay in Swan Quarter and Davis in Engelhard.

This "one way" integration caused the boycott, but county officials stuck with it. HEW has also vetoed plans to keep Davis and Peay open on a segregated basis if necessary.

Now, there may be a change, on Nov. 4, the county will vote on a $500,000 bond issue to add 28 classrooms and additional land and facilities to Mattamuskeet. If it is approved, this would be the county's one school.

Black voters are expected to vote solidly against it.

If the bond issue is rejected, county officials say, all three schools would be kept open with total integration coming in 1970–71. This is what boycott leaders were demanding last year.

But what was demanded in the past is often unimportant in the rapidly changing Hyde County situation.

Outwardly, the county seems a strange location for this sort of struggle. It is one of the five poorest in the state, drawing its living from corn and soybean farming, tourist hunting for waterfowl and deer and a few shrimp and crab packing plants.

The narrow, flat roads are flanked by swampy ditches, with trees sometimes forming dense tunnels over the road, sometimes parting to reveal vast, marshy flatlands alive with the humming of insects.

The resistance to school integration has been no heavier than usual for rural counties with large black populations. The issue of "busing," dynamite in an urban situation, is meaningless here since everyone, black and white, is used to it.

The county was, frankly, chosen as a test case by N.C. representatives of SCLC.

"The people here had an issue but no philosophy," says SCLC's Golden Frinks. "SCLC said, 'let us come and build a philosophy.'"

To officials in Hyde County—and in state government—the issue is simply getting the children back in school.

"I'm just basing my operation on what's right and fair for the children," says Singletary. "Some of these people want to sacrifice their children. If the adults want to demonstrate, that's all right. But this is a crime. These children may never recover from the loss of a year in school."

Singletary promises that the state pupil attendance law—all but ignored last year—will be enforced this year from the first day of school. A black attendance officer has been hired and Singletary says that any parent or guardian not sending a child to school will be served with a warrant.

The maximum penalty is a $50 fine or 30 days in jail and he plans to have the first warrants served in locations scattered across the county to make an impression.

Although taking a hard line in this area, Singletary has set up a biracial "better schools committee," placed two blacks on the advisory council for Mattamuskeet and sponsored an integration workshop for all teachers.

The board of education has also decided to start integration with grades 4–6, since black parents felt the burden should not be on the youngest children.

Boycott leaders feel, however, that this is barely a dent in the tradition of white dominance in Hyde County's institutions and the economy.

"I've learned more about white people here in one year than I did in my other 57," says Mrs. Etta Greene, a boycott leader.

At a recent meeting at O. A. Peay School, county blacks questioned Singletary, two HEW representatives and Harold Webb of the N.C. Department of Public Instruction.

The HEW representatives explained that they were unable to let Hyde County keep its black schools open on a segregated basis as a last resort. Webb told them that the state department could do nothing about an integration plan. These men were still able to speak without interruption.

Singletary, on the other hand, was constantly peppered with hoots and screams. "We'll get him out of here yet," said one black after a long series of catcalls.

Frinks then went to the microphone and told Singletary that, "this is what has happened to black people for years. We can't be heard."

Another boycott leader confirmed privately that attempts are being made to discredit Singletary "because he's always fronting for the school board and the white officials."

Part of the problem, white leaders say privately, was an original underestimation of how strongly the blacks felt about one-way integration that closed "their" schools.

When full desegregation became inevitable, it was felt that most whites wanted to close the black schools and just use Mattamuskeet although all three plants are in good shape.

With whites making up some 58 percent of the population and 75 percent of the registered voters, this feeling was quickly translated into the one school plan.

Now, with black resentment clear, the bond issue is seen as an out that will not involve caving into the demonstrations that were held almost daily last year on the streets of Swan Quarter.

Assuming that the blacks will vote against the bond issue, the message to Hyde County whites is clear:

"Do you want to close the black schools badly enough to add 31 cents to the tax rate (now $1.40) and have your children transported further even if this won't mean any less integration. And do you want this badly enough to vote 2-1 for it to offset the expected black-vote against it?"

The answer, most blacks and whites feel, will be, "no."

In fact, one white leader says that "if Frinks would just shut up, the bond issue wouldn't have a snowball's chance in hell. It could get beat three to one, and the blacks would get what they're demanding. But then, there'd be nothing to agitate for."

If white leaders see the bond issue as a possible out, the militant blacks do not. First, there is a lingering suspicion that if the issue failed, the school board would somehow find a way to close the black schools.

But more important is a desire to see the white leadership voluntarily approve a three-school plan.

"They've got the power to open all three schools," says Mrs. Greefe. "So they should do it." She and other boycott leaders plan to ask the county commissioners Tuesday to drop the bond issue from the November ballot.

"Moral issues shouldn't be decided by bond issues," Frinks says.

There are also indications that Frinks and other SCLC leaders are seeking to broaden the conflict beyond the "three school" issue and aren't particularly interested in seeing that issue settled if it means a loss of momentum for "the movement."

"We are going to take over this county" Frinks claims. "Up until now it's been run by a little political clique. No matter what school plan they adopt, there will still be a movement."

Frinks says that decision was reached last year when two Hyde County girls were killed in an auto accident in Wilson during SCLC's march to Raleigh.

At that point, he said, the movement's goals had to be expanded to maintain Hyde County's interest.

This broadening effort could be clearly seen at the frequently stormy two-and-one-half hour meeting at Peay.

Hyde County blacks most frequently asked questions about the school situation itself, while SCLC officials such as Milton Fitch of Wilson and James Barrow of Washington, N.C., asked broader questions.

Barrow claimed that the board of education had "perpetrated a fraud on the black people of Hyde County" by misrepresenting what would be in the bond issue to gain approval of it from the Local Government Commission in Raleigh. (Singletary said that the board had followed the usual custom of requesting broader authority than it actually would need).

Whether the boycott movement will have as enduring an influence on the county's blacks as last year is still unknown.

Some blacks, including several who kept their children out of school last year, say they will send them back this time.

A petition, signed by some 75 local blacks, has been sent to Gov. Bob Scott asking the state to act against Frinks.

"His corructive (SIC) influence is detrimental to our people and has had a devastating effect on all other people where he has been," the petition states. "We feel that steps should be taken to eliminate his offensive influence from North Carolina."

The county still has not had any black leadership rise to oppose the boycott. Whites claim that pressure is being used against possible antiboycott leaders while blacks say that white leaders are applying economic pressure to develop "Uncle Toms."

Singletary concedes that one kind of pressure has been used, on black school employes who encourage the boycott. He says that this will continue in addition to the new efforts to enforce the attendance law and thus shift the burden of the movement from children to adults.

Local boycott leaders say that if this happens they are willing to "fill up the jails."

Which, for the past year, has been easier in Hyde County than filling up the schools.

Mr. ERVIN. Mr. President, I am opposed to the weasel words which are sought to be inserted in the bill as an amendment. If we need the words in this statute, then we need those words in every statute. If they must be in this statute, then the words "if it is constitutional for us to do so and in accordance with the law" should be in every statute. Of course, the words are wholly unnecessary. These are words which would be implied because if the provision prohibiting busing, prohibiting closing schools, prohibiting denying children the right to attend schools selected by their parents are unconstitutional, those provisions would be unconstitutional without such language as this amendment proposes.

Mr. President, I oppose these weasel words. It is time for Senators to stand and say they do not think the Constitution requires or permits children to be herded around like cattle or shifted around like pawns in a chess game.

The case of Green against New Kent County is the only decision of the Supreme Court that has any intimation about freedom of choice plans and I can only say this about the Green case: Its facts are simple. The language of the opinion is ambiguous and murky. The case lays down no fixed rule or workable rule. Still, the case invalidated freedom of choice of New Kent County; it did not permit the choosing of schools on a nonracial basis. There is not a scintilla of justification for the holding. New Kent County adopted a freedom of choice system in which it allowed all of its children of both races to go to whichever of two schools they elected to attend. Could there be a fairer method of determining school attendance?

Well, none of the white children elected to go to the colored school, and only about 15 percent of the colored children elected to go to the white school. The record disclosed that all students both black and white, acted according to their own desires, free from all coercion.

In discussing this case, the editorial writer in the Washington Sunday Star of June 23, 1968, in an editorial entitled "Judges Should Stick to Their Judging," said this:

New Kent is a small rural county with only two schools for its 740 Negro and 550 white pupils—New Kent School on the east side of the county for whites and George W. Watkins School on the west for Negroes. There is no residential segregation in the county.

New Kent, as it had to do, went along for several years after Brown with the Virginia Legislature's various efforts to avoid school desegregation. But three years ago the county adopted a freedom of choice plan. There has been no claim that the plan did not offer a truly free choice or that it was applied in any discriminatory way. No white children transferred to the Watkins school. But in 1967 a total of 115 Negro children applied for and were enrolled in New Kent. This was up from 35 in 1965 and 111 in 1966. To sum it up, no white children have gone to the "colored" school, but slightly more than 15 percent of the Negro children were attending the "white" school at the end of this year's term.

In an ambiguous opinion, Justice Brennan said this was not good enough.

He did not, and indeed he could not, properly say that a bona fide freedom of choice plan, such as New Kent's, is unconstitutional. In fact, he did not cite any specific constitutional basis for holding that the New Kent system wouldn't do.

He said the plan placed a "burden" on children and their parents—the burden of applying for admission to one school or the other if they wanted to switch. He did not stress the point that the parents of 115 Negro children did not find this too burdensome last year. He also suggested that the county should adopt some kind of "zoning" system, although he was very vague about this. And without more ado, he set aside a ruling by the Fourth Circuit which had upheld the New Kent plan.

So much for that. But what is it that New Kent County is supposed to do that will satisfy the learned justices of the Supreme Court when they doff their judicial robes and sit as a local school board? Justice Brennan didn't say. The county authorities are left in the dark. But we have several suggestions. (1) The ruling applies only to states whose schools formerly were segregated by law, which means the southern and border states. If this is what the law now requires in those states, why is it not required in all states?

Let me interpolate here that this includes New York, which has a statute similar to the provision in the bill——

(2) This decision, although it doesn't spell it out, clearly commands compulsory integration, and this without specifying any constitutional basis for the command. Judge Brennan did cite some language from Brown II, but Brown II is not the Constitution. (3) The court is saying, though not in so many words, that some white children in New Kent County, regardless of their wishes, must be compelled by the local authorities to attend the "colored" school, and that more than 115 Negro children, regardless of their desires, must be compelled to attend the "white" school. Precisely what racial "mix" will be satisfactory? Again, the justices in their infinite wisdom did not say. We suspect they haven't the foggiest notion. We also suspect that what they have done will play hob with New Kent County's public school system and the education of both its black and white children.

Mr. President, I ask unanimous consent to have the entire editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR JUDGES SHOULD STICK TO THEIR JUDGING

Eleven months ago the American Association of School Administrators, with some 17,000 members around the country, strongly urged that an appeal be taken from Judge Skelly Wright's decision in the District school case.

The association said that the decision "usurps the prerogatives of boards of education and school administrators" and, further, that Judge Wright's educational theories are "wrong and dangerous."

Now, a year after the ruling, an appeal will be heard this week by the United States Court of Appeals. What the result will be is, of course, uncertain. But one may at least hope that the appellate judges will return control of the Washington schools to the school authorities, and that Judge Wright will be encouraged to devote himself to his judicial knitting.

Judge Wright has not been the only federal judge to get into the business of running or trying to run public school systems. The Supreme Court and the Fourth Circuit Court of Appeals also got in a few whacks this year.

The case of Brown vs. Board of Education was decided by the Supreme Court in 1954 and an implementing decision, known as Brown II, came down a year later.

The 1954 Brown ruling held that segregated public school systems imposed or required by state or local law were in violation of the Fourteenth Amendment and therefore unconstitutional. Brown II decreed that such segregated systems must be abolished. The court did not say, however, that compulsory segregation must be replaced by compulsory integration.

John J. Parker, then chief judge of the Fourth Circuit, construed the Brown decision in this language: "It (the court) has not decided that the states must mix persons of different races in the schools or must require them to attend schools or must deprive them of the right of choosing the schools they attend. What it has decided, and all that it has decided, is that a state may not deny to any person on account of race the right to attend any school that it maintains. . . . Nothing in the Constitution or in the decision of the Supreme Court takes

away from the people the freedom to choose the schools they attend."

Chief Judge Parker was a distinguished jurist, not a man to bypass or undermine Superior Court rulings. A few years before his death in 1958 he was awarded the American Bar Association's gold medal for "conspicuous service to American jurisprudence." But in undertaking to construe Brown, Judge Parker spoke too soon. He couldn't foresee, of course, what the Supreme Court would say in May, 1968, in the case of Virginia's New Kent County, and he would have been horrified to read that opinion.

New Kent is a small rural county with only two schools for its 740 Negro and 550 white pupils—New Kent School on the east side of the county for whites and George W. Watkins School on the west for Negroes. There is no residential segregation in the county.

New Kent, as it had to do, went along for several years after Brown with the Virginia Legislature's various efforts to avoid school desegregation. But three years ago the county adopted a freedom of choice plan. There has been no claim that the plan did not offer a truly free choice or that it was applied in any discriminatory way. No white children transferred to the Watkins school. But in 1967 a total of 115 Negro children applied for and were enrolled in New Kent. This was up from 35 in 1965 and 111 in 1966. To sum it up, no white children have gone to the "colored" school, but slightly more than 15 percent of the Negro children were attending the "white" school at the end of this year's term.

In an ambiguous opinion, Justice Brennan said this was not good enough.

He did not, and indeed he could not, properly say that a bona fide freedom of choice plan, such as New Kent's, is unconstitutional. In fact, he did not cite any specific constitutional basis for holding that the New Kent system wouldn't do.

He said the plan placed a "burden" on children and their parents—the burden of applying for admission to one school or the other if they wanted to switch. He did not stress the point that the parents of 115 Negro children did not find this too burdensome last year. He also suggested that the county should adopt some kind of "zoning" system, although he was very vague about this. And without more ado, he set aside a ruling by the Fourth Circuit which had upheld the New Kent plan.

So much for that. But what is it that New Kent County is supposed to do that will satisfy the learned justices of the Supreme Court when they doff their judicial robes and sit as a local school board? Justice Brennan didn't say. The county authorities are left in the dark. But we have several suggestions. (1) The ruling applies only to states whose schools formerly were segregated by law, which means the southern and border states. If this is what the law now requires in those states, why is it not required in all states? (2) This decision, although it doesn't spell it out, clearly commands compulsory integration, and this without specifying any constitutional basis for the command. Judge Brennan did cite some language from Brown II, but Brown II is not the Constitution. (3) The court is saying, though not in so many words, that some white children in New Kent County, regardless of their wishes, must be compelled by the local authorities to attend the "colored" school, and that more than 115 Negro children, regardless of their desires, must be compelled to attend the "white" school. Precisely what racial "mix" will be satisfactory? Again, the justices in their infinite wisdom did not say. We suspect they haven't the foggiest notion. We also suspect that what they have done will play hob with New Kent County's public school system and the education of both its black and white children.

Another judicial shocker, which reinforces our belief that judges, especially eager-beaver judges, should stay out of the schoolroom, has just come down from the Fourth Circuit.

The effect of this 5-to-2 ruling in a Norfolk case is to cut down the neighborhood school concept. Again, the court majority uses weasel words. It says that the assignment of pupils to neighborhood schools is a sound concept. But it adds that this is not true if purely *private* discrimination in housing keeps Negroes out of a given residential area. How does private discrimination, as distinguished from public or state discrimination, offend the Constitution? The majority judges, of course do not say. But we note with interest the dissenting opinion by Judge Albert V. Bryan, who said the court was guilty of "usurpation," and that the majority through its decision "once again acts as a school board and as a trial court, and now is about to act as a city planning commission." This last presumably refers to the problem of how to bus pupils in Norfolk, which has no school bus system.

To sum it up, federal judges have a constitutional duty and the competence to strike down any law which imposes school segregation. They have neither the duty nor the competence to demand compulsory integration and to run the schools by judicial fiat. The sooner the judges recognize this, if they ever recognize it, the better it will be for our system of public education.

Mr. ERVIN. Mr. President, I am willing to stand up on the floor of the Senate and I am willing to say what the Constitution of the United States does or does not require in this field.

All the decisions of the Court have been based upon the equal protection clause of the 14th amendment. The equal protection clause of the 14th amendment is a very simple clause. It says exactly what it means, and it means exactly what it says.

The Supreme Court has declared in many cases that the equal protection clause of the 14th amendment requires that all persons shall be treated alike, under like circumstances and conditions, both in the privileges conferred and in the liability imposed. That is all the equal protection clause of the 14th amendment means.

It means that a State must treat all its people in like condition in like manner. When a State has a freedom-of-choice plan which says to the children of both races, "You may attend whichever school your parents select for you to attend or whichever school you select for yourself," the State is then acting in complete accord with the equal protection clause of the 14th amendment, and oceans of legal sophistry cannot upset that plain fact.

What does the bill do? It prohibits the use of funds to force a school district to take any action involving the busing of students. Instead of being contrary to the provisions of the Constitution, it is in perfect harmony with the equal protection clause of the 14th amendment as it was interpreted by the Supreme Court in the first Brown case. The Court held, in that case, that a State cannot deny to a school child the right to attend any State school that the State maintains solely upon the basis of that child's race. Yet, when the HEW requires schools to bus its children from their neighborhood school to some other place because either they want to desegregate the neighborhood school or they want to integrate the other school, then, HEW is denying a child the right to attend a school maintained by the State on the basis of that child's race.

So section 408 in this bill is a provision which is in harmony with the interpretation placed upon the equal protection clause of the 14th amendment by the Supreme Court in the Brown case. I am not opposed to it.

What business is it of the Federal Government to tell a State whether it can act through the court or through the HEW and close down a school? It is nothing but a pure usurpation of power.

Mr. President, God gave the little schoolchildren of this country their educational privileges. He did not give them to the bureaucrats in HEW.

The parents of these children are more interested in their education and their upbringing than any other human beings on the face of the earth.

All this bill is attempting to do is to recognize the fact that God gave the children to their parents, not to HEW and to permit the children to attend the schools their parents selected for them to attend. That is fair and just.

I refuse to accept any interpretation of the Constitution which says that school children in America are to be made hapless and helpless pawns or puppets of the HEW, or of the Federal courts.

All this bill tries to do is to give the children the right to attend their neighborhood schools, the right not to be denied that right on account of race, and the right to go to the school that their parents select for them.

I say, Mr. President, it is time for the Senate to repudiate this weasel-worded amendment which is put in here just as a sort of camouflage. It is time for Senators to stand up on the floor of the Senate and say they think our Constitution was intended to make Americans as free as humanly possible, and that our Constitution does not make the school children of America the helpless pawns of HEW bureaucrats.

I yield the floor.

The PRESIDING OFFICER. The Chair recognizes the Senator from Mississippi.

Mr. EASTLAND. Mr. President, I want to compliment my colleague from Mississippi on the great speech he made tonight.

I am going to discuss conditions as they exist in my State.

This is a national question that needs a national policy, and what exists in my State also exists in the States of Louisiana, Alabama, Arkansas, and other Deep South States.

Mr. President, it is absolutely imperative that sections 408 and 409 of the House bill be retained in their present form. Those two sections simply provide that no part of the funds appropriated by this act shall be used to force busing of students, the abolishment of any school, or the attendance of any student enrolled in an elementary or secondary school at a particular school against the choice of his or her parents or parent. Section 409 provides that none of these conditions may be imposed as a condition precedent to obtaining Federal

funds otherwise available to any State, school district, or school.

These sound provisions would merely prevent forced busing and arbitrary closing of schools, and would permit a child to attend the school of his parents' choice.

What is wrong with that? This is completely consistent with our American traditions of self-determination and local control over school matters.

If we fail to include these provisions in the law, we will permit, sanction, and condone the actions of the Federal courts in unjustifiably treating the public schools of the South differently from the public schools of the other parts of the Nation.

The Federal courts have held that zoning is permissible in the North, East, and West, but that Southern schools must bus children to overcome racial imbalance. This is wrong, and it is discrimination in its worst form. We should no longer countenance such regional and sectional discrimination on the part of the courts.

The courts justify this discriminatory treatment on the basis that racial separation in the Northern, Eastern, and Western schools is a result of residential patterns. They label this "de facto" segregation. On the other hand, they claim that the racial separation in the Southern public schools is a result of State legislation requiring it. They label this "de jure" segregation.

We all know that this is a distinction without a difference. We know that the so-called fortuitous housing patterns of the North, East, and West, are the results of long established customs, habits, and traditions sanctioned or permitted by State and local governments. Indeed, until a few years ago this discrimination was required by agencies of the Federal Government such as the Federal Housing Authority and the Veterans' Administration.

These housing patterns did not just happen. They exist because the law sanctioned or permitted them to exist and grow.

We also know that most States in the North, East, and West had laws which required or permitted racial separation in the public schools. These laws were widespread in the 19th century, and in many of these States existed into the 20th century.

This distinction between "de facto" and "de jure" segregation is meaningless. It should not be used to discriminate against the South.

In the unfortunate opinion of the Supreme Court of the United States in the case of Brown against Board of Education, which amended the Constitution of the United States and took away from the States and localities the right to operate the public school system, the Court discussed the impact on colored students of racial separation. The harmful impact on these children, which I believe the Court erroneously found, is the basis for the holding of the case. The Supreme Court stated this harmful impact in the following words:

> To separate them from others of similar age and qualifications solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone.

I have never been able to understand how a 10-year-old colored student in a public school in Harlem, Watts, or South Chicago, is expected to look around and see nothing but black faces in his classroom and say to himself: "This kind of racial separation does not hurt me because the State of Illinois does not have a law requiring me to attend all-black schools. I should not feel hurt by this racial separation because it is the result of housing patterns that just accidently developed."

Perhaps the Federal courts and some of my colleagues will attribute this much wisdom, knowledge, and sophistication to a 10-year-old child, but I cannot.

Mr. President, the recent actions taken by the Supreme Court of the United States and the Fifth Circuit Court of Appeals in the Mississippi school cases have had a terrible effect upon the public school systems in many parts of my State. I am sorry to say that there is every likelihood that these unsound and ill-advised decisions of the Federal courts will in the future have an even more disastrous impact upon our school systems.

My colleague from Mississippi has, over the last few weeks, ably and forthrightly presented to this body the true facts and figures pertaining to the operation of the public schools in several Northern and Eastern States. These facts and figures show beyond dispute that there is a great deal of racial separation in the public school systems of these Northern and Eastern States.

I commend my colleague for bringing these important facts to the attention of the Senate and the Nation. I think that he has rendered a valuable public service in this matter. I join him in the hope that the school systems of the Southern States receive the exact same treatment from the Federal Government as the school systems of the States mentioned by my distinguished colleague.

I would like to discuss today the effect that Federal coercive action calling for total mixing of the races in the public schools of Mississippi is having upon the children, the parents, and the school systems. If we fail to consider the children, who are entitled to receive a quality public school education and the parents of these children, who pay the taxes for the support of these schools, then we will be remiss in our duties and responsibilities.

I have conducted a survey of selected school districts in Mississippi, and have had research made in an effort to find answers to these questions.

I can solemnly report today that the Federal demand for instant total integration is causing, and will continue to cause, severe disruptions and dislocations in the operations of the public systems in most of the areas of our State.

In the most crucial areas of Mississippi, where the ratio of school children is anywhere from 2-to-5 to 1 black, the results will in many areas be the withdrawal of all or a substantial majority of the white children from the public school systems, with the result that the public schools will be virtually all black, both as to students and teachers—as they are in the District of Columbia, as they are in the city of New York, as they are in every area of this country where those conditions exist.

We have another problem. We have a corporation, one of the biggest in the State, that manufactures tractors and equipment. I was told that two of their chief executives have resigned and are moving to the State of Kentucky because of the chaotic school system that exists in my State.

Why would a pharmacist or a doctor or a lawyer locate in a little town when the environment in the school system was not such that he would want his children to attend that school? You do not have that problem in Illinois. You do not have it in California. You do not have it in other areas of this country.

This is a somber report, but this is what will happen unless substantial changes are made.

The white children and parents of Mississippi and the other Southern States should not be chastised or condemned for reacting to this disaster in this fashion. Their only motivation is to maintain sound and proper social and educational surroundings.

Whether those who hear and read these words like it or not, the plain and simple truth is that these white parents and students in Mississippi and the other Southern States are being asked to endure conditions which more than 95 percent of all of the white parents and students in the United States of America will never voluntarily accept.

It is a well-known and established fact that in all sections of this Nation, North, South, East, and West, when the proportion of colored students in a school system exceeds 10 percent, the vast majority of the white children withdraw from that school, and, consequently, the student body becomes all black or predominantly black. This fact is implicitly recognized by the U.S. Commission on Civil Rights, in its study, "Racial Isolation in the Public Schools," published in 1967. On page 199 of this report of the Civil Rights Commission appears the following finding:

> Racial isolation in the public schools has been increasing. Over recent years Negro elementary school enrollment in northern city school systems has increased, as have the number and proportion of Negro elementary students in majority-Negro and nearly all-Negro schools. Most of this increase has been absorbed in schools which are now more than 90 percent Negro, and almost the entire increase in schools which are now majority-Negro. There is evidence to suggest that once a school becomes almost half- or majority-Negro, it tends rapidly to become nearly all-Negro.

Why does a school rapidly become nearly all black once it becomes almost half black?

The only reasonable and logical answer is that the white parents flee the neighborhood in which this school is located and new colored people move into the neighborhood, so that the school becomes virtually all black.

These white people are "voting with their feet."

Mr. President, I would like to give the Senate an illustration, and I think I speak with authority, that forced integration is opposed by the vast majority of Negroes as well as white people. The illustration I am going to give is as follows, and I know personally what I am talking about: I know a white man, a friend of mine, who is engaged in the farming business. You might call him a large farmer. He understood in February that his mechanic was going to resign. He went to that mechanic and he asked him, "Now, what is the trouble?" The mechanic told him, "Why, my daughter, who is in the ninth grade"—and I know what I am talking about—"has been assigned to a seat by a Negro boy." And the father of the Negro was also an employee. This man said, "I don't want you to quit. Put your children in a private school and I will pay their tuition." "All right."

The Negro employee came to him and protested the fact that his son had been put in a school with whites. It was the same boy that had been assigned to sit by the daughter of the mechanic.

I know, in addition to that, that one of his valued employees—and I could give his name, if necessary—a Negro who operates big equipment—and that takes skill and ability—had his son assigned to a white school. This is all in my own neighborhood. He told his employer, "If you can't get my boy out of that white school and get him to go to a school of his color, then I am going to move and work where my son can be in school with his own kind."

I think there is a lot of justice in this amendment. We are faced with facts. There are towns in my State, which I could name, where industries had agreed to go, but, because of the chaotic conditions of the schools, they will not locate in those towns.

The best illustration of how people really feel about this matter is shown by the school situation in Washington, D.C. In the summer of 1966 Joseph Alsop wrote a penetrating series of articles about the school situation in Washington and in several other large cities. In an article appearing in the August 3, 1966, edition of the Washington Post entitled "A Modest Proposal II" Mr. Alsop made the following statement:

> Here in Washington, for instance, we have elementary schools that are over 90 percent Negro; we have a city-wide population that is two-thirds Negro; and we have a voting population that is still only about one-half Negro. (These differences appear in all major cities, although other cities' figures are down in the scales as yet.)
>
> But although Washington has already become a predominantly Negro city, the District of Columbia retains a white population of about 250,000. There should, therefore, be a great many tens of thousands of white children of school age in the District. And in reality, there are almost none!
>
> To be precise, Washington had 26,000 white children of elementary school age five years ago. It has lost half that number since then. And of the 13,000 white children of school age still in the District of Columbia, far more than a third attend private schools.
>
> Those figures mean only one thing: That nowadays, white families with children almost automatically emigrate to the suburbs. That conclusion can be cross-checked, too, in half a dozen ways.
>
> The Southwest redevelopment, for instance, has caused many white people to return to live in the District of Columbia. But of these returners, almost none are families with children.

In a previous article entitled "Some More Hard Facts" which appeared in the June 30, 1966, edition of the Washington Post, Mr. Alsop predicted that many of the great cities of the North and East would soon have the same situation as Washington. He states:

> Thus Washington, in a few years, is clearly due to be a city nearly nine-tenths Negro. But the Negro immigration and the white emigration that are jointly producing this result in Washington are not unique District of Columbia phenomena. They are nationwide urban phenomena, which merely appeared a little later in other cities.
>
> In Detroit, Philadelphia, Baltimore, Chicago and Saint Louis, to name five, the racial mix in the elementary schools has already passed the half-and-half point which Washington reached in 1947.
>
> Chicago, with an elementary school population containing only 52.3 per cent of Negro children, is nearest to Washington 19 years ago. The other cities listed are well down the road, with 66 per cent of Negroes in the St. Louis elementary schools, for instance.

Mr. Alsop has previously stated in his articles that as of 1966 there were an estimated 250,000 white people and 550,000 black people living in Washington.

These remarkable figures bear out what is general knowledge, which is that most of the white persons in the District of Columbia are "empty nesters." They are either single people, young married people without school-age children, or old people whose children have finished school. A number of those who do have school age children are wealthy, because as Mr. Alsop pointed out, more than one-third of the white school-age children in the District of Columbia attended private schools in 1966. As a result of these factors, 91 percent of students attending the Washington elementary schools in 1966 were black. Of course, all of these percentages and ratios have since gotten much worse.

I agree with Mr. Alsop that it is ridiculous to talk about integration in such a situation. For all practical purposes, the public school system is all-black.

The white parents and children who used to live in Washington simply decided they would not put up with an intolerable situation, so they left Washington. Many now live in the "safe" areas of Virginia and Maryland where they can condescendingly comment on the efforts of white Southerners to avoid this horrible fate.

But, my friends of the North, and East, and West, do not patronize us any longer. Your people feel the same way about this as I and my people. Your people do not want it and will not have it. We only ask the same privilege.

Let us look at what has happened in the Hollandale Consolidated School District, which is located in Washington County, Miss. Prior to this school year this school district had operated under a "freedom of choice" plan. This plan achieved some degree of desegregation. Under the "freedom of choice" plan, each parent selects the school his child shall attend. In the school year 1968–69, 390 white children and 13 colored children attended the Hollandale Attendance Center.

During that school year there were approximately 2,000 Negro children and 400 white children attending the public schools of that district.

Prior to the beginning of the current school year, the Federal court ordered the Hollandale Consolidated School District to adopt a "pairing plan" for integration. Under this plan students in the affected grades are arbitrarily assigned to various schools so that the attendance in each school will generally reflect the racial ratio of children in the entire school system. The Federal court plan directed that grades 1 to 3 be "paired" during the current school year; that grades 4 to 8 be "paired" in the 1970–71 school year; and that grades 8 to 12 be "paired" in the 1971–72 school year, at which time the integration would be total and complete.

The Federal court order also directed the school district to arbitrarily assign teachers at the beginning of the current school year so as to achieve actual teacher integration in every school in the system.

How has this court-ordered plan worked? What has been its impact on the people of the school district? The enrollment of white students in the public schools has dropped from 390 in the preceding school year to 167 in the present school year. This represents a loss of 56 percent of the white student enrollment.

Every white child in the affected grades of 1 to 3 withdrew from the public school system. Approximately half of the other white children, who were not in the affected grades, also withdrew.

At the present time, there are 1,577 students enrolled at the Simmons Attendance Center. All of these students are Negroes. There are 437 black students and no white students enrolled at the Arcola Attendance Center. At the Hollandale Attendance Center, which had included grades 1 to 12, the first three grades are not taught this year because of the student withdrawal. In grades 4 to 12 at that attendance center, there are now enrolled 167 white and 11 black students.

There is no more integration in the public schools this year than there was last year, and 56 percent of the white students have been driven out. Is this progress? God save us from any more such progress.

At the direction of the Federal court, the school board transferred three white teachers to teach in the formerly all-black schools of Simmons and Arcola.

I think that is wrong, because when a teacher signs a contract to teach in x school, I do not think the courts have the power to overrule it. These teachers, along with seven other white teachers in the school system, resigned their jobs. At the Hollandale Attendance Center there are now 11 white and two black teachers. There are no white teachers in the predominantly black schools.

The Federal court ordered the school district to make an active effort to recruit white teachers to teach in the predominantly black schools. Pursuant to this demand, the Hollandale Consolidated School District purchased advertisements in newspapers published in Jackson, Miss., Memphis, Tenn., and New Orleans, La. The advertisements specified that the school district wanted to employ white teachers. There have been no responses to these advertisements.

This absurd request shows how far the Federal courts will go in order to promote integration at any cost. The ironic part is that in ordering the Hollandale school authorities to act in such a manner, the Federal court created a possible conflict with one of the many civil rights laws enacted by Congress recently. I refer, of course, to section 704(b) of the Civil Rights Act of 1964, which makes it an unlawful employment practice for an employer to print or publish or cause to be printed or published any notice or advertisement relating to employment indicating any preference, limitation, specification, or discrimination based on race or color.

I am advised that the Memphis Commercial Appeal initially declined to publish this advertisement because it did not want to be a party to what it considered to be an unlawful employment practice, but that after the advertisement was redrafted it agreed to publish it.

Apparently there are those who think it is all right to discriminate in the name of civil rights.

What has happened to the Hollandale School District is a disgrace, and those responsible for forcing these conditions on the people should be ashamed.

The situation is equally bad in the Sunflower County School District. This district is in my home county of Sunflower, where I live. It encompasses a rural area of approximately 450 square miles and includes all of the county except for those areas included in the Indianola Municipal Separate School District and the Drew Municipal Separate School District.

Let me say something about that Drew Separate School District. It is near my home. I know that one street there are three vacant houses, because people have moved since September to escape integration in the public schools.

The Sunflower County School District was brought under court order in 1966. The court approved a "freedom of choice" plan. The operation of this plan achieved some degree of integration, and in the 1968–69 school year three of the eight schools in the system were integrated and five were attended solely by colored students. During that year there were a total of 5,119 students in the system, of whom 4,100 were black and 1,019 were white.

Prior to the opening of school in September 1969, the Federal court ordered the school district to assign students to the schools on the basis of tests to be administered to the students. The court ordered that the assignments be made on this basis for grades 1–4, inclusive, for the present school year. Children of both races, totaling 1,635, in the affected grades were administered these tests. Those who scored in the top one-fourth were assigned to formerly white schools, and those who scored in the lower three-fourths were assigned to formerly all-black schools. The tests resulted in 177 black students being assigned to predominantly white schools and 79 white students being assigned to the school formerly attended by black sutdents.

The results of the operation of this plan were that none of the 79 white students assigned to the formerly black school are attending the public schools of the district. They withdrew from the public schools. Of the 177 colored students in grades 1 to 4 assigned to the predominantly white school, only 121 enrolled to attend any of the public schools of the district, and a number of these 121 have since withdrawn from school.

Of the 1,019 white students who had attended the public schools of the district in the preceding school year, only 460 enrolled for attendance in September of this year. This is a decrease of almost 55 percent.

One of the most tragic consequences of what has happened in the Sunflower County School District is the closing of the Inverness High School. Despite its name, this school taught grades 1 to 12. During last year approximately 300 white students and no colored students attended this school. As a result of the "test" plan, 24 colored students were assigned to attend the Inverness school this year. Every one of the white students withdrew from the school, which has now been closed as an economy measure. The 24 colored students assigned to that school are being bused to other schools in the district.

At the Moorhead Elementary School, which includes grades 1 to 8, 125 students were in attendance last year. As a result of the "testing" 76 Negro students were assigned to grades 1 to 4 of the school this year. No white students enrolled to attend the Moorhead school. They all withdrew from the public school system.

How far will the intellectual screwballs go in disrupting our educational system? They have already gone too far. They must be stopped, and stopped now.

Similar disastrous consequences have resulted in the Carroll County school system. Until this year the Carroll County schools were operated under a "freedom of choice" plan. Prior to the beginning of this school year the Federal court ordered the school district to "pair" all of the first six grades of the school system. As a result, the great majority of the affected white students have withdrawn from the public school system. At the Vaiden School, there are currently enrolled 218 black elementary students and 15 white elementary students. At the North Vaiden School the figures are 218 black and 19 white students. At the J. Z. George School, there are enrolled 241 black students and 44 white students. And, at the Marshall school there are 254 colored students and 50 white students enrolled. The totals for the entire country school system of students enrolled in the first six grades are 931 blacks and 128 whites.

Does anyone really want his child to attend school under such circumstances? If they do, then they should certainly vote against the Whitten amendment. In fact, if freedom of choice is not enacted, public education will be destroyed in many areas of the South.

In Carroll County, too, this disruption in the public school system has tragically resulted in the closing of a school. In order to better achieve the goal of integration, the Federal court ordered the Carroll County School Board to close the school at Blackhawk. This school was located in a Negro community and had been attended by colored students. These students are now being bused to other schools in the county. I am told that the colored citizens of that area are very upset about the closing of this school, because they feel that such action has destroyed their community. They are very much opposed to this.

To make this matter even worse, the taxpayers of Carroll County had just recently spent approximately $42,000 in the construction and equipping of a new cafeteria to serve the students and faculty of Blackhawk School. That cafeteria is now useless.

Integration, what crimes are committed in thy name.

The situation in the Bolivar County schools unfortunately follows the same pattern. There are five school districts in Bolivar County. Each of these districts was compelled by court order, prior to the beginning of this school year, to abandon their "freedom of choice" plans and adopt more stringent plans to achieve integration.

The most informative article concerning the Bolivar County schools was published in the Delta Democrat-Times, Greenville, Miss., on October 27, 1969. The article is entitled "Bolivar Students Refuse To Comply With Court Order."

I ask unanimous consent that this article be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOLIVAR STUDENTS REFUSE TO COMPLY WITH COURT ORDER

(By Bill Rose)

CLEVELAND.—Exact racial breakdowns of attendance in Bolivar County public schools, made public for the first time last week, indicate a stubborn refusal of many whites and some blacks to comply with accelerated desegregation plans ordered for five of the county's six school districts in July by U.S. District Judge W. C. Keady.

The figures, contained in progress reports filed in the U.S. District Court clerk's office in Clarksdale Oct. 15 on orders of Judge Keady, reveal that only a minute percentage of whites assigned to predominantly black schools this fall are actually enrolled there. Also, some whites who had a substantial number of blacks assigned to their school or grade have withdrawn from that school.

Only 124 of the total white public-school enrollment of about 3,185 are attending formerly all-black schools, while 484 blacks out of the approximate total black enrollment of 9,504 are attending once all-white schools.

Before the fall term began there were published estimations that school attendance in

Bolivar County would be approximately 3,815 whites and 11,084 blacks.

If pre-school projections and the figures on file in Clarksdale are accurate, public school attendance is noticeably down, apparently due to an increased white exodus from desegregated public schools to one of the county's segregated private schools at Skene (Bayou Academy), Duncan, Benoit or Shaw. No one seems to know exactly where the missing blacks are, though, unless they are simply staying home.

Perhaps nowhere is the readiness of whites to desert public schools when faced with substantial integration more graphically displayed than at Benoit School in District Two. District Two's court-approved desegregation plan utilized for the first time this fall called for students in grades one through four scoring in the upper 30 per cent of those taking mental achievement tests to be assigned to once all-white Benoit School. The other students were to be assigned to all-black Nugent Center.

As a result of the test scores, 28 whites and 438 blacks were assigned to the first four grades at Nugent Center. None of the whites assigned to Nugent Center are attending there.

Seventy-three whites and 48 blacks were assigned to the first four elementary grades at Benoit School, but only seven whites and 25 blacks are actually enrolled there, according to the district's report.

None of the 13 whites and just three of the 17 blacks assigned to the first grade at Benoit School are attending classes there. None of the 15 whites and only 11 of the 15 blacks assigned to the second grade are attending that grade.

Because of the smaller number of pupils in the first two grades, they have had to be consolidated, school sources said.

The same sources said many of the whites who left Benoit School's elementary grades in the face of increased integration have enrolled in a recently established four-grade private school here.

The intelligence testing plan will be expanded to encompass the school's other eight grades over the next two years, although some informed school sources in Benoit say the exodus of whites from that school will probably increase if the test scores call for more integration.

The most desegregation has apparently been attained in District One (Rosedale).

District One's report was not in the files at Clarksdale Thursday, although it had been filed by the Oct. 15 deadline. However, district superintendent Joe Barnes revealed his district's racial makeup by schools to the DD–T in a telephone conversation.

At once all-white Rosedale School, the enrollment is composed of 384 whites and 246 blacks. In the first four grades—those affected this fall by the district's intelligence testing plan—the enrollment is 104 whites and 199 blacks, according to Barnes.

Under District One's testing plan, similar to the one used in District Two, 21 whites and 1,133 blacks are attending classes at once all-black West Bolivar County Training School (Rosedale), 15 whites and 344 blacks are attending once all-black Pace Elementary, and 12 whites and 493 blacks are attending once all-black Bob Woods Elementary (Gunnison).

In the county's most heavily populated school district, District Four (Cleveland), students are assigned to one of the city's five elementary schools on the basis of the court-approved zone they live in. The zoning plan will be broadened to include formerly all-white Cleveland High School and Margaret Green Junior High and all-black East Side High School for the 1970–71 school term.

Enrollments by schools in District Four are: 948 blacks and eight whites at once all-black Nailor Elementary, 309 blacks and 31 whites at once all-black Hayes-Cooper Elementary (Merigold), 364 blacks and one white at once all-black Bell Elementary, 76 blacks and 410 whites at once all-white Pearman Elementary, 49 blacks and 461 whites at once all-white Margaret Green Junior High, 1,150 blacks and no whites at traditionally all-black East Side High School, and two blacks and 437 whites at once all-white Cleveland High School.

In District Three (Shelby), the only other district to assign pupils by intelligence test scores, some substantial desegregation of Shelby School, the district's only predominantly white school, was revealed in the progress reports.

Shelby's enrollment includes 250 whites and 85 blacks. Enrollment at formerly all-black Broad Street School (Shelby) is two whites and 1,054 blacks, and enrollment at once all-black Brooks Elementary (Duncan) is three whites and 496 blacks.

In District Five (Shaw), as in the other five districts which filed reports this week, there are a number of blacks going to a once all-white school but very few whites attending a formerly all-black school.

There are 93 blacks and 304 whites attending the nine grades (four through 12) being offered at once all-white Shaw School. All but 11 of the blacks at Shaw and 28 whites are enrolled in the ninth grade. Shaw is the only school in District Five containing a ninth grade under terms of the district's pairing plan being used for the first time this fall.

Thirty whites and 1,339 blacks are enrolled at once all-black McEvans School. All the whites at McEvans are enrolled in grades one through three. McEvans is the only school in District Five offering grades one through three this fall.

Included in the stack of papers inside the folder containing the districts' progress reports at Clarksdale was a motion filed by Cleveland attorney Alfred Levingston asking Judge Keady to free District Six (Mound Bayou) from a previous order requiring all Bolivar County districts to report the number of black and white students enrolled.

The motion stated that such a report from District Six would be elementary school in the district and both have all-black enrollments.

The motion was granted by Judge Keady.

DISTRICT ONE

District One's (Rosedale) desegregation plan approved by U.S. District Judge W. C. Keady calls for students to be assigned on the basis of their scores on court-approved mental achievement tests. Students scoring in approximately the top 25 per cent of those tested are assigned to Rosedale School, a predominantly white school, while the other students are assigned to one of three predominantly black schools—West Bolivar Training School (Rosedale), Pace Elementary, or Bob Woods Elementary (Gunnison), Grades 1–4 are included in the plan this year. Grades 5–8 will be included in 1971–72, and grades 9–12 in 1971–72.

Students not covered by the testing assignment plan for the first two years of its implementation may choose the school they wish to attend under the old "freedom of choice" method under which all Bolivar County's school districts formerly operated.

DISTRICT TWO

District Two (Benoit) is also operating under a desegregation plan calling for pupil assignment to schools by their scores on mental achievement tests. Grades one through four were covered by the plan for this school term, but it will be broadened to cover grades five through eight for the 1970–71 term and grades nine through twelve for the 1971–72 term.

Students scoring in approximately the upper 30 per cent of those tested are assigned to predominantly white Benoit School, with the remainder of the students assigned to all-black Nugent Center (Benoit). School officials must also assure that 20 per cent of students in the eleventh and twelfth grades at Benoit School are black. During the first two years of the plan, those students not covered by it may choose a school under the "freedom of choice" method.

DISTRICT THREE

District Three (Shelby) is the third Bolivar County school district operating under a desegregation plan calling for pupil assignment to schools on the basis of students' scores on mental achievement tests. Students scoring in the upper 20 per cent of those tested in grades one through four this fall were assigned to predominantly white Shelby School. The rest were assigned to one of the district's predominantly black schools at Broad Street School (Shelby) or Brooks Elementary (Duncan).

The plan will expand to cover grades five through eight for the 1970–71 term. District school officials must also attempt to insure that 20 per cent of the students in grades 11 and 12 at Shelby High School are black. Students not covered by the testing plan during its first two years may choose the school they want to go to under the "freedom of choice" method.

DISTRICT FOUR

District Four (Cleveland) is operating under a zoning plan which calls for students to attend the school located in the court-approved zone in which they live. The district has been divided into five elementary school zones which apply to students in grades one through six in the district this year.

The plan will expand to cover all high school (grades seven through 12) students in the district for the 1970–71 school term. At that time, all students living west of the Illinois Central Railroad tracks which run north and south through the center of downtown Cleveland will be assigned to predominantly white Cleveland High School. Students living east of the tracks will be assigned to all-black East Side High School. Students in grades seven through 12 were allowed to choose the school they wished to attend under the "freedom of choice" system.

DISTRICT FIVE

District Five (Shaw) is operating under a pairing desegregation plan which will be instituted over a three-year period. This year, all students in the district in grades one through three were assigned to predominantly black McEvans School (Shaw). Also, all students in the district in the ninth grade were assigned to predominantly white Shaw High School.

For the 1970–71 school term, all students in grades one through six will be assigned to McEvans and all students in grades seven through 12 will be assigned to Shaw. For the 1971–72 term, all students in grades one through eight will be assigned to McEvans and all students in grades nine through 12 will be assigned to Shaw. During the three years required to complete the plan, those students not covered by the pairing system may choose the school they want to attend under the old "freedom of choice" system.

Mr. EASTLAND. This article points out that only a minute percentage of whites assigned to predominantly black schools this fall are actually enrolled there. A number of whites, who had a substantial number of blacks assigned to their school, or grade, have withdrawn from that school. A reading of this article also makes it plain that many colored children and parents are opposed to arbitrary assignment of students to obtain integration. A significant number of colored students who were assigned to

predominantly white schools and not permitted to attend the schools to which they had been attending, rejected or declined to actually enroll in their new schools. In other words they just dropped out of school completely. For instance, the article stated that 73 whites and 48 blacks were assigned to the first four elementary grades at Benoit School, but only seven whites and 25 blacks were actually enrolled there.

Mr. President, this is a deplorable situation for the children and parents of all races.

The situation in the Holmes County schools has received attention from the Wall Street Journal. An article entitled "Integration Irony" which appears in the November 12, 1969, issue, deals exhaustively with the terrible impact this problem is having on that community. The thrust of the article is that when the final blow falls in Holmes County there will be very few children left in the public schools. I ask unanimous consent that this article be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTEGRATION IRONY: SUPREME COURT RULING MAY SPUR SEGREGATION OF SOME DIXIE SCHOOLS—WHITES BUILD OWN ACADEMIES IN HEAVILY BLACK COUNTIES, ABANDONING PUBLIC SYSTEM—SCRAPING UP TUITION MONEY

(By Neil Maxwell)

DURANT, MISS.—The Supreme Court's order to end all school segregation immediately seems destined to have a dramatic—but ironic—impact here.

Both whites and Negroes here in Holmes County, where the suit leading to the High Court order originated, agree that the ruling will lead to less, not more, integration. They say it could even result in a completely segregated school system.

This outlook reflects the fact that Holmes County is more than 70% black. The outnumbered whites have grudgingly gone along with integration until now, but with the Federal Government trying to effect widespread integration, the prospect of white children attending predominantly black schools arises. And few here doubt the outcome: The whites will withdraw into an already flourishing private school system, abandoning the public schools to the blacks.

THE PROBLEM DISTRICTS

That may well be the initial result in many of the 250 or so Southern school districts where Negroes outnumber whites, both white and black observers agree. Holmes County forms one of these districts. But civil rights advocates, heartened by the Supreme Court ruling, say it should hasten integration in many of the more than 1,300 Southern districts where Negroes are in the minority.

"I think over the long haul we're going to get substantial gains from the ruling," says one veteran Southern civil rights worker. In time, this observer adds, "there's no reason the all-Negro schools in the hard-core districts can't be made into quality schools, and if that happens eventually the white children will come back to them."

Holmes County has presented special difficulties all along. In fact, the Fifth Circuit Court of Appeals ruled last week that instead of ending segregation by Dec. 31, as most of the 32 other Mississippi school districts named in the Supreme Court ruling must do, Holmes County may do it in two steps, with the final one coming next September.

But when integration day comes to Durant, "the white students won't be there," Mayor C. H. Blanton Jr. says flatly. "A unitary system just won't work here. Would you send your children?" Such threats have been made before, of course—and not always carried out.

But many whites insist they're dead serious about avoiding real integration at all costs. Take John Henry Guess, a worker at a plastics plant here. "I ain't sending my kids to that nigger school; I'll keep them home," he says, standing on the front porch of his cramped, shabby home in a largely Negro neighborhood.

Mr. Guess may keep his three boys and two girls at home if he chooses, because the far-sighted Mississippi legislature abolished the state compulsory attendance law after the Supreme Court outlawed segregated school systems in 1954. But sending the children to private schools would be a real problem, because tuition would run about $400 a year apiece, and Mr. Guess earns less than $5,000 a year.

WHITE COUNTERMEASURES

Mississippi is trying to help people like Mr. Guess avoid integration. A few weeks ago the state legislature passed a law providing money for tuition payments. However, a Federal court knocked down an earlier tuition grant law several months ago, and this law is under legal attack.

There is a strong feeling here that Durant's two public schools, as well as all the others in Holmes County, will be all black before long. A total white exodus already has produced this situation in the western half of the county, which is cotton-growing delta land with a high concentration of Negroes. The Department of Health, Education, and Welfare has abandoned any hope of integrating the western part of the county; its plan assumes public schools there will remain all black.

White leaders here have laid plans to open a private school—the fourth in the county—with only the timing still undetermined. "I figure it will only take us a couple of months to get started," Mayor Blanton says. "We've got a building lined up and teachers lined up who are ready to leave the public schools when we need them."

Racial consciousness is obvious throughout Holmes County. The only cafe in Cruger, a hamlet of less than 500 in the western part of the county, still has six-inch-high "White" and "Colored" signs on the restroom doors, and Negroes are seldom seen at the lunch counters. The county phone book still identifies "colored" funeral homes. When integration first came to Holmes County four years ago, nearly half the white students fled to the instantly organized private schools, leaving behind a public school enrollment that is now 85% black.

ANTICIPATING FAILURE

Both public schools in Durant now contain grades one through twelve. Under Durant's present system of limited integration, 160 Negroes have joined the 190 whites at the formerly all-white school; the second school remains all-black. Under the HEW plan for total integration next fall, the all-black school would be used for grades one through six; theoretically, it would have an enrollment of about 500 Negroes and 200 whites. The currently integrated school would be used for the remaining six grades and would have about 450 Negroes and 140 whites.

The projected white enrollment figures, however, assume the complete cooperation of all white parents in this district, even those who have already withdrawn their children from the public school system. In reality, public school officials expect almost no white parents to cooperate.

Pairing of the two schools and other drastic steps to eliminate the dual system don't have to be taken until September, but the interim steps less than two months away don't promise to be easy. In stage one, the seventh and eighth grades at the Negro school are to move en masse to the integrated one, resulting in heavy concentrations of Negroes in those classes. Other county schools have a difficult path to follow in coming weeks, too. At Pickens, for example, roughly 40 white students of the enrollment of 100 whites must shift to a Negro school with 400 students. School officials predict all 40 of the whites will shift to private schools instead or drop out of school entirely.

Whites here have adapted surprisingly well to the integration of the formerly all-white school, but the idea of sending their children to the Negro school is something else. A white farmer who scrapes by raising soybeans says: "I'll keep my children in school so long as they can stay with their friends, but if they send them, to the colored school, I'm pulling them out. I've got them in the third, fifth and eighth grades, and they can get by with that much education if they have to."

With other whites, too, the objections grow as the Negro percentage increases. Paul Tardy, editor of the Holmes County Herald, a weekly newspaper started a few years back by the white Citizens Council, sends his son to 10th grade at Lexington, Miss., high school which is about 25% black. But if that level rises drastically, Mr. Tardy is convinced that teaching quality will drop, and he vows he'll pull his son out.

To insure that the son will be able to get into the nearest private high school, about 20 miles away, "I'm trying to get $100 ahead right now so I can go on and start paying his tuition," Mr. Tardy says. He plans to keep his son in public school until there is an overwhelming influx of Negroes, then shift to the private one.

There is wide agreement among local whites that the quality of teaching in the public schools will drop as the Negro pupils come in. For one thing, it already has been well-established here that when white students leave for the private schools, so do their teachers. When integration came to the white Lexington elementary school, all but three of the 13 teachers there left for the new private schools, along with all the white pupils.

LOSING PUBLIC SUPPORT

With the prospect of massive integration, "the white students will undoubtedly come out, the faculty will come out and public support will immediately be withdrawn," says a white leader. This does not mean whites could cut off school funds, since most of them come from the state on the basis of enrollment, but it does mean there might be solid white opposition to bond issue proposals.

Says Robert G. Clark of Holmes County, the only Negro to be elected to the state legislature since Reconstruction: "I think it's very likely we'll have an all-black system, and that will be bad as long as the whites control it. I expect they will try to make the system as rotten as they can."

It is difficult to judge the quality of the segregated private schools, although their backers insist that quality education is the reason for their existence. Many of the schools still lack adequate libraries, laboratory equipment and audio-visual aids. On the other hand, few seem to be suffering from a lack of qualified teachers; the teachers are coming from the public schools or out of retirement, if necessary.

The largest Holmes County private school, the Cruger-Tchula Academy, is housed in an abandoned public school building and in some new prefabricated buildings. Its classrooms are in good shape, and it offers a broad range of courses. Besides home economics and business, for example, advanced courses are offered in mathematics, science and languages.

The school also has a lighted football field where the Colonels meet their opponents in the Academy Conference. A fleet of buses transports students.

HELP FROM THE POVERTY PROGRAM

Another private school, Central Holmes Academy in Lexington, is housed in a shiny new metal-sided building that, according to an internal Office of Economic Opportunity memo, got a helping hand from the Federal poverty program. An OEO investigator visiting the county in 1966 to check on irregularities in the program wrote his boss: ". . . The most glaring discrepancy is this: Many of these men (in a training program to teach them to be auto mechanics) have been working on the white Citizens Council's private school. In other words, Federal funds are building the white Citizens Council school. How about that?" (Both the president and the principal of Central Holmes Academy declined to be interviewed on any aspect of their school.)

There is little doubt that in some instances private schools are a legal, workable haven from integration. However, a suit currently in the courts seeks to knock out the tax deductibility the Internal Revenue Service now grants to contributions to such schools. Another suit is planned to try to make the state of Mississippi stop supplying textbooks to private schools.

Clearly, the popularity of private schools has risen dramatically in the South. The Southern Regional Council, which works to promote better race relations, estimates that 300,000 white students are attending what it calls "segregation academies" this year—perhaps 10 times more than there were five years ago.

Mr. EASTLAND. Mr. President, most of my remarks today have been confined to school districts in north Mississippi. I have talked with many people in the school districts of south Mississippi. They are going to very shortly be affected by the recent decisions of the Supreme Court and the Fifth Circuit Court of Appeals, to bring about total integration by January 1, 1970. In those southern districts, where the ratio of black to white students is high, responsible and informed persons have expressed to me the gravest concern as to the future of public education in those areas. Specifically, it is felt that where the ratio is intolerable, the white students and teachers will withdraw from the public school system.

The Fifth Circuit Court of Appeals in entering its order of November 7, 1969, which implemented the recent Supreme Court decision, specifically took note of the enormous problems faced by some of these school districts as follows:

The scope of the problem of converting from dual to unitary school systems in these districts may be seen from the following tables which reflect racial composition.

System	White students	Negro students
Amite	1,461	2,582
Anguilla-Line	214	906
Canton Mun	1,326	3,672
Hinds	6,438	7,489
Holly Bluff	240	483
Holmes	913	5,355
Kemper	793	2,060
Madison	1,238	3,376
Natchez-Adams	4,494	5,927
Noxubee Co	872	3,573
Sharkey-Issaquena	630	2,002
South Pike	1,135	2,156
Wilkinson	779	2,757
Yazoo Co	1,071	2,495

These figures speak for themselves.

We must do something to alleviate this terrible situation. The adoption of the Whitten amendment by the Senate will be the first step. The great majority of both races oppose the abolition of the dual school system.

As I have previously stated, the white parents and students will not tolerate this terrible situation.

An immediate result of this unwarranted interference in the operation of the public schools of Mississippi has been the tremendous and spectacular growth of private schools in the State.

I am advised that as of 3 weeks ago there were a total of 84 private schools operating in Mississippi; 35 of these have been started since September 1969. All of them as a result of integration there are now being organized more than 200 additional private schools.

Pillow Academy, at Greenwood, Miss., had 200 students enrolled last year; there are 1,200 students enrolled there this year. There are three council schools in Jackson which had an enrollment of 500 students on October 29, 1969; there are now 1,500 students enrolled. They are now building several additional private schools to the citizens council. I am told that there have been 200 requests from over the South in the last 10 days on how to organize private schools. In addition, requests have been received from the States of Maryland, New Jersey, Pennsylvania, Utah, Idaho, and Washington.

Mr. President, I believe that these circumstances prove beyond a shadow of a doubt that the greatest enemies of public education today are the self-styled "liberals" and many judges of our Federal courts. These are the same people who beat their breasts and proclaim their concern for public education. Yet, they are blindly and foolishly pursuing and enforcing policies which are resulting, and will result, in the ruin of public education in many areas. They will prevent many children both black and white from securing an education.

Mr. President, this deplorable public school situation is having a terrible impact upon our social and economic development.

New and expanded industries will not come into a community where the public school situation is as I have outlined above. In one of the communities most crucially affected by these court orders a substantial industry had planned to locate a plant prior to September 1969. When the owners of the company learned of the school situation in that town this fall they changed their mind and decided not to locate in that community. They gave as their reason the fact that their workers and employees would have to be assured that their children could attend public schools in acceptable circumstances. Since this assurance could not be given, they decided to go elsewhere. This new industry would have produced jobs and income for this community. This situation can be multiplied many times to get a true picture of what is happening.

When the public school situation becomes so unbearable, people who can make a living elsewhere tend to consider moving to another town. This results in the loss of the most skilled and talented members of the community. What a terrible price to pay for integration.

I know of one small town in the delta section of Mississippi which has a population of 200 or 300. Between September 1 and October 15 of this year, no less than 19 families have moved from this town. The only reason for these moves was that the parents insisted on their children having a decent educational environment. I know of another small town where there are now three vacant houses on one street. These vacancies occurred for the same reason.

The cry is now being heard, and let me say I am opposed, that we must reduce the money spent on the public school system. In the long run, against my opposition, this will happen in many areas. The Supreme Court is following a course which will mean inferior schools and the lack of education. I know that none of my colleagues would want such terrible tragedies to occur in your respective States. I know that none of you would think or expect that Mississippi and other Southern States should be dealt with differently and more harshly than his own State.

In light of these facts I trust that each of you, my fellow Members of the Senate, will join in this effort to restore some sanity in the operation of our public schools.

RECESS UNTIL 9 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business tonight, it stand in recess, rather than in adjournment, until 9 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the prayer tomorrow, there be a time limitation of 3 hours on the pending amendment, the time to be equally divided between the distinguished Republican leader, the Senator from Pennsylvania (Mr. SCOTT), and the distinguished Senator from Mississippi (Mr. STENNIS), and that at the conclusion of that time period, the vote take place on the pending amendment.

Mr. SCOTT. Mr. President, reserving the right to object—and I have no objection—I would simply add, if the majority leader will accept it, that sometime during that period, if the majority leader so elects, we may go to the Executive Calendar for the purpose of considering a nomination.

Mr. MANSFIELD. I was going to make another suggestion about that.

Mr. SCOTT. That is satisfactory.

Mr. STENNIS. Mr. President, reserving the right to object—and I do not intend to object—I think the leader has made a

good suggestion. We have several Senators who want to speak on the matter. There is no disposition on the part of anyone to try to delay the vote. It is a vital matter. There are several more Senators who want to speak on the merits.

I think it would be better to start fresh in the morning. We could have a live quorum after the prayer and then go right into one and a half hours of debate on each side and finish it.

Mr. DOMINICK. Mr. President, reserving the right to object—and I will not object—what about amendments to the amendment or substitute amendments? Would they be included? I am not at the moment planning any. However, I understand that some Senators have suggested some.

Mr. MANSFIELD. I understood the issue was pretty clearcut; and I was making the request on that basis.

Mr. DOMINICK. But would the form of the unanimous-consent request cut off such amendments?

Mr. MANSFIELD. That is a matter which I think the Senator ought to discuss with the distinguished Republican leader.

Mr. SCOTT. Mr. President, I would have no objection to including in the unanimous-consent request the right to offer substitutes or amendments to the amendment, provided that all debate would end at the end of 3 hours and we could have a vote at that time.

The PRESIDING OFFICER. Is there objection to the fact that there will be 3 hours of debate tomorrow commencing after the prayer, and that at the end of the 3 hours there be a vote?

Mr. MANSFIELD. Exclusive of a live quorum at the beginning.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the termination of the vote on the pending amendment, there be a time limitation of 30 minutes on the amendment to be offered by the distinguished Senator from Alabama (Mr. ALLEN), the time to be equally divided between the author of the amendment, the distinguished Senator from Alabama, and the manager of the bill, the distinguished Senator from Washington (Mr. MAGNUSON).

Mr. JAVITS. Mr. President, could we know what the amendment is before we have a ruling?

Mr. ALLEN. It is amendment No. 142.

Mr. JAVITS. What does it relate to?

Mr. ALLEN. It relates to the public policy on freedom of choice.

Mr. JAVITS. The same general idea.

Mr. ALLEN. The Senator is correct.

Mr. JAVITS. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

The unanimous consent agreement, later reduced to writing, is as follows:

Ordered, That following the prayer and a live quorum on Wednesday, December 17, 1969, further debate on the pending amendment offered by the Senator from Pennsylvania (Mr. SCOTT), to the bill, H.R. 13111, making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, be limited to three hours to be equally divided and controlled, respectively, by the Senators from Pennsylvania and Mississippi (Mr. SCOTT and Mr. STENNIS). Following the vote on this amendment, debate on an amendment (No. 142) to be offered by the Senator from Alabama (Mr. ALLEN) will be limited to 30 minutes to be equally divided and controlled by the Senator from Alabama and the Senator from Washington (Mr. MAGNUSON).

Ordered further, That on all other amendments, except amendments to Sections 407, 408 and 409, and one by Senator Javits to be limited to 1½ hours, debate be limited to one hour, to be equally divided and controlled by the moved of the amendment and the Senator from Washington (Mr. MAGNUSON).

Mr. MANSFIELD. Mr. President, I ask unanimous consent, the Senate concurring, that at the conclusion of the speech by the Senator from Mississippi——

Mr. EASTLAND. Mr. President, I want to finish the speech in the morning. We can go out now.

Mr. MANSFIELD. No. Is the Senator through now?

Mr. EASTLAND. I want to finish this.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. EASTLAND. I yield.

Mr. MANSFIELD. Mr. President, I am very sorry and apologize to the Senator from New Hampshire who has had his share of sorrow today, but I think I should inform the Senate that it is the intention of the leadership if it is necessary and appears important, to call the Senate into session on Sunday. I do not intend to put the Senate in a position where it has not completed its business by Christmas and it will thereby be subject to a call by the President of the United States to come back into session.

So, the Senate is on notice.

Mr. SCOTT. Mr. President, will the Senator from Mississippi yield so that I may try to clarify a matter?

Mr. EASTLAND. I yield.

Mr. SCOTT. Mr. President, may I inquire whether at the conclusion of the remarks of the Senator from Mississippi tonight, with the understanding that he continue tomorrow, there is a possibility——

Mr. EASTLAND. I do not have more than 10 minutes. If the Senate wishes to vote on the Cotton amendment tonight, it will suit me fine. If not, I will finish this on tomorrow.

Mr. SCOTT. Mr. President, may I suggest that at the conclusion of the remarks of the Senator from Mississippi tonight, the Senator from New Hampshire be recognized to offer his amendment.

Mr. COTTON. Mr. President, I am not offering the amendment. The Senator from New York is offering the amendment.

Mr. JAVITS. I am offering it.

Mr. COTTON. I am the defendant. Mine is contained in the bill.

Mr. SCOTT. Mr. President, I suggest that the Senator from New York be authorized to offer his amendment, and if the distinguished majority leader has no objection, we can agree on a time limitation of 30 minutes.

Mr. JAVITS. When?

Mr. SCOTT. Tonight.

Mr. JAVITS. Not tonight.

Mr. MANSFIELD. Why not tonight? This body has been waiting here tonight and showing an interest.

Mr. JAVITS. The Senate has not been waiting on me. This is putting me in a box for no reason. I am here like the Senator from New Hampshire.

Mr. MANSFIELD. I did not even know who was going to offer the amendment.

Mr. JAVITS. I am here like the Senator from New Hampshire.

Mr. COTTON. Not like me.

Mr. SCOTT. Mr. President, I do not know how I got in the middle.

Mr. JAVITS. Mr. President, I have the amendment. I am willing to proceed with the amendment, but to take it up in the shank of the evening—I would not dream of it.

Mr. MANSFIELD. The Senator is entitled to his opinion, as usual.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. ALLOTT. Mr. President, I send to the desk an amendment and ask that it be printed.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. ALLOTT. Mr. President, for the sake of explanation, the amendment would restore the remaining 10 percent of the impact area funds in the bill. I will call it up at any convenient time, even if it is 10 o'clock tonight. Or I will call it up at 7 o'clock in the morning.

Mr. MANSFIELD. Mr. President, why does not the Senator call it up right now? I understand that the Senator from Mississippi has concluded his remarks.

Mr. EASTLAND. The majority leader is correct.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending amendment be laid aside temporarily for the purpose of allowing the Senator from Colorado to offer his amendment.

The PRESIDING OFFICER. Without objection, it is so ordered. The Chair recognizes the Senator from Colorado.

Mr. ALLOTT. Mr. President, without losing my right to the floor, I yield to the Senator from Texas.

The PRESIDING OFFICER. Will the Senator suspend?

The Senate will be in order.

Mr. MANSFIELD. Mr. President, I suggest that the Chair ask all Senators to take their seats and to stay in them.

The PRESIDING OFFICER. It is so ordered.

Mr. TOWER addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the Senator from Colorado.

Mr. ALLOTT. Mr. President, I yield to the distinguished Senator from Texas, with the understanding that I will not lose my right to the floor.

The PRESIDING OFFICER. The Senator from Texas.

Mr. TOWER. Mr. President, I recognize the need for a great degree of dispatch in the expedition of our business between now and Christmas. But I should like to respectfully suggest that this is hardly a proper climate in which to legislate. We have been legislating

intensively here for several days—indeed, weeks. I am not sure that we are really all ourselves. As a matter of fact, I think the later the hours grow, the more tired the Members of this body get, probably the less responsible they get. After all, we are all human beings; we are not superhuman.

I recall something that the great Alben Barkley once said:

> The first year you are in the Senate, you sit there in great awe of all these great men and wonder how you got there. The second year you are in the Senate, you wonder how they got there.

This is something Alben Barkley said.

I should like to suggest that this is not a proper hour, a proper climate, a proper environment for responsible legislation. Even though we are in a rush to finish and we want to conclude by Christmas, I think that we, as the world's greatest deliberative body, cannot try to enact far-reaching and significant legislation in this kind of climate.

Mr MANSFIELD. Mr. President, will the Senator yield?

Mr. TOWER. I yield.

Mr. MANSFIELD. Mr. President, sometimes I am not at all certain that we are the world's greatest deliberative body. We have been on the job only 12 hours today. I feel as fresh as a daisy. I want to get on with the work, because I want to take a vacation as soon as possible. I know what is going on. My mind is not dulled. I am aware of the amendments. I can still read a page legibly, and I can still understand what my colleagues say.

So I would hope that we work together, as we have been, and try to bring to a head these appropriation bills, which are the only factors in the way of a sine die adjournment.

Mr. TOWER. I suggest there is a question between speed and deliberation.

The PRESIDING OFFICER. The Chair recognizes the Senator from Colorado.

The clerk will read the amendment offered by the Senator from Colorado.

The assistant legislative clerk read as follows:

> On page 31, line 19, strike out "$600,167,000" and insert in lieu thereof "$665,167,000".
>
> On page 31, line 19, strike out "$585,000,000" and insert in lieu thereof "$650,000,000".

The PRESIDING OFFICER. Does the Senator wish the amendments to be considered en bloc?

Mr. ALLOTT. I ask unanimous consent that they be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, I thank the distinguished Senator from Texas for his comments on the present situation. For 2 or 3 months I have been speaking about the same problem, in that I thought the Senate would get to a situation in which the Members were all so fatigued that they would not be able to deal with these matters.

I do not criticize the majority leader. He has great responsibilities, and he is trying to accomplish what I am sure is the purpose of all of us here—to get out the appropriation bills so that the Senate may finish its work and salvage a sense of self-respect out of our work for the year. Unless we dispose of these appropriation bills, I do not think we can do that.

I am completely aware of the concerns which the distinguished Senator from Texas has just mentioned, and which I share. Nevertheless, we are here. We are dealing with amendments. We are dealing with critical amendments. The one which has been laid aside contains some of the most narrow nuances of the law and of judgment that anybody can imagine. I hope that the limitation we have placed on this particular question for tomorrow will give me an opportunity to express myself on that.

Tonight, I have offered an amendment. Because of the hurry, I was not aware, until after the HEW bill had been marked up this morning, that we had not funded the impacted areas funds to the full entitlement.

As all Senators know, the distinguished senior Senator from South Dakota for many years has carried these amendments, when the administration sought to cut these funds and at the same time emphasize title I of the bill. I do not want to put in my remarks tonight any particular weight as between title I and the impacted area funds, because title I also has its virtues, and all of us have voted for those funds in one way or another.

On the other hand, since World War II, we have had the impacted area funds, and they have constituted a major portion of the support of many school districts in this country.

I do not want to convey the impression—and I say this frankly—that I am offering this amendment at the instigation of the senior Senator from South Dakota (Mr. MUNDT), who, unfortunately, is hospitalized at the moment; but, rather, that I am doing it on my own, as one who has supported historically his efforts I have supported these efforts because I believe that the Public Law 874 program is a solid, substantial, and logical way to support our local schools.

Mr. President, there is a difference between the impacted area funds and the title I funds, for example, which require matching funds. The title I funds, praiseworthy though they may be, often actually drain our school districts of resources in order to match Federal programs that are not necessarily required in those particular districts. On the other hand, the impacted area funds go to the school districts without limitation, and these are the areas where we have Federal employees, Federal installations, and children attending schools. All of these factors put a burden on the school district which the school district cannot possibly meet under its own system of taxation.

This is not a situation particular to my own State. It is a situation that is equally peculiar or individual to Virginia or West Virginia or Massachusetts or almost any other State in the Union, for that matter.

What this amendment does, in very simple form, is to add $65 million on page 31, line 19—I will read it:

> For grants and payments under the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and under the Act of September 23, 1950, as amended (20 U.S.C., ch. 19), $665,167,000, of which $650,000,000 shall be for payments to local educational agencies for the maintenance and operation of schools as authorized by the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and $15,167,000 which shall remain available until expended.

Mr. President, the proposal would add $65 million to this provision to implement the impacted area fund, not to 90 percent, as the bill would do, but to implement the impacted area fund to the extent of 100 percent of entitlement.

Mr. President, I should make one further brief comment and then I shall have completed my remarks. On such short notice, I can only speak with reference to how it would affect my own State. However, I think Senators will find that it affects all States in the same way. Representatives of our school districts in my State are dependent, to a large extent, upon this program for their fiscal existence. The extent to which they would benefit from increasing this provision in the bill by $65 million would be, for example, in Aurora, Colo., it would add $112,000; in Boulder, Colo., $70,000; in Denver, $214,000; in Harrison, $49,000; in Fountain, approximately $82,000; in Colorado Springs, $201,000; at the Air Force Academy, where we have some 5,000 employees including enlisted men, approximately $102,000; in Pueblo, $64,000.

Therefore, where Colorado has a 6-percent limitation on the amount of school aid which can be increased during a school year after appropriations have been made for a fiscal year, this is very important.

I shall conclude my remarks and then I will be happy to yield. The basic and essential point about the particular amendment is that federally impacted funds go to the bone, blood, and muscle of school districts. If this is cut, we are going to place thousands of our school districts in this country in a financial bind which they cannot meet. Unless my amendment is adopted these school districts well be forced either to cut the number of their classes or increase the number of students, and thereby decrease the quality of education.

This is one area where we can help the schools. This is one area where we can help the local boards which know best what their districts need to sustain their schools and carry them through the school year.

I yield to the Senator from New Mexico.

Mr. MONTOYA. Mr. President, I ask unanimous consent that I may be permitted to join the Senator from Colorado as a cosponsor of the amendment.

The PRESIDING OFFICER (Mr. MONDALE in the chair). Without objection, it is so ordered.

Mr. MONTOYA. Mr. President, first of all I want to say that the committee, in approving this particular item, was very generous.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MONTOYA. The Senator from Colorado yielded to me.

Mr. ALLOTT. Mr. President, how much time do I have remaining on the amendment?

The PRESIDING OFFICER. The Senator has 20 minutes remaining.

Mr. ALLOTT. Mr. President, I yield 5 minutes to the distinguished Senator from New Mexico.

The PRESIDING OFFICER. The Senator from New Mexico is recognized.

Mr. MONTOYA. Mr. President, I do not think that the Senator from Colorado, nor I, intends to impute any criticism to the committee for what it has done in providing $600,167,000, which is the same sum provided by the House. Somehow the $600 million represented in the bill is not the full entitlement to which the school districts in these areas are entitled. The Senator from Colorado is trying to bring this to 100-percent entitlement as I understand it.

This is one of the most popular fundings that we provide in Congress because it affects every State in the Union. It affects many of the school districts in our States. It is a funding from the Federal Government which is depended upon by the school districts in trying to work out their budgets and their expenditures for the ensuing year.

During the last 2 years the school districts in America have been impeded by lack of assurance that this money was forthcoming. I think the action of this Congress, even though it is at this late stage, brings encouragement to many of these districts which have children that are Federally connected. I think this money will be well spent and I think if we give assurances through this increase in this appropriation that we will be able to bring about better facilities through administration and operation in all these school districts throughout the country.

Mr. President, all the school superintendents met in Washington about 2 months ago. I am sure all the school officials who are concerned with this type funding have contacted all Senators here in the Chamber pleading with their Senators to come forth with 100-percent entitlement.

I think this is an investment in the future of America. I think this is an investment in the human resources of tomorrow. That is why I wanted to join my good friend from Colorado. I think this is, indeed, a very worthy amendment, and I urge its adoption.

Mr. ALLOTT. Mr. President, I thank the senior Senator from New Mexico very much for his support on this particular amendment.

I must apologize and I do so publicly. I became so involved in my own statement—I have been wrapped up in this matter for many, many years—that I did not realize the senior Senator from New Hampshire was seeking the floor.

Mr. President, I yield the floor now in order that the senior Senator from New Hampshire may speak.

Mr. COTTON. Mr. President, what is the time limitation?

The PRESIDING OFFICER. The manager of the bill has 30 minutes.

Mr. COTTON. Mr. President, I am speaking for the committee in opposition.

The PRESIDING OFFICER. The manager of the bill has 30 minutes.

Mr. COTTON. Mr. President, I yield myself 5 minutes and I will try not to take any more than that.

Mr. President, I think I am speaking for the chairman of our subcommittee. I hope I am speaking for the committee.

I discovered today, in something that really bothered me, that my own administration had not seen fit to take me into their confidence about what they wanted on the OEO. They told everybody except the senior ranking Republican on the Committee on Appropriations. I apologize—not to my administration, but to my fellow Senators. I will have an opportunity sometime, when they will wish they had let me know.

Mr. President, I wish that the committee were in a position to accept this amendment.

I am not going to stamp and roar strenuously and make the welkin ring. I suppose, actually, it adds up not to $50 million—although the distinguished Senator from Colorado had sincerely figured it so—but the total will add up to $65 million. I do not suppose that is much when one considers that, so far today, in this Chamber, we have added to the bill $478.2 million; so perhaps $65 million more as a burden on the bill will not be significant.

But the facts are as follows:

In fiscal 1969, we appropriated on a 90 percent basis for the impacted area funds.

Two administrations have tried, vainly, radically to reduce or remove the funds.

Congress does not stand for that, and I am entirely sympathetic with the position of Congress.

The funds have reached the point that school districts depend upon them. They are among the few funds which have no Federal strings attached, so the school districts can use them for the purposes they most need. They are not earmarked, and a particular district can use them for buildings, teachers' salaries, equipment, or whatever is most needed.

I do not blame the school districts, the school authorities, the teachers, or the superintendents for wanting these funds. I am all for restoring them in the bill.

But in fiscal 1969 we restored them on a 90-percent basis of estimated full funding, and we appropriated $520,861,000—that is, not quite $521 million.

This year the committee decided to do the same thing.

It is an estimate as to what is absolute, complete, full funding, but it is an estimate of what the 90 percent would be.

We have already provided in the bill the $600,167,000, which is an advance over fiscal 1969 of $79,306,000.

Mr. President, I submit, on behalf of the committee, that we have been fair and reasonably generous, because we cannot calculate to the last dollar or the last cent what 100-percent funding will be, with all of the other items in this vast bill of $21 billion which we are blowing up every half hour, or every hour on the hour.

I think that if we restore, and are sure that we are restoring, the 90 percent, which is practically $81 million more than was appropriated in fiscal 1969, that is a fair approach.

That is the reason why I feel that the committee cannot accept the amendment and that we are compelled to oppose it, much as I should like to accept it, and much as I sympathize with the feelings of my good friend from Colorado, who truly represents the thinking all over the country on the subject of impacted funds. We feel that we have been consistent and fair in computing the 90-percent estimate, which may be more than the 90 percent, but is $80 million more than they had last year.

Mr. MURPHY. Mr. President, will the Senator yield for a question?

Mr. COTTON. I yield.

Mr. MURPHY. This is not a part of the amendment, but I think that a short colloquy might properly be injected here, if the Senator from Colorado has no objection.

Mr. President, since coming to the Senate, I have been a strong supporter of the impacted aid and I am pleased to cosponsor the Allott amendment.

Now, if I could have the attention of the manager of H.R. 13111, the distinguished Senator from Washington, Mr. MAGNUSON, or one who can clarify a matter with respect to sections 2 and 4 of Public Law 874 which deal with impacted aid. This does not directly involve in the pending amendment, but it is an important matter.

Section 2 deals with Federal acquisition of real property and section 4 deals with those instances where there has been a sudden substantial increase in school attendance resulting from the activities of the United States. Yet, the House through a serious oversight omitted those sections.

It is my understanding that these sections have always been funded in the past, and I am particularly concerned with the section 2 provision which is so important to so many school districts in my State. Under section 2 of Public Law 874 entitlements are allocated to those school districts throughout the United States who have lost a substantial portion—and this must be 10 percent or more—of their assessed evaluation through Federal acquisition of real property. In addition, the districts are required to show a continuing financial burden throughout the year in order to receive these funds. Section 2, then, is a method, and an equitable one, of reimbursing school districts for Federal impact and loss of school property.

I have a table showing the adverse effect this would have on school districts in my State, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

IMPACTED-AID TO CALIFORNIA—PUBLIC LAW 874—SECTION 2, 1967–68

School district and county:	*Amount*
Hueneme, Ventura	$52,951
Deluz, San Diego	7,250
Fallbrook Union, San Diego	154,220
Fallbrook Union (elementary), San Diego	205,200
Oceanside, San Diego	702,450
San Miguel, San Luis Obispo	1,770
Vallelindo, Los Angeles	58,030
Washington Union, Monterey	1,911
San Antonio, Monterey	1,974
Los Alamitos, Orange	131,729
French Gulch Whiskey, Shasta	8,159
Total	1,325,644

Mr. MURPHY. Mr. President, the case of Fallbrook Union School District, Fallbrook, Calif., illustrates how important these funds are to these California school districts. The loss of funds from section 2, I am advised by Fallbrook Assistant Superintendent Robert Murphy, would force the closure of the school district before the end of the school year since it represents more than 10 percent of the school district's budget.

There is a great need in these districts for these impacted funds. They have always been funded in the past, and the example I have just cited illustrates there is a need for a continuation of this needed Federal assistance.

The question I have for the Senator is: Does the bill as reported by the committee cover sections 2 and 4 of Public Law 874?

Mr. COTTON. Let me say, in reply, that this is a very important and good point raised by the Senator from California. Those two items are important, and the House language in the bill probably did exactly what the Senator from California is apprehensive about; namely, it eradicated or diluted them. The Senate committee, recognizing that, has restored it in the bill now before us. The language used in fiscal year 1969, in last year's appropriations, puts them back.

Mr. MURPHY. I thank my distinguished colleague from New Hampshire.

Mr. COTTON. I think that I can assure the Senator from California that our language takes care of the two items, which are important and about which I share his concern.

Mr. MURPHY. I thank the distinguished Senator from New Hampshire for his concern. I thank the distinguished Senator from Colorado for his courtesy in allowing me to inject this colloquy during his remarks.

Mr. PASTORE. Mr. President, will the Senator from Colorado yield me 2 or 3 minutes?

Mr. ALLOTT. I am glad to yield 3 minutes to the Senator from Rhode Island.

Mr. PASTORE. Mr. President, the question of whether we should fund the full entitlement is an old chapter. We have gone through this time and time again. It was my happy privilege to serve with former Senator Lister Hill on his committee; and then I remember that once or twice, when I was the manager of the supplemental appropriation bill, this item would come up as a deficiency item from time to time.

If we are going to break this program, we should do it in a reasonable way. We ought to notify the school districts in advance that at some point we are going to bring the program to an end. Until that time, I think it is very unfair to those districts that rely on Federal funding. They rely on these funds when they constitute their own school budgets. They have every reason to rely on the commitments made by the U.S. Government.

The idea that we have voted 90 percent or 80 percent is all wrong. Either we ought to vote the full entitlement or not vote any funds at all. If we have reached the point where we are no longer going to finance the program, we ought to do it properly. We ought to notify the districts long in advance.

I remember distinctly that the previous administration—the Johnson administration—took the position that when we passed the legislation on aid for elementary and secondary education, that was to be a substitution for this program. Indeed, there is no connection whatsoever—absolutely none.

I remember when Mr. Gardner, who formerly was Secretary of Health, Education, and Welfare, came before our commitee. He took the position that this program should come to an end because of what we were doing under the other program. He took the position at that time, as I am taking today, that if ever we wanted to discontinue that program, we should not do it by eliminating funding after the school year had started, but that we should give the districts notice in advance.

I hope that this evening—I am sorry; I have lost track of the time—that tonight we will grant the full entitlement, and that if the time should come when we are no longer going to grant it, we will give the districts advance notice, so that they can provide for themselves.

Mr. BIBLE. Mr. President, will the Senator from Colorado yield me 2 minutes, so that I may ask a question of the Senator from Rhode Island?

Mr. ALLOTT. I yield 2 minutes to the Senator from Nevada.

Mr. BIBLE. The point I wish to make, as the Senator from Rhode Island has so correctly said, is that we have had the question of underfunding before us year after year, just as we have tonight.

I am a member of the Committee on Appropriations and of the Subcommittee on Labor, and Health, Education, and Welfare. What constantly bothers me is that even though this program should be funded 100 percent tonight, when the item comes before us in a supplemental appropriation bill it will be considered again. It that not correct?

Mr. PASTORE. I do not want to say that that is true as a fact; but it has happened several times. We have called the Commissioner of Education, and he has told us time and again that if we provide the full entitlement, the money can be used; that it is money that they need.

Mr. BIBLE. I think the RECORD should indicate that year after year, if the program is not funded at the full entitlement under the law, we go to the supplemental appropriation and the districts receive funds under the supplementals. I think the RECORD will show that.

But additionally, it should be said that both the Democratic and Republican administrations make a differential between A and B class students in this area. That does not conform with the law, because the law makes no such distinction. Yet the administration constantly tries to do this indirectly rather than through the legislative process.

I think the program should be funded as the Senator from Colorado has indicated.

Mr. ALLOTT. I thank the distinguished Senator from Nevada. We all understand perfectly well what is involved.

Mr. CANNON. Mr. President, will the Senator from Colorado yield me 1 minute?

Mr. ALLOTT. I yield 1 minute to the distinguished Senator from Nevada.

Mr. CANNON. Mr. President, I completely support the amendment to raise these figures to the full entitlement. I think it is a tragedy that each year we are confronted with an attempt to cut back the funds to provide for only category A children. I think it is also a tragedy that we find ourselves, at the end of the year, trying to fund for schoolchildren when school has been going on for 6 months. The budgets have been prepared for 8 or 9 months, or perhaps 12 months, ahead of this time, and they still do not know whether they are going to get the money, except for a continuing resolution.

I wish this administration, as well as others, would take heed from Congress that we are not going to discontinue this program unless the proper approach is made, and that we are not going to limit it to category A students until Congress makes such a determination.

I support the Senator's amendment for the full funding of this particular program.

Mr. ALLOTT. Mr. President, I thank both Senators from Nevada for their contribution, because they have pointed out what has been said over and over again on the floor, that if there is a change made in the program, it should be made by the legislative committee, and it should be done in advance.

Mr. President, I ask unanimous consent that the Senator from South Carolina (Mr. THURMOND) and the Senator from Alabama (Mr. ALLEN) may be joined as cosponsors of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. MURPHY. Mr. President, I ask unanimous consent to be joined as a cosponsor.

Mr. ALLOTT. And also the Senator from California.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. And the junior Senator from Wyoming (Mr. HANSEN).

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CANNON. Mr. President, I ask to have my name added as a cosponsor.

Mr. ALLOTT. And the junior Senator from Nevada.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, I yield to the Senator from South Carolina (Mr. THURMOND).

Mr. THURMOND. Mr. President, I am strongly in favor of this amendment. I am in favor of it because the law provides that the districts will receive the money. I think they ought to receive the money until we repeal the law. They have relied on it, and we should fulfill the trust they have placed in our Federal Government.

I am strongly in favor of this amendment because the program has the least Federal control of any Federal program I know of. I believe the distinguished Senator from New Hampshire brought out the point that in many programs there is strong Federal control. Here there is practically no control. I think that is a very important factor.

I hope the amendment will be adopted.

Mr. COTTON. Mr. President, I yield myself 1 minute simply to say, although the distinguished chairman of the subcommittee is now on the floor, that I felt it my duty as a member of the committee to call attention to what we were doing.

I yield myself 2 additional minutes.

I just want to add that we still are not absolutely sure whether it is 90 or 95 percent that the committee gave. We do not know exactly what the full funding is. But, speaking for myself, unless my chairman feels differently, I think the feeling of the Senate in this matter is perfectly obvious. We want to get on with the business of the Senate. Subject to the feeling of my chairman, just as soon as I yield for a question, I am going to suggest that the committee be permitted to ask for a division.

Mr. PASTORE. Mr. President, what is the suggestion?

Mr. COTTON. That the committee, or at least that I, be permitted to ask for a division vote.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. COTTON. I yield.

Mr. PASTORE. I think we ought to have a yea-and-nay vote as notice to the administration that if this program is going to be repealed, let us repeal the law, and as long as the law stands, we should live up to our commitment. I think we can vote "yea" and give resounding notice to the administration.

Mr. COTTON. So those of us who have to carry on for the committee will have our feet put to the fire.

Mr. AIKEN and Mr. MAGNUSON addressed the Chair.

Mr. COTTON. Mr. President, how much time do I have left?

The PRESIDING OFFICER. The Senator has about 20 minutes remaining.

Mr. COTTON. I yield to the Senator from Vermont.

Mr. AIKEN. Mr. President, I am seeking information. Does a Federal installation with Federal employees in a State have any bearing upon allocations of any other Federal funds for that State which may be based partly on population? For instance, would the fact that there is a Federal installation with 2,000 employees and their families—if there is such a case—influence the allocation of other funds to the States which are based partly on population?

Mr. COTTON. Oh, yes; it would.

Mr. AIKEN. I am wondering if that would make up the difference between what the committee holds is right and what the amendment seeks.

Mr. MAGNUSON. Mr. President, the Senate committee was very generous on impacted areas; $600,167,000 is provided in the bill. The House increased it from the administration proposal, and we agreed with the House increase. Two kinds of students are classed as making up an impacted area. One is the class A students, which we have taken care of wholly. The other is the larger amount of class B students.

HEW, when it set up the budget, frankly admitted that we should take care of the class A amount, and not give anything to class B students. It used the continuing resolution in cutting down the money as an excuse. If we are going to have impacted areas, I guess we should take care of them all.

I think the Senator from New Hampshire will agree with me on this. I thought all the money amendments were offered earlier. I asked about it five times this afternoon.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. ALLOTT. I have been on the floor almost all afternoon, and it was not asked while I was here.

Mr. MAGNUSON. No. I am not criticizing the Senator.

As long as we have the distinction of class B in the law, this impacted area definition of eligibility has to be looked at by the legislative committee, one of these days; because if you work in a Federal establishment and you have children and send them to school, they are impacted. We have, as the extreme example, a Federal judge who works in a Federal courthouse and has a family, and his children live in the area where he is a Federal judge, they are impacted. All the children of employees of civil service who work in a Government building and have children are impacted.

I think it is time that we review what is an impacted area.

We took care—and I will say to the Senator his figures are correct—as far as we could find out from all the people that came to testify from the impacted areas, all the class A students and 90 percent or more of the class B, on the theory that the committee might look at this. That brought the figure up to $600,167,000. So 10 percent of that would be close to the $65 million the Senator is talking about. Our figure is $80 million more than they had last year.

I have no objection to this personally, but it is the law. I surely would recommend to the legislative committee that they take another look at what children should be classified as class B in an impacted area.

I do not think we meant Federal employees who live in a town and work in a Federal building, who are permanent residents of the town, when we passed the law.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. PASTORE. I quite agree with everything the Senator says, but until they do review the matter, does not the Senator feel we have a commitment?

I remember very vividly—this is only several years ago—when John Gardner was Secretary of Health, Education, and Welfare—the same man who made a speech down here at the Press Club last week—when he said everyone was out of step but him.

Mr. MAGNUSON. That is right.

Mr. PASTORE. That Congress was in a state of lethargy, and the administration was not living up to its responsibility. Yet he came before our committee, and when I asked him categorically, "Why did you not ask for any of this money for impacted areas," he said, "Because I do not think it is a good program."

Who is he, after Congress has passed a bill and it has been approved by the President of the United States, and becomes the law of this land, that it is up to him to say whether it is a good program or not, so that he can ask or not ask for the money?

That is what we have been up against. I agree with the chairman; if it is to be reviewed, let us review it. But you do not do that by cutting down the funding.

Mr. MAGNUSON. Let me suggest that that is some token. We have $600,167,000 for the total program. That includes some construction.

Mr. ALLOTT. Mr. President, will the Senator yield on that point?

Mr. MAGNUSON. I yield.

Mr ALLOTT. I would like to point out that by line 22 of the bill, it is reduced by $15,167,000 for facilities and grants to educational agencies. So that the full $600 million in the bill is reduced by the subsequent lines by $15,167,000.

Mr. MAGNUSON. That is for construction. Now, for the maintenance and operation, the cost per student of impacted areas is adequately covered by the $585 million, according to all the figures we received. In total, the construction, and there is a small amount, makes over $600 million for this program. We are talking about, roughly, in round figures, 90 percent. I would hope that the Senator would modify his amendment. The request is how much?

Mr. ALLOTT. It is $665,167,000.

Mr MAGNUSON. So the increase would be——

Mr. COTTON. It is $65 million.

Mr. MAGNUSON. It is $65 million more. We would be more responsible if the Senator would submit to the Senate a reduced amount of $60 million.

Mr. ALLOTT. Mr. President, first of all, I should like to say to the distinguished Senator that the difference is a very small amount, and it may be that his figures are correct. As nearly as we could get the figures, it would require the full $665 million to fully finance this program. However, I am willing to modify my amendment to read $660 million, in accordance with the Senator's suggestion, and I so request.

Mr. MAGNUSON. I appreciate that.

The PRESIDING OFFICER. The amendment is so modified. Who yields time?

Several Senators address the Chair.

Mr. ALLOTT. Mr. President, before yielding, I request that the names of the Senator from California (Mr. CRANSTON), the Senator from Idaho (Mr. JORDAN), the Senator from Tennessee (Mr. BAKER), the Senator from Kansas (Mr. DOLE), the Senator from Alaska (Mr. STEVENS), the Senator from Wyoming (Mr. HANSEN), and the Senator from Oregon (Mr. HATFIELD) be added as cosponsors of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, may I make just one further statement?

I think that the statements that have been made in behalf of this bill by the Senator from Rhode Island, the Senators from Nevada, and others, are completely and wholly correct. I compliment my distinguished colleague from New Hampshire, who has tried valiantly and has done such an able job in upholding the hand of the committee on this matter. I talked with him several hours ago about this amendment. I was not able to talk with the distinguished chairman, because I could not find him. So I feel that as much notice as I could give was given.

I ask unanimous consent that the name of my colleague (Mr. DOMINICK) and the name of the distinguished Senator from Idaho (Mr. CHURCH) be added as cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, may I put in the RECORD tomorrow some figures, so everyone will know what we are doing?

Mr. ALLOTT. On the Senator's own time.

Mr. MAGNUSON. We have a list of States and what they received in 1969, what the revised budget would provide, and what the House and Senate allowance is per State, so everyone in every State will know what they will be getting.

Mr. MAGNUSON subsequently said, on December 17: Mr. President, if the Senator will permit me, I would like to make a correction, first. The information we have from HEW is that of the 25,000 school districts, give or take, that there were 300. I said 400. I misread my notes. There are 300 that they consider under their rules.

Mr. President, because of the lateness of the hour last night, when we discussed the impacted areas funding, I did not insist that this table be included in the RECORD because it would have delayed the printing of our debate.

I should like to point out to the Senate that this table sets forth the allocations to States under Public Law 874, and was prepared by the Department on the basis of the House allowances, for our subcommittee. The final figures, which total $585,000,000 show just what we approved in the subcommittee and full Appropriations Committee. Any additional funds would be distributed accordingly. I ask unanimous consent to have the table printed in the RECORD.

There being no objection, the figures were ordered to be printed in the RECORD, as follows:

ALLOCATIONS TO STATES FOR OPERATIONS AND MAINTENANCE UNDER PUBLIC LAW 874

	1969 appropriation	1970 revised estimate [1]	House allowance
Total	$505,900,000	$187,000,000	$585,000,000
Alabama	9,530,000	2,362,000	11,075,000
Alaska	13,379,000	13,935,000	15,917,000
Arizona	9,059,000	6,526,000	10,825,000
Arkansas	2,696,000	958,000	3,071,000
California	78,042,000	25,225,000	88,431,000
Colorado	13,291,000	3,109,000	15,522,000
Connecticut	3,429,000	1,503,000	3,974,000
Delaware	1,922,000	1,388,000	2,212,000
Florida	17,351,000	5,013,000	20,056,000
Georgia	16,421,000	5,749,000	18,978,000
Hawaii	9,117,000	5,741,000	10,735,000
Idaho	2,656,000	1,044,000	3,225,000
Illinois	12,724,000	4,280,000	14,805,000
Indiana	4,391,000	982,000	4,974,000
Iowa	2,605,000	310,000	3,033,000
Kansas	8,534,000	3,302,000	9,836,000
Kentucky	8,731,000	5,604,000	9,801,000
Louisiana	3,431,000	770,000	3,960,000
Maine	3,049,000	2,213,000	3,593,000
Maryland	24,846,000	3,387,000	29,362,000
Massachusetts	15,743,000	5,971,000	18,514,000
Michigan	4,574,000	2,852,000	5,211,000
Minnesota	2,923,000	846,000	3,367,000
Mississippi	2,615,000	1,115,000	3,048,000
Missouri	8,386,000	2,176,000	9,617,000
Montana	4,444,000	3,960,000	5,453,000
Nebraska	4,429,000	2,286,000	5,298,000
Nevada	$3,457,000	$1,426,000	$4,130,000
New Hampshire	2,138,000	904,000	2,474,000
New Jersey	11,933,000	4,251,000	13,835,000
New Mexico	10,127,000	6,147,000	11,299,000
New York	17,641,000	6,027,000	20,504,000
North Carolina	11,198,000	6,864,000	12,621,00 0
North Dakota	2,501,000	2,664,000	2,886,000
Ohio	10,561,000	1,182,000	12,384,000
Oklahoma	12,140,000	3,695,000	13,952,000
Oregon	2,535,000	791,000	3,076,000
Pennsylvania	8,953,000	856,000	10,184,000
Rhode Island	3,578,000	1,585,000	4,084,000
South Carolina	8,446,000	3,589,000	9,872,000
South Dakota	3,587,600	2,697,000	4,216,000
Tennessee	6,566,000	705,000	7,703,000
Texas	29,659,000	7,709,000	34,617,000
Utah	6,901,000	1,055,000	8,067,000
Vermont	119,000	4,000	138,000
Virginia	34,531,000	7,442,000	39,552,000
Washington	12,938,000	4,852,000	15,097,000
West Virginia	413,000	18,000	490,000
Wisconsin	2,252,000	571,000	2,660,000
Wyoming	1,600,000	1,275,000	1,910,000
District of Columbia	5,984,400	374,000	6,744,000
Guam	1,735,000	1,247,000	2,032,000
Puerto Rico	5,764,000	6,067,000	6,124,000
Virgin Islands	43,000	0	60,000
Wake Island	281,000	396,000	396,000

[1] Estimate based on latest data (1968) and assumes existing formula but only funding children who live on Federal property with parents who are employed on Federal property and "section 6" children whose education is arranged for by the Commissioner of Education.

Mr. ALLOTT. Mr. President, I promised the distinguished Senator from Texas that before I concluded I would yield to him. How much time do I have remaining?

The PRESIDING OFFICER. Six minutes.

Mr. ALLOTT. How much time does the Senator need?

Mr. YARBOROUGH. One and one-half minutes.

Mr. ALLOTT. I yield the Senator 1½ minutes.

Mr. YARBOROUGH. Mr. President, I support the amendment of the distinguished Senator from Colorado, but I call the attention of my colleagues not only to the language on line 19, page 31, that he is amending, but to lines 22 and 23 on that page, where the appropriation is for only $15,167,000 under Public Law 815, for construction. The sentence the Senator is amending is for funds under Public Law 874, for maintenance and operation of schools. In the committee, I offered an amendment to raise the figure of $15,167,000 to $50 million. There is a backlog since 1967 for construction of school buildings under Public Law 815, the impacted education law. There has been very little money put in there. I believe there is a backlog now of $226 million.

The PRESIDING OFFICER. The Senate will be in order.

Mr. YARBOROUGH. I think there is a backlog of $226 million for construction. I offered an amendment to provide $50 million; but it lost in committee. The amount of money that the distinguished Senator from Colorado is putting in the bill for maintenance and operation will relieve some of the pressure on those districts so that they can use some of their maintenance and operation funds for building. That is what they have done in the past; they have had to spend their own money out of maintenance and operations and put it into construction, to build buildings, because the Federal Government would not live up to its obligations.

I think this money is badly needed for maintenance and operation but funds are needed for construction also, because the school districts have been forced to put their own money into the building fund for the classrooms that the Federal Government would not provide the funds to build.

The PRESIDING OFFICER. Who yields time?

Mr. ALLOTT. Mr. President, I am

ready to yield back the remainder of my time, but there are Senators who have indicated they want a rollcall on this matter.

Mr. COTTON. Mr. President, before we have the yeas and nays, I yield myself 1 minute to say that the Senator from Colorado did give seasonal notice to me. We all understand the situation of the chairman as to why he had to be away from the floor today.

The Senator from Colorado did go over the matter with me. We knew this was to be offered. We knew that the Senator wanted this and felt it was the just thing to do.

I know that there will be a rollcall vote. I envy all those who can get on record on a rollcall vote and go home and tell the folks they voted for the impacted area funds. Two or three of us because of our burden will have to vote with the committee.

Mr. PASTORE. Mr. President, because of the very, very plaintive plea made by the Senator from New Hampshire, I hope that we will not have to have a rollcall vote.

Mr. COTTON. No. We will have a rollcall vote.

The PRESIDING OFFICER. Who yields time?

Mr. YOUNG of North Dakota. Mr. President, I wish to say a word along the line of what the Senator from Rhode Island spoke about a few minutes ago. There is a lot of injustice in the law. For example, I have employees who live in Maryland and Virginia. They own houses and pay taxes as everyone else does. But the Federal Government pays them impacted area school funds.

There is something wrong with the law. I can understand why the Bureau of the Budget under the present administration and under the previous administration would reduce the funds to try to force Congress to enact a better law.

I admire the fight put up by the Senator from New Hampshire, even though he will not get more than a half dozen votes.

Mr. MAGNUSON. Mr. President, the two highest impacted areas in the country are California and Texas. They have the most military installations. Then we have Maryland; because the parents work on Federal property.

I am not so sure that the Senators who have children could not have them impacted because we work in a Federal building under the ruling.

That is the sort of thing I think we have to take a good hard look at.

Virginia gets $39 million. Texas only $34 million. North Dakota gets $2 million.

Mr. YOUNG of North Dakota. We have two big airbases.

Mr. MAGNUSON. New Hampshire gets $2.4 million. Perhaps California gets more. California is the Abou Ben Adhem. They get $88 million.

Mr. PASTORE. That was the Styles Bridges amendment for the Portsmouth Navy Yard. They have employees in Maine and New Hampshire. In order to take care of that situation, both Maryland and Virginia fell into the slot. And that is how that came about. That ought to be looked into.

Mr. COTTON. Mr. President, let me say in 2 minutes' time that the Senator from Rhode Island has made my day complete.

When we have these fund drives, these community fund drives, we have a big thermometer and show how near we get to the top. I want to make the announcement that the amendment, which I know will be agreed to and which I wish I could vote for, with what we have added on the floor today has pushed the bill over the half-billion-dollar mark. We have added $538.2 million since lunch.

Mr. MAGNUSON. Mr. President in view of that announcement, the Senator from New Hampshire and I will accept the amendment and take it to conference. Let us get on with the next amendment.

Mr. ALLOTT. Mr. President, I ask unanimous consent that the names of Senators STEVENS, YARBOROUGH, SPONG, and DOLE be added as cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, I thought I could do this in 5 minutes. I say to my distinguished friends on the other side of the aisle particularly, and particularly to the Senator from Rhode Island with whom I have worked for so many years, that I think the sentiment of the Senate is pretty well known. It is getting very late. I hope that we can dispose of this matter with a division.

Mr. MONTOYA. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second, and the yeas and nays are ordered.

Mr. ALLOTT. Mr. President, if the other side is ready to yield back their time, I yield back the remainder of my time.

IMPACT FUNDS

Mr. TOWER. Mr. President, I was pleased to note that the committee has provided very nearly full funding for the Public Law 874 program of aid to federally affected areas. I support this funding wholeheartedly and do not feel that we can responsibly do less. This money represents the taxes owed to the localities where there is a substantial Federal presence. In areas where there is heavy Government activity, such as military installations, the local tax base is narrowed by expansive Federal ownership of lands and facilities which cannot be taxed. At the same time there is a large population of persons drawn to the area to work at the Federal installation, many of whom also live on Federal property but whose children attend the public schools. Many fine words were pronounced during the course of the tax reform debate recently concluded about the closing of loopholes and insuring that all citizens pull their share of the load; it is now incumbent upon us to insure that the Federal Government pays its taxes as well.

There has been some discussion over the 20-year history of Public Law 874 as to the payment for category 3(b) children. These are the children whose parents are employed on Federal property but do not reside there. The argument usually is to the effect that since such persons live in taxable dwellings on taxable property they are paying their share of the burden.

The fact is that if it were not for the Federal presence, many of these people would be elsewhere, or would be working for non-Government, hence taxable, enterprises. It is not unreasonable then to pay for category 3(b) children 50 percent of the amount for category 3(a) children, whose parents both live and work on Federal property. In any event, the distinguished committee members are in the right when they indicate that the appropriations bill is not the proper vehicle through which to amend Public Law 874 by striking all funds for category 3(b).

At many points in the bill there is evidence that the gentlemen of the committee were touched by the Christmas spirit, that they yielded to an impulse to play Santa Claus. However, I believe that their action on impact aid is sound and responsible, and I endorse it unhesitatingly.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may proceed for 1 minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, with the distinguished Senator from New York on the floor, I would like to propound a unanimous-consent request.

I ask unanimous consent that there be a time limitation on the Javits amendment, which will follow the other two amendments, of 1½ hours, the time to be equally divided between the Senator from New York (Mr. JAVITS), and the manager of the bill, the Senator from Washington (Mr. MAGNUSON).

Mr. STENNIS. Mr. President, this will not displace the other matter?

Mr. MANSFIELD. No.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. Mr. President, I would like to call to the attention of the Senate the agreement which has been made, that immediately after the prayer tomorrow morning, there will be a live quorum call before the time limitation begins to run.

I do not know whether we can finish this week or not. We have three appropriation bills after the pending bill has been disposed of. However, I do want to put the Senate on notice that if those bills are not completed and in conference, the Senate will meet on Sunday morning next.

Mr. President, there will be no further rollcall votes tonight.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment of the Senator from Colorado. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Massachusetts (Mr. KENNEDY), the

Senator from Minnesota (Mr. McCARTHY), the Senator from South Dakota (Mr. McGOVERN), the Senator from New Hampshire (Mr. McINTYRE), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), and the Senator from Ohio (Mr. YOUNG) are necessarily absent.

I also announce that the Senator from Washington (Mr. JACKSON) is absent because of a death in his family.

I further announce that, if present and voting, the Senator from Washington (Mr. JACKSON), and the Senator from Massachusetts (Mr. KENNEDY) would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from Ohio (Mr. SAXBE) is necessarily absent.

The Senator from Kentucky (Mr. COOPER) is absent because of illness in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from New Jersey (Mr. CASE), the Senator from Arizona (Mr. GOLDWATER), the Senator from New York (Mr. GOODELL), the Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) are detained on official business.

On this vote, the Senator from Texas (Mr. TOWER) is paired with the Senator from New York (Mr. GOODELL). If present and voting, the Senator from Texas would vote "yea" and the Senator from New York would vote "nay."

The result was announced—yeas 73, nays 9, as follows:

[No. 245 Leg.]

YEAS—73

Allen	Gravel	Murphy
Allott	Griffin	Muskie
Baker	Gurney	Nelson
Bayh	Hansen	Packwood
Bellmon	Harris	Pastore
Bennett	Hart	Pearson
Bible	Hartke	Pell
Boggs	Hatfield	Percy
Brooke	Holland	Prouty
Burdick	Hollings	Ribicoff
Byrd, Va.	Hruska	Schweiker
Cannon	Inouye	Scott
Church	Javits	Smith, Maine
Cook	Jordan, N.C.	Sparkman
Cranston	Jordan, Idaho	Spong
Curtis	Long	Stennis
Dodd	Magnuson	Stevens
Dole	Mansfield	Talmadge
Dominick	Mathias	Thurmond
Eagleton	McClellan	Tydings
Ervin	McGee	Williams, N.J.
Fannin	Miller	Yarborough
Fong	Mondale	Young, N. Dak.
Fulbright	Montoya	
Gore	Moss	

NAYS—9

Aiken	Ellender	Proxmire
Byrd, W. Va.	Hughes	Randolph
Cotton	Metcalf	Williams, Del.

NOT VOTING—18

Anderson	Jackson	Russell
Case	Kennedy	Saxbe
Cooper	McCarthy	Smith, Ill.
Eastland	McGovern	Symington
Goldwater	McIntyre	Tower
Goodell	Mundt	Young, Ohio

So Mr. ALLOTT's amendment was agreed to.

The PRESIDING OFFICER. The question recurs on the amendment of the Senator from Pennsylvania.

Mr. BYRD of West Virginia. Mr. President, what is the pending business?

The PRESIDING OFFICER. The Senator from West Virginia is advised that the pending business is the amendment offered by the distinguished Senator from Pennsylvania.

TRANSACTION OF ADDITIONAL ROUTINE BUSINESS

By unanimous consent, the following additional routine business was transacted:

ADDITIONAL COSPONSORS OF A BILL

S. 3181

Mr. PROXMIRE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Massachusetts (Mr. KENNEDY) be added as a cosponsor of S. 3181, the Regional Water Quality Act of 1970.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATION BILL, 1970—AMENDMENTS

AMENDMENT NO. 431

Mr. SCOTT (for himself, Mr. PASTORE, Mr. CASE, Mr. PEARSON, and Mr. JAVITS) proposed an amendment to the bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, which was ordered to be printed.

AMENDMENT NO. 432

Mr. JAVITS (for himself and Mr. HART) submitted an amendment, intended to be proposed by them, jointly, to H.R. 13111, supra, which was ordered to lie on the table and to be printed.

AMENDMENT NO. 433

Mr. TYDINGS submitted an amendment, intended to be proposed by him, to H.R. 13111, supra, which was ordered to lie on the table and to be printed.

RECESS UNTIL 9 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 9 o'clock tomorrow morning.

The motion was agreed to; and (at 10 o'clock and 10 minutes p.m.) the Senate took a recess until tomorrow, Wednesday, December 17, 1969, at 9 a.m.

NOMINATIONS

Executive nominations received by the Senate December 16, 1969:

IN THE NAVY

Vice Adm. Allen M. Shinn, U.S. Navy, for appointment to the grade of vice admiral, when retired, in accordance with the provisions of title 10, United States Code, section 5233.

Having designated Rear Adm. Frederic A. Bardshar, U.S. Navy, for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, I nominate him for appointment to the grade of vice admiral while so serving.

The following-named officers of the U.S. Navy for temporary promotion to the grade of lieutenant in the line subject to qualification therefor as provided by law:

Aanerud, Kenneth Dean
Abel, Arthur Philip
Abston, J. B.
Ackerman, David William
Ackley, Ralph William, Jr.
Adams, John Bricker
Adams, Robert Bruce, Jr.
Adkins, Freeman Frederick
Aeschleman, Vance Ellsworth, Jr.
Aiken, Edwin Wilmer
Aker, Robert Emil, Jr.
Albright, David Lewis
Alcon, Charles Arthur
Alexander, Dennis Jay
Alf, Donald Lee
Allen, Layton Southerland, Jr.
Alley, Stephen David
Amber, Richard Owen
Ameel, Frederick Donald
Andersen, Harold
Anderson, Gene George
Anderson, Lane Schofield, III
Anderson, Stanley Ivar
Andrade, John Robert

HOUSE OF REPRESENTATIVES—*Tuesday, December 16, 1969*

The House met at 12 o'clock noon.

The Reverend Nelson C. Pierce, associate director of development, Alice Lloyd College, Pippa Passes, Ky., and president of the National Council of Community Churches, offered the following prayer:

Our Father, Thou hast been our dwelling place in all generations. From the beginning of time to its end, Thou art God. In these days of strife and turmoil and change we find stability in Thee and we are grateful.

We thank Thee for the life which Thou hast given us and for the purpose to which daily Thou dost call us. Grant that each of us may fulfill our appointed purpose this day. Speed us to our work with a sense of the urgency of each moment.

May Thy rich blessing be with the Congress, the courts, the President of the United States, and upon all who are absent from home in the service of our Nation. And O speed the day of peace on earth and good will among all men, for Thy name's sake. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 11711. An act to amend section 510 of the International Claims Settlement Act of 1949 to extend the time within which the Foreign Claims Settlement Commission is required to complete its affairs in connection with the settlement of claims against the Government of Cuba.

The message also announced that the Senate had passed with amendments in

which the concurrence of the House is requested, bills of the House of the following titles:

H.R. 8449. An act to amend the act entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; and

H.R. 15090. An act making appropriations for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 15090) entitled "An act making appropriations for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. RUSSELL, Mr. MCCLELLAN, Mr. ELLENDER, Mr. STENNIS, Mr. JACKSON, Mr. YOUNG of North Dakota, Mrs. SMITH of Maine, and Mr. ALLOTT to be the conferees on the part of the Senate.

The message also announced that the Senate disagrees to the amendments of the House to the bill (S. 3016) entitled "An act to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes," and agree to the conference requested by the House on the disagreeing votes of the two Houses, and appoints Mr. NELSON, Mr. YARBOROUGH, Mr. PELL, Mr. KENNEDY, Mr. MONDALE, Mr. CRANSTON, Mr. HUGHES, Mr. MURPHY, Mr. JAVITS, Mr. PROUTY, Mr. DOMINICK, and Mr. SMITH of Illinois to be the conferees on the part of the Senate.

The message also announced that the Senate disagrees to the amendment of the House to the amendment of the Senate, to the bill (H.R. 4293) entitled "An act to provide for continuation of authority for regulation of exports," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. MUSKIE, Mr. WILLIAMS of New Jersey, Mr. MONDALE, Mr. HUGHES, Mr. TOWER, Mr. BENNETT, and Mr. BROOKE, to be the conferees on the part of the Senate.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 2244. An act to amend section 212(a) of the Interstate Commerce Act, as amended, and for other purposes.

COMMUNICATION FROM THE CHAIRMAN OF THE COMMITTEE ON PUBLIC WORKS—WATERSHED PROTECTION AND FLOOD PREVENTION ACT WORK PLANS

The SPEAKER laid before the House the following communication from the chairman of the Committee on Public Works, which was read and referred to the Committee on Appropriations:

DECEMBER 12, 1969.

Hon. JOHN W. MCCORMACK,
The Speaker,
House of Representatives.

DEAR MR. SPEAKER: Pursuant to the provisions of Section 2 of the Watershed Protection and Flood Prevention Act, as amended, the Committee on Public Works has approved the work plans transmitted to you which were referred to this committee. The work plans involve the following States and Watersheds:

Arkansas, Galla Creek, Executive Communication No. 1055, committee approval, December 11, 1966.

Georgia, Soque, Executive Communication No. 1055, committee approval, December 11, 1969.

Mississippi, Copiah Creek, Executive Communication No. 1055, committee approval, December 11, 1969.

Mississippi, Line Creek, Executive Communication No. 1055, committee approval, December 11, 1969.

New Mexico, Corrales, Executive Communication No. 1055, committee approval, December 11, 1969.

North Carolina (Supplement), Town Fork Creek, Executive Communication No. 1055, committee approval, December 11, 1969.

North Dakota, Square Butte Creek, Executive Communication No. 1055, committee approval, December 11, 1969.

Ohio (Supplement), Rush Creek, Executive Communication No. 1055, committee approval, December 11, 1969.

South Carolina, North Tyger River, Executive Communication No. 1055, committee approval, December 11, 1969.

Texas, McClellan Creek, Executive Communication No. 1055, committee approval, December 11, 1969.

Arkansas, Little Mulberry Creek, Executive Communication No. 1230, committee approval, December 11, 1969.

Georgia, Big Creek, Executive Communication No. 1230, committee approval, December 11, 1969.

Montana, Big Spring Creek, Executive Communication No. 1230, committee approval, December 11, 1969.

New Mexico, Tucumcari Draw, Executive Communication No. 1230, committee approval, December 11, 1969.

Oklahoma, Brushy-Peaceable Creek, Executive Communication No. 1230, committee approval, December 11, 1969.

Texas, Comal River, Executive Communication No. 1230, committee approval, December 11, 1969.

Texas, Lower Running Water Draw, Executive Communication No. 1230, committee approval, December 11, 1969.

Texas and New Mexico, Running Water Draw, Executive Communication No. 1230, committee approval, December 11, 1969.

Sincerely yours,

GEORGE H. FALLON,
Chairman.

THE LATE HONORABLE JOHN McSWEENEY

(Mr. BOW asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BOW. Mr. Speaker, I am sure many Members of the House who served with my distinguished predecessor, the Honorable John McSweeney, will be saddened to learn of his passing on Saturday, December 13. John McSweeney was a fine patriotic citizen who served his country well.

John McSweeney represented the 16th Congressional District of Ohio in the 68th, 69th, 70th, 75th, and 81st Congresses.

Born in Wooster, Ohio, December 19, 1890, he was educated in the public schools of Wooster and the College of Wooster, and taught in the public schools there before enlisting in the U.S. Army in 1917.

John McSweeney had a distinguished career in the military service. He served overseas during the First World War from May 10, 1917 to August 11, 1919, and was promoted to captain and aide-de-camp to General Farnsworth on August 16, 1918. He was awarded the Purple Heart Medal and received the Croix de Guerre from the Government of France.

During World War II he returned to the service as a lieutenant colonel with the military government in Italy, 1943–46. For this service he received the Legion of Merit, the Italian Red Cross Medal, the Order of Malta, the Order of St. George, and a medal from the Pope.

Immediately after World War I service, John McSweeney engaged in the study of law at the Inns of Court in London and he was admitted to the practice of law in Ohio in 1925. He engaged in the practice of law in Wooster continuously thereafter except for those periods when he served in the Congress and as Ohio's State director of public welfare. He was honored by his party's nomination for U.S. Senator in 1940 and for Governor of Ohio in 1942. He will be long remembered as a distinguished citizen of Wooster and of the State of Ohio and a strong advocate of programs to benefit the veterans of all of our wars, his comrades in arms during World War I and World War II.

Mr. Speaker, Mrs. Bow and I extend to Mrs. McSweeney our deep sympathy and condolences.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. BOW. I am happy to yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, I was saddened to hear of the death of John McSweeney, who served a 1-year term after I came to Congress. I knew him as a very fine man, and a distinguished and able Member of the House of Representatives. He has left many friends among those who were serving here 20 or more years ago.

Mr. Speaker, I join my friend, the gentleman from Ohio (Mr. Bow), in extending to John McSweeney's loved ones my deepest sympathy.

Mr. BOW. I thank the gentleman.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the distinguished minority leader.

Mr. GERALD R. FORD. Mr. Speaker, I share the views expressed by the distinguished gentleman from Ohio (Mr. Bow), and my colleague, the distinguished majority leader, the gentleman from Oklahoma (Mr. ALBERT). I, too, wish to extend to the family of John McSweeney my deepest condolences at this time of sadness.

Mr. Speaker, it was my privilege to know John McSweeney while we were both Members of the House of Representatives. He was a fine gentleman, and an able Member of the House of Representatives. I am sure that the contributions he made in the House will be well recognized in the years ahead. John McSweeney was dedicated to the public good

as he saw it. I admired and respected him as a friend and legislator.

Mr. BOW. I thank the distinguished minority leader.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the distinguished gentleman from Ohio (Mr. ASHBROOK) who now represents the Wooster district in Ohio.

Mr. ASHBROOK. Mr. Speaker, I thank the gentleman from Ohio for yielding. I, too, would like to rise and express my appreciation for having known this wonderful man for the few years I have been privileged to represent this district. His death was a loss to our area as well as the whole Nation.

I would say, Mr. Speaker, that John McSweeney had a dimension and a quality that is not achieved by many of us in politics.

Many people who are active in Government service become known—they may become respected, and in some cases they even become feared. But very few ever achieve the additional quality of being genuinely loved by our people. I would say in the case of John McSweeney that he was a person who was warmly loved, admired, and appreciated by his constituents, and by all of his friends in the State of Ohio.

Mr. Speaker, it was my great privilege just a few short years ago to attend an appreciation dinner for John McSweeney in Wooster, Ohio. I think if anybody could have seen the outpouring of sentiment for this fine man on that particular night they would know exactly what I am talking about.

So, Mr. Speaker, I too certainly wish to add my condolences to his loved ones, and to express my thought that here was a very fine citizen, a very fine American, a person who added a lot of luster to the field of public service at the very time when so many people in public service seem to be condemned by the public, and to be held in such low opinion. Here was a man who was held in such high respect and esteem—and rightly so. His public service stood as an example to all. He will be missed.

Mr. BOW. Mr. Speaker, I thank the gentleman.

Mr. MINSHALL. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the distinguished gentleman from Ohio, Mr. MINSHALL.

Mr. MINSHALL. Mr. Speaker, I also was shocked and saddened to learn of the passing of John McSweeney. I knew John McSweeney and his family well, our families were well acquainted. I can always think back at what a friendly, kindly, and gracious man he was, and although our political philosophies were somewhat at opposite ends of the spectrum, nonetheless he was respected and admired by all who knew him.

Mr. Speaker, I believe if there was one quality that could be said of John McSweeney—he was familiarly known as "June"—it would be his great quality of friendliness and fairness.

He was rich in years at his passing, but that does not mitigate the loss of one so many of us were proud to call our friend. He knew that the gift of friendship is one of the most essential qualities of happiness, and he had that gift in abundance. It is always hard to say farewell. We will miss John McSweeney, an outstanding American, a noble friend.

GENERAL LEAVE TO EXTEND

Mr. BOW. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to express their views on the life and accomplishments of John McSweeney.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

APPOINTMENT OF CONFEREES ON H.R. 15090, DEPARTMENT OF DEFENSE APPROPRIATIONS, 1970

Mr. MAHON. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 15090) making appropriations for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference requested by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Texas? The Chair hears none, and appoints the following conferees: Messrs. MAHON, SIKES, WHITTEN, ANDREWS of Alabama, FLOOD, SLACK, ADDABBO, LIPSCOMB, MINSHALL, RHODES, DAVIS of Wisconsin, and BOW.

PERMISSION TO FILE CONFERENCE REPORT ON H.R. 15090, DEPARTMENT OF DEFENSE APPROPRIATIONS, 1970, UNTIL MIDNIGHT TOMORROW

Mr. MAHON. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tomorrow to file a conference report on the bill (H.R. 15090) making appropriations for the Department of Defense for the fiscal year ending June 30, 1970.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

MYLAI HEARINGS

(Mr. DICKINSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DICKINSON. Mr. Speaker, once again we see an example of an implied attack on the integrity and objectiveness of our Committee on Armed Services and on its special investigation subcommittee in this morning's Washington Post, where there appeared an article written by a fellow named George C. Wilson, captioned "Hearing Set on Pretrial Mylai Talk." He concludes, after writing at some length on the subject, by saying:

> Armed Services Committee sources predicted that the Hébert unit—

And I might say, Mr. Speaker, I am one of four who have been selected as members of a special subcommittee to look into the Mylai incident—

> will keep quiet until after the Army finishes its own investigation and then endorse the service's actions.

He does not name his so-called sources.

Mr. Speaker, I can only say that nothing could be further from the truth. While it is true that we will not be conducting our hearing in a circus atmosphere, as has gone on in some places about Capitol Hill, and we will be discrete in all that comes out of our committee in the very near future, the aims, and purposes of our special committee will be made public. They will not be startling disclosures that might prejudice anyone who might possibly have to stand trial on criminal charges under this action, but I can assure you that no one is more dedicated to the task of ascertaining, the truth than the members of this subcommittee.

We are not prejudiced pro or con. Whatever will be the actions of this committee, it will be what we determine as individuals and will not be an attempt to rubberstamp the action of any service or reflect on anyone else's opinion.

It would seem, Mr. Speaker, that this is another action to attack our committee by condemning in advance whatever action we take. I, for one, resent it.

PRESIDENT NIXON'S ANNOUNCEMENT

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, last night the President announced he will bring 50,000 more troops home from Vietnam by April 15.

This will be good news to many American fighting men and their families.

The President's announcement demonstrates his great willingness and desire to unwind this war.

Unfortunately, as the President disclosed, the North Vietnamese have shown no desire to cooperate.

In fact, quite to the contrary. They refuse to negotiate in good faith in Paris.

And even as we bring our troops home, they increase their rate of infiltration in the South.

Mr. Speaker, even to those who wave the bloody flag of Ho Chi Minh in the name of peace, it should now be clear who the aggressor is. It is the Vietcong and the North Vietnamese who are not willing to end the killing and the bloodshed.

It is their belief that eventually America will surrender. Unfortunately, they have mistaken the strident shouts of a few for the voice of the American people.

I repeat, they are mistaken. Americans have made it clear they stand behind President Nixon. They have made it clear they will not settle for less than an honorable peace.

It is time for the North Vietnamese to do as the President urges. Abandon its dream of military victory and begin to negotiate seriously. They have nothing to gain by delay.

ATTACKS ON MEMBERS OF THE HOUSE

(Mr. CARTER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CARTER. Mr. Speaker, as a Member of this body of diverse and distinct heritage, I must admit to pride in its composition, a respect for its proceedings, and an abiding faith in its judgments. Although we may not agree, we every one try not to be disagreeable.

For the past 5 years, I have been deeply impressed by the enduring charm, kindliness, graciousness and fairness of our Speaker. As one Member of many in this body, I resent the insidious attacks made upon him. To me, he is the embodiment of kindliness.

Again, Mr. Speaker, I am aroused and disturbed when a columnist, though of ill repute, impugns the judgment, even the honor, of a man of the cloth, the respected and distinguished Member from Birmingham, Ala.

What Member within this body can know the pedigree and intimate personal history of each and every employee?

But such is the sadistic nature of some members of the press, that they would attempt to destroy the reputations of respected Members of this body with sordid and salacious stories.

These distinguished gentlemen have earned good names, and a good name is rather to be chosen than great riches, and loving favor rather than silver and gold.

As the Bard has said:

Who steals my purse steals trash,
'Tis something, nothing.
Twas mine, 'tis his and has been slave to thousands.
But he who filches from me my good name,
Robs me of that which not enriches him,
Yet makes me poor indeed.

CALL OF THE HOUSE

Mr. CEDERBERG. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 326]

Abbitt	Bolling	Conyers
Anderson, Tenn.	Brooks	Cunningham
Blatnik	Cahill	Dawson
	Clay	Fallon
Galifianakis	McFall	Reid, N.Y.
Gallagher	McMillan	Rhodes
Green, Oreg.	Martin	Rivers
Gubser	Miller, Calif.	Rooney, Pa.
Hall	Morton	Steed
Hanna	Moss	Teague, Tex.
Hébert	Nix	Tunney
Kirwan	Ottinger	Van Deerlin
Kluczynski	Pelly	Vander Jagt
Kuykendall	Pollock	Whalley
Lipscomb	Powell	
McEwen	Pryor, Ark.	

The SPEAKER. On this rollcall 388 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills of the House of the following titles:

On December 11, 1969:

H.R. 9906. An act for the relief of J. Burdette Shaft and John S. and Betty Gingas; and

H.R. 14159. An act making appropriations for public works for water, pollution control, and power development, including the Corps of Engineers—Civil, the Panama Canal, the Federal Water Pollution Control Administration, the Bureau of Reclamation, power agencies of the Department of the Interior, the Tennessee Valley Authority, the Atomic Energy Commission, and related independent agencies and commissions for the fiscal year ending June 30, 1970, and for other purposes.

On December 12, 1969:

H.R. 13763. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1970, and for other purposes.

PERSONAL ANNOUNCEMENT

Mr. SMITH of New York. Mr. Speaker, on rollcall No. 325, I was unavoidably detained. Had I been present, I would have voted "yea."

ELIMINATING THE REQUIREMENT THAT A UNIFORMED SERVICE MEMBER MUST MAINTAIN A RESIDENCE TO QUALIFY FOR FAMILY SEPARATION ALLOWANCE PAYMENTS

Mr. BENNETT. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 110) to amend section 427(b) of title 37, United States Code, to provide that a family separation allowance shall be paid to a member of a uniformed service even though the member does not maintain a residence or household for his dependents, subject to his management and control.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

Mr. GROSS. Mr. Speaker, reserving the right to object, will the gentleman give us a brief explanation of the bill? I had assumed that these three or four bills would be called up after disposition of the Private Calendar. Will the gentleman briefly explain the bill?

Mr. BENNETT. I shall be glad to do so.

Mr. GROSS. What is the purpose and the cost of the bill?

Mr. BENNETT. H.R. 110 is designed to restore the family separation allowance to approximately 47,000 service families whose entitlement to this $30 monthly allowance was terminated on December 1, 1968, as a consequence of a ruling by the Comptroller General of the United States.

The Comptroller General of the United States in his decision of February 9, 1968—B–157486—ruled that unless a member maintains a residence or household for his dependents, subject to his management and control, which he will likely share with them as a common household when his duty assignment permits, he is not entitled to payment of the family separation allowance. The Comptroller General further stated that the entitlement does not exist if the dependents reside as guests or visitors in the home of relatives or friends, and the member maintains no other residence for them subject to his management and control.

H.R. 110 speaks directly to the Comptroller General's decision and provides additional language to the statute which would waive the requirement that the member maintain a residence or household for his family—under his management and control. The effect of such a change in the statute would resolve the issues raised by the Comptroller General by making it clear that such entitlement is not contingent upon the maintenance of a separate household under the service member's management and control.

DEPARTMENTAL POSITION

The Department of Defense, by letter dated April 24, 1969, advised the committee that it strongly supports enactment of H.R. 110.

FISCAL DATA

The Department advises that if H.R. 110 is enacted into law, it would result in an annual increase of approximately $17,000,000 in the budgetary requirements of the Department of Defense. However, funds to cover this additional cost have been included in the fiscal year 1970 budget.

Mr. GROSS. Further reserving the right to object, did the gentleman say that the cost would be $17 million?

Mr. BENNETT. That is correct.

Mr. GROSS. That is the annual cost?

Mr. BENNETT. That is correct.

Mr. GROSS. Is there comparable legislation with respect to civilian employees?

Mr. BENNETT. There is comparable legislation of a similar nature coming from another committee.

Mr. GROSS. Is there anything presently in the law comparable to this? Let me put it that way.

Mr. BENNETT. I understand that there is. Ordinarily civilian employees do not have this kind of allowance, but I understand some do, and those who do

receive this kind of treatment rather than the kind of treatment which the Comptroller General said had to be rendered to the military.

Mr. GROSS. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the bill as follows:

H.R. 110

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 427(b) of title 37, United States Code, is amended by adding the following sentence at the end thereof: "An allowance is payable under this subsection even though the member does not maintain for his primary dependents who would otherwise normally reside with him, a residence or household, subject to his management and control, which he is likely to share with them as a common household when his duty assignment permits."

SEC. 2. Section 1 of this Act is effective October 1, 1963.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AUTHORIZING THE PAYMENT OF A FAMILY SEPARATION ALLOWANCE TO ELIGIBLE MEMBERS OF THE UNIFORMED SERVICES WITHOUT REGARD TO THEIR ASSIGNMENT TO GOVERNMENT QUARTERS

Mr. BENNETT. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 386) to amend title 37 of the United States Code to provide that a family separation allowance shall be paid to any member of a uniformed service assigned to Government quarters providing he is otherwise entitled to such separation allowance.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

Mr. GROSS. Mr. Speaker, reserving the right to object, what is the cost of this bill?

Mr. BENNETT. First, to explain the bill briefly, H.R. 386 addresses itself to the problem of entitlement to the monthly family separation allowance.

The provisions of H.R. 386 are designed to make eligible for this family separation allowance of $30 per month, that group of service personnel whose dependents are now occupying Government quarters.

Under the provisions of existing law, a member of the uniformed services whose dependents occupy Government quarters are not entitled to a family separation allowance despite the fact that he may otherwise meet the criteria of the statute.

The existing exclusion results from the language of the statute which establishes as one of the criterion for entitlement to this special separation allowance, a stipulation that it be payable only to those members who are "entitled to basic allowance for quarters." Thus, since the entitlement to the "basic allowance for quarters" does not arise in the instance of those members who are occupying Government quarters, they are precluded from the receipt of the monthly separation allowance, notwithstanding the fact that they might otherwise meet all of the other criteria of the statute.

DEPARTMENTAL AND FISCAL DATA

The Department of the Air Force, on behalf of the Department of Defense by letter dated August 19, 1969, had advised the committee that it strongly supports the objectives of H.R. 386. The Department further advises that if this modification is made in the statute it will increase the annual budgetary requirement by $2,653,000. This amount, however, has been included in the fiscal year 1970 budget of the Department.

Mr. GROSS. Mr. Speaker, does this provide for babysitting fees, extra transportation, and so on?

Mr. BENNETT. It only provides for the extra costs that a family experiences by virtue of the absence of the member.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the bill, as follows:

H.R. 386

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 427(b) of title 37, United States Code, is amended by striking out "who is entitled to a basic allowance for quarters".

SEC. 2. The amendment made by this Act shall take effect on the first day of the first calendar month which occurs after the date of the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AUTHORIZING CERTAIN REIMBURSEMENTS, TRANSPORTATION, AND VARIOUS ALLOWANCES, FOR MEMBERS OF THE UNIFORMED SERVICES AND THEIR DEPENDENTS

Mr. BENNETT. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 8021) to amend title 37, United States Code, to authorize a dislocation allowance under certain circumstances, certain reimbursements, transportation for dependents, and travel and transportation allowances under certain circumstances, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the bill, as follows:

H.R. 8021

Be it enacted by the Senate and House of Representatives of the United States of American in Congress assembled, That chapter 7 of title 37, United States Code, is amended as follows:

(1) Section 404(d) is amended by adding the following new sentence: "In addition to the allowances authorized by this section reimbursement may be allowed for the actual cost of parking fees, ferry fares, and bridge, road, and tunnel tolls."

(2) Section 404 is amended by adding the following new subsection:

"(g) Under regulations prescribed by the Secretaries concerned, a member of a uniformed service who receives change of permanent station orders while he is away from his permanent station under orders may, without regard to the comparative cost of the various modes of transportation, be authorized travel and transportation allowances for travel performed or to be performed by him to the permanent station from which ordered for the purpose of settling his personal affairs and, from that station, to the permanent station to which ordered. Travel performed under this subsection is considered to be travel on official business."

(3) Section 406 is amended by adding the following new subsection:

"(i) Where a member is ordered to sea duty on a vessel or with a mobile unit and although otherwise entitled moves his dependents and household effects to other than the home port or home yard of the vessel or mobile unit because of anticipated extended deployment of such vessel or mobile unit, and he is subsequently ordered to a different vessel or mobile unit which has the identical home port or home yard, the Secretaries concerned may authorize the movement of the dependents, baggage, and household effects to the home port or home yard and prescribe transportation in kind, reimbursement therefor, or a monetary allowance in place thereof, as the case may be, as authorized under subsection (a) or (b) of this section."

(4) The catchline of section 406a and the corresponding item in the analysis are each amended by striking out "and transportation" and inserting in place thereof "transportation, and dislocation" and by amending the text of section 406a by inserting "dislocation allowance under section 407 of this title notwithstanding the requirement prescribed in subsection (b)(1) of that section," after "section 404 of this title,".

(5) Section 407 is amended as follows:

(A) Subsection (a) is amended by (i) striking out "make" and inserting in place thereof "in reliance on orders, make or begin"; (ii) inserting "or prolonged treatment in a hospital," after "change of permanent station"; and (iii) inserting "or 406(i)" after "405a(a)".

(B) Subsection (b) is amended by striking out "or" at the end of clause (2), striking out the period at the end of clause (3) and inserting in place thereof "; or", and adding the following new clause:

"(4) the member is certified, in accordance with regulations prescribed by the Secretary concerned, as requiring prolonged treatment in a hospital."

(6) Section 408 is amended by adding the following new sentence: "In addition to the fixed rate a mile authorized by this section for the use of privately owned vehicles, reimbursement may be allowed for the actual cost of parking fees, ferry fares, and bridge, road, and tunnel tolls."

(7) Section 411(a) is amended by striking out "(d)–(f)" and inserting in place thereof "(d)–(g)".

(8) The last two sentences of section 411(d) are amended to read as follows: "The definition shall include a shore station or the home yard or home port of a vessel or other afloat mobile unit to which a member of a uniformed service who is entitled to basic pay may be ordered. An authorized

change in the home yard or home port of such a vessel or other afloat mobile unit is a change of permanent station."

Mr. BENNETT. Mr. Speaker, H.R. 8021 is a Department of Defense legislative proposal designed to amend title 37, United States Code, to authorize a dislocation allowance under certain circumstances, certain reimbursements, transportation for dependents, and travel and transportation allowances under certain circumstances, and for other purposes.

EXPLANATION OF THE BILL

The bill is essentially an omnibus bill covering five general purposes:

First. It would authorize reimbursement to members of the uniformed services for the actual cost of parking fees, ferry fares, bridge, road and tunnel tolls incurred during official travel, and so forth.

The annual cost of this element of the proposal is estimated at $5,291,000. Funds to cover this cost are included in the fiscal year 1970 budget.

Second. This legislation would also entitle a member of the uniformed services to travel allowances from a temporary duty station to a former permanent duty station, and then to his newly assigned permanent duty station.

Under existing law, a member receiving permanent change of station orders is only entitled to travel performed from his temporary duty station to his new permanent duty station.

Under the provisions of this bill such travel would be authorized. The Department considers the cost of such liberalization as being very modest involving an annual cost of approximately $61,980.

Third. This legislation would also authorize the payment of a dislocation allowance to a member of a uniformed service whose dependents travel prior to the effective date of orders directing a permanent change of station when such orders are later cancelled, revoked, or modified.

The proposed legislation is therefore attempting to correct hardships which result in the case of individual service families who, in proper anticipation of the effectiveness of a permanent change of station order, go forward to relocate in other geographical areas and later find that the orders have been cancelled.

The Department advises:

Any additional cost resulting from the enactment of this part of the proposal would be negligible and would be absorbed in applicable appropriations.

Fourth. This proposed legislation would also provide for the payment of a dislocation allowance for a member of a uniformed service when his dependents make an authorized move in connection with his prolonged treatment in a hospital.

Prolonged treatment is that treatment which is expected to require a minimum of 6 months of time.

The Comptroller General of the United States has ruled that a member is entitled to a dislocation allowance only when dependents move in connection with a permanent change of station, and that an order to proceed to a hospital is not a permanent change of the member's duty station.

The dislocation allowance is an amount equal to the member's basic allowance for quarters for 1 month—section 407, title 37, United States Code.

The Department advises that the estimated annual cost of this element of the proposal is $178,300.

Fifth. The proposed legislation would authorize the transportation of dependents and shipment of household goods to the home port or home yard at Government expense incident to a member's transfer from sea duty to sea duty, when the vessel or other afloat mobile units involved have identical home yards or home ports. This element of the proposal is designed to eliminate a hardship now confronting naval personnel who complete tours of sea duty on one ship or unit, and are subsequently immediately reassigned to another ship or unit home ported at the same geographical location. Under these circumstances the member is not entitled to a transportation allowance for his dependents despite the fact that during his previous tour of sea duty he had elected to permit his family to reside at a location other than the home port of the ship. Thus, he must now either endure the continued separation of his family during his second tour of sea duty, or in the alternative move them to his home port at his own expense.

The Department is of the view that this change in the statute would not result in any substantial increase in the cost to the Government.

SUMMARY

This departmental proposal, H.R. 8021, is identical to H.R. 8375 of the 90th Congress which was reported favorably by the Committee on Armed Services and passed the House on August 7, 1967. Unfortunately, it was not acted on by the other body and died with the termination of the 90th Congress.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMENDING TITLE 37, UNITED STATES CODE, TO AUTHORIZE TRAVEL, TRANSPORTATION, AND EDUCATION ALLOWANCES TO CERTAIN MEMBERS OF THE UNIFORMED SERVICES FOR DEPENDENTS' SCHOOLING

Mr. BENNETT. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 8022) to amend title 37, United States Code, to authorize travel transportation, and education allowances to certain members of the uniformed services for dependents' schooling, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the bill, as follows:

H.R. 8022

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 7 of title 37, United States Code, is amended as follows:

(1) The following new section is inserted after section 427:

"§ 428. Education, travel and transportation allowances: dependents at permanent station outside United States

"Under regulations prescribed by the Secretaries concerned, which shall be, as far as practicable, uniform for all of the uniformed services, a member of a uniformed service who is on duty outside the United States at a permanent station, and when such benefits are not made available in kind by the United States, is entitled to an education allowance and a travel and transportation allowance, to assist in providing adequate education for his dependents who are authorized to accompany him, as follows:

"(1) An allowance is authorized for elementary and secondary education of not more than the cost of obtaining the elementary and secondary educational services that are ordinarily provided without charge by the public schools in the United States, plus, in those cases where the Secretary concerned has designated the duty station of the member as having inadequate educational facilities, board and room, and periodic transportation between that station and the nearest locality (including where applicable the United States), designated by the Secretaries concerned as having adequate educational facilities; but the amount of the allowance granted shall be determined on the basis of the educational facility used.

"(2) A travel and transportation allowance is authorized to meet the travel expenses of the dependents of a member to and from a school in the United States to obtain an undergraduate college education, not to exceed one round trip each school year for each dependent for the purpose of obtaining such type of education. All or any portion of the travel for which a transportation allowance is authorized by this section will be performed wherever possible by the Military Airlift Command or the Military Sea Transportation Service on a space-required basis. Notwithstanding the area limitations in this section, a travel and transportation allowance for the purpose of obtaining undergraduate college education may be authorized under this clause for dependents of members stationed in the Canal Zone.

"(3) The term 'United States' shall, for the purposes of this section, mean the several States, the District of Columbia, Puerto Rico, and the Canal Zone.

"(4) The words 'permanent station' shall, for the purposes of this section, include the home yard or home port of a vessel to which a member of a uniformed service may be assigned.

"(5) Nothwithstanding section 401(2)(A) of this title, 'dependent' in this section may include an unmarried child over 21 years of age who is in fact dependent and is obtaining undergraduate college education."

(2) The analysis is amended by inserting the following item:

"428. Education, travel, and transportation allowances: dependents at permanent station outside the United States."

SEC. 2. Section 912 of the Internal Revenue Code of 1954 (26 U.S.C. 912) (relating to exemption from taxation for certain allowances) is amended by adding the following new paragraph at the end:

"(4) EDUCATION ALLOWANCE.—In the case of a member of a uniformed service, amounts

received under section 428 of title 37, United States Code."

Mr. BENNETT. Mr. Speaker, H.R. 8022 is a bill which will amend title 37 United States Code, to authorize travel, transportation, and education allowances to members of the uniformed services stationed abroad, for their dependents' schooling.

The provisions of this bill would extend to members of the uniformed services stationed abroad authority to receive allowances for certain expenses incurred in educating their dependents and in transporting them between the member's station and the dependents' school.

With regard to the education allowances, it is a recognized fact that dependents' education can create a major financial and morale problem for uniformed personnel stationed in foreign areas, where there are no local dependents' schools operated by the Department of Defense. Some of our posts are located in Asia, Africa, and the Near East, where the lingual, cultural, and educational standards are very different from our own, and thus where the local schools are not suitable for our children.

At most of these stations there are so few American children that the estabment of a DOD-sponsored dependents' school is not feasible, and parents must send their children to suitable dormitory or tuition-fee schools.

At the present time, approximately 1,527 dependents must attend elementary and secondary dormitory and tuition schools. Tuition assistance in such cases is available under the authority of the annual Department of Defense Appropriations Act. Further, in fiscal year 1969 $524,000 was appropriated to cover room and board fees of elementary and secondary students living in tuition-fee or service operated dormitory schools, and the fiscal year 1970 Department of Defense appropriation request in this area is $526,000.

In addition to continuing this room and board allowance, the present bill would recognize and provide allowances to cover other costs that are incurred when a child must attend a dormitory or tuition fee school. That is, the bill would provide allowances for periodic transportation home when the elementary or secondary school is closed for holidays, and it would provide allowance to cover the additional fees charged by the school, such as library and health fees. Allowances for such periodic transportation and fees are not presently provided to service families. On the other hand, all of these allowances, room and board, periodic transportation and school fees, are presently authorized by 5 U.S.C. 5924(4) for civilian Government employees stationed in foreign areas.

This bill will also provide a transportation allowance of one roundtrip annually for dependents of service members stationed abroad who are obtaining an undergraduate college education at a school in the United States. Travel by Military Airlift Command will be utilized when available. This allowance would be available to the approximately 1,764 dependents who are enrolled full time in a college course of instruction which leads to an associated or baccalaureate degree. This allowance is presently authorized by 5 U.S.C. 5924(4) for civilian Government employees stationed in foreign areas.

The Department of Defense favors this legislation and the Bureau of the Budget has no objection to its passage.

The enactment of this measure will result in an increased annual cost to the Department of Defense of approximately $1,886,000, and as previously mentioned $526,000 of this amount is for room and board allowances and is presently contained in the fiscal year 1970 Department of Defense appropriation request.

You will recall that the Armed Services Committee reported out a similar bill in 1967, H.R. 2082, and it was passed by the House. However, the other body failed to act on it. Further, you will recall that the college student transportation provision was included in this year's procurement authorization bill, but it was deleted during conference.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. BENNETT. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks, prior to the passage of each one of the four bills.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

THIRTEENTH ANNUAL REPORT ON THE TRADE AGREEMENTS PROGRAM—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91-204)

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Ways and Means and ordered to be printed:

To the Congress of the United States:

With this message I am transmitting the Thirteenth Annual Report on the Trade Agreements Program, as required by the Trade Expansion Act of 1962. The report covers the year 1968.

In 1968, free world trade increased by 11.6 percent; U.S. exports increased by 9.6 percent; and U.S. imports rose by 23.7 percent, largely due to the inflationary forces in our economy which stimulated imports and also hampered the competitiveness of our exports.

The Trade Bill of 1969, which I recently submitted to the Congress, will equip us to build on the past gains of the Trade Agreements Program and to move forward toward a new trade program for the 1970s. It will give us the capability to continue to move forward toward freer world trade, defend our own trade interests, and provide constructive adjustment to changes in world trade patterns. The Commission on World Trade, which I am appointing, will examine the complex trade issues that will confront us in the 1970s, and will make recommendations for the U.S. policies needed to deal with them.

This Administration is committed to a freer exchange of goods among nations. We must continue to strive for further growth in mutually advantageous world trade and, in part through such trade, for the eventual dismantling of the barriers that have stood in the way of the freer interchange of people and ideas.

RICHARD NIXON.

THE WHITE HOUSE, *December 16, 1969.*

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

JOHN VINCENT AMIRAULT

The Clerk called the bill (H.R. 2552) for the relief of John Vincent Amirault.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

REFERENCE OF CLAIM OF JESUS J. RODRIGUEZ

The Clerk called House Resolution 86, referring the bill (H.R. 1691) to the Chief Commissioner of the Court of Claims.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that the resolution be passed over without prejudice.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

Mr. BOLAND. Mr. Speaker, I object.

Mr. GROSS and Mr. HUNT objected, and, under the rule, the bill was recommitted to the Committee on the Judiciary.

CONFERRING JURISDICTION ON CLAIM OF PHILIP J. FICHMAN

The Clerk called the bill (H.R. 10658) conferring jurisdiction upon the U.S. Court of Claims to hear, determine, and render judgment upon the claim of Philip J. Fichman.

There being no objection, the Clerk read the bill, as follows:

H.R. 10658

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any statute of limitations pertaining to suits against the United States, or any lapse of time, or bars of laches or any prior judgment of the United States Court of Claims, jurisdiction is hereby conferred upon the Court of Claims to hear, determine, and render judgment upon any claim of Philip J. Fichman, of Indianapolis, Indiana, for disability retirement pay allegedly due him as the result of certain preexising, nondisabling physical conditions which the said Philip J. Fichman maintains were aggravated while he was serving in the Armed Forces of the United States.

SEC. 2. Suit upon any such claim may be instituted at any time within one year after the date of the enactment of this Act. Nothing in this Act shall be construed as an inference of liability on the part of the United States. Except as otherwise provided herein, proceedings for the determination of such claim, and review and payment of any judgment or judgments thereon shall be had in the same manner as in the case of claims over which such court has jurisdiction under section 1491 of title 28 of the United States Code.

With the following committee amendment:

Page 1, line 10, strike "preexising" and insert "preexisting".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CAPT. WILLIAM O. HANLE

The Clerk called the bill (S. 882) for the relief of Capt. William O. Hanle.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

The Clerk called the bill (S. 476) for the relief of Mrs. Marjorie Zuck.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

JACK BROWN

The Clerk called the bill (H.R. 1697) for the relief of Jack Brown.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

JANIS ZALCMANIS, GERTRUDE JANSONS, LORENA JANSONS MURPHY, AND ASJA PANSONS LIDERS

The Clerk called the bill (H.R. 3530) for the relief of Janis Zalcmanis, Gertrude Jansons, Lorena Jansons Murphy, and Asja Jansons Liders.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

DR. EMIL BRUNO

The Clerk called the bill (H.R. 4105) for the relief of Dr. Emil Bruno.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

MRS. PEARL C. DAVIS

The Clerk called the bill (H.R. 7264) for the relief of Mrs. Pearl C. Davis.

There being no objection, the Clerk read the bill as follows:

H. R. 7264

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of determining the entitlement of Mrs. Pearl C. Davis, of New Haven, Connecticut, to widow's insurance benefits under section 202(e) of the Social Security Act on the basis of the wages and self-employment income of her late husband Alver C. Davis (Social Security Account Numbered 044–12–3912), the said Mrs. Pearl C. Davis shall be deemed to have satisfactorily established her marital relationship with the said Alver C. Davis at the time she first filed application for such benefits in 1954. There shall be paid to the said Mrs. Pearl C. Davis, in a lump sum from the Federal Old-Age and Survivors Insurance Trust Fund, an amount equal to the total of the additional widow's insurance benefits (for the period beginning with the month of April 1955, and ending with the month preceding the first month for which she was entitled to such benefits without regard to this Act) which are payable to her by reason of the preceding sentence.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BURROWES MANUFACTURING CORP.

The Clerk called the bill (H.R. 8100) for the relief of the Burrowes Manufacturing Corp.

There being no objection, the Clerk read the bill as follows:

H.R. 8100

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the case of a claim for credit or refund with respect to the tax imposed by section 4161 of the Internal Revenue Code of 1954 filed by the Burrowes Manufacturing Corporation of Portland, Maine, within the 30-day period which begins on the date of the enactment of this Act, subparagraphs (A) and (B) of section 209(b)(1) of the Excise Tax Reduction Act of 1965 (relating to floor stocks refunds with respect to certain manufacturers excise taxes) shall be applied by substituting the date of the 30th day after the date of the enactment of this Act (1) for "February 10, 1966" in such subparagraph (A), and (2) for "such February 10" in such subparagraph (B).

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

QUITCLAIMS TO QUIET TITLE, ARIZONA

The Clerk called the bill (H.R. 7161) for the relief of Leonard N. Rogers, John P. Corcoran, Mrs. Charles W. (Ethel J.) Pensinger, Marion M. Lee, and Arthur N. Lee.

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

QUITCLAIM OF SAND AND GRAVEL—EMOGENE TILMON, LOGAN COUNTY, ARK.

The Clerk called the bill (S. 65) to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to Emogene Tilmon of Logan County, Ark.

There being no objection, the Clerk read the bill, as follows:

S. 65

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture shall convey by quitclaim deed, without consideration, to Emogene Tilmon the sand, gravel, stone, clay, and similar materials reserved to the United States in a certain tract of 80.07 acres of land, conveyed to her by deed dated September 22, 1960, recorded in Logan County, Arkansas, on October 10, 1960, in Book 52 of Deeds, page 691: *Provided,* That the conveyance authorized by this Act shall change none of the other provisions or conditions of the above cited September 22, 1960, deed from the United States: *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract.

With the following committee amendment:

Page 2, line 2, strike out the following: ": *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract." and insert in lieu thereof a period after the words "United States".

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

QUITCLAIM OF SAND AND GRAVEL—ENOCH A. LOWDER, LOGAN COUNTY, ARK.

The Clerk called the bill (S. 80) to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and sim-

ilar materials in certain lands to Enoch A. Lowder of Logan County, Ark.

There being no objection, the Clerk read the bill as follows:

S. 80

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture shall convey by quitclaim deed, without consideration, to Enoch A. Lowder, the sand, gravel, stone, clay, and similar materials reserved to the United States in a certain tract of forty acres of land, more or less, conveyed to her by deed dated February 5, 1963, recorded in Logan County, Arkansas, on February 23, 1963, in Book 55 of Deeds, page 141: *Provided,* That the conveyance authorized by this Act shall change none of the other provisions or conditions of the above cited February 5, 1963, deed from the United States: *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract.

With the following committee amendment:

Page 2, line 2, strike out the following: ": *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract." and insert in lieu thereof a period after the words "United States".

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

QUITCLAIM OF SAND AND GRAVEL—J. B. AND SULA SMITH, MAGAZINE, ARK.

The Clerk called the bill (S. 81) to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to J. B. Smith and Sula E. Smith, of Magazine, Ark.

There being no objection, the Clerk read the bill as follows:

S. 81

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture shall convey by quitclaim deed, without consideration, to J. B. Smith and Sula E. Smith, his wife, the sand, gravel, stone, clay, and similar materials reserved to the United States in a certain tract of 52.13 acres of land, more or less, conveyed to them by deed dated November 26, 1962, recorded January 12, 1963, in deed book 55, page 110, Southern District Court House of Logan County, at Booneville, Arkansas: *Provided,* That the conveyance authorized by this Act shall change none of the other provisions or conditions of the above cited November 26, 1962, deed from the United States: *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract.

With the following committee amendment:

Page 2, line 3, strike out the following: ": *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract." and insert in lieu thereof a period after the words "United States".

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

QUITCLAIM OF SAND AND GRAVEL—WAYNE AND EMOGENE TILMON, LOGAN COUNTY, ARK.

The Clerk called the bill (S. 82) to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to Wayne Tilmon and Emogene Tilmon, of Logan County, Ark.

There being no objection, the Clerk read the bill as follows:

S. 82

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture shall convey by quit claim deed, without consideration, to Wayne Tilmon and Emogene Tilmon, his wife, the sand, gravel, stone, clay and similar materials reserved to the United States in a certain tract of 70.36 acres of land, more or less, conveyed to them by deed dated November 27, 1959, recorded in Logan County, Arkansas, on March 8, 1960, in Book 52 of Deeds, page 556: *Provided,* That the conveyance authorized by this Act shall change none of the other provisions or conditions of the above cited November 27, 1959, deed from the United States: *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract.

With the following committee amendment:

Page 2, line 2, strike out the following: ": *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract." and insert in lieu thereof a period after the words "United States".

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TO PERMIT THE VESSEL "MARPOLE" TO BE DOCUMENTED FOR USE IN THE COASTWISE TRADE

The Clerk called the bill (H.R. 1497) to permit the vessel *Marpole* to be documented for use in the coastwise trade.

There being no objection, the Clerk read the bill as follows:

H.R. 1497

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding section 27 of the Merchant Marine Act, 1920, as amended (46 U.S.C. 883), the vessel known as the Marpole, official number CF4754CN, owned by (Mrs.) Jean C. Rowe, 334 25th Street, Santa Monica, California, 90402, area code 213, telephone EX 5-3034, shall be entitled to be documented to engage in the fisheries and the coastwise trade upon compliance with the usual requirements, so long as such vessel is, from the date of enactment of this Act, continuously owned by a citizen of the United States. For the purposes of this Act, the term "citizen of the United States" includes corporations, partnerships, and associations, but only those which are citizens of the United States within the meaning of section 2 of the Shipping Act, 1916 (46 U.S.C. 802).

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The SPEAKER. This concludes the call of the Private Calendar.

PARLIAMENTARY INQUIRY

Mr. GROSS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. GROSS. Mr. Speaker, were not the last six bills on the Private Calendar not eligible for consideration?

The SPEAKER. The Chair is informed that they were.

Mr. GROSS. They were eligible?

The SPEAKER. Yes. That is the information that the Chair has received.

CONFERENCE REPORT ON H.R. 14916, DISTRICT OF COLUMBIA APPROPRIATIONS, 1970

Mr. NATCHER. Mr. Speaker, I call up the conference report on the bill (H.R. 14916) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending June 30, 1970, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of December 15, 1969.)

(Mr. NATCHER asked and was given permission to revise and extend his remarks and to include a tabulation.)

Mr. NATCHER. Mr. Speaker, the conference agreement provides a Federal payment of $104,169,000 to the general fund composed of $99,169,000 plus a special one-time payment of $5,000,000 for law enforcement activities. The House bill provided $107,000,000, including the special one-time payment. The Senate bill provided $109,206,000. The conference agreement is $5,831,000 below the budget estimates; $2,831,000 below the House bill; and $5,037,000 below the Senate bill; but it is $14,804,000 above the 1969 Federal payment, which was $89,365,000.

DISTRICT OF COLUMBIA FUNDS

The conference agreement provides $650,249,600 in District of Columbia appropriated funds. The House bill provided $683,106,300. The Senate bill provided $657,064,600. The conference agreement is $102,694,700 below the budget estimates, $32,856,700 below the House bill, and $6,815,000 below the Senate bill. It is $66,654,212 above the 1969 appropriations and represents an alltime high for the District government.

At this point in the RECORD I will insert a tabulation showing the various stages of the bill by appropriations:

DISTRICT OF COLUMBIA APPROPRIATION BILL, 1970 (H.R. 14916) CONFERENCE SUMMARY

Agency and item	New budget (obligational) authority, fiscal year 1969	Budget estimates of new (obligational) authority, fiscal year 1970	New budget (obligational) authority recommended in House bill	New budget (obligational) authority recommended in Senate bill	New budget (obligational) authority recommended by conference action	Conference action compared with— New budget (obligational) authority, fiscal year 1969	Budget estimates of new (obligational) authority, fiscal year 1970	New budget (obligational) authority recommended in House bill	New budget (obligational) authority recommended in Senate bill

[1] Includes $10,365,000 in 2d supplemental, 1969 (Public Law 91-47).
[2] Includes $20,000,000 requested in H. Doc. 91-196.
[3] Includes $7,902,000 in supplemental, 1969 (Public Law 90-608).
[4] Includes $18,736,000 requested in H. Doc. 91-50 for fiscal year 1969, and reflects decrease of $515,000 proposed in H. Doc. 91-99 and includes $6,000,000 requested in H. Doc. 91-140.
[5] Includes $1,049,500 in supplemental, 1969 (Public Law 90-608), and $975,000 in 2d supplemental, 1969 (Public Law 91-47). Also includes $1,611,000 for Corporation Counsel appropriated under "Public safety."
[6] Includes $847,000 requested in H. Doc. 91-99.
[7] Includes $68,000 in supplemental, 1969 (Public Law 90-608) and $10,034,000 in 2d supplemental 1969 (Public Law 91-47). Excludes $1,611,000 for Corporation Counsel, now under "General operating expenses."
[8] Includes $10,060,000 requested in H. Doc. 91-99.
[9] Includes $13,931,000 in 2d supplemental, 1969 (Public Law 91-47).
[10] Includes $1,204,000 requested in H. Doc. 91-99.
[11] Includes $322,000 in 2d supplemental, 1969 (Public Law 91-47).
[12] Includes $563,000 requested in H. Doc. 91-99.
[13] Includes $2,548,000 in 2d supplemental, 1969 (Public Law 91-47).
[14] Includes $2,054,000 requested in H. Doc. 91-99 and $2,200,000 requested in H. Doc. 91-140 and $1,369,000 requested in H. Doc. 91-196.
[15] Includes $163,000 in 2d supplemental, 1969 (Public Law 91-47).
[16] Includes $35,000 requested in H. Doc. 91-99.
[17] Includes $479,000 in 2d supplemental, 1969 (Public Law 91-47).
[18] Includes $403,000 requested in H. Doc. 91-99.
[19] Includes $3,179,000 in 2d supplemental, 1969 (Public Law 91-47).
[20] Includes $27,900 in supplemental 1969 (Puolic Law 90-608), and $50,000 in 2d supplemental, 1969 (Public Law 91-47).
[21] Requested in H. Doc. 91-196.
[22] Includes $49,000 requested in H. Doc. 91-140.
[23] Includes $10,590,000 in supplemental, 1969 (Public Law 90-608).
[24] Includes $18,736,000 requested in H. Doc. 91-50 for fiscal year 1969, $8,928,000 requested in H. Doc. 91-99, and $18,275,000 requested in H. Doc. 140, and excludes $2,286,000 requested in H. Doc. 91-196.

PERSONNEL

The conference agreement provides a net total of 40,664 positions. The House bill provided a total of 41,500. The Senate bill provided 40,865, including a personnel freeze on existing positions in the 1970 base. The conferees have agreed to this personnel freeze so as to comply with section 802 of the District of Columbia Revenue Act of 1969.

The Senate allowed 887 new positions over the House allowance. The conference action allows 686 new positions over the House bill. A total of 3,858 new full-time positions is authorized under the terms of the conference agreement. The funding for almost all of the new positions is on a 4-month basis, as proposed by the Senate, due to the late passage of the bill.

GENERAL OPERATING EXPENSES

The conference action eliminates or reduces many of the increases provided by the Senate for the Executive Office including $500,000 proposed for the neighborhood service centers. The increases provided by the Senate for the community development unit, the office of consumer affairs, the Economic Development Committee, coordination of the arts, the planning office, the office of legislative affairs, and the personnel office were dropped by the conferees. The additional positions provided for the budget office were approved. The conferees agreed to allow the Fuson stamp program on a 1-year trial basis with the stipulation that future expenditures should not exceed $50,000 annually. The additional positions for the City Council were eliminated. The Senate allowance for the Human Relations Commission has been reduced in half, which allows 20 new positions for the Commission.

PUBLIC SAFETY

The conference agreement allows 100 additional police cadets which will provide a total of 250 in 1970 as originally requested. Numerous other adjustments have been made in the other activities under this appropriation, including funding of the Offender Rehabilitation project under the Legal Aid Agency.

EDUCATION

The conferees agreed to a number of increases over the House bill for the public schools including additional positions for general administration, early childhood education, summer school and

continuing education, and instructional services. Additional funds granted to the Federal City College and the Washington Technical Institute will not enable any increase in the current enrollments at those institutions.

PARKS AND RECREATION

The conferees agreed substantially with the recommendations of the Senate.

HEALTH AND WELFARE

The conferees agreed to the additional funds allowed by the Senate for District of Columbia General Hospital. The request for these funds arrived too late for consideration by the House. Other increases added by the Senate for the Department of Public Health were reduced generally, as was also true of Department of Public Welfare increases. Additional funds and personnel were allowed to enable District of Columbia Village to convert more beds from immediate to intensive care.

HIGHWAYS AND TRAFFIC

The conference agreement restores the 310 positions eliminated from the Department of Highways and Traffic budget base by the Senate. Fifty-three of these positions relate to operating expense activities and are vital to the day-to-day maintenance of our streets, highways, bridges, and for traffic operations. There are 252 of the positions which are capital outlay positions directly connected with the Department's major construction programs. The freeway impasse is finally broken and these positions will be necessary to enable the freeway system program to get underway. The Department has over $200 million in previously appropriated funds and they are available to fund these positions as well as the contracts for actual construction. I am glad to report that the House position prevailed.

SANITARY ENGINEERING

Numerous downward adjustments were agreed to in these activities. The House did agree to the Senate proposal to accelerate the purchase of compactor truck bodies for trash collection from 3 years to 1 year.

CAPITAL OUTLAY

The House conferees agreed substantially with the reductions proposed by the Senate. Additional reductions were agreed to in conference including the increases allowed by the Senate for educational parks, air-conditioning buildings at District of Columbia General Hospital that are not already air conditioned, and the community street program. The conferees agreed to a reprograming action to fund a preliminary survey for a new District court building.

THE COMMISSION ON THE REVISION OF THE CRIMINAL LAWS OF THE DISTRICT OF COLUMBIA

The conferees agreed to the appropriation of $150,000 for the Commission.

Mr. Speaker, this is a good bill. As I noted earlier it is below both the House and Senate versions of the bill, but it provides a substantial increase over the 1969 appropriations for the operation of the government of our Capital City. I recommend the adoption of the conference report.

Mr. Speaker, at this time I yield to the distinguished gentleman from Iowa (Mr. GROSS).

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding. While I think that the Federal Government is appropriating far too much money to the District of Columbia, I am pleasantly surprised by this conference report which indicates that for the first time in many, many years the other body failed to obtain an increase above the extraordinary amount that the House approved. I suppose we can take some solace from the fact that this is apparently one of the best conference reports that we have had in many, many years. I want to thank the gentleman from Kentucky (Mr. NATCHER) and the members of his subcommittee. Although, I say, again, and emphasize that I think we have appropriated far too much money from the Federal Treasury for the District of Columbia.

Mr. NATCHER. Mr. Speaker, I want to thank the gentleman from Iowa for his statement.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. NATCHER. Mr. Speaker, at this time I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I thank the gentleman for yielding.

I think it is particularly noteworthy, I would say to the gentleman from Kentucky, to read in the morning newspaper an article which stated that the police officers are evidently going to be on the spot unless there is a direct reduction in crime for the District of Columbia.

I know some of this would obviously relate to the committee which authorizes the appropriations, not the Committee on Appropriations which the gentleman from Kentucky (Mr. NATCHER) so ably heads.

I wonder if the gentleman could tell the Members, particularly in light of today's development, the so-called order of the Police Chief, to reduce crime and whether or not in the considered judgment of the gentleman from Kentucky there is an adequate amount in the appropriation bill for police protection in the District of Columbia?

Mr. NATCHER. Mr. Speaker, I want to thank my distinguished friend from Ohio. I would like to say to the gentleman, and the other Members at this time, that we have an authorized police force in the District of Columbia of 5,100 men. In this bill for fiscal year 1970 we have $68,355,000 for the maintenance of the Police Department. This is $71.93 per capita.

There is no city in the United States of America, with the exception of Boston, Mass., Mr. Speaker, that has a larger per capita amount expended on its police department than the District of Columbia.

The article that the gentleman from Ohio read in this morning's paper quoting the concern of the Chief of Police as to the inspectors here in the city of Washington is long overdue. I want the gentleman from Ohio to know that I for one believe that the Chief of Police is correct. This action is long overdue. We have an adequate number of police officers in our Capital City. We have not reduced the Metropolitan Police budget one dime in 10 years. Each year they come in with their requests and we do not reduce them. We have given them everything they have asked for. We believe that the people from the great State of Ohio and from the great State of Kentucky and throughout the United States should have a right to come to our Capital City and walk the streets in peace, and not fear that they will be raped, mugged, and robbed. So I say to the Members of the House at this time, Mr. Speaker, that the action of the Chief of Police is long overdue. If these inspectors do not clear this situation up in their districts, I think the Chief of Police is right—I think they ought to be transferred.

Again I want to thank the gentleman from Ohio for calling this matter to our attention.

With the total amount contained in this bill and with the total amount per capita for the operation of our Capital City Police Department, there is no reason why we should not have better law enforcement.

There are problems such as those we have been discussing and the Department has operated under some adverse conditions but I am definitely of the opinion that we have a good Police Department in our Capital City.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield further?

Mr. NATCHER. I yield further to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I appreciate the gentleman's statement, and I would like to make another point which might be a matter which should come up before the authorizing committee, and not the Committee on Appropriations. A cursory examination indicates that a great amount of the time of the police force in the District of Columbia is spent on special events, and on what might be called non-crime-related duties of an officer.

For example, it is my understanding that approximately 400 policemen in the District of Columbia will be assigned every time the Redskins play a football game, whereas in other cities, take, for example, Chicago, the taxpayers there are not called upon to such a large extent, and that there are certain duties around their football stadium which are performed by private individuals, paid for by the Chicago Bears.

So maybe we are calling upon the police force to handle a great amount of duties which in other cities in the country are performed by the business enterprises or private groups themselves, as well as the local government, and are not reflected in the police costs.

So possibly at the same time the Chief is calling upon this investigation, or putting this order down, I wish he would take a look into how much of the police force money goes for special events that might well be handled by others who do not wear the blue uniform.

Mr. NATCHER. Mr. Speaker, I want to thank the gentleman from Ohio for his statement. In addition to the duties that the gentleman from Ohio has

pointed out, just as a matter of emphasis, the last moratorium demonstration, it cost the city of Washington $689,000.

Now think about it—$689,000 is the cost as a result of the moratorium march to the District of Columbia. That does not include the expenses of the Department of Defense and other departments such as the Department of the Interior for the Park Police and all of the other services that were furnished during that weekend.

Mr. WALDIE. Mr. Speaker, will the gentleman yield?

Mr. NATCHER. I yield to the distinguished gentleman from California.

Mr. WALDIE. Mr. Speaker, I too wanted to ask the distinguished chairman of the subcommittee a question relative to Chief Wilson's urging his top police officers starting to do something that they have not been doing apparently, that is, cause crime to decrease, or they would have action taken against them.

Is it the gentleman's understanding that there has been laxity on the part of the local District police force in enforcing the law and in combating the problem of crime in the District?

Mr. NATCHER. I would like to say to the gentleman, as I have said earlier, I am of the opinion that we have a good police department in our Capital City. I think what the Chief of Police had in mind was this—with the total number of officers patrolling the streets, with the amount of money contained in this bill and in every budget down through the years for our Metropolitan Police Department, and with the assistance they are now receiving from the Attorney General and the other Government departments from the standpoint of narcotics and from the standpoint of the crime situation generally—that certainly in those districts where we have most of our crime, the inspectors ought to come up to order—they ought to take a better look.

I think the Chief of Police is right—with all of the services now being furnished in our Capital City and the amount of money and the number of personnel, the inspectors should take a better look into the problem. If these particular men are unable to cope with the situation, I think the Chief of Police is right, he should transfer them.

Mr. WALDIE. Mr. Speaker, I appreciate the gentleman's frank response.

I was concerned when I read the article this morning because I had been led to believe, after listening to the comments from the Attorney General, for one, that the increase of crime in the District was largely the responsibility of the Congress, for their neglect in acting upon his crime package.

It would seem to me at least that this strong criticism by Chief Wilson ascribes the responsibility for the increase in crime to another cause than the Congress. That is a comforting thought, I suppose, that there may be others to share this onerous responsibility.

Although it does strike me as more than passing strange that the District police force, in whom I have had considerable confidence in the past, and I think deservedly so, should be, in my view, castigated by their chief by this reflection upon their ability to have done the job with which they are confronted. I think there has been an aspersion on their abilities cast by their Chief. I think if it is a justified aspersion, it is something I was not aware of—if it is not justified, it seems to me that that would tend greatly to diminish what must be already a low morale in the police department.

Mr. NATCHER. I would say to the gentleman, Mr. Speaker, that the Chief of Police had in mind not that the Metropolitan Police Department generally is not carrying out its duties. He had in mind that these particular inspectors in these particular districts should take a better look.

I say this to the gentleman from California as I have stated earlier—I believe—and I have believed this all down through the years since I have been a Member of the House of Representatives—that we have a good police department in our Capital City and it is one that has operated at times under adverse conditions.

Those in command—the inspectors—and other in command—are the ones the Chief of Police was directing his remarks to.

Mr. WALDIE. I thank the gentleman and I certainly would concur, at least from my own observations of the operation of the District police force.

I would hope that those who do have the authority over the District, however, would ask the Chief to explain further, if he would, what deficiencies did exist at that tremendously important level of command within the Police Department that justified this public chastisement of them.

Mr. NATCHER. I thank the gentleman.

Mr. Speaker, at this time I would yield to my distinguished friend, the gentleman from Wisconsin (Mr. DAVIS), but before yielding I would like to say this to the Members of the House—that one of the nicest things that has happened to me since I have been a Member of the Congress is the privilege of serving with the distinguished gentleman from Wisconsin on this committee.

Mr. Speaker, I now yield to the gentleman.

Mr. DAVIS of Wisconsin. Mr. Speaker, I certainly wish to strongly support the conference report, for the terms of which we are all greatly indebted to the chairman of our subcommittee and the man who served as chairman of the conference, the gentleman from Kentucky. I am not sure that some of my colleagues on this side of the aisle are going to accept his comments about the fine relationships that we have had too favorably because they might think that I am getting a little soft with respect to some of these appropriations. However, the gentleman from Kentucky, a most able negotiator, did accomplish something that has never been accomplished before in my experience with respect to similar conference reports, and that is to bring the report back with a figure below the House and the Senate bills.

In the field of general operations the Senate had exceeded the House bill. So the Senate reductions for the most part came in a reduction of capital outlay.

In pointing out a number of places where increases in general operating expenses were not justified, we were able, as you will note from the conference report, to bring in figures below either the House or the Senate version with respect to general operating expenses and also below either figure basically with respect to capital outlay.

I wish to refer to the major additions. I am sure the gentleman from Iowa, who expressed his displeasure with the growth and the size of the budget here in the District of Columbia, will be interested to know that the major additions to be found in this bill over the budget for the previous year, can be accounted for by the $40 million included for the practical initiation of the construction of the subway, for the crime package, so-called, and increases in facilities for public safety which are included in the conference report, increases for education and welfare and, of course, these latter two items are not unique. The increases are not unique in the District of Columbia. They are the pattern that all of us have to live with in all the communities from which we come.

We had not made reductions in capital outlay for education nearly to the extent that were made by the other body, and the explanation for that is this: A year ago, when we brought this bill to you, we had made substantial reductions in capital outlay in the area of education, because the District government simply did not demonstrate a capability to effectuate that kind of capital outlay program. So this year in our bill we attempted to catch up for the deletions that had been made a year ago.

Over in the other body the concept was accepted there that in this time of retrenchment in the area of public construction of all kinds, a major effort should also be made here in the District of Columbia to bring about a cutback in public works, generally. So we did accept in this conference report that concept, and so that accounts for a figure in the area of capital outlay substantially below that which had been approved in either House.

This is one of the first times it has been a pleasure to bring back a conference report, because all too often we have borne the brunt on this side for making some of the reductions that were not always easy to make, and then having those reductions restored almost fully in the other body. That did not happen this year. This is a conference report that represents good judgment in the light of the overall conditions that exist in the District of Columbia. It provides adequate funding for education, for welfare, and related subjects. It gets the subway system off the ground. It prevents the efforts of some to scuttle an effective highway and street program here within the District.

So I heartily support the conference report, and I would remind my colleagues of the indebtedness each of us does have to the gentleman from Kentucky, who served as chairman of this conference.

Mr. NATCHER. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 1: On page 2, strike out "$107,000,000" and insert "$109,206,000".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 1 and concur therein with an amendment, as follows: In lieu of the sum proposed insert "$104,169,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 4: On page 2, line 19, insert the following:

"THE COMMISSION ON REVISION OF CRIMINAL LAWS OF THE DISTRICT OF COLUMBIA

"For expenses necessary to carry out title X of the Act of December 27, 1967 (81 Stat. 742, 743), establishing The Commission on Revision of the Criminal Laws of the District of Columbia, $150,000 to remain available until expended."

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 4 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 5: On page 3, line 7, strike out "$39,209,000" and insert "$40,417,000".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 5 and concur therein with an amendment, as follows: In lieu of the sum proposed insert "$38,769,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 7: On page 4, line 19, strike out "$130,324,000" and insert "$130,801,000".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 7 and concur therein with an amendment, as follows: In lieu of the sum proposed insert "$129,556,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 10: On page 6, line 14, strike out "$18,337,000" and insert "$17,419,000".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 10 and concur therein with an amendment, as follows: In lieu of the sum proposed insert "$17,406,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 11: On page 6, line 23, strike out "$137,382,000" and insert "$137,297,000".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 11 and concur therein with an amendment, as follows: In lieu of the sum proposed insert "$136,234,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 13: On page 8, line 25, strike out "$33,340,000" and insert "$33,101,000".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 13 and concur therein with an amendment, as follows: In lieu of the sum proposed insert "$32,707,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 14: On page 10, line 22, strike out "$149,928,000" and insert "$122,460,300".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 14 and concur therein with an amendment, as follows: In lieu of the sum proposed insert "$120,682,300".

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the conference report and on the several motions was laid on the table.

GENERAL LEAVE

Mr. NATCHER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the conference report.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

PERMISSION FOR COMMITTEE ON RULES TO FILE PRIVILEGED REPORTS

Mr. HOLIFIELD. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

CABINET COMMITTEE ON OPPORTUNITIES FOR SPANISH-SPEAKING PEOPLE

Mr. HOLIFIELD. Mr. Speaker, I move to suspend the rules and pass the bill (S. 740) to establish a Cabinet Committee on Opportunities for Spanish-Speaking People, and for other purposes, as amended.

The Clerk read as follows:

S. 740

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is the purpose of this Act to assure that Federal programs are reaching all Mexican Americans, Puerto Rican Americans, Cuban Americans, and all other Spanish-speaking and Spanish-surnamed Americans and providing the assistance they need, and to seek out new programs that may be necessary to handle problems that are unique to such persons.

SEC. 2. (a) There is hereby established the Cabinet Committee on Opportunities for Spanish-Speaking People (hereinafter referred to as the "Committee").

(b) The Committee shall be composed of—

(1) the Secretary of Agriculture;

(2) the Secretary of Commerce;

(3) the Secretary of Labor;

(4) the Secretary of Health, Education, and Welfare;

(5) the Secretary of Housing and Urban Development;

(6) the Secretary of the Treasury;

(7) the Attorney General;

(8) the Director of the Office of Economic Opportunity;

(9) the Administrator of the Small Business Administration;

(10) the Commissioner of the Equal Employment Opportunity Commission most concerned with the Spanish-speaking and Spanish-surnamed Americans;

(11) the Chairman of the Civil Service Commission; and

(12) the Chairman of the Committee, who shall be appointed by the President, by and with the advice and consent of the Senate, from among individuals who are recognized for their knowledge of and familiarity with the special problems and needs of the Spanish speaking.

(c) The Chairman may invite the participation in the activities of the Committee of any executive department or agency not represented on the Committee, when matters of interest to such executive department or agency are under consideration.

(d)(1) The Chairman of the Committee shall not concurrently hold any other office or position of employment with the United

States, but shall serve in a full-time capacity as the chief officer of the Committee.

(2) The Chairman of the Committee shall receive compensation at the rate prescribed for level V of the Executive Schedule by section 5316 of title 5, United States Code.

(3) The Chairman of the Committee shall designate one of the other Committee members to serve as acting Chairman during the absence or disability of the Chairman.

(e) The Committee shall meet at least quarterly during each year.

SEC. 3. (a) The Committee shall have the following functions:

(1) to advise Federal departments and agencies regarding appropriate action to be taken to help assure that Federal programs are providing the assistance needed by Spanish-speaking and Spanish-surnamed Americans; and

(2) to advise Federal departments and agencies on the development and implementation of comprehensive and coordinated policies, plans, and programs focusing on the special problems and needs of Spanish-speaking and Spanish-surnamed Americans, and on priorities thereunder.

(b) In carrying out its functions, the Committee may foster such surveys, studies, research, and demonstration and technical assistance projects, establish such relationships with State and local governments and the private sector, and promote such participation of State and local governments and the private sector as may be appropriate to identify and assist in solving the special problems of Spanish-speaking and Spanish-surnamed Americans.

SEC. 4. (a) The Committee is authorized to prescribe rules and regulations as may be necessary to carry out the provisions of this Act.

(b) The Committee shall consult with and coordinate its activities with appropriate Federal departments and agencies and shall utilize the facilities and resources of such departments and agencies to the maximum extent possible in carrying out its functions.

(c) The Committee is authorized in carrying out its functions to enter into agreements with Federal departments and agencies as appropriate.

SEC. 5. The Committee is authorized to request directly from any Federal department or agency any information it deems necessary to carry out its functions under this Act, and to utilize the services and facilities of such department or agency; and each Federal department or agency is authorized to furnish such information, services, and facilities to the Committee upon request of the Chairman to the extent permitted by law and within the limits of available funds.

SEC. 6. (a) The Chairman shall appoint and fix the compensation of such personnel as may be necessary to carry out the functions of the Committee and may obtain the services of experts and consultants in accordance with section 3109 of title 5, United States Code, at rates for individuals not in excess of the daily equivalent paid for positions under GS–18 of the General Schedule under section 5332 of such title.

(b) Federal departments and agencies, in their discretion, may detail to temporary duty with the Committee such personnel as the Chairman may request for carrying out the functions of the Committee, each such detail to be without loss of seniority, pay, or other employee status.

SEC. 7. (a) There is established an Advisory Council on Spanish-Speaking Americans (hereinafter referred to as the Advisory Council) composed of nine members appointed by the President from among individuals who are representative of the Mexican American, Puerto Rican American, Cuban American, and other elements of the Spanish-speaking and Spanish-surnamed community in the United States. In making such appointments the President shall give due consideration to any recommendations submitted by the Committee.

(b) The Advisory Council shall advise the Committee with respect to such matters as the Chairman of the Committee may request. The President shall designate the Chairman and Vice Chairman of the Advisory Council. The Advisory Council is authorized to—

(1) appoint and fix the compensation of such personnel, and

(2) obtain the services of such experts and consultants in accordance with section 3109 of title 5, at rates for individuals not in excess of the daily equivalent paid for positions under GS–18 of the General Schedule under section 5302 of such title,

as may be necessary to carry out its functions.

(c) Each member of the Advisory Council who is appointed from private life shall receive $100 a day for each day during which he is engaged in the actual performance of his duties as a member of the Council. A member of the Council who is an officer or employee of the Federal Government shall serve without additional compensation. All members of the Council shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of such duties.

SEC. 8. Nothing in this legislation shall be construed to restrict or infringe upon the authority of any Federal department or agency.

SEC. 9. Subchapter III of chapter 73 of title 5, United States Code, shall apply to the employees of the Committee and the employees of the Advisory Council.

SEC. 10. There are hereby authorized to be appropriated for fiscal years 1970 and 1971 such sums as may be necessary to carry out the provisions of this Act, and any funds heretofore and hereafter made available for expenses of the Interagency Committee on Mexican-American Affairs established by the President's memorandum of June 9, 1967, shall be available for the purposes of this Act.

SEC 11. The Committee shall, as soon as practicable, after the end of each fiscal year, submit a report to the President and the Congress of its activities for the preceding year, including in such report any recommendations the Committee deems appropriate to accomplish the purposes of this Act.

SEC. 12. This Act shall expire five years after it becomes effective.

The SPEAKER pro tempore. Is a second demanded?

Mr. ERLENBORN. Mr. Speaker, I demand a second.

PARLIAMENTARY INQUIRY

Mr. GROSS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state his parliamentary inquiry.

Mr. GROSS. Is the gentleman opposed to the bill?

Mr. ERLENBORN. Mr. Speaker, I am not.

Mr. GROSS. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. The gentleman from Iowa qualifies. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California will be recognized for 20 minutes, and the gentleman from Iowa will be recognized for 20 minutes.

Mr. HOLIFIELD. Mr. Speaker, I yield myself 6 minutes.

Mr. Speaker, S. 740 will establish a Cabinet Committee on Opportunities for Spanish-Speaking People. Similar bills were originally introduced in both the House and Senate and proposed to give statutory basis to the existing Inter-Agency Committee on Mexican American Affairs set up in the previous administration and continued in existence by President Nixon. The House bills were introduced by Congressman ED ROYBAL, of California, and a number of other Members.

The urgency surrounding this legislation is that, unless this bill is passed, the Inter-Agency Committee will no longer be able to receive appropriated funds. The independent offices appropriation bill passed in the 90th Congress prohibited further funding of interagency committees. The Mexican American Committee was given until the end of fiscal 1969; but, inasmuch as the fiscal 1970 appropriation bill has not yet been passed, it is still benefiting from continuing resolutions. However, we are told, it cannot extend beyond December 31 on its present basis.

The committee was established by President Johnson in a memorandum dated June 9, 1967, and was then composed of the Secretaries of Labor, Health, Education, and Welfare, Agriculture, and Housing and Urban Development, the Director of OEO, and one of the Commissioners of the Equal Employment Opportunity Commission, who was designated as Chairman. The President defined the committee's purpose as to: Assure that Federal programs are reaching the Mexican Americans and providing the assistance they need; and seek out new programs that may be necessary to handle problems that are unique to the Mexican American community.

The Senate, in passing S. 740, broadened the coverage to include Puerto Rican-Americans, Cuban-Americans and "all other Spanish-speaking and Spanish-surnamed Americans" and added to the membership of the committee additional Cabinet and agency officials. The chairman is to serve in a full-time capacity and not hold any other Federal position. The chairman is given the power to appoint and fix the compensation of personnel under the normal civil service wage levels.

The bill gives the committee the following functions:

First, to advise Federal departments and agencies regarding appropriate action to be taken to help assure that Federal programs are providing the assistance needed by Spanish-speaking and Spanish-surnamed Americans; and

Second, to advise Federal departments and agencies on the development and implementation of comprehensive and coordinated policies, plans, and programs focusing on the special problems and needs of Spanish-speaking and Spanish-surnamed Americans, and on priorities thereunder.

An Advisory Council on Spanish-Speaking Americans, to be appointed by the President, is also created to advise the Committee.

The bill authorizes the appropriation of such sums as may be needed to carry out the provisions of the act and transfers to the Cabinet Committee any funds

available to the existing Inter-Agency Committee on Mexican-American Affairs.

Our committee proposed amendments which would have these effects on the bill:

First, to eliminate the power given in section 2(b)13, on page 2, to the President and to the Chairman of the Committee to appoint other Federal officers to the Committee to serve at the pleasure of the person making the appointment. This was an open-ended grant of authority which did not seem wise. We substituted for it authority on the part of the Chairman to invite the participation of other departments and agencies when matters of interest to them are under consideration.

Second, to eliminate "travel time" as a measure of compensation for $100 per day members of the Advisory Council. To be paid for travel time is unusual and could lead to abuses.

Third, to make certain that employees of the Cabinet Committee and the Advisory Council would be covered by the Hatch Act and thereby prevented from engaging in any partisan political activities. If any official of the Commission or Advisory Council participates in partisan politics, using their official or appointive position as an adjunct to their activity, I will personally oppose any fiscal year 1970 appropriation.

Fourth, to extend the authorization to both fiscal years 1970 and 1971—section 9—to make certain that the authorization would meet the appropriation requirements of both the new and old Committees. We also inserted the word "hereafter" with reference to funds made available to make certain that the new Committee could receive by transfer all of the funds of the old Committee and therefore avoid the necessity to go back over the entire appropriation process.

Fifth, to limit the legislation to 5 years. In setting the time limit for this Committee at 5 years, I want to express my frank opinion that the problem we face may not be solved in that time period. However, it is a reasonable time during which the people who administer this program can establish a record of accomplishment for any extension which a future Congress may decide to make.

Also, I wish to point out that section 11, on page 7, requires an annual report to the President and the Congress of its activities for each preceding year. Of course, the annual justification of funds must be made to the Government Operations Committee and the House Appropriations Committee in future years beyond this present authorization.

Mr. Speaker, some concern has been expressed that possible actions of this Cabinet Committee may have an adverse effect on some segments of American labor. The congressional intent and the purpose of this bill is to build up the vocational skills and the educational levels of that segment of American citizens and legal residents who are of the Spanish-speaking group. Such improvement in capability shall not be used to depress the wage level of other segments of our society, but shall be used to increase their opportunities so that they can share more abundantly in our normal American standard of living.

I might say that during our hearings we were presented some startling statistics on the unusual service and casualties in Vietnam of our Spanish-surnamed members of the armed services. These figures will be given to you by Congressman ROYBAL in his remarks to follow.

This legislation serves a worthy purpose and will help focus the attention of the Federal Establishment on a problem too long neglected. Our large minority of Spanish-speaking and Spanish-surnamed Americans deserves no less from their Government.

Mr. Speaker, this bill was reported from our committee with an overwhelming vote. It is a bipartisan effort and the product of bipartisan cooperation. I hope it will be acted upon in the same way by the House.

Mr. GROSS. Mr. Speaker, I yield myself 6 minutes.

(Mr. GROSS asked and was given permission to revise and extend his remarks.)

Mr. GROSS. Mr. Speaker, as I understand it, there has been some kind of a committee, dealing with this subject, in operation since about 1967. What has been accomplished and how much money has been spent since that committee has been in existence?

Mr. ROYBAL. Mr. Speaker, will the gentleman yield?

Mr. GROSS. Yes. I yield to the gentleman.

Mr. ROYBAL. I am somewhat familiar with the progress made by this committee. In the field of employment, particularly under civil service, there has been a tremendous increase in the amount of Spanish-speaking personnel hired by the Federal Government.

In the Post Office Department alone 60 times more Spanish-speaking personnel have been appointed in the last 2 years than in the previous 120 years.

So if one looks at the figure of employment alone, one finds that a great deal of progress has been made in this area.

Mr. GROSS. Well, I suppose that could be said for other racial groups—that their numbers in the Post Office Department and other employment in Government has also increased but without spending a half million dollars to do it. I do not know. I am asking the question.

Mr. ROYBAL. Mr. Speaker, if the gentleman will yield further——

Mr. GROSS. Yes.

Mr. ROYBAL. I think the gentleman is mistaken in his assumption. While it is true that the personnel has increased in all of civil service employment insofar as ratios and percentages are concerned, the Spanish-speaking people only in the last few years have been the recipients of these benefits.

Mr. GROSS. Well, what are we starting here with a Cabinet Committee on Opportunities for Spanish-Speaking People? Why not a Cabinet Committee for Polish-Speaking People? What about a Cabinet Committee on Opportunities for Scandinavians—for Danes and Swedes, and for Germans?

Are we about to spread this thing out all over the map? I understand we are embarking upon the teaching of Swahili in this country. Will we have a Cabinet Committee on Opportunities for Swahili-Speaking People before we get through? Why this Cabinet Committee—and how many members will be on this Cabinet Committee?

Mr. ROYBAL. There will be seven.

Mr. GROSS. Seven on the Cabinet Committee and nine on the Advisory Council, both of them financed by the Federal Government. That is real empire building.

Mr. WIGGINS. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from California.

Mr. WIGGINS. I wish to reply only to those remarks made by the gentleman from Iowa with respect to why a Cabinet Committee for the Spanish-Speaking Americans and not for the Polish-Speaking Americans, Scandinavians, and the like.

I have some personal familiarity with the problems of Spanish-speaking Americans, and there are very many in my district.

I will say to the gentleman that the problem is unique because these people are not bilingual. Spanish is their only language and as such they do not have the advantages of other hyphenated Americans.

Mr. GROSS. Can they not learn English?

Mr. WIGGINS. I certainly think they have the capability.

Mr. GROSS. Are they going to teach languages under this program or is it to promote basket weaving or what?

Mr. WIGGINS. I am sure the gentleman from Iowa can understand that it is much more difficult for a person who does not speak English and who does not understand English to take advantage of the programs that are organized and arranged for those who do speak English. This is designed to help get these people introduced into these programs just as American-speaking individuals are participating in these programs. This is what this is for.

Mr. GROSS. We are getting a new Cabinet committee established in this country, it seems to me, every day. Must we have a Cabinet committee to provide opportunities for Spanish-speaking people?

Mr. STEIGER of Arizona. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. I thank the gentleman for yielding.

I think the question which the gentleman has asked is a valid one. But I would simply point out that in terms of population and need the people isolated by a language barrier, the Spanish-speaking people in this country, have proven themselves to be the most needy. We have gone on record for at least a decade here to aid minorities at the Fed-

eral level but here is a minority that has been virtually ignored, a minority whose needs in many instances exceed the minorities that have been helped by law.

This is an attempt to bring in line the Federal efforts to focus particular attention upon the Spanish-speaking communities where the need is very, very great.

Mr. GROSS. What about the need of all the others?

Mr. STEIGER of Arizona. I would point out that the needs of others is mitigated by the fact that they are more diversified than anybody that is cared for in either their own communities or the English-speaking communities that surround them; these are isolated.

Mr. GROSS. The gentleman from Arizona is beginning to sound like one of these bureaucrats running the poverty program.

Mr. STEIGER of Arizona. I was afraid the gentleman would notice that.

Mr. GROSS. What about the poverty program? They are in every welfare field known to mankind. What about the opportunities provided by the poverty program?

The SPEAKER pro tempore (Mr. ALBERT). The time of the gentleman has expired.

Mr. GROSS. Mr. Speaker, I yield myself 3 additional minutes.

Mr. STEIGER of Arizona. Mr. Speaker, if the gentleman will yield further, I share the skepticism of the gentleman about the merits of some of the Federal efforts to date. However, I would point out that in terms of simple equity, if we are going to attempt to solve the problems of a minority, then we must attempt to solve the problems of all minorities, and we must not have a situation where we have a favorite minority, if you will. This is an attempt to recognize that problem and nothing more. It is not going to be a funnel through which vast new amounts of money are to be funded.

Mr. GROSS. It is unbelievable with the billions we are spewing out on social and welfare programs in this country that any real segment of the population is neglected. I am surprised that there is a rock down in the southwest part of the country that has not been turned over so that they could find another place to plant some money. This, in my opinion, is just another attempt to establish an expensive administrative setup and increase the Federal payroll.

How much do you suppose this will cost? What kind of empire building is this? Already we are spending money to send do-gooders down to Chile and Argentina to teach them basket weaving. Maybe some of your Navajo Indians have been on that kick. I do not know. We sent an American dancer down to Mexico to teach those people how to do the Mexican hat dance. They have forgotten more about the Mexican hat dance in Mexico than any dancer in the United States will ever know.

Mr. STEIGER of Arizona. I would remind the gentleman in the well——

Mr. GROSS. What are we up to in this business? Who dreamed up this Cabinet committee and his advisory council? This is just an effort to spend some more of the poor old taxpayers' money to take care of some people who are allegedly downtrodden, at the same time spewing out billions of dollars through assorted welfare programs. I am surprised that there is a rock that has not been turned over to find a place to plant some more of welfare money.

Mr. WHITE. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I would like to yield to the gentleman from Texas. I know how the gentleman is bound to feel, coming from that part of the poverty stricken Southwest, but I would like to hear from a possible opponent of this program.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman.

Mr. PUCINSKI. Mr. Speaker, I wonder if my very distinguished colleague from Iowa would reconsider the use of the words like "supposedly downtrodden," because this is really the forgotten minority in America.

Let me just tell the gentleman one thing, and I think he will support this legislation if he knew one thing——

The SPEAKER. The time of the gentleman has again expired.

Mr. GROSS. Mr. Speaker, I yield myself 2 additional minutes.

Mr. Speaker, the gentleman from Illinois is way out in left field if the gentleman thinks I am going to support this bureaucracy-building legislation.

Now I will yield to the gentleman from Texas. I thought perhaps I could find a supporter somewhere. I yield to the gentleman from Texas.

Mr. WHITE. Mr. Speaker, I want to mention some things to the gentleman from Iowa.

In the first place, we are trying to save the taxpayers money through eventually having this group become an active part of the business area.

Mr. GROSS. I have heard that record played around here from the beginning of time, that we are going to lift somebody up by their bootstraps. When do we let somebody lift themselves up by their own bootstraps?

Mr. WHITE. This is not only the second largest minority group in the United States, but I would judge it is one of the most patriotic minority groups.

Mr. GROSS. I do not want to pick and choose between them on that basis. They are all patriotic as far as I am concerned.

Mr. WHITE. But there are more Congressional Medal of Honor winners in this group than in any other group in this country.

Mr. GROSS. You know, I was surprised to read in the report, and I believe it is on page 4, that there are pockets of poverty and deprivation in the Southwest far worse than any suffered by other citizens of the United States.

You are from Texas, from the wonderful oil rich State of Texas. How can there be all these pockets of poverty there that demand we create a brand new bureaucracy, and direct that bureaucracy in Washington to come down and bail you out? What has happened in this great oil rich State of Texas that you have the worst pockets of poverty?

Mr. WHITE. No—we admit our problems and we are trying to address ourselves directly to them at every opportunity—and that is, on the cultural and language barriers. We are advised from Mexican Americans in my district and in many other areas that the reaction of the Spanish-speaking people in every single one of these pockets of poverty is that this will help to give these people direction and opportunities for employment.

Mr. HENDERSON. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman from North Carolina.

Mr. HENDERSON. Mr. Speaker, I thank the gentleman for yielding.

I want to join in opposition to this legislation and point out to the gentleman and to the House section 6 of the bill:

> The Chairman shall appoint and fix the compensation of such personnel as may be necessary to carry out the functions of the Committee and may obtain the services of experts and consultants—

And as to the compensation:

> not in excess of the daily equivalent paid for positions under GS–18 of the General Schedule

That is the highest position.

Further, section 6 says:

> Federal departments and agencies, in their discretion, may detail to temporary duty with the Committee such personnel as the Chairman may request for carrying out the functions of the Committee,

In this time when we have cutbacks and RIF's throughout the Federal agencies—if there are departments and agencies with surplus personnel they are able to detail to this Cabinet commission, without the Congress knowing specifically the limits of the required personnel—as we are authorizing here, then I think our Post Office and Civil Service Committee ought to take a look to see who is detailed and what their primary functions are.

Mr. GROSS. I thank the gentleman from North Carolina. I know how he has been trying to hold down the high cost of employment in the Federal Government, and I commend him.

Did the gentleman from North Carolina mention the $36,000 a year that the chairman of this Cabinet committee is to get?

Mr. HENDERSON. The gentleman did not mention that.

But more importantly, I would say that every department and agency has people on their payrolls attempting to assist Spanish-speaking people with regard to employment. The statement was made about the increase in the Post Office Department. We know that the Post Office Department has personnel that are doing nothing but helping minority groups.

Mr. GROSS. The gentleman is exactly right.

Mr. HENDERSON. Yet, here we are asked to rubberstamp a Cabinet-level committee which has already been put into effect by an Executive order.

Mr. GROSS. What about the Equal Opportunities Commission and all the rest of the commissions and boards upon which millions are being spent each year

to do what it is claimed this outfit will do?

Mr. HOLIFIELD. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman.

Mr. HOLIFIELD. In response to the previous colloquy that has just been heard by the House, section 6 departs from the ordinary fee for consultants, which is, throughout the Government, at least $100 a day, and puts it under GS–18 level of wages.

Mr. GROSS. I am glad to have the gentleman admit your program is loaded up with supergrades in this activity. I do not know what the committee is going to do.

Mr. HOLIFIELD. This has to comply with the requirements of the civil service, and the provision in the bill has to comply with the manpower requirements and they cannot load it up. It had to do with the rate that is paid to the consultants. The appropriation would not be large enough to allow the use of many consultants.

The SPEAKER pro tempore. The time of the gentleman from Iowa has expired.

Mr. GROSS. Mr. Speaker, I yield myself 2 additional minutes so that I can get from the gentleman from Illinois an indication that he is going to propose for the Polish-speaking people all over the country a Cabinet committee. Is the gentleman prepared to set up another Cabinet committee for Polish-speaking people?

Mr. PUCINSKI. If the gentleman will yield to someone who does not always agree with him—but very often does agree with him.

Mr. GROSS. It will be the day when you very often agree with me.

Mr. PUCINSKI. I think the gentleman is very badly misinformed on this particular legislation.

Mr. GROSS. I am sure the gentleman would think that.

Mr. PUCINSKI. Would the gentleman listen for a moment?

Mr. GROSS. There is no doubt of that.

Mr. PUCINSKI. Would the gentleman yield for a second?

Mr. GROSS. What is there for this particular group of people in this bill?

Mr. PUCINSKI. The Latin American people and the Spanish-speaking people are the only group that almost never ask for a handout. They suffer their indignities and they are exploited. They work hard and they do not ask for handouts. I think we ought to help them in this bill.

Mr. GROSS. I yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. I would like to assure the gentleman that my confrontations with him in the future will be held to the absolute minimum. I thank the gentleman for his courtesy.

Mr. GROSS. I thank the gentleman.

Mr. HOLIFIELD. Mr. Speaker, I yield to my colleague, the gentleman from California (Mr. ROYBAL).

Mr. ANDERSON of California. Mr. Speaker, will the gentleman yield?

Mr. ROYBAL. I yield to the gentleman from California (Mr. ANDERSON).

Mr. ANDERSON of California. Mr. Speaker, I rise in support of S. 740, to establish a Cabinet Committee on Opportunities for Spanish-Speaking People, as a permanent statutory agency. It would be a major contribution toward achieving the goals of increased jobs, better housing, improved health care, and wider educational opportunities for members of the Spanish-speaking community.

In 1960, Mexican Americans comprised 12 percent of the total population in the five Southwestern States. Although this group is the second largest minority group in the United States, it is the largest minority in each of these States. Of Spanish-surname California families living in California in urban areas, 17.5 percent made less than $3,000 a year in 1959.

Mexican Americans comprise 13.8 percent of the 19 to 26 age male population in the Southwest, yet the University of California numbers just over 1½ percent Mexican Americans in the total student population. This can be traced to the school dropout rate, which, for Mexican-American children is over twice the national average.

I believe that it is obvious that most Mexican Americans are not sharing in the fruits of our society. They must be brought into the mainstream of our society, sharing in the economic, social, and educational benefits.

This bill, establishing a Cabinet Committee on Opportunities for Spanish-Speaking People, will do much to meet the growing requirements of this important segment of our population.

Mr. WIGGINS. Mr. Speaker, will the gentleman yield?

Mr. ROYBAL. I yield to the gentleman from California (Mr. WIGGINS).

Mr. WIGGINS. I also wish to indicate my support for this needed legislation.

Mr. ROYBAL. Mr. Speaker, I rise in support of Senate bill 740, not only because I believe it is necessary but also because I firmly believe that this House should recognize the problems and needs of the Spanish-speaking people in the United States. President Johnson established the Committee after coming to the conclusion that Federal programs were not reaching the Spanish-speaking people. The President of the United States determined that the vast employment resources of this Nation were actually not being made available to the Spanish-speaking people of our Nation.

Yet, as we look at statistics, we find that the problem that weighs most heavily on the Spanish-speaking people in the United States is the problem of poverty, unemployment, and underemployment. These Spanish-speaking Americans that live in poverty are not the recipients of the benefits intended for them under the Poverty Act. At the present time, as has been the case for generations, they are at the bottom of the totem pole. In the field of education they have the highest dropout rate of any group. They are ill-housed and ill-fed, and have a lot to be desired insofar as health facilities are concerned. Their morality rate is high and suffer from every social ill attributed to the condition of poverty under which they are forced to live.

I would like to discuss briefly conditions in the field of employment in private industry as well as civil service in which Mexican Americans are always the last to be hired. For example, in utilities, only 1.1 percent of those employed are Spanish speaking. The same thing could also be said with regard to our great defense industry, in which our Government spends millions and millions of dollars every year.

Statistics tell us that in the field of civil service fewer than 3 percent of all civil service employees have Spanish surnames. May I point out to the House that the people who will be benefiting by this legislation are not foreigners to this land, content to learn to dance the dance of a foreign country as has been suggested. They are Americans who can trace their ancestry here in the United States to a time before the Pilgrims landed on Plymouth Rock. And they are Americans who have come from every Latin American country to enrich the culture of our Nation. As we look at the culture of this country, we can safely say that they have made a tremendous contribution. Wherever we go through the Southwest and through this land we find their influence. Cities, States, mountains, and valleys have Spanish names, as well as the giants of industry that helped make their country the greatest in the world.

Mr. Speaker, may I also point to the fact that the American soldier of Spanish descent has established a tremendous record in the military service. I would like to place in the RECORD the following statistics that have been made available by reliable sources:

For example, from the State of Arizona the casualties of Spanish-speaking people in Vietnam alone were 23.3 percent; their percentage in Government employment is 8.9 percent.

From the State of California, the percentage of casualties among Spanish-speaking people is 14.8 percent; the corresponding percentage on Government jobs is 9.9 percent.

From Colorado, the percentage of casualties in Vietnam is 19.1 percent; Government jobs, 9.9 percent.

From the State of New Mexico, 39.4 percent of the casualties from that State have Spanish surnames, and still their civil service employment is in the neighborhood of 21 percent.

In the State of Texas, 25.2 percent of all American soldiers killed in Vietnam have Spanish surnames with Government jobs at only 15.1 percent.

Statistics point to the fact that Spanish-surnamed Americans do respond when their Government needs them.

That they are law-abiding Americans who have not resorted to riot and civil disobedience and need just a little help to enable them to lift themselves from their present status of poverty and neglect. As the original sponsor of this legislation in the House, I urge an overwhelming vote on the legislation before us.

Mr. HOLIFIELD. Mr. Speaker, I yield 3 minutes to the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. Mr. Speaker, this bill which provides for the creation of a

Cabinet Committee on Opportunities for Spanish-Speaking People came before our Subcommittee on Executive and Legislative Reorganization. First I want to congratulate and thank the gentleman from California (Mr. HOLIFIELD) for the work he did to handle this expeditiously after it had been referred to the wrong committee. We had to act hastily to bring this to the floor in a timely fashion, so that the committee could get the statutory authority it needed.

In the testimony we had before our subcommittee, I was impressed with the job this committee or its predecessor has already done. I would like to point out the Interagency Committee on Mexican-American Affairs, which is the existing agency and will be the predecessor to this proposed Cabinet Committee on Opportunities for Spanish-Speaking People, was created by Executive memorandum by President Lyndon Johnson. It was continued in this administration. The first request for statutory authority for this committee was prepared and submitted by the last administration, and the request that is now before us is a request by this, the Nixon administration, for the statutory authority that is needed.

Unless we do act in a timely fashion and enact this law prior to December 31, any authority for the existing committee or the proposed new committee will expire and no funds will be available.

We had testimony before our committee as to the work that the Inter-Agency Cabinet Committee can do to coordinate the efforts of the Federal Government. This is not a new program. It is not a program for any special privileges for the Spanish-speaking peoples, but merely an opportunity at the Federal level to coordinate the existing resources and programs that are available.

It was pointed out, and I think we should take cognizance of the fact, that the Spanish speaking were the first to come to this country, and they have resisted assimilation into the culture of this country—that is, a complete assimilation—and they maintain their own life style and culture. I think this is healthy.

As a result of this, however, many of them are Spanish speaking and are not bilingual. Many are living in poverty and have not been given the opportunity to utilize the programs that have been made available to other minorities.

Mr. Speaker, I support this bill and hope that it will enjoy overwhelming support on the floor of this House today.

Mr. HOLIFIELD. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Speaker, I rise in support of this legislation.

The purpose of creating a Cabinet Committee on Opportunities for Spanish-Speaking People is to increase economic opportunities for almost 10 million Spanish-speaking and Spanish-surnamed Americans who live in both our urban centers and rural areas.

Many Spanish-speaking people live along the eastern seaboard. For example, in New York City it is estimated that there are more than 1 million Puerto Rican inhabitants.

In 1960 the number of Puerto Ricans in New York City comprised 8 percent of the population; at the same time, this 8 percent of the population comprised 18 percent of the New Yorkers living in poverty. The 1960 census revealed that at that time Puerto Rican unemployment in New York was 9.7 percent; general unemployment was at a rate of 4.4 percent.

According to the New York State Division of Human Rights, in 1969 the median family income in New York City was $6,684, but the median family income for Puerto Rican families in New York was only $3,839.

The disparity is clear, and the need for action to close the gap is compelling.

A similarly grim picture can be seen in the southwestern part of the United States where 6½ million of our Spanish-speaking Americans live in the States of Arizona, California, Colorado, New Mexico, and Texas; and 80 percent work in unskilled or semiskilled employment. Almost 50 percent of their families earn incomes below the $3,200 poverty line. And few finish an eighth grade education.

In 1967 President Johnson established an Interagency Committee on Mexican-American Affairs to deal with the problems of Spanish-speaking Americans of Mexican descent.

S. 740 would expand this concept by changing the committee's name and purpose so that it could deal with the problems of all Spanish-speaking Americans.

The Cabinet committee would advise Federal agencies and departments regarding appropriate action to be taken to assure that Spanish-speaking and Spanish-surnamed Americans are able to take advantage of programs open to them. In addition, this committee would advise Federal agencies and departments about comprehensive and coordinated policies and programs focusing on the special needs and problems of the Spanish-speaking American.

Immediate attention should be given to the under representation of Spanish-surnamed citizens in the Federal civil service. According to a study of minority group employment in the Federal Government by the U.S. Civil Service Commission, as of June 1966, only 2.6 percent of the Federal employees had Spanish surnames; and that 2.6 percent was concentrated in the lower grade levels.

As an example of the dismal performance by Federal agencies in employing Spanish-surnamed Americans, let me cite some statistics pertaining to the Social Security Administration.

The Social Security Administration headquarters employs 17,289 persons, of whom 43 have Spanish surnames; and they are in the lower grade levels.

In New York City, where 12½ percent of the population is Spanish speaking, there is only one Spanish-speaking field representative.

In California, out of 92 employees in five district offices, not one has a Spanish surname. The offices are in Los Angeles, where the Spanish-speaking population is 10.5 percent; Salinas, where the Spanish-speaking population is 12.1 percent; in San Bernadino, where the Spanish-speaking population is 17.9 percent; San Jose, where the Spanish-speaking population is 14 percent; and Santa Barbara, where the Spanish-speaking population is 14.7 percent.

To compound the failure, the very office in the Social Security Administration which is charged under the Executive order with the responsibility for affirmative action to increase and improve employment opportunities for minority groups—the Equal Employment Opportunity office—has exactly one Spanish-surnamed employee.

I favor the creation of the proposed Cabinet committee, and I urge that it give prompt attention to discrimination within the Federal Government. Federal agencies, such as the Social Security Administration, should be required to take immediate action to staff field offices serving Spanish-speaking communities with Spanish-speaking employees; have Spanish-surnamed representation on all Equal Employment Opportunity staffs; to carry out aggressively the Executive order so that promotion opportunities are opened up for Spanish-surnamed employees.

I was a sponsor of the Bilingual Education Act which is aimed at overcoming the language barrier which is a major obstacle to employment. The Cabinet committee should seek to make that act more effective as an instrument in opening up job opportunities for Spanish-speaking people.

I urge the House to pass this bill. This is supposed to be a nation of liberty and justice for all. If we allow the minorities of this Nation—the black Americans, the Spanish-speaking Americans, and the American Indians—to continue to live in poverty and inequality, then we are not fulfilling the credo set down in the Declaration of Independence.

This bill should be a step toward the equality and justice that our Spanish-speaking Americans deserve, but do not have.

Mr. HOLIFIELD. Mr. Speaker, I yield 2 minutes to the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Speaker, I rise in support of S. 740, which is in its general effect the same as H.R. 8416, of which I am one of the coauthors. Our bill would have given the sanction of legislation to the existing Interagency Committee on Mexican-American Affairs. The bill we are considering, which has already passed the Senate, would accomplish the same end, but would change the name of the agency to the Cabinet Committee on Opportunities for the Spanish-Speaking people.

The purpose of this legislation is to assure this Nation that the special needs of its second largest minority group are given the attention they deserve. My district is one of those with a large concentration of these Americans of Latin American heritage. Official census reports show 40.6 percent of the residents of my district have Spanish surnames. El Paso, in my district, is the largest city on the Mexican border; and it adjoins Ciudad Juarez, Mexico, that country's largest border city.

The contribution made by American citizens of Spanish-speaking heritage is a great and historic one. These people first crossed the Rio Grande into what is now my district in 1598, 9 years before the landing at Jamestown, and 22 years before the Pilgrims landed at Provincetown and Plymouth.

Through the centuries, these people have been a part of our communities, and since my State became a part of the United States of America, they have been fine and useful citizens of our country.

With gratitude and admiration we look upon the great number of their young men who served the cause of freedom in the two world wars, in Korea, and Vietnam. Their names on the casualty lists, and among the Medal of Honor winners, have proved their loyalty to their adopted country beyond question.

Their contributions to our life and language have enriched us greatly, and those who have been successfully assimilated into the mainstreams of our society have succeeded brillantly, providing leadership in almost every field of endeavor.

But, the barriers of language and customs are great. It is necessary that we list our failures, as well as our success, in the assimilation of our citizens, from Mexico and other Latin American nations, who have chosen the United States as a land of opportunity, the best place on earth to make their homes.

In the five Southwestern States, Mexican Americans, age 14 and older, have an average of only 8.1 years of schooling, compared with 12 years for the average Anglo-American. In 1966, Mexican Americans in southwestern cities had an unemployment rate of 8 to 13 percent, compared to a national average of 4 percent for that year. The number of high school dropouts among young Americans of Mexican descent is more than twice the national average.

These statistics are reflected in low incomes, inadequate housing, broken homes, and all the social ills that accompany such conditions.

We are trying to do something about this situation. In my first term in Congress, I introduced legislation to provide that one member of the Equal Employment Opportunity Commission should represent the special needs of our citizens of Latin American descent. The purpose of this legislation was largely achieved by Executive action in 1967, when President Johnson created the Cabinet-level Interagency Committee on Mexican American Affairs, and made the Chairman of that committee a member of the Equal Employment Opportunity Commission.

President Johnson called for the committee to meet with Mexican Americans, survey their needs, review their problems, and see how the Federal Government can best work with State and local government and with private industry, and with the people themselves, in solving the problem.

The conference requested was held in my home city, El Paso, in October 1967. It was highly successful. It enabled the various departments of government to gear their services toward the special needs of our Spanish-American heritage citizens. Manpower development and training, bilingual education, low-rent housing, Neighborhood Youth Corps, Project Upward Bound, and a great many other ongoing programs have been geared to the special opportunities of understanding and utilizing the human resources of this major minority group.

Our need, Mr. Chairman, is to be sure that this Cabinet-level Committee, created only by Executive order, continues by legislative mandate. The program has already proved its worth. We should look upon it, not as an obligation toward any racial group, but as an opportunity to work with and for a large and vital segment of our society in the developing of better and more useful citizens.

I hope the House will give these American citizens new hope, and new opportunities by approving S. 740 today.

As a Member of Congress, and with the cooperation of my fellow Congressmen, I have been able to sponsor considerable legislation, and support much more, which will improve the opportunities of our citizens of Latin American heritage. Here are some of the more important of those measures.

First. I was author of the bill under which President Johnson proclaimed "Lulac Week" in February 1968, honoring the work of the League of United Latin-American Citizens.

Second. I intervened with the Department of Health, Education, and Welfare to prevent a planned reduction of funds for the bilingual education program. As a result, the reduction is being reconsidered.

Third. To perpetuate improved relations with our neighbors in Mexico, I was the author of legislation which established the Chamizal National Memorial, and the Chamizal Memorial Highway.

Fourth. Knowing that education offers the great avenue of opportunity for our citizens of Latin American origin, I have been among those who supported maximum authorization and appropriations for special programs for minority groups, bilingual education, student loans, and work-study programs for our colleges, and special vocational training programs.

Fifth. I supported the Housing and Urban Development Act of 1968, under which 1,650 units of low-rent housing have been authorized for low income areas of El Paso. The communities of Alpine, Balmorhea, Pecos, Grand Falls, Marfa, and Wink, in my district are benefiting from similar programs I assisted on. I am working with the city of El Paso and its housing authority to develop still other housing programs for the area where concentrations of our Mexican-American citizens make their homes.

Sixth. I invited other border congressmen to join me in cosponsorship of a bill to give permanent status to the United States-Mexico Commission on Border Development and Friendship, created by Executive order of President Johnson. The present administration did not see fit to extend this Commission as an independent unit.

Seventh. I am the author of legislation which designated the Tiwa Indians of Ysleta, in my district, as a tribe, thereby qualifying them for benefits from the State of Texas.

Eighth. I supported manpower development and training legislation, under which hundreds of Latin Americans have been successfully trained for better paying jobs. Recent additions to this program are now training more than 300 persons.

Ninth. I supported legislation to extend the provisions of the minimum wage laws. This brought pay increases to thousands of Mexican Americans.

Tenth. I supported necessary legislation and worked to secure grants, for neighborhood centers health units, parks and playgrounds in low-income areas of my district.

This is an incomplete list, Mr. Speaker, but I believe it should establish the fact that efforts are being made, every day, to increase the opportunities for American citizens of Latin American heritage to share more of the benefits of living in a land dedicated to principles of equal opportunities for all.

Mr. GROSS. Mr. Speaker, I yield 2 minutes to the gentleman from Iowa (Mr. KYL).

Mr. KYL. Mr. Speaker, I should like to direct a question or two either to the gentleman from California (Mr. HOLIFIELD) or to his colleague (Mr. ROYBAL).

I would preface this by saying I have an earnest desire to help the people who are on the subject of this bill. I want also to prevent, as far as possible, a continued frustration of the needy people of this country through promises which cannot be fulfilled. Therefore I should like to ask a question of either of these gentlemen.

In the 2 years we have had the Mexican-American Commission what has been accomplished, or in what direction has the group moved to achieve some purpose?

Mr. ROYBAL. Mr. Speaker, will the gentleman yield?

Mr. KYL. I yield to the gentleman from California.

Mr. ROYBAL. Several accomplishments have been made, particularly in the poverty program.

At the time this agency was established the poverty program was not reaching the Spanish-speaking people. Through the aid and the help of the Committee, the poverty program started to get into the Spanish-speaking communities of the United States. Where they were deficient particularly was in the preparation of proposals. By the time the proposals were prepared it was already too late. This Committee actually did help in that regard.

Mr. KYL. Will the gentleman permit me to interject?

Last week we had the poverty program on the floor, and those who favored that program indicated that there were not such shortcomings of this kind, which the gentleman described, and that therefore we should simply fund the program for 2 additional years.

There is a problem I have in a situation like this, and I am sure the gentleman understands it. Instead of trying to correct the program which exists, and

which continues to cost money, we simply let it go as it is and add another layer on top.

Mr. ROYBAL. One way of correcting such a problem would be to make it available to all Americans. This is exactly what this would do.

The SPEAKER pro tempore. The time of the gentleman from Iowa has expired.

Mr. GROSS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I am surprised to hear the report of the gentleman from Texas of such serious deficiencies in education. It is almost unbelievable that a State as prosperous and as rich as Texas has such a shabby educational record. It is hard for me to believe this. I do not want to believe it.

Mr. WHITE. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Texas.

Mr. WHITE. This is precisely what we are talking about. With these Spanish-speaking people there is a language barrier. One can have a fine educational system, but if the people are frustrated in the use of language or do not understand the English language, there will be dropouts.

Mr. GROSS. It seems to me the gentleman stated that once before, but I do not find it a very good answer for creation of more layers of fat on the bureaucracy in Washington to achieve this end.

What has happened in the Equal Opportunities Commission and the poverty program that they have not gotten any attention?

What is sought to be done here is to add another layer of fat. If this passes, I will be tempted to introduce a bill to create a Cabinet Committee for the American Indians. They have been more long-suffering than the Spanish speaking.

Mr. WHITE. Will the gentleman yield?

Mr. GROSS. Yes. I yield to the gentleman.

Mr. WHITE. The name of this is "interagency." The objective of this organization, among others, is to coordinate various programs.

Mr. GROSS. In other words, to create another layer of bureaucratic blubber in Washington in order to get more people to perform duties that you are already paying high salaries to be performed.

Mr. WHITE. No. What the interagency is trying to do is to bring attention to this problem and allow these people to grasp the opportunities and to understand the realities of them.

Mr. GROSS. What are all of these programs supposed to do?

Mr. WHITE. That is a part of it. They have had success in some areas. They have had success in a number of areas, such as equal employment opportunities. We can show you figures on it.

Mr. GROSS. But you have to have more bureaucratic fat down here. Is that it?

Mr. WHITE. What we are trying to do is solve a problem with this agency, which is merely a coordinating agency, among others. It will help to reduce the number of dropouts and the undereducated.

Mr. GROSS. From reading the bill and the report I do not know what this new outfit is going to do or where it will be involved.

Mr. Speaker, I hope that this bill is defeated. It simply builds the bureaucratic empire in Washington, D.C.

Mr. HOLIFIELD. Mr. Speaker, I yield 2 minutes to the gentleman from Colorado (Mr. EVANS).

Mr. EVANS of Colorado. Mr. Speaker, it has been my privilege for a number of years to have known many Spanish-speaking individuals. I find them to be proud, religious, ambitious, and also disadvantaged. They are disadvantaged by language, by schools, and by employment, and in business. Their leadership potential is great, however. They catch up, and they want to catch up now. I believe this bill will help them. Neither I nor they find very much solace in those who find humor in this bill. I support this bill and hope this House will do so as well. It is not going to cure all of the dropouts or do all of the things that the poverty program was aimed at doing. It is not designed to correct discrimination, but rather to get a device in the hands of the people to provide for leadership and to provide a means for these Americans to catch up and to find out what the Federal programs are, whether they are in the fields of education, business or labor. This bill is designed to give these Americans special assistance in catching up with the rest of the people in the country. I strongly support the bill.

Mr. HOLIFIELD. Mr. Speaker, this bill has been endorsed by two administrations. It comes out of our committee unanimously. We have looked into this matter very carefully. This is not to set up programs to spend additional money. This is to help those people who are underprivileged in a certain language group to participate in these programs which we have already set up. These people, many of them, do not speak our language. They do not know how to qualify for educational opportunities, for vocational training, and that sort of thing. They need Spanish-speaking guides to explain the availability of these programs. This bill will not set up additional programs. This is to make more efficient the programs that we have already authorized in this Congress.

Now, Mr. Speaker, I have lived among these people most of my life. These people are gentle and kindly and are a religious-type people. These people err on the side of gentility and timidness if they err at all. They are not the type of people who go out and burn down buildings and break windows and do that sort of thing. They suffer in silence. I say to you that we owe to these people an effort costing far more than this paltry $500,000 in order to bring them into the programs that we have already arranged for their benefit. I say to you that we owe to these people some encouragement for their refusal to resort to violence to obtain what they need. And, I can assure you that these people are in need of this kind of help. Therefore, I hope every Member in this House will vote for this bill.

Mr. MINISH. Mr. Speaker, I rise in support of S. 740, a bill to establish the Cabinet Committee on Opportunities for Spanish-Speaking People. The committee will replace the now existing Interagency Committee on Mexican-American Affairs.

This legislation is designed to insure that Federal programs are reaching and providing necessary assistance for the 10 million Puerto Rican, Mexican, Cuban, and other Spanish-speaking and Spanish-surnamed Americans. In addition, the legislation provides for the development of new programs to meet the critical needs of Spanish Americans.

The Cabinet Committee will be composed of the Secretaries of the following seven departments: Agriculture, Commerce, Health, Education, and Welfare, Housing and Urban Development, Labor, Treasury, and Justice. The Director of the Office of Economic Opportunity, the Administrator of the Small Business Administration, the Chairman of the Civil Service Commission, and a Commissioner of the Equal Employment Opportunity Commission will round out the Committee's membership. A full-time chairman is to be appointed by the President and confirmed by the Senate.

The measure before us also provides for the establishment of an Advisory Council on Spanish-Speaking Americans to be composed of nine members appointed by the President to represent the various Spanish-American groups. The Council will be available to advise the Cabinet Committee with respect to such matters as the committee chairman may request.

Mr. Speaker, New Jersey has been enriched by our residents of Puerto Rican descent. These Americans, with their industry, vitality, and pride, have contributed vastly to the quality of our national life. Unfortunately this group, together with other Spanish Americans, often has been the victim of inattention and neglect resulting in their exclusion from the mainstream of American life. The establishment of the Cabinet Committee on Opportunities for Spanish-Speaking People provides a recognition on the highest level of the serious problems of these citizens.

Mr. LEGGETT. Mr. Speaker, I support Senate bill 740, to establish the Cabinet Committee on Opportunities for Spanish-Speaking People.

I will keep my remarks brief but I wish to assure the Members that I strongly support this measure. Our efforts in the area of assisting the Spanish-speaking citizens of the United States have been small in comparison to the needs which these citizens face.

For far too many years many citizens of this country failed to see the special problems faced by this segment of our population. Many of us failed to see the problems because we did not understand the cultural differences that existed. Many others realized that there were differences and thought that because there were differences, they had nothing in common.

In recent years, due in a substantial

degree to the efforts of this Congress, all Americans have begun to realize that there are citizens of this country that have special needs. The Congress has established a number of very fine programs that are aimed at meeting the needs that are unique to Spanish-speaking and Spanish-surnamed Americans.

These programs, while being aimed at individual needs of this group of citizens, have not been coordinated to such a degree that they provided a total program. I believe that this bill will do a great deal to develop these separate efforts into a coordinated and total effort on the part of the Federal Government.

This does not mean that I believe that this bill will immediately cure all the problems facing the Mexican-American community in my district or elsewhere. This would be an absurdity. There can be no real progress in solving these special problems until those persons in the Mexican-American community desire to take the action necessary.

All we can do in Congress is to recognize the needs of this segment of American citizens and offer them the means to help themselves. This bill will do much to make the opportunities available to them more meaningful and more easily accessible.

The Mexican-American population of my district is a proud and determined group of individuals. They have every right to be proud of their heritage and their culture. They also have every right to expect that their elected representatives understand their needs and aspirations and make every possible effort to help them fulfill these goals.

In my district, there are a number of Mexican-American associations that have done a lot to assist their people. They do not want others to do what they can do well enough themselves. Gentlemen, they need only our assistance to give them the opportunity to help themselves.

This bill is not just a reaction to a need; it is a needed reaction to a just cause. It is needed and it is written so as to allow those facing the problems to also solve them.

I can assure you that the Mexican-American citizens of California fully support this bill. I would be remiss in my duties as their Representative if I did not urge this committee to immediately approve this bill.

Mr. CRAMER. Mr. Speaker, creation of a Cabinet Committee on Opportunities for Spanish-Speaking People comes as long overdue recognition of the needs of one of America's largest minorities. People with Spanish backgrounds have brought a rich heritage to our Nation, and particularly to my home State of Florida.

I wholeheartedly support this new program to assure that Federal programs are reaching all Mexican Americans, Puerto Rican Americans, Cuban Americans and others of our Spanish-speaking and Spanish-surnamed citizens.

Florida was founded by the Spanish; the city of St. Augustine is the oldest settlement in the Nation; Tampa has long been known for its large and vibrant Cuban-American colony, and in recent years Greater Miami has successfully assimilated more than 250,000 Cubans fleeing the Communist tyranny of their homeland.

Spanish-speaking Americans have made outstanding contributions to our Nation. Yet many of them, because of language and cultural differences, have had difficulty in becoming part of the mainstream of American life.

Americans of Spanish heritage have proved a law-abiding minority—and perhaps, for this reason, we have been slow in recognizing their needs. Since they have not burned and rioted to draw attention to their problems, some have interpreted this as contentment for their lot.

Yet precisely because they have been such good citizens, willing to work without complaint for their share of the bounties of America, we must do everything to insure they receive the benefits they have earned.

In the past I have been proud to support legislation improving the lot of Spanish-speaking Americans. I have been particularly proud to welcome freedom-loving Cubans to my State and Nation. And I have strongly supported immigration legislation allowing them to make a new life here.

They have earned all the support we can give them.

Mr. MATSUNAGA. Mr. Speaker, as a cosponsor of H.R. 9330, a bill the basic purpose of which is to assure that Federal programs reach all Spanish Americans and provide the assistance they need, and to seek out new programs that may be necessary to handle problems that are unique to the Spanish-American community, I rise in support of a similar Senate-passed measure, S. 740, to establish a Cabinet Committee on Opportunities for Spanish-Speaking People.

The Cabinet committee would replace the present Inter-Agency Committee on Mexican-American Affairs, established by former President Lyndon B. Johnson on June 9, 1967, and will be composed of seven department heads, two agency heads, a Commissioner of the Equal Employment Opportunity Commission and a Chairman—all to be appointed by the President. The committee would operate within the $510,000 appropriated to the Inter-Agency Committee.

S. 740, which is supported by the present administration, reaffirms this Nation's interest in and concern for the problems of the more than 10 million Spanish-speaking and Spanish-surnamed Americans—the second largest minority group in America.

Although considerable progress has been made in recent years to improve the quality of life for members of all minority races, little has actually been done to alleviate the special problems of Spanish-speaking Americans.

The seriousness of the problem is indicated by statistics. Of the approximately 10 million Spanish-speaking and Spanish-surnamed Americans in this country, nearly 80 percent of them work in unskilled or semiskilled jobs; nearly 50 percent of them fall below the poverty line of $3,200 annual income; most of them barely complete the 8th grade and many are functionally illiterate; and they own less than 1 percent of the businesses in the United States.

In this achievement-oriented society of ours, there is nothing of greater value to a man than an education and the opportunity to earn a good livelihood in order to obtain a bit of life's luxuries for himself and his family. S. 740 is designed to improve the social and economic plight of the Spanish-speaking Americans by helping to extend the promise of educational and economic opportunity, which is inherent in our system of democracy and which we cherish so highly, to this small but important segment of the American community now lacking that opportunity.

Mr. Speaker, it is our responsibility to build on the hopeful beginning that was provided by the establishment of the Inter-Agency Committee on Mexican American Affairs. The time has come for us to bring the promise of America to this group of Americans who have had such an important influence of the development of our country.

Let us now expand the 1967 promise into reality by approving the creation of a Cabinet Committee on Opportunities for Spanish-Speaking Americans in order that these millions may be given the opportunity to share in the American dream.

I shall never forget the words of former President Johnson when he spoke of the uncomprehending pain in the eyes of the Mexican-American schoolchildren he saw confronted with poverty and intolerance. I recall his description of these little Mexican-American children whom he taught as a young man:

> Somehow you never forget what poverty and hatred can do when you see its scars on the hopeful faces of a young child. It never even occurred to me in my fondest dreams that I might have the chance to help the sons and daughters of those students and to help people like them all over this country. But now I do have that chance.

And we too have that chance today, a chance I am proud to share, of reaffirming our faith in America and its people by the passage of the legislation we are considering. Ya es Tiempo. It is time. I strongly urge a unanimous vote on S. 740.

Mr. FARBSTEIN. Mr. Speaker, it has been for many years and, I hope will continue to be, my distinct privilege and honor to represent a large portion of the Puerto Rican people residing in New York City.

Because of my sincere and abiding interest in their well-being and success, and my admiration for their progressive spirit and hardworking character, I am pleased to join my colleagues in supporting the bill to establish a Cabinet Committee on Opportunities for Spanish-Speaking People, S. 740. This legislation expands the purview of the existing interagency Committee on Mexican-American Affairs, created by the previous administration, to include among its beneficiaries all the Spanish-speaking peoples in the land. The purpose of this Committee is to make existing Federal programs more relevant to the needs of Spanish-speaking Americans and to

bring those programs that are relevant to the residents of Spanish-speaking communities.

In my district, on the lower East Side of Manhattan, there exists a large Puerto Rican community afflicted by the problems not only of poverty, but of cultural and language differences, which denies them a chance of equal opportunity in the economic struggle for survival. I know of situations where Spanish-speaking young men who were endeavoring to better their economic situation have been denied employment for which they were amply qualified because of their lack of orientation to the mores of the local-born American.

There are many Americans beset by poverty today, and all are deserving of the Government's attention. But the Spanish-speaking people require a special agency to handle their side of the problem, because their difficulties are different and need to be treated differently.

According to 1960 Department of Commerce figures, 53 percent of the Puerto Rican adults residing in New York City, 25 years and older, have less than eighth-grade education. The current educational program unfortunately does not alter the situation to any appreciable extent. The Coleman Report on Equality of Educational Opportunity, published 3 years ago by the U.S. Office of Education, reveals that Puerto Rican children in the New York City public schools are lagging considerably behind all other children, white and black, in verbal ability, reading comprehension, and understanding of mathematics. There is a significant level of illiteracy not only with respect to English, but Spanish as well.

The failure to provide proper programs for the Puerto Rican children of New York City is not merely a social crime but an economic crime, as well. If the failure continues, New York City will soon be swarming with additional thousands of uneducated, unemployed persons without hope of success. No city can stand such pressures. No country can stand such pressures.

It is my sincere hope that with the establishment of this committee, the Federal Government will make more available the type and kind of educational program which will facilitate the opportunity for learning among young Puerto Ricans—basic literacy and high school equivalency programs, for example, and programs to increase their opportunities for employment.

A recent amendment to the Economic Development Act that is being called the "Farbstein amendment," I expect will provide job opportunities for the Puerto Ricans in my district. This amendment to the Economic Development Act, when implemented, will provide grants and loans for public works that will attract jobs available for Spanish-speaking people of the Lower East Side. I hope the committee will make its first order of business the implementation of this new provision.

I applaud S. 740—a bill to establish the Cabinet Committee on Opportunities for Spanish-Speaking People—and urge its adoption.

Mr. RAILSBACK. Mr. Speaker, I believe that the bill S. 740 to establish a Cabinet Committee on Opportunities for Spanish-Speaking People is a worthwhile replacement of the present Interagency Committee on Mexican-American Affairs. The old committee expires at the close of this year and the new committee can carry on the important functions of stimulating and coordinating the existing governmental efforts and programs designed to assist the country's second largest minority group. The legislation is a welcome reaffirmation of the Federal Government's interest in and concern about the approximately 10 million Spanish-speaking and Spanish-surnamed Americans in the country.

This legislation is by no means intended as fulfillment of the entire responsibility of the Government toward this proud and law-abiding minority. For much too long, this Nation has failed to recognize the very special problems faced by this segment of our population. These citizens are gentle, kind, timid, and deeply religious. They do not demonstrate in the streets, burn down buildings, and break windows. They suffer in silence, often frustrated at their lot, but always striving toward self-help. In my congressional district there are several active Mexican-American organizations that have done much to help their own people. They do not ask that others do what they themselves can do. They ask only for assistance in giving them opportunities to help themselves.

The proud heritage of these Americans, many of whom can trace their ancestry as resident Americans far earlier than the landing of the Pilgrims, is deserving of a better fate. There is no doubt that, in the past, there may have been inattention and even neglect of this group of our citizens. Of the members of this sizable segment of our population, nearly 80 percent work in unskilled or semiskilled jobs; nearly 50 percent fall below the poverty line of $3,200 annual income; most of them barely complete the eighth grade, and language barriers render many to be classified as functionally illiterate. This group of almost 5 percent of the population owns less than 1 percent of the businesses in the United States.

The bill which we have before us does not purport to solve all the problems of these people, but it does specifically have two purposes, namely: First, to advise Federal departments and agencies regarding appropriate action to be taken to help assure that Federal programs are providing the assistance needed by Spanish-speaking and Spanish-surnamed Americans and, second, to advise Federal departments and agencies on the development and implementation of comprehensive and coordinated policies, plans, and programs focusing on the special problems and needs of Spanish-speaking and Spanish-surnamed Americans, and on priorities thereunder.

In recent years, Congress has established a number of programs aimed at meeting needs unique to Spanish-speaking and Spanish-surnamed Americans. These programs have suffered from a lack of coordination and total effort. New programs are needed, new directions should be undertaken. But coordination of efforts into a total Federal program is imperative, and it is my hope that this legislation can effectively provide that coordination.

GENERAL LEAVE TO EXTEND

Mr. HOLIFIELD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on this bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The SPEAKER pro tempore (Mr. ALBERT). The question is on the motion of the gentleman from California that the House suspend the rules and pass the bill S. 740, as amended.

The question was taken.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 316, nays 81, answered "present"—2, not voting 34, as follows:

Edwards, Calif.	Martin	

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Hall.
Mr. McFall with Mr. Cunningham.
Mr. Hanna with Mr. Lipscomb.
Mr. Foley with Mr. Pelly.
Mr. Brooks with Mr. Kuykendall.
Mr. Celler with Mr. Cahill.
Mr. Tunney with Mr. Whalley.
Mr. Abbitt with Mr. Mizell.
Mr. Rivers with Mr. Martin.
Mr. Anderson of Tennessee with Mr Steed.
Mr. Edwards of California with Mr. Dawson.
Mr. Passman with Mr. Fascell.
Mr. Evins of Tennessee with Mr. Patman.
Mrs. Hansen of Washington with Mr. Kirwan.
Mr. Moss with Mr. Blatnik.
Mr. Van Deerlin with Mr. Powell.

Mr. WAMPLER changed his vote from "nay" to "yea."

Messrs. JARMAN, FOUNTAIN, and LONG of Maryland changed their votes from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

House Resolution 741 was laid on the table.

THE TRICK-BAG

Mr. GONZALEZ. Mr. Speaker, in approving S. 740, to create a Cabinet-level Committee on Opportunities for the Spanish-speaking, the majority of the House has given its sanction to a trick-bag. Rather than approve specific programs for meeting the special needs of this minority group, rather than enact legislation to meet the more general needs of the Southwest, where most of these people live, rather than study the problems for itself, rather than seek action that is meaningful, the majority has settled for a token, a false hope, a vague promise. It will be recognized for what it is—in Spanish we say, "dar atole con el dedo" which in English translates, "feeding soup with your finger." You get enough to taste, but not enough to satisfy hunger. That is what this bill does; it promises a taste but affords no real satisfaction.

The first chairman of the Inter-Agency Committee on Mexican Affairs, which is the same group that is sanctioned by this bill, resigned, and he said that his resignation was caused as much by disgust as anything else. He said that he had been unable to convince the "establishment" that Mexican Americans are real. At about the same time, a liberal journal called the committee a "stepchild" agency that had "no real authority" and that President Nixon had ignored.

The first chairman of the committee noted a few days ago that he had experienced vast difficulty in getting his committee members to give meaningful support to the work of the committee. The fact was that the mandate of the committee was vague, and it had no power to compel agencies to act on whatever recommendations it might offer.

That is the committee that has been given legal sanction today. This bill provides no substantive program; all it does is create a committee to research, to study, and to advise. It has no powers to act, and none to compel action. Nor have we given any mandate to the Executive to act. What we have done in effect is to create an illusion and we are calling that help.

It is not for nothing that black Americans have never asked for a committee of this kind. They have seen the true picture, and know the difference between real power and the granting of sops. Should the Spanish surnamed be satisfied with a third-rate Bureau of Indian Affairs? Should they expect real help from a small, unknown, powerless agency? It may well be that this agency will in fact imprison hope and freeze into permanence the injustices that afflict the Spanish surnamed. They will be told, "tell your troubles to the Inter-Agency Committee." But that committee cannot legislate, and it cannot compel agencies to act to resolve problems; it cannot deliver on promises made and forgotten; it can only listen. A sympathetic ear alone will not heal the economic ills of the Southwest and of the border, nor will it ease the uncounted ills of the Spanish surnamed.

The fact is that a committee of this kind can probably do nothing that would not have been done anyway. It has been in the past, and will probably be in the future a fine agent for political gamesmanship, and it can serve endlessly as a press agent for a politically astute administration. But when it comes down to hard reality, the politics of the grand gesture are as empty today as they were a hundred years ago. And that is what the majority has given today—a grand gesture of the Spanish surnamed, and given nothing that will really help.

APPOINTMENT OF CONFEREES ON H.R. 4293, EXPORT EXPANSION AND REGULATION ACT OF 1969

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 4293) to provide for continuation of authority for regulation of exports, with a House amendment to the Senate amendment thereto, insist on the House amendment to the Senate amendment, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Texas? The Chair hears none, and appoints the following conferees: Messrs. PATMAN, BARRETT, Mrs. SULLIVAN, Messrs. REUSS, WIDNALL, MIZE, and BROWN of Michigan.

AUTHORIZING APPROPRIATIONS FOR EXPENSES OF THE OFFICE OF INTERGOVERNMENTAL RELATIONS

Mr. FOUNTAIN. Mr. Speaker, I move to suspend the rules and pass the joint resolution (H.J. Res. 757) to authorize apropriations for expenses of the Office of Intergovernmental Relations, and for other purposes, as amended.

The Clerk read as follows:

H.J. RES. 757

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby

authorized to be appropriated such sums as may be necessary for expenses of the Office of Intergovernmental Relations (referred to hereafter as the "Office"), established by Executive Order Numbered 11455 of February 14, 1969.

SEC. 2. The Director of the Office shall be compensated at a rate of basic compensation not to exceed the rate now or hereafter provided for level IV of the Federal Executive Salary Schedule.

SEC. 3. The Director of the Office is authorized—

(1) to appoint such personnel as he deems necessary, without regard to the provisions of title 5, United States Code, governing appointments in the competitive services; and

(2) to obtain the services of experts and consultants in accordance with section 3109 of title 5, United States Code, at rates not to exceed the daily equivalent of the rate now or hereafter provided for GS–18.

The SPEAKER. Is a second demanded?

Mrs. DWYER. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. FOUNTAIN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of House Joint Resolution 757 is to authorize expenses of the Office of Intergovernmental Relations, which was established by Executive Order 11455 of February 14, 1969. It is intended to provide authorization for the olderly funding of this Office which has been operating temporarily with personnel charged to other agencies.

The function of the Office of Intergovernmental Relations, as specified in Executive Order 11455, can be summarized as those of advising and assisting the Vice President in performing his responsibilities as the President's principal liaison with the executive and legislative officials of State and local governments. The responsibilities assigned to the Vice President for Federal-State-local relations, and the functions of the Office of Intergovernmental Relations which was established to assist him, were divided in the previous administration between the Office of the Vice President and the Office of Emergency Preparedness. The Vice President served as the President's liaison with the mayors and other local officials, while the Director of Office of Emergency Preparedness performed the same function with State governments. Both of these functions are now combined in one office under the immediate supervision of the Vice President.

This Office is intended to improve communications between the Federal Government and State and local governments, to help assure State and local officials access to the proper offices and levels in the Federal bureaucracy when questions or problems arise, and to serve as a catalyst in attempting to bring the various levels together in solving problems after the usual administrative remedies have been exhausted. This is a recourse that the mayors, county officials, and Governors feel is needed.

An office of this kind can be especially helpful to the officials of small communities—cities, counties, and towns—who need a friend in court, so to speak, when they run into unusual or unreasonable redtape in dealing with our impersonal Federal bureaucracy.

The Bureau of the Budget and the Advisory Commission on Intergovernmental Relations favor enactment of this legislation. Former Gov. Farris Bryant, speaking as Chairman of the Advisory Commission on Intergovernmental Relations, reported to the committee as follows:

> The President, by creating the Office of Intergovernmental Relations under the immediate supervision of the Vice President, has provided an appropriate focal point for close and continuing liaison between the executive branch of the Federal Government on the one hand and State and local governments on the other.
>
> The Advisory Commission believes that day-to-day liaison of this type is highly essential; it should result in better coordination of intergovernmental activities and more effective administration of Federal grant-in-aid programs. Obviously, adequate funding needs to be provided for such an Office in order for it to discharge these responsibilities.

The Director of the Office of Intergovernmental Relations has informed the committee that the administration intends to request an operating budget of $201,350 for the Office on an annual basis.

The committee gave consideration to amending the joint resolution to provide a limitation on the authorization for the Office of Intergovernmental Relations, but did not think this course practical. The committee decided instead to report the joint resolution without such a limitation on the Director's assurance that the Office will operate with the staffing described in hearings. It is the committee's desire that it be advised in the event any substantial enlargement of the Office is planned so that the committee may reconsider this matter.

After carefully considering the matter, the committee recommended passage of House Joint Resolution 757, without amendment. An identical joint resolution—Senate Joint Resolution 117—was passed by the Senate on September 29, 1969.

However, immediately after voting to report this joint resolution, the committee became aware of a desire on the part of the Committee on Post Office and Civil Service to maintain effective control over the number of supergrade positions in the executive branch. Since House Joint Resolution 757, as introduced, would have permitted the compensation of three employees at supergrade levels, the committee authorized an amendment to require those positions to be taken from the so-called general pool. The committee amendment was actually drafted by the Post Office and Civil Service Committee with whom we cooperated very closely in this matter.

For technical reasons, it was necessary in the committee amendment to delete specific references in the joint resolution to the grade level limitations for staff other than the Director. It is the committee's expectation, however, that these limitations recommended by the administration will be observed.

Mr. HENDERSON. Mr. Speaker, will the gentleman yield?

Mr. FOUNTAIN. I yield to my able and distinguished colleague, the gentleman from North Carolina (Mr. HENDERSON).

Mr. HENDERSON. Mr. Speaker, I thank the gentleman for yielding.

I want to commend the gentleman for the committee amendment the gentleman just referred to, because we did note the supergrade authority which of course would violate the system that we have been operating under. I want to tell the gentleman that the cooperation shown by the committee is certainly appreciated, and it makes it much easier for me to support the legislation. I assure the gentleman that my subcommittee in its oversight with regard to supergrades will fully cooperate with the gentleman's subcommittee as a legislative committee to insure that the proper personnel are provided to carry out the purposes of the bill if it is enacted.

Mr. FOUNTAIN. I want to thank my able and distinguished colleagues from North Carolina (Mr. HENDERSON) and his Manpower Aid Civil Service Subcommittee staff for their cooperation in suggesting the language for the amendment adopted.

Mr. Speaker, I think I have adequately explained this legislation; but in closing, I would like to emphasize that House Joint Resolution 757 was recommended unanimously by the House Committee on Government Operations.

Mrs. DWYER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, a movement having broad support in both political parties is the drive to make our unique federal system of government work more effectively. There is a growing realization that successful Government programs cannot be administered from Washington in the absence of additional State and local participation, assistance, and initiative.

In recognition of the importance of developing a more effective and coordinated federal system, President Nixon, by Executive order on February 18, 1969, established an Office of Intergovernmental Relations to be under the immediate supervision of the Vice President. The functions of the Office are to serve as a clearinghouse of Federal-State-local problems, to identify interagency and intergovernmental problems, to maintain liaison with intergovernmental units in the many Federal agencies, and to assure that State and local officials are afforded an opportunity to confer and comment on intergovernmental problems and Federal assistance programs affecting them.

The President has made an excellent selection in requesting former Gov. Nils A. Boe, of South Dakota, to serve as Director. Governor Boe has had extensive experience in State and local government and is an ideal man to provide leadership in intergovernmental matters.

This resolution, House Joint Resolution 757, which I introduced on June 3, 1969, would authorize the necessary funds for the operation of the Office. I urge its speedy enactment. I assure you that this will be money well spent as we have every reason to look forward to many times this amount saved in more

efficient and effective government at all levels.

Mr. GROSS. Mr. Speaker, will the gentlewoman yield?

Mrs. DWYER. I yield to the gentleman.

Mr. GROSS. Mr. Speaker, I would like to address a question, if I may, to the gentleman from North Carolina (Mr. FOUNTAIN) who is in charge of the bill.

The language of the bill says that this will provide ways and means to cut through redtape.

Does the gentleman really mean that the creation of this intergovernmental relations setup will do this?

Mr. FOUNTAIN. Let me say, first, to the distinguished gentleman from Iowa, that the Office has already been established by Executive order of the President. The functions of this Office were previously divided between the Office of the Vice President and the Office of Emergency Preparedness.

I do not think any agency or arm of the Government can cut through all the redtape which has been developed in government down through the years. But I do think this is an opportunity for our State and local governments, especially for smaller communities, to have a central place—an arm of the President supervised by the Vice President—to which they can go when they need help and where they can confer concerning their many problems of an intergovernmental nature.

For example, the President has taken the position, I think wisely, that he is going to do everything he can to bring the various levels of government together to strengthen our federal system by recognizing the views of people locally and at the State level, and by cooperating with them.

One recommendation which will necessitate bringing together public officials at all levels relates to revenue sharing. Consultations on this subject have already taken place between the Director of the Office of Intergovernmental Relations, Mr. Nils Boe, and local and State officials.

But the answer to your question is "No," you can never cut all the redtape. That is not the basic purpose of this joint resolution.

The purpose of this legislation is to improve the lines of communication between Washington and the other levels of government, so that when problems arise which are not adequately dealt with by the Federal administrative agencies, States and local officials can go to this office for assistance.

Mr. GROSS. Mr. Speaker, this will be the dawning of a brand new day in Washington, if the gentleman can be successful, for the sum of $250,000 or any other amount in establishing a clearinghouse through which the redtape and by which the redtape can be cut and that we can get some results from some of the agencies and departments of this government.

I hope the gentleman is right. But, I fear he is wrong. I do not know what they are going to use for a cutting instrument to cut the redtape in this new setup. I have not seen any results so far for what we have had by way of the Executive order, but I am going to look to the day when I can write to Vice President AGNEW and say to him, that I have run into a few miles of redtape over here and I hope you will help me out and untangle it or cut through it.

This will be one of the busiest offices in the Federal Government if it comes anywhere close to cutting the redtape that has immersed us all.

I thank the gentlewoman for yielding.

Mr. FOUNTAIN. Mr. Speaker, will the gentlewoman yield?

Mrs. DWYER. I am glad to yield to the gentleman from North Carolina.

Mr. FOUNTAIN. I would like to respond further to the distinguished gentleman from Iowa by saying that in my opinion it is very hard to predict what is going to happen to any agency of the Government. But in my opinion, this Office, operating under the Vice President, will have a tremendous potential for service.

We are doing two things through this legislation. We are subjecting to the surveillance of the Congress of the United States an arm of the President which is already in existence, and you can be assured that the Committee on Government Operations will be looking at the operations of this Office.

It will also place on the President of the United States, through the Vice President and those who serve in the Office. the responsibility and also the opportunity of checking on his own agencies.

There are surely many small communities in America that are making applications for programs of one kind or another, for funds which this Congress has provided under some 400 grant programs, but which do not have the talent and the experience to enable them to know exactly how to go about getting the benefits to which they are entitled. That is what this Office is for. It is to give these communities needed information, and if they come to roadblocks, to open the appropriate doors—not to be their advocates in terms of overruling an agency. The purpose is to help them understand their problems and to assist them in obtaining a full and proper hearing.

Mr. GROSS. I wish I were half as optimistic as is the gentleman from North Carolina. We will have to wait and see if the $250,000 has bought any help for them.

Mr. FOUNTAIN. I thank the gentleman for his observations and for spotlighting the importance of this legislation with his questions.

Mr. BERRY. Mr. Speaker, will the gentlewoman yield?

Mrs. DWYER. I am glad to yield to the gentleman from South Dakota.

Mr. BERRY. Mr. Speaker, I rise in support of this legislation. I feel that this Office is one that has long been needed. It is actually a liaison between the Executive Office of the Nation and the executive offices of the 50 States.

We are fortunate, Mr. Speaker, in having former Gov. Nils Boe serving as Director and since he took office in January has done an enviable job of carrying out the functions and duties of this important office.

Director Boe was formerly Governor of South Dakota. He was not only a good executive, but was recognized throughout the Nation for his ability and was chosen to head the organization of State Governors. He will be equally effective and popular in this position.

The SPEAKER. The question is on the motion of the gentleman from North Carolina that the House suspend the rules and pass the joint resolution (H.J. Res. 757), as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the joint resolution, as amended, was passed.

A motion to reconsider was laid on the table.

Mr. FOUNTAIN. Mr. Speaker, I ask unanimous consent that the Committee on Government Operations be discharged from further consideration of a similar Senate joint resolution (S.J. Res. 117) and ask for its immediate consideration.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The Clerk read the Senate joint resolution as follows:

S.J. RES. 117

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby authorized to be appropriated such sums as may be necessary for expenses of the Office of Intergovernmental Relations (referred to hereafter as the "Office"), established by Executive Order Numbered 11455 of February 14, 1969.

SEC. 2. (a) The Director of the Office shall be compensated at a rate of basic compensation not to exceed the rate now or hereafter provided for level IV of the Federal Executive Salary Schedule.

(b) The Deputy Director of the Office shall be compensated at a rate of basic compensation not to exceed the rate now or hereafter provided for GS–18.

SEC. 3. The Director of the Office is authorized—

(a) to appoint and fix the compensation of such personnel as he deems necessary without regard to (1) the provisions of title 5, United States Code, governing appointments in the competitive service, and (2) the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and to general schedule pay rates: *Provided,* That, except as provided in section 2 of this Act and subsection (b) of this section, no person shall receive compensation in excess of the rate now or hereafter provided for GS–15;

(b) to fix the compensation of two employees at rates of basic compensation not to exceed the rate now or hereafter provided for GS–17; and

(c) to obtain the services of experts and consultants in accordance with section 3109 of title 5, United States Code, at rates not to exceed the daily equivalent of the rate now or hereafter provided for GS–18.

MOTION OFFERED BY MR. FOUNTAIN

Mr. FOUNTAIN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Motion offered by Mr. FOUNTAIN: Strike out all after the resolving clause of Senate Joint Resolution 117 and insert in lieu thereof the provisions of House Joint Resolution 757 as passed by the House.

The motion was agreed to.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

A similar House joint resolution (H.J. Res. 757) was laid on the table.

EXTENSION OF INTERSTATE OIL AND GAS COMPACT

Mr. STAGGERS. Mr. Speaker, I move to suspend the rules and pass the Joint Resolution (H.J. Res. 506) consenting to an extension and renewal of the interstate compact to conserve oil and gas.

The Clerk read the joint resolution as follows:

H.J. RES. 506

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to an extension and renewal for a period of two years from September 1, 1969, to September 1, 1971, of the interstate compact to conserve oil and gas, which was signed in the city of Dallas, Texas, the 16th day of February 1935, by the representatives of Oklahoma, Texas, California, and New Mexico, and at the same time and place was signed by the representatives, as a recommendation for approval to the Governors and Legislatures of the States of Arkansas, Colorado, Illinois, Kansas, and Michigan, and which prior to August 27, 1935, was presented to and approved by the Legislatures and Governors of the States of New Mexico, Kansas, Oklahoma, Illinois, Colorado, and Texas, and which so approved by the six States last above named was deposited in the Department of State of the United States, and thereafter was consented to by the Congress in Public Resolution Numbered 64, Seventy-fourth Congress, approved August 27, 1935, for a period of two years, and thereafter was extended by the representatives of the compacting States and consented to by the Congress for successive periods, without interruption, the last extension consented to by Congress by Public Law Numbered 90–185, Ninetieth Congress, approved December 11, 1967, being for the period from September 1, 1967, to September 1, 1969. The agreement to extend and renew said compact for a period of four years from September 1, 1967, to September 1, 1971, duly executed by representatives of the States of Alabama, Alaska, Arizona, Arkansas, Colorado, Florida, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maryland, Michigan Mississippi, Montana, Nebraska, Nevada, New Mexico, New York, North Dakota, Ohio, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas, Utah, West Virginia, and Wyoming, has been deposited in the Department of State of the United States, and reads as follows:

"AN AGREEMENT TO EXTEND THE INTERSTATE COMPACT TO CONSERVE OIL AND GAS

"Whereas, on the 16th day of February, 1935, in the City of Dallas, Texas, there was executed 'An Interstate Compact to Conserve Oil and Gas' which was thereafter formally ratified and approved by the States of Oklahoma, Texas, New Mexico, Illinois, Colorado, and Kansas, the original of which is now on deposit with the Department of State of the United States, a true copy of which follows:

"'AN INTERSTATE COMPACT TO CONSERVE OIL AND GAS

"'ARTICLE I

"'This agreement may become effective within any compacting state at any time as prescribed by that state, and shall become effective within those states ratifying it whenever any three of the States of Texas, Oklahoma, California, Kansas, and New Mexico have ratified and Congress has given its consent. Any oil-producing state may become a party hereto as hereinafter provided.

"'ARTICLE II

"'The purpose of this compact is to conserve oil and gas by the prevention of physical waste thereof from any cause.

"'ARTICLE III

"'Each state bound hereby agrees that within a reasonable time it will enact laws, or if the laws have been enacted, then it agrees to continue the same in force, to accomplish within reasonable limits the prevention of:

"'(a) The operation of any oil well with an inefficient gas-oil ratio.

"'(b) The drowning with water of any stratum capable of producing oil or gas, or both oil and gas, in paying quantities.

"'(c) The avoidable escape into the open air or the wasteful burning of gas from a natural gas well.

"'(d) The creation of unnecessary fire hazards.

"'(e) The drilling, equipping, locating, spacing or operating of a well or wells so as to bring about physical waste of oil or gas or loss in the ultimate recovery thereof.

"'(f) The inefficient, excessive or improper use of the reservoir energy in producing any well.

"'The enumeration of the foregoing subjects shall not limit the scope of the authority of any state.

"'ARTICLE IV

"'Each state bound hereby agrees that it will, within a reasonable time, enact statutes, or if such stautes have been enacted then that it will continue the same in force, providing in effect that oil produced in violation of its valid oil and/or gas conservation statutes or any valid rule, order or regulation promulgated thereunder, shall be denied access to commerce; and providing for stringent penalties for the waste of either oil or gas.

"'ARTICLE V

"'It is not the purpose of this compact to authorize the states joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations.

"'ARTICLE VI

"'Each State joining herein shall appoint one representative to a commission hereby constituted and designated as "The Interstate Oil Compact Commission", the duty of which said commission shall be to make inquiry and ascertain from time to time such methods, practices, circumstances, and conditions as may be disclosed for bringing about conservation and the prevention of physical waste of oil and gas, and at such intervals as said commission deems beneficial it shall report its findings and recommendations to the several States for adoption or rejection.

"'The Commission shall have power to recommend the coordination of the exercise of the police powers of the several states within their several jurisdictions to promote the maximum ultimate recovery from the petroleum reserves of said states, and to recommend measures for the maximum ultimate recovery of oil and gas. Said Commission shall organize and adopt suitable rules and regulations for the conduct of its business.

"'No action shall be taken by the Commission except: (1) by the affirmative votes of the majority of the whole number of the compacting States represented at any meeting, and (2) by a concurring vote of a majority in interest of the compacting States at said meeting, such interest to be determined as follows: such vote of each State shall be in the decimal proportion fixed by the ratio of its daily average production during the preceding calendar half-year to the daily average production of the compacting States during said period.

"'ARTICLE VII

"'No State by joining herein shall become financially obligated to any other State, nor shall the breach of the terms hereof by any State subject such State to financial responsibility to the other States joining herein.

"'ARTICLE VIII

"'This compact shall expire September 1, 1937. But any State joining herein may, upon sixty (60) days notice, withdraw herefrom.

"'The representatives of the signatory States have signed this agreement in a single original which shall be deposited in the archives of the Department of State of the United States, and a duly certified copy shall be forwarded to the Governor of each of the signatory States.

"'This compact shall become effective when ratified and approved as provided in Article I. Any oil-producing State may become a party hereto by affixing its signature to a counterpart to be similarly deposited, certified, and ratified.'

"Whereas, the said Interstate Compact To Conserve Oil and Gas has heretofore been duly renewed and extended with the consent of the Congress to September 1, 1967; and

"Whereas, it is desired to renew and extend the said Interstate Compact to Conserve Oil and Gas for a period of four (4) years from September 1, 1967, to September 1, 1971:

"Now, therefore, this writing witnesseth:

"It is hereby agreed that the Compact entitled 'An Interstate Compact To Conserve Oil and Gas' executed in the City of Dallas, Texas, on the 16th day of February, 1935, and now on deposit with the Department of State of the United States, a correct copy of which appears above, be, and the same hereby is, extended for a period of four (4) years from September 1, 1967, its present date of expiration, to September 1, 1971. This agreement shall become effective when executed, ratified, and approved as provided in Article I of the original Compact.

"The signatory States have executed this agreement in a single original which shall be deposited in the archives of the Department of State of the United States and a duly certified copy thereof shall be forwarded to the Governor of each of the signatory States. Any oil-producing state may become a party hereto by executing a counterpart of this agreement to be similarly deposited, certified, and ratified.

"Executed by the several undersigned states, at their several state capitols, through their proper officials on the dates as shown, as duly authorized by statutes and resolutions, subject to the limitations and qualifications of the acts of the respective State Legislatures.

SEC. 2. The Attorney General of the United States shall continue to make an annual report to Congress, as provided in section 2 of Public Law 185, Eighty-fourth Congress, for the duration of the Interstate Compact to Conserve Oil and Gas as to whether or not the activities of the States under the provisions of such compact have been consistent with the purposes as set out in article V of such compact.

SEC. 3. The right to alter, amend, or repeal the provisions of the first section of this joint resolution is hereby expressly reserved.

The SPEAKER. Is a second demanded?

Mr. SPRINGER. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. STAGGERS. Mr Speaker, the committee has before it for consideration legislation which would grant the consent of the Congress to an extension and renewal of the interstate oil and gas compact until September 1, 1971. The Subcommittee on Communications and Power unanimously reported House Joint Resolution 506 to the full committee after holding hearings on it. The other bill is Senate Joint Resolution 54 which was passed by the Senate on October 13. I should note for the information of the Members that consent of the Congress to the compact expired as of September 1, 1969.

The Interstate compact to conserve oil and gas was first approved by the Congress in 1935. Since that time it has been renewed and extended nine times.

The purpose of the compact is to permit oil-producing States to act together voluntarily for the purpose of conserving two of our most important natural resources—oil and natural gas. This is done by developing and improving oil and gas conservation programs and eliminating wasteful practices with respect to those precious minerals. Twenty-nine States are members of the compact.

The compact, as article V makes clear, is not intended to be used to limit production or fix the prices of oil and gas. The Attorney General is required to make an annual report to the Congress on whether actual operation of the compact is consistent with this intent.

Recent reports submitted pursuant to this provision have stated that although there are anticompetitive factors affecting the marketing of oil and natural gas, these factors cannot be attributed to the compact, and its role is constructive insofar as it can be separately identified and appraised.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, does this joint resolution deal in any way with the present offshore oil proposition?

Mr. STAGGERS. It does not.

Mr. GROSS. I thank the gentleman from West Virginia.

(Mr. SPRINGER asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SPRINGER. Mr. Speaker, the interstate oil and gas compact has been around now for 34 years. Its very commendable purpose is to allow cooperation among oil- and gas-producing States to agree on practices which will conserve the supply of those precious substances for the benefit of all Americans.

There are now 29 States which adhere to the pact, with resulting stability and relative uniformity in conservation practices among them. Although no State is required to do anything by the terms of the pact, most States do have very specific conservation regulations which they enforce. By sticking together on the matter the States have avoided cutthroat practices which would jeopardize our oil and gas reserves. Each State has been able to rest easy in the knowledge that other oil and gas producers have been insisting upon the same conservation practices and the temptation to jump the traces is surpressed.

At times there have been suggestions that the oil compact results in price fixing. Some years ago the committee requested the Attorney General to keep a particularly watchful eye on this aspect of the compact. Each official report since then has assured us that any shenanigans on prices, and there may be some now and then, have no relationship to this compact and that no practice under the compact is designed to encourage or foster it. The compact itself specifically states that it may not be used in any way to stabilize or fix prices, and apparently this agreement has been honored.

This bill would extend the consent of Congress to the compact for an additional 2 years. I recommend that it again be approved.

Mr. PICKLE. Mr. Speaker, within the last 2 years we have a proven track record for the interstate compact on oil and gas. For nearly 30 years, we have this

same proven record. It has proven to be a good vehicle for the orderly use of petroleum and it is a tool used in receiving maximum benefit from the oil economies in several oil-producing States.

We are asking today for a 2-year extension of a workable program. The theory and practice of the oil compact has been carefully scrutinized by the Attorney General. His report indicates there was no foundation for the earlier fears that this compact would make the temptation too strong to set and control petroleum prices. Since 1967, the Attorney General has uncovered not one single case of abuse by the industry.

The only reason the bill was limited to 2 years in the 1967 act was to provide ample time for the Attorney General to conduct an investigation. His office issued a report in April of this year. The committee, after analyzing the study, reported the bill out. It is a valuable oil and gas conservation measure.

I am pleased that we are considering this bill today. I consider it to be as necessary as drilling bits to the oil industry and the growth of this vital segment of our national economy. I strongly urge its extension.

The SPEAKER. The question is on the motion of the gentleman from West Virginia that the House suspend the rules and pass the joint resolution (H.J. Res. 506).

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the joint resolution was passed.

A motion to reconsider was laid on the table.

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent for the immediate consideration of a similar Senate joint resolution (S.J. Res. 54) consenting to an extension and renewal of the interstate compact to conserve oil and gas.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the Senate joint resolution as follows:

S.J. RES. 54

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to an extension and renewal for a period of two years from September 1, 1969, to September 1, 1971, of the interstate compact to conserve oil and gas, which was signed in the city of Dallas, Texas, the 16th day of February, 1935, by the representatives of Oklahoma, Texas, California, and New Mexico, and at the same time and place was signed by the representatives, as a recommendation for approval to the Governors and Legislatures of the States of Arkansas, Colorado, Illinois, Kansas, and Michigan, and which prior to August 27, 1935, was presented to and approved by the Legislatures and Governors of the States of New Mexico, Kansas, Oklahoma, Illinois, Colorado, and Texas, and which so approved by the six States last above-named was deposited in the Department of State of the United States, and thereafter was consented to by the Congress in Public Resolution Numbered 64, Seventy-fourth Congress, approved August 27, 1935, for a period of two years, and thereafter was extended by the representatives of the compacting States and consented to by the Congress for successive periods, without interruption, the last extension being for the period from September 1, 1967, to September 1, 1969, consented to by Congress by Public Law Numbered 90–185, Ninetieth Congress, approved December 11, 1967. The agreement to extend and renew said compact for a period of four years from September 1, 1967, to September 1, 1971, duly executed by representatives of the States of Alabama, Alaska, Arizona, Arkansas, Colorado, Florida, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maryland, Michigan, Mississippi Montana, Nebraska, Nevada, New Mexico, New York, North Dakota, Ohio, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas, Utah, West Virginia, and Wyoming, has been deposited in the Department of State of the United States, and reads as follows:

"AN AGREEMENT TO EXTEND THE INTERSTATE COMPACT TO CONSERVE OIL AND GAS

"Whereas, on the 16th day of February, 1935, in the City of Dallas, Texas, there was executed 'An Interstate Compact to Conserve Oil and Gas' which was thereafter formally ratified and approved by the States of Oklahoma, Texas, New Mexico, Illinois, Colorado, and Kansas, the original of which is now on deposit with the Department of State of the United States, a true copy of which follows:

" 'AN INTERSTATE COMPACT TO CONSERVE OIL AND GAS

" 'ARTICLE I

" 'This agreement may become effective within any compacting state at any time as prescribed by that state, and shall become effective within those states ratifying it whenever any three of the States of Texas, Oklahoma, California, Kansas, and New Mexico have ratified and Congress has given its consent. Any oil-producing state may become a party hereto as hereinafter provided.

" 'ARTICLE II

" 'The purpose of this compact is to conserve oil and gas by the prevention of physical waste thereof from any cause.

" 'ARTICLE III

" 'Each state bound hereby agrees that within a reasonable time it will enact laws, or if the laws have been enacted, then it agrees to continue the same in force, to accomplish within reasonable limits the prevention of:

" '(a) The operation of any oil well with inefficient gas-oil ratio.

" '(b) The drowning with water of any stratum capable of producing oil or gas, or both oil and gas, in paying quantities.

" '(c) The avoidable escape into the open air or the wasteful burning of gas from a natural gas well.

" '(d) The creation of unnecessary fire hazards.

" '(e) The drilling, equipping, locating, spacing or operating a well or wells so as to bring about physical waste of oil or gas or loss in the ultimate recovery thereof.

" '(f) The inefficient, excessive or improper use of the reservoir energy in producing any well.

" 'The enumeration of the foregoing subjects shall not limit the scope of the authority of any state.

" 'ARTICLE IV

" 'Each state bound hereby agrees that it will, within a reasonable time, enact statutes, or if such statutes have been enacted then that it will continue the same in force, providing in effect that oil produced in violation of its valid oil and/or gas conservation statutes or any valid rule, order or regulation promulgated thereunder, shall be denied access to commerce; and providing for stringent penalties for the waste of either oil or gas.

" 'ARTICLE V

" 'It is not the purpose of this compact to authorize the states joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations.

" 'ARTICLE VI

" 'Each State joining herein shall appoint one representative to a commission hereby constituted and designated as "The Interstate Oil Compact Commission", the duty of which said commission shall be to make inquiry and ascertain from time to time such methods, practices, circumstances, and conditions as may be disclosed for bringing about conservation and the prevention of physical waste of oil and gas, and at such intervals as said commission deems beneficial it shall report its findings and recommendations to the several States for adoption or rejection.

" 'The Commission shall have power to recommend the coordination of the exercise of the police powers of the several states within their several jurisdictions to promote the maximum ultimate recovery from the petroleum reserves of said states, and to recommend measures for the maximum ultimate recovery of oil and gas. Said Commission shall organize and adopt suitable rules and regulations for the conduct of its business.

" 'No action shall be taken by the Commission except: (1) by the affirmative votes of the majority of the whole number of compacting States represented at any meeting, and (2) by a concurring vote of a majority in interest of the compacting States at said meeting, such interest to be determined as follows: such vote of each State shall be in the decimal proportion fixed by the ratio of its daily average production during the preceding calendar half-year to the daily average production of the compacting States during said period.

" 'ARTICLE VII

" 'No State by joining herein shall become financially obligated to any other State, nor shall the breach of the terms hereof by any State subject such State to financial responsibility to the other States joining herein.

" 'ARTICLE VIII

" 'This compact shall expire September 1, 1937. But any State joining herein may, upon sixty (60) days notice, withdraw herefrom.

" 'The representatives of the signatory States have signed this agreement in a single original which shall be deposited in the archives of the Department of State of the United States, and a duly certified copy shall be forwarded to the Governor of each of the signatory States.

" 'This compact shall become effective when ratified and approved as provided in Article I. Any oil-producing State may become a party hereto by affixing its signature to a counterpart to be similarly deposited, certified, and ratified.'

"Whereas, the said Interstate Compact to Conserve Oil and Gas has heretofore been duly renewed and extended with the consent of the Congress to September 1, 1967; and

"Whereas, it is desired to renew and extend the said Interstate Compact to Conserve Oil and Gas for a period of four (4) years from September 1, 1967, to September 1, 1971:

"Now, therefore, this writing witnesseth:

"It is hereby agreed that the Compact entitled 'An Interstate Compact To Conserve Oil and Gas' executed in the City of Dallas, Texas, on the 16th day of February, 1935, and now on deposit with the Department of State of the United States, a correct copy of which appears above, be, and the same hereby is, extended for a period of four (4) years

from September 1, 1967, its present date of expiration, to September 1, 1971. This agreement shall become effective when executed, ratified, and approved as provided in Article I of the original Compact.

"The signatory States have executed this agreement in a single original which shall be deposited in the archives of the Department of State of the United States and a duly certified copy thereof shall be forwarded to the Governor of each of the signatory States. Any oil-producing state may become a party hereto by executing a counterpart of this agreement to be similarly deposited, certified, and ratified.

"Executed by the several undersigned states, at their several state capitols, through their proper officials on the dates as shown, as duly authorized by statutes and resolutions, subject to the limitations and qualifications of the acts of the respective State Legislatures.

SEC. 2. The Attorney General of the United States shall continue to make an annual report to Congress, as provided in section 2 of Public Law 185, Eighty-fourth Congress, for the duration of the Interstate Compact to Conserve Oil and Gas to whether or not the activities of the State under the provisions of such compact have been consistent with the purposes as set out in article V of such compact.

SEC. 3. The right to alter, amend, or repeal the provisions of the first section of this joint resolution is hereby expressly reserved.

AMENDMENT OFFERED BY MR. STAGGERS

Mr. STAGGERS. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STAGGERS: Strike out all after the resolving clause of Senate Joint Resolution 54 and insert in lieu thereof the provisions of House Joint Resolution 506, as passed.

The amendment was agreed to.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House joint resolution (H.J. Res. 506) was laid on the table.

FORMULA GRANTS TO SCHOOLS OF PUBLIC HEALTH

Mr. STAGGERS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 14086) to amend the Community Mental Health Centers Act to extend the program of assistance under that act for community mental health centers and facilities for the treatment of alcoholics and narcotic addicts, and for other purposes, as amended.

The Clerk read as follows:

SHORT TITLE

SECTION 1. This Act may be cited as the "Community Mental Health Centers Amendments of 1969".

TITLE I—GRANTS FOR CONSTRUCTION OF COMMUNITY MENTAL HEALTH CENTERS AND FACILITIES FOR ALCOHOLICS AND NARCOTIC ADDICTS

EXTENSION OF PROGRAM FOR COMMUNITY MENTAL HEALTH CENTERS

SEC. 101. (a) Section 201 of the Community Mental Health Centers Act (42 U.S.C. 2681) is amended by striking out the period at the end and inserting in lieu thereof a comma and the following: "and for each of the next three fiscal years.".

(b) Section 207 of such Act (42 U.S.C. 2687) is amended by striking out "1970" and inserting in lieu thereof "1973".

EXTENSION OF PROGRAMS FOR FACILITIES FOR ALCOHOLICS AND NARCOTIC ADDICTS

SEC. 102. (a) Section 261(a) of such Act (42 U.S.C. 2688o) is amended by striking out "and $25,000,000 for the next fiscal year" and inserting in lieu thereof "$15,000,000 for the fiscal year ending June 30, 1970, $20,000,000 for the fiscal year ending June 30, 1971, $25,000,000 for the fiscal year ending, June 30, 1972, and $30,000,000 for the fiscal year ending June 30, 1973,".

(b) Section 261(b) of such Act is amended by striking out "the next three" and inserting in lieu thereof "the next seven", and by striking out "for the fiscal year ending June 3, 1969, or the fiscal year ending June 30, 1970" and inserting in lieu thereof "for any fiscal year ending before July 1, 1973".

TRAINING AND EVALUATION OF PROGRAMS FOR ALCOHOLISM AND NARCOTIC ADDICTION

SEC. 103. (a) Part C of the Community Mental Health Centers Act is amended by redesignating sections 245 and 246 as sections 246 and 247, respectively, and by inserting after section 244 the following:

"TRAINING AND EVALUATION

"SEC. 245. The Secretary is authorized to make grants to any public or nonprofit private agency or organization to cover part or all of the cost of (1) developing specialized training programs or materials relating to the provision of public health services for the prevention and treatment of alcoholism, or developing inservice training or short-term or refresher courses with respect to the provision of such services; (2) training personnel to operate, supervise, and administer such services; and (3) conducting surveys and field trials to evaluate the adequacy of

the programs for the prevention and treatment of alcoholism within the several States with a view to determining ways and means of improving, extending, and expanding such programs."

(b) Section 252 of such Act (42 U.S.C. 2688l) is amended by striking out "1970" and inserting in lieu thereof "1973".

(c) The first sentence of section 261(a) of the Community Mental Health Centers Act (42 U.S.C. 2688o) is amended by striking out "section 252" and inserting in lieu thereof "sections 245 and 252".

TITLE II—GRANTS FOR STAFFING OF COMMUNITY MENTAL HEALTH CENTERS AND FACILITIES FOR ALCOHOLICS AND NARCOTIC ADDICTS

FEDERAL SHARE

SEC. 201. (a)(1) Effective with respect to costs of compensation of professional and technical personnel of any community mental health center for any period after June 30, 1970, for which a grant has been or is made under subsection (a) of section 220 of the Community Mental Health Centers Act (42 U.S.C. 26883, subsection (b) of such section is amended to read as follows:

"(b)(1) Except as provided in paragraph (2), grants under this section for such costs for any center may be made only for the period beginning with the first day of the first month for which such a grant is made and ending with the close of six years and three months after such day; and such grants with respect to any center may not exceed 75 per centum of such costs for the period ending with the close of the fifteenth month following such first day, 60 per centum of such costs for the first year thereafter, 45 per centum of such costs for the second year thereafter, and 30 per centum of such costs for the third, fourth, and fifth years thereafter.

"(2) In the case of any such center providing services for persons in an area designated by the Secretary as an urban or rural poverty area, grants under this part for such costs for any such center may be made only for the period beginning with the first day of the first month for which such a grant is made and ending with the close of six years after such first day; and such grants with respect to any such center may not exceed 90 per centum of such costs for the first two years after such first day, 80 per centum of such costs for the third year after such first day, and 70 per centum of such costs for the fourth, fifth, and sixth years after such first day."

(2) Effective with respect to costs of compensation of professional and technical personal of any alcoholism prevention and treatment facility, specialized facility for alcoholics, or treatment facility for narcotics addicts for any period after June 30, 1970, for which a grant has been or is made under section 242, 243, or 251 of the Community Mental Health Centers Act (42 U.S.C. 2688g, 2688h, 2688k), subsection (b) of section 242 of such Act is amended to read as follows:

"(b)(1) Grants under this part for such costs for any facility may be made only for the period beginning with the first day of the first month for which such a grant is made and ending with the close of six years after such first day; and, except as provided in paragraph (2), such grants with respect to any facility may not exceed 80 percentum of such costs for the first two years after such first day, 75 per centum of such costs for the third year after such first day, 60 per centum of such costs for the fourth year after such first day, 45 per centum of such costs for the fifth year after such first day, and 30 per centum of such costs for the sixth year after such first day.

"(2) In the case of any such facility providing services for persons in an area designated by the Secretary as an urban or rural poverty area, such grants with respect to any such facility may not exceed 90 per centum of such costs for the first two years after such first day, 80 per centum of such costs for the third year after such first day, and 70 per centum of such costs for the fourth, fifth, and sixth years after such first day."

(b) In the case of any community mental health center, alcoholism prevention and treatment facility, specialized facility for alcoholics, or treatment facility for narcotic addicts, for which a staffing grant was made under section 220, 242, 243, or 251 of the Community Mental Health Centers Act before July 1, 1970, the applicable provisions of subsection (b) of section 220 or 242 of such Act (as amended by subsection (a) of this section) shall, with respect to costs incurred after June 30, 1970, apply to the same extent as if such subsection (b) had been in effect on the date a staffing grant for such center or facility was initially made.

AUTHORIZATION OF APPROPRIATIONS

SEC. 202. (a) The first sentence of section 224 of such Act (42 U.S.C. 2688d) is amended by striking out "and $32,000,000 for the fiscal year ending June 30, 1970" and inserting in lieu thereof "$26,000,000 for the fiscal year ending June 30, 1970, $32,000,000 for the fiscal year ending June 30, 1971, $40,00,000 for the fiscal year ending June 30, 1972, and $48,000,000 for the fiscal year ending June 30, 1973".

(b) The last sentence of such section 224 is amended by striking out "seven" and inserting in lieu thereof "twelve".

(c) Section 221(b) of such Act (42 U.S.C. 2688a) is amended by striking out "1970" each place it appears therein and inserting in lieu thereof "1973".

REVIEW OF APPLICATIONS BY STATE MENTAL HEALTH AUTHORITY AND HEALTH PLANNING AGENCIES

SEC. 203. (a) Effective with respect to projects approved under sections 220 and 242 of the Community Mental Health Centers Act (42 U.S.C. 2688, 2688g) after June 30, 1970, section 221(a) of such Act (42 U.S.C. 2688a) is amended by adding immediately below paragraph (5) of the first sentence the following new sentence: "No application for a grant under section 220 shall be approved unless opportunity has been provided, prior to such approval, for consideration of the project by the State mental health authority, by any public or nonprofit private agency or organization which has developed the comprehensive regional, metropolitan area, or other local area plan or plans referred to in section 314(b) of the Public Health Service Act covering the area in which the project is to be located, and by the State agency administering or supervising the administration of the State plan approved under section 314 (a) of such Act."

(b) Effective with respect to projects approved under sections 243 and 251 of such Act (42 U.S.C. 2688h, 2688k) after June 30, 1970, subsection (c) of section 243 of such Act (42 U.S.C. 2688h) and subsection (c) of section 251 of such Act (42 U.S.C. 2688k) are amended by adding at the end of each subsection the following: "No application for a grant under this section shall be approved unless opportunity has been provided, prior to such approval, for consideration of the project by the State mental health authority, by any public or nonprofit private agency or organization which has developed the comprehensive regional, metropolitan area, or other local area plan or plans referred to in section 314(b) of the Public Health Service Act covering the area in which the project is to be located, and by the State agency administering or supervising the administration of the State plan approved under section 314(a) of such Act."

GRANTS FOR CONSULTATION SERVICES

SEC. 204. Part E of the Community Mental Health Centers Act is amended by adding at the end thereof the following new section:

"SEC. 264. (a) In the case of any community mental health center, alcoholism prevention and treatment facility, specialized facility for alcoholics, treatment facility for narcotic addicts, or facility for mental health of children, to which a grant under part B, C, D, or F, as the case may be, is made from appropriations for any fiscal year beginning after June 30, 1970, to assist it in meeting a portion of the costs of compensation of professional and technical personnel providing consultation services, the Secretary may, with respect to such center or facility, make a grant under this section in addition to such other staffing grant for such center or facility.

"(b) A grant under subsection (a) with respect to a center or facility referred to in that subsection—

"(1) may be made only for the period applicable to the staffing grant made under part B, C, D, or F, as the case may be, with respect to such center or facility, and

"(2) may not exceed whichever of the following is the lower: (A) 15 per centum of the costs with respect to which such other staffing grant is made, or (B) that percentage of such costs when added to the percentage of such costs covered by such other staffing grant equals 100 per centum.

"(c) For purposes of making initial grants under this section, there are authorized to be appropriated $5,000,000 for each of the fiscal years ending June 30, 1971, June 30, 1972, and June 30, 1973. There are also authorized to be appropriated for the fiscal year ending June 30, 1972, and for each of the next seven fiscal years such sums as may be necessary to continue to make grants under this section for projects which received initial grants under this section from appropriations authorized for any fiscal year ending before July 1, 1973."

APPROVAL BY NATIONAL ADVISORY MENTAL HEALTH COUNCIL

SEC. 205. (a) Part E of the Community Mental Health Centers Act is amended by adding after the section added by section 204 the following new section:

"APPROVAL BY NATIONAL ADVISORY MENTAL HEALTH COUNCIL

"SEC. 265. Grants made under this title for the cost of compensation of professional and technical personnel may be made only upon recommendation of the National Advisory Mental Health Council established by section 217(a) of the Public Health Service Act."

(b) The amendment made by subsection (a) shall apply with respect to grants initially made under the Community Mental Health Centers Act from appropriations made for fiscal years beginning after June 30, 1970.

INITIATION AND DEVELOPMENT GRANTS

SEC. 206. Effective with respect to appropriations made under section 224 of the Community Mental Health Centers Act (42 U.S.C. 2688d) for fiscal years beginning after June 30, 1970, part B of such Act is amended by adding after such section 224 the following new section:

"GRANTS FOR INITIATION AND DEVELOPMENT OF COMMUNITY MENTAL HEALTH CENTERS

"SEC. 225. For the purposes of assessing local mental health needs, developing necessary resources, and involving local citizens in the development of mental health programs, up to a maximum of 5 per centum of the appropriation for each fiscal year under section 224 shall be available to the Secretary for grants to local public or nonprofit private agencies or organizations to cover up to 100 per centum of the costs, but in no case to exceed $50,000, for initiation and development of a program for delivery of community mental health center services, for one year only running from the first day of the first month for which such a grant is made with respect to such a local public or private nonprofit agency or organization."

TITLE III—AMENDMENTS RELATING TO COMMUNITY MENTAL HEALTH CENTERS AND FACILITIES FOR THE MENTALLY RETARDED, ALCOHOLICS, AND NARCOTIC ADDICTS

FEDERAL SHARE; HIGHER SHARE FOR DISADVANTAGED AREAS

SEC. 301. Effective with respect to projects approved after June 30, 1970, under part C of title I or part A of title II of the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, section 402 of such Act (42 U.S.C. 2692) is repealed and section 401(h) of such Act is amended to read as follows:

"(h)(1) The term 'Federal share' with respect to any project means the portion of the cost of construction of such project to be paid by the Federal Government under part C of title I or part A of title II.

"(2) The Federal share with respect to any project in the State shall be the amount determined by the State agency designated in the State plan but, except as provided in paragraph (3), the Federal share for any project may not exceed 66⅔ per centum of the cost of construction of such project or the State's Federal percentage, whichever is the lower. Prior to the approval of the first such project in the State during any fiscal year, such State agency shall give the Secretary written notification of the maximum Federal share established pursuant to this paragraph for such projects in such State to be approved by the Secretary during such fiscal year and the method for determining the actual Federal share to be paid with respect to such projects; and such maximum Federal share and such method of determination for such projects in such State approved during such fiscal year shall not be changed after the approval of the first such project in the State during such fiscal year.

"(3) In the case of any facility or center which provides or will, upon completion of the project for which application has been made under part C of title I or under part A of title II, provide services for persons in an area designated by the Secretary as an urban or rural poverty area, the maximum Federal share determined under paragraph (2) may not exceed 90 per centum of the costs of construction of the project."

PERIOD FOR PROMULGATING FEDERAL PERCENTAGES

SEC. 302. Section 401(j)(1) of such Act is amended by striking out "August 31" and inserting in lieu thereof "September 30".

MAXIMUM FEDERAL SHARE OF CONSTRUCTION PROJECTS FOR FACILITIES FOR ALCOHOLICS OR NARCOTIC ADDICTS IN DISADVANTAGED AREAS

SEC. 303. Effective with respect to projects approved after June 30, 1970, under part C or part D of the Community Mental Health Centers Act, section 241(b) of such Act (42 U.S.C. 2688f), section 243(d) of such Act (42 U.S.C. 2688h), and section 251(b) of such Act (42 U.S.C. 2688k) are each amended by inserting immediately after "66⅔ per centum" the following: "(or 90 per centum in the case of a facility providing services for persons in an area designated by the Secretary as an urban or rural poverty area)".

TITLE IV—MENTAL HEALTH OF CHILDREN

CONSTRUCTION AND STAFFING OF TREATMENT FACILITIES

SEC. 401. The Community Mental Health Centers Act is amended by adding after part E the following:

"PART F—MENTAL HEALTH OF CHILDREN

"GRANTS FOR TREATMENT FACILITIES

"SEC. 271. (a) Grants from appropriations under subsection (d) may be made by the Secretary to any public or nonprofit private agency or organization which owns or operates a community mental health center to assist such agency or organization in meeting the costs of construction of a facility for mental health of children within the States, and to assist such an agency or organization in meeting a portion of the costs (determined pursuant to regulations of the Secretary) of compensation of professional and technical personnel for the operation of a facility for mental health of children constructed with a grant made under part A or this part or for the operation of new services in an existing facility for mental health of children.

"(b)(1) No grant may be made under this section for the construction of a facility for mental health of children unless such facility will be part of or affiliated with the community mental health center owned or operated by the agency or organization receiving the grant.

"(2) The grant program for construction of facilities authorized by subsection (a) shall be carried out consistently with the grant program under part A, except that the amount of any such grant with respect to any project shall be such percentage of the cost thereof, but not in excess of 66⅔ per centum (or 90 per centum in the case of a facility providing services for persons in an area designated by the Secretary as an urban or rural poverty area), as the Secretary may determine.

"(c)(1) No application for a grant under this part for the costs of compensation of professional and technical personnel shall be approved unless opportunity has been provided, prior to such approval, for consideration of the project by the State and mental health authority, by any public or nonprofit private agency or organization which has developed the comprehensive regional, metropolitan area, or other local area plan or plans referred to in section 314(b) of the Public Health Service Act covering the area in which the project is to be located, and by the State agency administering or supervising the administration of the State plan approved under section 314(a) of such Act.

"(2) Grants made under this section for such costs may not exceed the percentages of such costs, and may be made only for the periods, prescribed for grants for such costs under section 242.

"(d)(1) There are authorized to be appropriated $6,000,000 for the fiscal year ending June 30, 1971, $10,000,000 for the fiscal year ending June 30, 1972, and $15,000,000 for the fiscal year ending June 30, 1973, for grants under this part for construction, for initial grants under this part for compensation of professional and technical personnel, and for training and evaluation grants under section 272.

"(2) There are also authorized to be appropriated for the fiscal year ending June 30, 1972, and each of the next six fiscal years such sums as may be necessary to continue to make grants with respect to any project under this part for which an initial staffing grant was made from appropriations under paragraph (1) for any fiscal year ending before July 1, 1973.

"TRAINING AND EVALUATION

"SEC. 272. The Secretary is authorized, during the period beginning July 1, 1971, and ending with the close of June 30, 1973, to make grants to public or nonprofit private agencies or organizations to cover part or all of the cost of (1) developing specialized training programs or materials relating to the provision of services for the mental health of children, or developing inservice training or short-term or refresher courses with respect to the provision of such services; (2) training personnel to operate, supervise, and administer such services; and (3) conducting surveys and field trials to evaluate the adequacy of the programs for the mental health of children within the several States with a view to determining ways and means of improving, extending, and expanding such programs."

The SPEAKER. Is a second demanded?

Mr. SPRINGER. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. STAGGERS. Mr. Speaker, this bill was considered in 3 days of hearings and was ordered reported unanimously.

Basically, the bill is a 3-year extension of the existing program of grants for the construction and staffing of community mental health centers, with a number of modifications recommended at the hearings.

The existing construction grant authorization of $70 million a year is extended in the same amount for 3 fiscal years, fiscal years 1971, 1972, and 1973. The program of grants for paying a portion of the cost of professional and technical personnel staffing these centers is also extended for 3 years, with a change in that formula.

It seems that most of the centers are beginning to run into financial difficulties so the matching formula is stretched out for 2 additional years, with appropriation authorizations of $32 million, $40 million, and $48 million for fiscal years 1971 through 1973. This compares with the authorization for fiscal year 1970 which is at $32 million, which the bill reduces to $26 million.

Mr. Speaker, frankly I do not think that the amounts provided in this bill are adequate to meet national needs in this area. The committee is in a dilemma, however. In recent years we have authorized what we thought were adequate programs, and then it has been our experience that the administration asks for much less than the authorization, and when they get the appropriation, they fail to spend the appropriated amounts. This has been true almost across the board in health programs, and has been true in the case of the community mental health centers program.

Our national goal, as set in 1963, is for 2,000 of these centers, yet the administration's goals now are for somewhere around 450 by 1972. This is far too few, but the budget constraints we have had in recent years have led in many areas—this one included—to our saving a few dollars today, with the inevitable result that expenditures have to be greater later. We demonstrate over and again the wisdom of the comment that a "stitch in time saves nine," and in the health area we have been saving individual stitches. In other words, I think the authorizations for staffing contained in this bill are inadequate, but in view of recent history in the case of appropriations, I think the amounts set in the bill are fairly realistic; not in terms of needs, but rather in terms of realistic expectations.

To return to the bill, in 1968 the law was amended to add a 2-year authority for construction and staffing of facilities for alcoholic and narcotic addicts, at a $25 million authorization for fiscal year 1970. This bill would authorize $15 million for 1970, and then $20 million, $25 million, and $30 million for fiscal years 1971, 1972, and 1973 for this program.

Two new features are added. One is a program of grants for construction and

staffing of facilities which are an integral part of community mental health centers but devoted to the mental health of children. Grants for construction may be up to two-thirds of cost, and grants for staffing may be at the level of 80 percent for 2 years, 75 percent for 1 year, 60 percent for a year, 45 percent for a year, and 30 percent for the sixth and last year. The committee felt this preferential treatment was necessary because children's mental health services are usually more expensive than mental health services for adults and we wanted to encourage the adoption of programs in this area.

In addition, the committee provided for an additional 15 percent of staffing costs to be covered in the case of consultative services provided by mental health centers. This type of service involves use of mental health professional manpower to consult with persons who deal with the public, such as schoolteachers, ministers and others, to aid them in recognizing and coping with mental health problems of people whom they deal with. This is a way of stretching scarce manpower in this area, so 15 percent additional can be added to the Federal construction for costs of these services.

The bill contains another feature, dealing with urban and rural poverty areas. Up to 90 percent of the construction costs of facilities of community mental health centers facilities for alcoholics and narcotics addicts, and facilities for children may be paid. With respect to the staffing of these facilities, the bill provides that 90 percent of the costs may be covered for the first 2 years, 80 percent for the third year, and 70 percent for the next 3 years. I am sure the committee will have to take another look at this formula 3 years from now.

The bill also permits use of 5 percent of appropriated funds for staffing to be used for developing new programs leading to the establishment of community mental health centers. With respect to the relationship between this program and comprehensive planning, the bill requires that all applications for staffing grants must be submitted for review and comment to the State mental health authority, to the areawide planning agency, if there is one, and, in addition, to the State comprehensive planning agency. These three agencies do not have a veto power, but are permitted to review and comment on the application. In addition, the National Advisory Mental Health Council is given authority to review all staffing grant applications, and no application may be approved unless the Council so recommends.

Mr. Speaker, this covers the principal areas dealt with by the bill, and we recommend its passage.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, did the gentleman say this is a 3-year extension, or for how many years is it?

Mr. STAGGERS. This is a 3-year extension of the basic law with the exception that we have extended the staffing for 2 years.

Mr. GROSS. Extended the staffing for 2 years?

Mr. STAGGERS. That is correct.

Mr. GROSS. Does this provide for expansion or additions to the mental health centers?

Mr. STAGGERS. Yes, it does.

As I explained, there are two changes, for the children's mental health programs for taking care of the youngsters who have problems, and consultation services to help prevent some of them from becoming problems.

Mr. GROSS. Mr. Speaker, does this provide for an increase in the next 3 years?

Mr. STAGGERS. For an increase?

Mr. GROSS. Yes, an increase in expenditures. Does this authorize an increase in expenditures?

Mr. STAGGERS. It does. I would say this to the gentleman: it is not nearly enough of an increase, in my opinion.

One of the great problems we have in the Nation today, as the gentleman knows and as we have said before, is that one out of every 10 Americans can expect to spend some time in a mental institution before he dies.

Mr. GROSS. I understand that.

Mr. STAGGERS. As I said, in my opinion we are not providing enough in several ways.

I could mention various community mental health centers which are on the verge of closing. They have spent enormous amounts of money and do a great job for their people. They are finding it difficult to raise matching funds.

We did expand this bill in another way for the poverty areas by providing a little more matching for them. This was approved by the administration in their proposal, as well as the other bills we had.

Mr. GROSS. Is there not a difficulty with respect to finding trained and experienced personnel to man an expanded program? Somewhere not too long ago, I read quite an article which seemed to be authentic, saying that they were having tremendous difficulty in finding trained personnel.

Did the committee go into this, in providing more money for an expanded program?

Mr. STAGGERS. Yes.

Mr. GROSS. We can spend all the money in the world, yet without trained and experienced personnel in centers of this kind, the money would be largely wasted.

Mr. STAGGERS. I would agree with the gentleman on that.

Last year we passed the Health Manpower Act, which specifically is tooled to do just this job, which we need to do. We need to do more of it, I can say to the gentleman.

Mr. SPRINGER. Mr. Speaker, I yield myself such time as I may consume.

In reply to my distinguished colleague from Iowa, may I say we have kept this strictly within the budget. When they came down for hearings we went into this whole question of staffing very completely. I have been one who has been quite interested in whether or not staffing could be supplied. I was satisfied as a result of the testimony that was given it could be done.

Representatives of two States—Illinois and Minnesota—have been in to see me this week on this question of staffing. I happen to have some intimate knowledge of those two States with reference to this particular problem.

They felt there was not enough money in this bill to do what they had in mind. On the other hand, they were unanimous in approving what we have done thus far, and felt it was very good.

All of the other States, including the gentleman's own State of Iowa, have found this program to be extremely helpful in this whole mental health field. I do want to say that the State of Iowa does go along with this program and endorses it.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SPRINGER. I yield to the gentleman from Iowa.

Mr. GROSS. I was not being critical of the program in any sense. I am merely asking whether the committee ascertained that there are enough retained and experienced staff people to provide for an expanded program. That is all.

Mr. SPRINGER. I understood that what the gentleman said was intended to be constructive, to find out the details with reference to this bill. I believe the gentleman has contributed greatly with what he has said today in making these inquiries.

Mr. Speaker, the legislation providing grants for the creation of community mental health centers in 1963 started what has become the most successful and meaningful Federal health program since Hill-Burton. Upon the recommendation of the medical profession as well as Public Health authorities Congress provided funds to assist in the construction of facilities at the local level to treat mental problems. At a later date when the program was renewed, it was demonstrated that the bricks and mortar made available would provide little help unless professional people necessary to the activity could be attracted to serve. As a result funds were made available to assist the community in acquiring and keeping such staff by underwriting a certain percentage of those expenses on a decreasing scale over the years.

Community mental health centers have been built, have been staffed, and are operating in over 400 communities. This is, of course, a very small start toward the elimination of the archaic system for the confinement and treatment of mental patients, but it is a start, and the program has performed even beyond the expectations of its sponsors.

We discovered as time went on that certain other necessary activities could be included within the framework of the program. The last Congress authorized the use of funds to expand community mental health centers to include treatment facilities for narcotic addicts and alcoholics. Although this portion of the program is fairly new there is every reason to believe that it will be a valuable adjunct and something which most communities will find useful.

The bill before us today would extend for 3 years the program of grants to assist in construction of the basic facilities included in the act. This would be funded

in the sum of $70 million a year which is the present rate of expenditure. Systems for staffing these institutions would be continued but somewhat expanded. The percentage of systems would remain the same until it reached the lowest level of 30 percent in the fourth year, and under this legislation would then be extended for 2 additional years. Facilities for alcoholism and narcotic addiction would be subject to the same terms and could be built in conjunction with a new institution or added to those already in existence. For this latter reason the funds to support this part of the program are set forth separately in the amounts of $20 million for 1971, $25 million for 1972, and $30 million for 1973.

Although it would appear that community mental health centers could use present authorities to treat mental conditions in children, it seems that there are particular problems which will make necessary in some instances different facilities and either different or additional personnel. Certainly it is highly important that the mental and emotional problems of children be given the highest priority for treatment at the community level. To make sure that this comes about specific funds are included in the amounts of $6 million for 1971, $10 million for 1972, and $15 million for 1973. I hope that as time goes on all of these various services can be treated as parts of a single institution needing no separate identification. At the present time it is probably well to have them set apart so that attention will be drawn to them and a history of their development properly kept.

One other service has been added which should increase the effectiveness of these institutions immeasurably. Aside from having the necessary facilities present in the community it can be very important in certain instances to take the services to the patient. The very matter of discovering and identifying those who need help, particularly among the young can become the most important part of the service to be offered. This bill provides the sum of $5 million for each of the 3 years to assist community mental health centers in creating consultative services. It is anticipated that one aspect of such service will be working with school systems. Although other uses may come to mind, this would no doubt be the largest user of such consultation.

We have thus far outlined the changes and additions which this bill makes in present law except in one area. It was the opinion of the committee that somewhat different formulas, both for construction and for staffing, will be necessary to successfully promote the creation of community mental health centers in poverty areas. For that reason the bill provides for 90 percent Federal funding of construction projects in poverty areas as opposed to the usual 66⅔ percent. Also in the matter of staffing a more generous formula is provided—90 percent of the staffing costs will be supported by Federal funds for the first 2 years, 80 percent of such costs for the third year, and 70 percent for the next 3 years thereafter.

The total cost of this legislation for the 3-year period is $451 million.

The Committee on Interstate and Foreign Commerce reviewed the accomplishments thus far under this act and considered many possible additions and changes as well as the appropriate level of effort. The bill before you today comes to you with the unanimous support of the committee. I recommend it to the House and urge its passage.

Mr. NELSEN. Mr. Speaker, will the gentleman yield to me?

Mr. SPRINGER. I yield to the gentleman from Minnesota.

Mr. NELSEN. Relative to the question of adequate personnel under this bill, there is a provision that will permit the directors in the various community health centers to make contacts through the schools and through the agencies where persons with natural aptitude in the way of psychology can be working with the limited personnel now working in the community health centers. The feeling of the experts is that we do not have adequate personnel, and likely will not have adequate personnel for some time. Therefore, this type of a program might spread the abilities of those we have to a wider field in the public interest.

Mr. STAGGERS. Mr. Speaker, will the gentleman yield?

Mr. NELSEN. I yield to the gentleman from West Virginia.

Mr. STAGGERS. I should like to say to the gentleman that I want to compliment him, and the House as a whole should, because this is his amendment. It has brought a new innovation into this field, which I believe is good.

I think it is wise that we use the knowledge we have now in order to spread these scarce talents as far as we can.

Mr. NELSEN. I would like to comment further that in our own State of Minnesota we have 11 centers. With regard to our State hospital, for example, the population of the insane there is way down. The number that reach the hospital are so much less today than has been true in the past. This is largely because of treatment that has been given to patients in our community health centers.

I think this program is very good and wish to congratulate the chairman and the committee for bringing out this bill.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I am glad to yield to the gentleman.

Mr. PUCINSKI. Did the distinguished chairman say that the testimony before the committee indicated one out of 10 Americans is going to spend some part of his life before he dies in a mental institution?

Mr. STAGGERS. Yes, that was testified to before the committee. I have also read this before, and it has been said by specialists.

Mr. PUCINSKI. That would mean we would need facilities for some 20 million Americans.

Mr. STAGGERS. But not all at the same time. However, we hope to alleviate all of this and work out most of these things.

Mr. PUCINSKI. Mr. Speaker, I would like to congratulate and commend the chairman of this committee for bringing this bill to the floor.

When people ask what Congress has done this year, we should point to this legislation as one example of our varied activity. This is one of the most important bills to come before the Congress. Not only does it address itself to the problems of mental health among children and the growing problem of alcoholism and the problem of narcotics addiction but to many other pressing problems of our day.

I certainly want to associate myself with this legislation and congratulate the chairman for making it possible for us to vote on this very major piece of legislation.

Mr. STAGGERS. Mr. Speaker, I now would like to yield to the chairman of our subcommittee which handled this matter and also wish to congratulate every member of this subcommittee for bringing to the full committee a bill which is a good one and which meets an important need.

Mr. JARMAN. I thank the chairman for yielding to me.

Mr. Speaker, the bill before the House today is presented with the unanimous recommendation of the Committee on Interstate and Foreign Commerce.

This bill, H.R. 14086, amends the Community Mental Health Centers Act to extend the program of assistance under the act for community mental health centers and facilities for the treatment of alcoholics and narcotic addicts. A new program of special assistance for mental health services for children has been added in recognition of a great need.

The committee cannot urge too strongly prompt action on this bill. Our motion for immediate passage is made on several counts. First and foremost, the mental health needs of this Nation must be met and they must continue to be met on a communitywide and community-tuned basis. Second, the bill extends a community health program of outstanding and singular merit. In the words of the Assistant Secretary for Legislation, Department of Health, Education, and Welfare:

> This is . . . one program that is on target . . . a program that is strongly conceived and well executed.

And, third, the extension should be voted now, because the authorities granted by the original act in 1963 and its amendments are due to expire shortly.

I should like, very briefly, to take up those points which so impressed the committee.

As to the need for this legislation, my distinguished colleagues are already aware of the health and social needs of the Nation. We are keenly aware, for example, that mental illness and many problems related to people's mental health are among the chief cripplers of our society. The estimate is that one out of every 10 Americans, or about 20 million people, suffer from mental or emotional problems that require professional help, if they can find it. Among these are some 8 million children and their families who need special attention, treatment, or counseling. The estimate

is that alcoholism, a major mental health problem, afflicts over 5 million Americans. As for the menace of narcotic addiction, the estimate of 100,000 users of hard drugs is compounded these days by an increasing trend toward drug abuse and experimentation with narcotics among our young people.

So much for the obvious need in this country to get mental health services out to where people are, to where they live, where they work, and where they grow up. These are services for the care of the sick, for the rehabilitation of hurt and troubled lives, and for the prevention of illness and breakdown.

These are the vital tasks of the new and developing community mental health centers. In many respects, they represent the most dynamic health service program in the Nation.

In 1963, the Community Mental Health Centers Act—Public Law 88–164—was enacted in response to mounting evidence that the mentally ill have a greater chance for early recovery when treated promptly in community-based facilities near their homes. The need for services to help prevent disabling illness and disruptive problems was also underscored in testimony presented by the Nation's leading mental health authorities.

Since then, the national community mental health center program has shown extraordinary progress. Although relatively young, its growth and impact have already been extensive. Since June 1965, when the first construction grant was awarded, a total of 376 community mental health centers have been funded. These centers are being established in every State of the Union, the District of Columbia, and Puerto Rico. They are on the way to providing services in communities of every kind—ranging from inner-city ghettos to farmlands in the central plains, from middle-class suburbs to the poorest counties of Appalachia, from bustling industrial centers to sparsely populated rural regions.

Since then, we have seen a continuing decrease in the number of Americans in the Nation's mental hospitals. Thirteen years ago, that number was well in excess of one-half million. Today, there are 401,000—a reduction of nearly 30 percent. Had the rising mental hospital population seen before 1955 gone unchecked, an estimated 731,000 patients would be confined today in costly and debilitating custodial care—or almost twice the actual number.

This decrease is not due solely, of course, to the establishment of mental health centers. More than a decade of steady advances in research and treatment made it possible for many patients to be maintained in their home communities.

From the outset, the community mental health center program has been based firmly upon sound goals and premises. These include the concept that mental health services should be available to all people who live within a center's defined catchment area, regardless of their age, their ability to pay, or their life circumstances. Also included is the concept that these services must be comprehensive and coordinated. That is, each center must offer a range of five essential services for continuity of patient care, for the prevention of illness, and for the promotion of the community's mental health.

Experience with the program has demonstrated that it is a highly practical vehicle for the implementation of these goals. Its flexibility permits applications in communities of all kinds. In fact, the community mental health center has introduced a system for the delivery of health services which uses existing resources, expands them, coordinates them into a system of care, or brings entirely new services to communities where none at all existed before.

The strength of the program and its great flexibility do not rest solely upon the differing types of communities which can be served. Its flexibility is also apparent in the great variety among applicants for community mental health center grants. These have included State and local governments, charitable institutions, public and nonprofit private general hospitals, public mental hospitals, independent mental health clinics, and community mental health boards composed of interested citizens. Approximately 85 percent of the centers represent the joint efforts of two or more affiliating agencies.

While it is too soon to evaluate fully the impact of the centers, we are impressed that in a short span of 4 years they have established the capacity for bringing comprehensive mental health services within the reach of 52 million Americans. When the present authorizations expire on June 30, 1970, grants will have been awarded to approximately 450 centers, accessible to about 62 million citizens. As for the potential effectiveness of these community services, the committee heard dramatic accounts of individual achievements. These point the way to entirely new and exciting accomplishments.

Finally, as to the extension bill before the House: the legislation respectfully submitted for action today not only extends but seeks to strengthen the program.

Briefly, this is accomplished by extending all existing authorities for a period of 3 years, by raising to 6 years the period during which mental health centers may receive staffing grants, by providing preferential funding for poverty areas and alcoholism and addiction services, and by earmarking funds for these urgently needed special services, as well as special services for children. Several other provisions are also designed to strengthen the program.

The committee heard, for example, that a significant number of centers which have initiated services are finding it extremely difficult to meet the challenge of implementing their programs while at the same time having to develop adequate funding resources with which to continue the support of their services when their Federal aid expires.

The committee also heard testimony that many communities which are aware of their mental health needs have abandoned plans for centers because of their inability to marshal the necessary funds either for matching a construction grant or for staffing a center beyond the initial period of staffing support, currently limited to the center's first 51 months of operation.

Earlier estimates of Federal financial participation were optimistically based on an assumption that third-party payments for services might absorb more of the costs. These have not yet materialized to the extent anticipated.

Earlier projections also underestimated the need for greater assistance to disadvantaged communities and the need for special incentives for services to deal with alcoholism and addiction, and to meet the great needs of children.

Therefore, while the proposed bill does not change the basic concepts and goals of the community mental health service programs—nor does it seek to—important operational changes are proposed. These liberalize Federal assistance for all communities and add incentives for programs directed to the special mental health problems of the underprivileged, the alcoholic, the drug addict, and the emotionally disturbed child.

The changes also include a new provision for initiation and development grants for centers in poverty areas, a further means to improve the capability of these areas to apply for and to use Federal aid for their community mental health services. We believe that this provision, plus the preferential funding for construction and staffing grants in these areas will provide the assistance needed to equalize the availability of services to all Americans.

With regard to special services for alcoholism and narcotic addiction, the committee notes with disappointment that the alcoholism portion of the Narcotic Addiction and Alcoholism Amendments of 1968 has not yet been implemented. However, on the basis of experience in implementing community services and facilities for narcotic addicts, a provision has been included for preferential funding, starting at 80 percent, to encourage these special services connected with or operated by community mental health centers.

Impressed as it was with the preventive services being undertaken by community mental health centers in many parts of the country, and convinced that such services must have high priority, the committee has provided in the proposed bill a premium for the operation of the center's consultation and education programs. This assistance is of key importance particularly for children who can benefit from mental health consultation provided to schools, courts, and other agencies serving our youth.

In closing, I respectfully draw your attention to one of the outstanding features of the centers program which the committee feels has been a vital element in its success. I referred earlier to this as continuity of care for the mentally ill.

The concept of an integrated program of essential mental health services is a key factor in the treatment of the mentally and emotionally disturbed. It means that people can get the kind of care they need when they need it, going from in-

patient care to partial hospitalization or daycare, to outpatient care, as their condition warrants, until they are functioning well again. The capacity to coordinate and deliver this range of services within a program is no less important in treating the mentally ill than is the availability of each service itself. The means for achieving this capability is the requirement that all centers must provide a range of a minimum of five services at the time they open their doors. By extending and improving this dynamic program for the mental health of all Americans, this House will perform a great service. I move the adoption of the proposed bill.

Mr. SPRINGER. Mr. Speaker, I want to add one final word which I think is proof of the pudding, that is, is our mental patient registration in State institutions going up or down? A few years ago there were about 570,000 people incarcerated in mental institutions, that is, Federal or State mental institutions.

That figure now is down to around 400,000. Not all of that has been attributable to this act, but in my opinion a good portion of it can be. I think the progress report shown by those figures indicates the direction in which we are going under this legislation that we have brought to the floor of the House today.

Mr. EDMONDSON. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the distinguished gentleman from Oklahoma.

Mr. EDMONDSON. I thank the gentleman for yielding. I merely want to take this time to commend my colleague, the gentleman from Oklahoma (Mr. JARMAN), chairman of the subcommittee, for his fine leadership in this important field of mental health and for the splendid work that his subcommittee and the full committee have done on this bill. In my opinion it is a fine bill and I wholeheartedly support it.

Mr. Speaker, I urge approval of this legislation.

Mr. ROGERS of Florida. Mr. Speaker, I rise in support of H.R. 14086, which would amend the Community Mental Health Centers Act to extend the program of assistance under that act for community mental health centers and facilities for the treatment of alcoholics and narcotic addicts and to establish a new program for the mental health of children.

This bill would extend for an additional 3 years—through fiscal year 1972—the existing program of matching grants for the construction and professional and technical staffing support of community mental health centers, with 2 additional years of support for staffing costs. In addition, the bill extends for the same period matching construction and staffing of specialized community services for alcoholism, narcotic addiction and children's mental health.

Special incentives for community programs to meet the needs of children with mental and emotional problems are also contained in the bill as reported, as well as preferential treatment for facilities serving urban or rural poverty areas, and is intended to encourage development of new careers and use of consultation services.

The bill as reported authorizes $70 million for each of the 3 fiscal years of construction of community mental health centers; a total of $120 million for the 3 years is authorized for the professional and technical staffing; a total of $75 million for 3 years is authorized for the construction and technical and professional personnel staffing of alcoholism and narcotic addict facilities; another $31 million for 3 years is authorized to establish children's mental health programs within community mental health centers, and, finally, $15 million for the 3 years is authorized to provide consultation services through the community mental health centers.

The provisions of the bill which give additional staffing assistance to community mental health centers also apply to staffing for narcotic addict facilities, alcoholic treatment centers and programs for the mental health of children.

Mr. Speaker, since the original law was first enacted, we are making significant progress in our efforts to prevent mental illness, to cure those who suffer, and to rehabilitate them to become useful and productive citizens again.

The key to this success is the local community mental health center which can provide comprehensive mental health services in surroundings that are familiar to the patient rather than warehousing him in a State hospital many miles from his home, his family, and his friends.

Statistics show that almost three-fourths of those patients treated at community mental health centers can be cured to permit them to return to their homes within 6 to 8 weeks. Without the use of community mental health centers, the mental patient who is placed in a state hospital has only one choice in 10 of going home within the same period of time, and if that patient remains in the hospital over a year, the odds are against his ever going home.

Mental illness costs the American economy an estimated $20 billion a year in wasted manpower and job absenteeism, and immeasurable amounts in human suffering and anguish. This legislation before the House will enable us to continue and expand our fight against mental illness.

I strongly support this legislation and urge its passage, yet I would like to note some other points concerning the bill.

First, it has been brought to my attention that some of the community mental health centers which were the first to be awarded staffing grants under Public Law 89–105 will use the last of these funds in the fall of 1972 based on the additional 2 years of assistance provided in this bill. These centers are not capable of sustaining themselves with only local support and they would be faced with some 6 to 9 months without Federal staffing support unless the period for support is extended. Therefore, I am proposing that the bill adopted by the conference committee provide a total of 84 months of Federal support for professional and technical staffing, with the last 4 years at the 30-percent level.

In addition, in testimony before the subcommittee and in consultation with directors of community mental health centers, the committee has found a more workable definition of "technical" personnel is necessary to permit the community mental health centers to carry out their responsibilities. The committee intends, as part of the legislative history of these amendments, that an expanded definition of this term is essential and that the National Institute of Mental Health, in its administration of this extension of the law, should issue guidelines which will permit the centers to employ accountants, financial counselors, medical transcribers, and other similarly designated individuals whose background and education would indicate that they are to perform technical functions in the operation of the centers.

This would not include minor clerical help, maintenance, or housekeeping personnel.

Likewise, there is a need for a clearly stated definition of a "poverty area" as such pertains to the Community Mental Health Centers Act. Centers should be able to qualify for the "poverty provisions" by virtue of the total catchment area or substantial pockets of poverty within the catchment areas. The National Institute of Mental Health should issue guidelines to clarify this term.

In addition, the committee has found that the evaluation of operating community mental health centers has not been as extensive as the committee would like for future planning. In that regard, as part of the legislative history, the committee would recommend that the National Institute of Mental Health select several centers that demonstrate various approaches to service and different types of populations to extensively study the crucial variables, problems, and effectiveness of their programs.

As a corollary, with respect to site visits as both an evaluation and problem solving program, the committee has found that it would be desirable to have all future site visit teams include at least one representative from a mental health center not from the same region, and that at least one center representative sit on the Grant Review Committee at a regional level and two directors serve on the National Review Committee.

Also, it has been brought to the committee's attention that some of the States are experiencing difficulty in the administration of State construction plans. An amendment to permit a 1-year carryover of moneys for the administration of State construction plans was presented to the subcommittee and was inadvertently omitted from the bill as reported. Therefore, I am proposing that the conference committee permit a 1-year carryover of such moneys.

Finally, during subcommittee consideration of this legislation, I asked the National Association of State Mental Health Program Directors if the various State mental health authorities thought that the 314(a) and 314(b) agencies under Public Law 89–749, the Partnership for Health Act, were in a position to approve State community mental health center plans and to review projects at the areawide level.

The response to my inquiry has been received from 40 States and territories and the replies do not indicate an ad-

vanced stage of development for the 314 (a) and (b) agencies.

With respect to the 314(a) agency—the State comprehensive health planning agency—21 of those replies said the agency in their jurisdiction is sophisticated enough to approve State community mental health center plans; 19 replied in the negative.

With respect to the 314(b) agency—the areawide planning agency—19 jurisdictions said no, the areawide agencies are not yet ready; only 11 States replied in the affirmative.

I would like to insert the State-by-State replies at this point in the RECORD:

314(a), State health planning agency, is developed enough to *approve* state plan for community mental health centers:

Alabama	No.
Alaska	Yes.
Arizona	No.
Arkansas	Yes.
California	No.
Colorado	Yes.
Connecticut	No.
Delaware	No.
Florida	No.
Georgia	Yes.
Guam	No.
Hawaii	No.
Idaho	Yes.
Indiana	Yes.
Iowa	No.
Kansas	No.
Kentucky	Yes.
Maryland	Yes.
Massachusetts	Yes.
Michigan	Yes.
Minnesota	Yes.
Mississippi	Yes.
Missouri	No.
Montana	Yes.
Nevada	No.
New Hampshire	Yes.
New Jersey	Yes.
New Mexico	Yes.
New York	Yes.
Ohio	No.
Oklahoma	Yes.
Oregon	No.
South Carolina	No.
Texas	No.
Utah	Yes.
Vermont	No.
Virginia	Yes.
Washington	No.
West Virginia	Yes.
Wisconsin	No.

314(b), areawide or regional health planning agencies are developed enough to *review* project applications for community mental health centers:

Alabama	No.
Alaska	No.
Arizona	No.
Arkansas	No.
California	Yes.
Colorado	No.
Connecticut	No.
Delaware	No.
Florida	No.
Georgia	No.
Guam	No.
Hawaii	No.
Idaho	No.
Indiana	Yes.
Iowa	No.
Kansas	No.
Kentucky	No.
Maryland	Yes.
Massachusetts	No.
Michigan	No.
Minnesota	Yes.
Mississippi	Yes.
Missouri	No.
Montana	No.
Nevada	No.
New Hampshire	Yes.
New Jersey	Yes.
New Mexico	Yes.
New York	Yes.
Ohio	No.
Oklahoma	No.
Oregon	No.
South Carolina	No.
Texas	No.
Utah	Yes.
Vermont	No.
Virginia	Yes.
Washington	No.
West Virginia	No.
Wisconsin	No.

States not responding: District of Columbia, Illinois, Louisiana, Maine, Nebraska, North Carolina, North Dakota, Pennsylvania, Puerto Rico, Rhode Island, South Dakota, Tennessee, Virgin Islands, Wyoming.

Mr. TIERNAN. Mr. Speaker, I rise in support of the Community Health Centers Amendments of 1969. In 1963, this landmark legislation was enacted in response to mounting evidence that the mentally ill have a greater chance of early recovery when treated promptly in community-based facilities located near their homes. Impressive and effective work has been accomplished by these centers, in fact, in many respects it is one of the most vital and dynamic health service programs in the Nation.

Since only a small number of centers have yet been in operation for a year or more, it is too early to evaluate the true impact these services are having. However, the longtime goal of the community mental health centers program is the establishment of a network of comprehensive mental health services that will serve the total population of the United States. This potential can be realized only with an adequate base of resources for planning, initiating, and developing the quality of programs essential to assure the equitable provision of services to all communities.

As we know, narcotic addiction, drug abuse, alcoholism, and emotional illness are growing problems in our country. Let us rise to meet them.

I urge my colleagues to join with me in support of this measure.

The SPEAKER. The question is on the motion of the gentleman from West Virginia that the House suspend the rules and pass the bill H.R. 14086, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent for the immediate consideration of a similar Senate bill (S. 2523) to amend the Community Mental Health Centers Act to extend and improve the program of assistance under that act for community mental health centers and facilities for the treatment of alcoholics and narcotic addicts, to establish programs for mental health of children, and for other purposes.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the Senate bill as follows:

S. 2523

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Community Mental Health Centers Amendments of 1969".

TITLE I—GRANTS FOR CONSTRUCTION OF COMMUNITY MENTAL HEALTH CENTERS, EXTENSION OF DURATION

AUTHORIZATION OF APPROPRIATIONS

SEC. 101. (a) Section 201 of the Community Mental Health Centers Act (42 U.S.C. 2681) is amended (1) by striking the word "and" which appears immediately before "$70,000,000", and (2) by inserting immediately before the period at the end thereof the following: ", $95,000,000 for the fiscal year ending June 30, 1971; $115,000,000 for the fiscal year ending June 30, 1972; and $115,000,000 for the fiscal year ending June 30, 1973.

(b) Section 207 of such Act (42 U.S.C. 2687) is amended by striking out "1970" and inserting in lieu thereof "1973".

ALLOTMENTS TO STATES: INCLUSION OF TRUST TERRITORY

SEC. 102. (a) The first sentence of subsection (a) of section 202 of such Act (42 U.S.C. 2682) is amended by striking out "and Guam," and inserting in lieu thereof "Guam, and the Trust Territory of the Pacific Islands,".

(b) The second sentence of such subsection (a) is amended by inserting after "State" the first time it appears ", other than the Virgin Islands, American Samoa, Guam, and the Trust Territory of the Pacific Islands,".

(c) Such subsection (a) is further amended by adding at the end thereof the following new sentence: "Sums so allotted to the Virgin Islands, American Samoa, Guam, or the Trust Territory of the Pacific Islands for a fiscal year and remaining unobligated at the end of such year shall remain available to it for such purpose for the next two fiscal years (and for such years only), in addition to the sums allotted to it for such purpose for each of such next two fiscal years."

(d) Section 401(a) of such Act (42 U.S.C. 2691(a)) is amended by inserting immediately before the period at the end thereof the following: "; and, for purposes of this title and title II only, includes the Trust Territory of the Pacific Islands".

(e) The amendments made by this section shall be effective with respect to allotments under section 202 from funds appropriated for fiscal years beginning after June 30, 1970.

PERCENTAGE OF ALLOTMENTS AVAILABLE FOR STATE PLAN ADMINISTRATION

SEC. 103. (a) Effective with respect to expenditures referred to in paragraph (1) of subsection (c) of section 403 of the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963 made after June 30, 1970, such paragraph (42 U.S.C. 2693) is amended by striking out "2 per centum" and inserting in lieu thereof "5 per centum".

(b)(1) The first sentence of section 403(c)(1) of such Act is further amended—

(A) by inserting "for any fiscal year" immediately after "title II";

(B) by striking out "during such year";

(C) by striking out "for a year" and inserting in lieu thereof "for any fiscal year"; and

(D) by striking out "for such year".

(2) Section 403(c)(1) of such Act is further amended by inserting immediately after the first sentence thereof the following new sentence: "Amounts made available to any State under this paragraph from its allotment or allotments under part A of title II for any fiscal year shall be available only

for such expenditures (referred to in the preceeding sentence) during such fiscal year or the following fiscal year."

COST OF LAND INCLUDED IN COST OF CONSTRUCTION

SEC. 104. Effective with respect to projects approved after June 30, 1970, under title II of the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, section 401(e) of such Act is amended by striking out "architect's fees, but excluding the cost of offsite improvements and the cost of the acquisition of land" and inserting in lieu thereof "architect's fees and the cost of the acquisition of land, but excluding the cost of offsite improvements."

FEDERAL SHARE TO BE MAXIMUM; HIGHER SHARE FOR DISADVANTAGED AREAS

SEC. 105. Effective with respect to projects approved after June 30, 1970, under part A of title II of such Act—

(1) section 402 of such Act (42 U.S.C. 2692) is amended by striking out "or title II";

(2) subsection (h) of section 401 of such Act is amended by redesignating clauses (1) and (2) as clauses (A) and (B), respectively, by inserting "(1)" after "(h)", by inserting "approved under part C of title I" after "with respect to any project", and by adding at the end thereof the following new paragraph:

"(2)(A) The term 'Federal share' with respect to any project approved under part A of title II means the portion of the cost of construction of such project to be paid by the Federal Government under such part A.

"(B) The Federal share with respect to any project approved thereunder in the State shall, except as provided in paragraph (3), be an amount equal to 66⅔ per centum, or the Federal percentage for the State, if lower, or such lesser amount as may be determined by the State agency designated in the State plan. Prior to the approval of the first such project in the State during any fiscal year, such State agency shall give the Secretary written notification of the maximum Federal share established pursuant to this paragraph for such projects in such State to be approved by the Secretary during such fiscal year and the method of determining the actual Federal share to be paid with respect to such projects; and such maximum Federal share and such method of determining the actual Federal share for such projects in such State approved during such fiscal year shall not be changed after such written approval has been given.

"(3) In the case of any facility or center which provides or will, upon completion of the project for which application has been made under part A of title II, provide services for persons in an area designated by the Secretary as a rural or urban poverty area, the maximum Federal share shall be equal to such per centum of the costs of the construction of the project as may be determined by the State, except that such per centum shall not exceed 90 per centum."

PERIOD FOR PROMULGATING FEDERAL PERCENTAGES

SEC. 106. Section 401(j)(1) of such Act is amended by striking out "August 31" and inserting in lieu thereof "September 30".

TITLE II—GRANTS FOR OPERATION OF COMMUNITY MENTAL HEALTH CENTERS

FEDERAL SHARE

SEC. 201. Effective with respect to costs of establishment and operation of any center, for any period after June 30, 1970, for which a grant has been or is made under subsection (a) of section 220 of the Community Mental Health Centers Act (42 U.S.C. 2688), subsection (b) of such section is amended to read as follows:

"(b) Grants for such costs for any center under this part (other than grants made from funds made available under section 224(b)) may not exceed—

"(1) except as provided in paragraph (2), 75 per centum of the costs for each of the first two years after the first day of the first month for which such grant is made with respect to such center, 60 per centum of such costs for the third year after such first day, 45 per centum of such costs for the fourth year after such first day, 30 per centum of such costs for each of the next six years after such first day; and

"(2) in the case of grants to any center which provides services for persons in an area designated by the Secretary as a rural or urban poverty area, 90 per centum of such costs for each of the first two years after the first day of the first month for which such grant is made with respect to such center, and 75 per centum of such costs for each of the next eight years such first day. No grant shall be made under this section, in the case of any center referred to in paragraph (1), for any period of time which is later than the last year referred to in paragraph (1), or, in the case of any center referred to in paragraph (2), for any period of time which is later than the last year referred to in paragraph (2)."

INITIATION AND DEVELOPMENT OF SERVICES

SEC. 202. (a) Section 224 of such Act (42 U.S.C. 2688d) is amended (1) by inserting "(a)" immediately after "SEC. 224." and (2) by adding at the end thereof the following new subsection (b):

"(b) Not to exceed 5 per centum of the amount appropriated for grants pursuant to subsection (a) for any fiscal year shall be available to the Secretary to make grants to local public or nonprofit private organizations to cover up to 100 per centum of the costs (but in no case to exceed $50,000) of projects, in areas designated by the Secretary as rural or urban poverty areas, for assessing local needs for mental health services, designing mental health service programs, obtaining local financial and professional assistance and support for community health services, and fostering community involvement in initiating and developing community mental health services. In no case shall a grant under this subsection be for a period in excess of one year; nor shall any grant be made under this subsection with respect to any project if, for any preceding year, a grant under this subsection has been made with respect to such project."

(b) Section 221(a) of such Act (42 U.S.C. 2688a) is amended (1) by striking out "and" at the end of paragraph (4), (2) by striking out the period at the end of paragraph (5) and inserting in lieu thereof "; and", and (3) by adding after paragraph (5) the following new paragraph:

"(6) in the case of a grant from funds made available pursuant to section 224(b), the Secretary is satisfied, upon the basis of evidence supplied by the applicant, that persons broadly representative of all elements of the population of the area will be given an opportunity to participate in the project with respect to which application for such grant is made."

MAINTENANCE OF EFFORT

SEC. 203. (a) Paragraph (4) of such subsection (a) of section 221 of the Community Mental Health Centers Act (42 U.S.C. 2688a) is amended to read as follows:

"(4) the Secretary determines that there is satisfactory assurance that (A) the services to be provided will constitute an addition to, or a significant improvement in quality (as determined in accordance with criteria of the Secretary) in services that would otherwise be provided, and (B) Federal funds made available under this part for any period will be so used as to supplement and, to the extent practical, increase the level of State, local, and other non-Federal funds, including third party health insurance payments, that would in the absence of such Federal funds be made available for the program described in paragraph (2) of this subsection; and".

(b) Section 221(a) of such Act (42 U.S.C. 2688a) is further amended by adding at the end thereof the following new sentence: "Notwithstanding the provisions of paragraph (2) of this subsection, the requirement therein with respect to essential elements of comprehensive mental health services shall not apply, in the case of an application for a grant to any center which will provide services in an area designated by the Secretary as an urban or rural poverty area, for the eighteen-month period commencing on the date such application is filed, if the Secretary is satisfied that such center will meet such requirement prior to the end of such period."

CONTINUATION GRANTS

SEC. 204. Section 221(b) of such Act (42 U.S.C. 2688a) is amended by striking out "1970" each place it appears and inserting in lieu thereof "1973".

AUTHORIZATION OF APPROPRIATIONS

SEC. 205. (a) The first sentence of section 224(a) of such Act (42 U.S.C. 2688d), as amended by section 202(a) of this Act, is amended (1) by striking out the word "and" which appears immediately after "1969" and (2) by inserting immediately after "1970," the following: "$60,000,000 for the fiscal year ending June 30, 1971, $60,000,000 for the fiscal year ending June 30, 1972, and $80,000,000 for the fiscal year ending June 30, 1973."

(b) The second sentence of section 224(a) of such Act (42 U.S.C. 2688d), as amended by section 202(a) of this Act, is amended by striking out "seven" and inserting in lieu thereof "fifteen".

STAFFING, OPERATION, AND MAINTENANCE GRANTS FOR CENTERS

SEC. 206. (a) Effective with respect to costs of operation of any center, for any period beginning after June 30, 1970, for which a grant has been or is made under subsection (a) of section 220 of the Community Mental Health Centers Act (42 U.S.C. 2688), such subsection is amended by striking out "a portion of the costs (determined pursuant to regulations under section 223) of compensation of professional and technical personnel for the initial operation" and inserting in lieu thereof "a portion of the costs determined pursuant to regulations under section 223 of operation, staffing, and maintenance".

(b) The heading of part B of such Act (42 U.S.C. 2688 et seq.) is amended to read as follows:

"GRANTS FOR INITIAL COSTS OF OPERATION OF CENTERS"

TITLE III—ALCOHOLISM AND NARCOTIC ADDICT REHABILITATION

EXTENSION OF PROGRAMS FOR FACILITIES FOR ALCOHOLICS AND NARCOTIC ADDICTS

SEC. 301. (a) Section 261(a) of such Act (42 U.S.C. 2688o) is amended by striking out "and $25,000,000 for the next fiscal year" and inserting in lieu thereof "$25,000,000 for the fiscal year ending June 30, 1970, $25,000,000 for the fiscal year ending June 30, 1971, and $30,000,000 for the fiscal year ending June 30, 1972".

(b) Subsection (a) of such section 261 is further amended by inserting before the period at the end of the first sentence the following: "and section 246".

(c) Section 261 of such Act is further amended by adding at the end thereof the following new subsection (c):

"(c)(1) Not to exceed 5 per centum of the amount appropriated pursuant to the preceding provisions of this section for any fiscal year shall be available to the Secretary to make grants to local public or nonprofit private organizations to cover up to 100 per centum of the costs (but in no case to exceed $50,000) of projects for assessing local needs for programs of services for alco-

holics or narcotic addicts, designing such programs, obtaining local financial and professional assistance and support for such programs in the community, and fostering community involvement in initiating and developing such programs in the community. In no case shall a grant under this subsection be for a period in excess of one year; nor shall any grant be made under this subsection with respect to any project if, for any preceding year, a grant under this subsection has been made with respect to such project.

"(2) A grant under this subsection with respect to any project may be made only if the Secretary is satisfied, upon the basis of evidence supplied by the applicant, that persons broadly representative of all elements of the population of the area will be given an opportunity to participate in the development of the project with respect to which application for such grant is made."

(d) Subsection (b) of such section 261 is amended by striking out "three" and inserting in lieu thereof "ten", and by striking out "for the fiscal year ending June 30, 1969, or the fiscal year ending June 30, 1970" and inserting in lieu thereof "for any fiscal year ending prior to July 1, 1972".

CONSTRUCTION GRANTS; ALCOHOLISM AND NARCOTIC ADDICTION

SEC. 302. Effective with respect to the cost of construction of any facility, for any period beginning after June 30, 1970, for which a grant from appropriations under section 261 of such Act has been or is made, subsection (b) of section 241 of such Act, subsection (d) of section 243 of such Act, and subsection (b) of section 251 of such Act are each amended by striking out "66⅔" and inserting in lieu thereof "90".

STAFFING, OPERATION, AND MAINTENANCE GRANTS; ALCOHOLISM AND NARCOTIC ADDICTION

SEC. 303. (a)(1) Effective with respect to the costs of operation of any facility, for any period after June 30, 1970, for which a grant from appropriations under section 261 of such Act has been or is made, subsection (a) of section 242 of such Act is amended by striking out "a portion of the costs (determined pursuant to regulations of the Secretary) of compensation of professional and technical personnel for the initial operation" and inserting in lieu thereof "a portion of the costs (determined pursuant to regulations of the Secretary) for operating, staffing, and maintenance".

(2) Effective with respect to the costs of operation of any facility, for any period beginning after June 30, 1970, for which a grant from appropriations under section 261 of such Act has been or is made, subsection (a) of section 243 of such Act is amended by striking out "compensation of professional and technical personnel" and inserting in lieu thereof "operation, staffing, and maintenance", and subsection (c) of such section is amended by striking out "compensation of professional and technical personnel" and inserting in lieu thereof "operation, staffing, and maintenance".

(3) Effective with respect to the costs of operation of any facility, for any period beginning after June 30, 1970, for which a grant from appropriations under section 261 of such Act has been or is made, subsection (a) of section 251 of such Act is amended by striking out "the costs, determined pursuant to regulations of the Secretary, of compensation of professional and technical personnel for the initial operation" and inserting in lieu thereof "the costs, determined pursuant to regulations of the Secretary, for the staffing, operation and maintenance", and subsection (c) of such section 251 is amended by striking out "Grants made under subsection (a) for the cost of compensation of professional and technical personnel" and inserting in lieu thereof "Grants made under subsection (a) for the costs of operating such facilities".

(b) Effective with respect to costs of establishment and operation of any facility for any period after June 30, 1970, for which a grant has been or is made under subsection (a) of section 242, 243, or 251 of the Community Mental Health Centers Act (42 U.S.C. 2688g, 2688h, 2688k), subsection (b) of section 242 of such Act is amended to read as follows:

"(b) Grants for such costs for any facility under this section may be made only for the period beginning with the first day of the first month for which such a grant is made and ending with the close of ten years after such first day; and such grant with respect to any facility may not exceed 90 per centum of such costs for each of the first two years after the first day of the first month for which such grant is made with respect to such facility, and 75 per centum of such costs for each of the next eight years after such first day."

DIRECT GRANTS FOR SPECIAL PROJECTS; ALCOHOLISM

SEC. 304. Part C of the Community Mental Health Centers Act is amended by redesignating section 246 as section 247, and adding after section 245 a new section 246 to read as follows:

"DIRECT GRANTS FOR SPECIAL PROJECTS

"SEC. 246. The Secretary is authorized during the period beginning July 1, 1970, and ending June 30, 1972, to make grants to any public or nonprofit private agency or organization to cover part or all of the cost of (A) developing specialized training programs or materials relating to the provision of public health services for the prevention or treatment of alcoholism, or developing inservice training or short-term or refresher courses with respect to the provision of such services; (B) training personnel to operate, supervise, and administer such services; (C) conducting surveys and field trials, to evaluate the adequacy of the programs for the prevention and treatment of alcoholism within the several States with a view to determining ways and means of improving, extending, and expanding such programs; and (D) programs for treatment and rehabilitation of alcoholics which the Secretary determines are of special significance because they demonstrate new or relatively effective or efficient methods of delivery of services to such alcoholics."

DIRECT GRANTS FOR SPECIAL PROJECTS; NARCOTIC ADDICTS

SEC. 305. (a) Section 252 of the Community Mental Health Centers Act is amended (1) by striking out "1970" and inserting in lieu thereof "1972", (2) by striking out "and" at the end of clause (B), and (3) by adding immediately before the period at the end thereof the following: "; and (D) programs for treatment and rehabilitation of narcotic addicts which the Secretary determines are of special significance because they demonstrate new or relatively effective or efficient methods of delivery of services to such narcotic addicts".

(b) The heading to such section 252 is amended to read as follows: "DIRECT GRANTS FOR SPECIAL PROJECTS".

TITLE IV—MENTAL HEALTH OF CHILDREN

CONSTRUCTION AND STAFFING OF TREATMENT FACILITIES

SEC. 401. The Community Mental Health Centers Act is amended by adding at the end thereof the following new part:

"PART F—MENTAL HEALTH OF CHILDREN

"GRANTS FOR TREATMENT FACILITIES

"SEC. 271. (a) Grants from appropriations under section 272(a) may be made to public or nonprofit private agencies and organizations (A) to assist them in meeting the costs of construction of facilities to provide mental health services for children within the States, and (B) to assist them in meeting the costs, determined pursuant to regulations of the Secretary, of the staffing, operation, and maintenance of (i) facilities providing such services which were constructed with grants made under this part or part A, or (ii) existing facilities which provide new mental health services for children.

"(b) The grant program for construction of facilities authorized by subsection (a) shall be carried out consistently with the grant program under part A of the Act except to the extent, in the judgment of the Secretary, special considerations make differences appropriate; but (1) before the Secretary may make a grant under such subsection for the construction of a facility for the provision of mental health services to children he must find that the application for such grant meets the requirements of section 205(a)(5) (relating to the payment of prevailing wages), and (2) the amount of any such grant with respect to any project shall be such percentage of the cost thereof, but not in excess of 90 per centum as the Secretary may determine.

"(c) Grants for the costs of staffing, operation, and maintenance of facilities providing mental health services to children, authorized by subsection (a) of this section, may not exceed 90 per centum of such costs for each of the first two years after the first day of the first month for which such grant is made with respect to such facility, and 75 per centum of such costs for each of the next eight fiscal years after such first day. No grants may be made for any period of time which is later than the last year referred to in this subsection.

"(d) Grants may be made under this section only with respect to (1) facilities which are part of or affiliated with a community mental health center providing at least those essential services which are prescribed by the Secretary, or (2) where there is no such center serving the community in which such facilities are to be situated, facilities with respect to which satisfactory provision (as determined by the Secretary) has been made for appropriate utilization of existing community resources needed for an adequate program of prevention and treatment of mental health problems of children.

"(e) No grant shall be made under this section with respect to any facility unless the applicant for such grant provides assurance satisfactory to the Secretary that such facility will make available a full range of treatment, liaison, and follow-up, services (as prescribed by the Secretary) for all children and their families in the service area of such facility who need such services, and will, when so requested, provide consultation and education for personnel of all schools and other community agencies serving children in such area.

"SEC. 272. (a) There are authorized to be appropriated $18,000,000 for the fiscal year ending June 30, 1971, $30,000,000 for the fiscal year ending June 30, 1972, and $45,000,000 for the fiscal year ending June 30, 1973, for grants authorized under this part.

"(b) There are also authorized to be appropriated for the fiscal year ending June 30, 1971, and for each of the next thirteen fiscal years such sums as may be necessary to continue to make grants with respect to any project under this part for which a staffing operation and maintenance grants was made under this section for any fiscal year ending before July 1, 1973".

TITLE V—MISCELLANEOUS

APPROVAL BY NATIONAL ADVISORY MENTAL HEALTH COUNCIL

SEC. 501. (a) Section 303(b) (42 U.S.C. 242a) of the Public Health Service Act is amended by inserting after the words "subsection (a)" the following: "or under title

II of the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, as amended".

(b) Part E of the Community Mental Health Centers Act, as amended, is amended by adding a new section 264 at the end thereof to read as follows:

"APPROVAL BY NATIONAL ADVISORY MENTAL HEALTH COUNCIL

"SEC. 264. Grants under this title may be made only upon recommendation of the National Advisory Mental Health Council, established by section 217(a) (42 U.S.C. 218 (a)) of the Public Health Service Act."

AMENDMENT OFFERED BY MR. STAGGERS

Mr. STAGGERS. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STAGGERS: Strike out all after the enacting clause of S. 2523 and insert in lieu thereof the provisions of H.R. 14086, as passed.

The amendment was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 14086) was laid on the table.

EXTENSION OF INTERSTATE OIL AND GAS COMPACT

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent to vacate the proceedings by which the Senate joint resolution (S.J. Res. 54) was amended, read a third time, and passed, and for its immediate consideration.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

S.J. RES. 54

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to an extension and renewal for a period of two years from September 1, 1969, to September 1, 1971, of the interstate compact to conserve oil and gas, which was signed in the city of Dallas, Texas, the 16th day of February, 1935, by the representatives of Oklahoma, Texas, California, and New Mexico, and at the same time and place was signed by the representatives, as a recommendation for approval to the Governors and Legislatures of the States of Arkansas, Colorado, Illinois, Kansas, and Michigan, and which prior to August 27, 1935, was presented to and approved by the Legislatures and Governors of the States of New Mexico, Kansas, Oklahoma, Illinois, Colorado, and Texas, and which so approved by the six States last above-named was deposited in the Department of State of the United States, and thereafter was consented to by the Congress in Public Resolution Numbered 64, Seventy-fourth Congress, approved August 27, 1935, for a period of two years, and thereafter was extended by the representatives of the compacting States and consented to by the Congress for successive periods, without interruption, the last extension being for the period from September 1, 1967, to September 1, 1969, consented to by Congress by Public Law Numbered 90–185, Ninetieth Congress, approved December 11, 1967. The agreement to extend and renew said compact for a period of four years from September 1, 1967, to September 1, 1971, duly executed by representatives of the States of Alabama, Alaska, Arizona, Arkansas, Colorado, Florida, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maryland, Michigan, Mississippi, Montana, Nebraska, Nevada, New Mexico, New York, North Dakota, Ohio, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas, Utah, West Virginia, and Wyoming, has been deposited in the Department of State of the United States, and reads as follows:

"AN AGREEMENT TO EXTEND THE INTERSTATE COMPACT TO CONSERVE OIL AND GAS

"Whereas, on the 16th day of February, 1935, in the City of Dallas, Texas, there was executed 'An Interstate Compact to Conserve Oil and Gas' which was thereafter formally ratified and approved by the State of Oklahoma, Texas, New Mexico, Illinois, Colorado, and Kansas, the original of which is now on deposit with the Department of State of the United States, a true copy of which follows:

"'AN INTERSTATE COMPACT TO CONSERVE OIL AND GAS

"'ARTICLE I

"'This agreement may become effective within any compacting state at any time as prescribed by that state, and shall become effective within those states ratifying it whenever any three of the States of Texas, Oklahoma, California, Kansas, and New Mexico have ratified and Congress has given its consent. Any oil-producing state may become a party hereto as hereinafter provided.

"'ARTICLE II

"'The purpose of this compact is to conserve oil and gas by the prevention of physical waste thereof from any cause.

"'ARTICLE III

"'Each state bound hereby agrees that within a reasonable time it will enact laws, or if the laws have been enacted, then it agrees to continue the same in force, to accomplish within reasonable limits the prevention of:

"'(a) The operation of any oil well with an inefficient gas-oil ratio.

"'(b) The drowning with water of any stratum capable of producing oil or gas, or both oil and gas, in paying quantities.

"'(c) The avoidable escape into the open air or the wasteful burning of gas from a natural gas well.

"'(d) The creation of unnecessary fire hazards.

"'(e) The drilling, equipping, locating, spacing or operating of a well or wells so as to bring about physical waste of oil or gas or loss in the ultimate recovery thereof.

"'(f) The inefficient, excessive or improper use of the reservoir energy in producing any well.

"'The enumeration of the foregoing subjects shall not limit the scope of the authority of any state.

"'ARTICLE IV

"'Each state bound hereby agrees that it will, within a reasonable time, enact statutes, or if such statutes have been enacted then that it will continue the same in force, providing in effect that oil produced in violation of its valid oil and/or gas conservation statutes or any valid rule, order or regulation promulgated thereunder, shall be denied access to commerce; and providing for stringent penalties for the waste of either oil or gas.

"'ARTICLE V

"'It is not the purpose of this compact to authorize the states joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations.

"'ARTICLE VI

"'Each State joining herein shall appoint one representative to a commission hereby constituted and designated as "The Interstate Oil Compact Commission", the duty of which said commission shall be to make inquiry and ascertain from time to time such methods, practices, circumstances, and conditions as may be disclosed for bringing about conservation and the prevention of physical waste of oil and gas, and at such intervals as said commission deems beneficial it shall report its findings and recommendations to the several States for adoption or rejection.

"'The Commission shall have power to recommend the coordination of the exercise of the police powers of the several states within their several jurisdictions to promote the maximum ultimate recovery from the petroleum reserves of said states, and to recommend measures for the maximum ultimate recovery of oil and gas. Said Commission shall organize and adopt suitable rules and regulations for the conduct of its business.

"'No action shall be taken by the Commission except: (1) by the affirmative votes of the majority of the whole number of compacting States represented at any meeting, and (2) by a concurring vote of a majority in interest of the compacting States at said meeting, such interest to be determined as follows: such vote of each State shall be in the decimal proportion fixed by the ratio of its daily average production during the preceding calendar half-year to the daily average production of the compacting States during said period.

"'ARTICLE VII

"'No State by joining herein shall become financially obligated to any other State, nor shall the breach of the terms hereof by any State subject such State to financial responsibility to the other States joining herein.

"'ARTICLE VIII

"'This compact shall expire September 1, 1937. But any State joining herein may, upon sixty (60) days notice, withdraw herefrom.

"'The representatives of the signatory States have signed this agreement in a single original which shall be deposited in the archives of the Department of State of the United States, and a duly certified copy shall be forwarded to the Governor of each of the signatory states.

"'This compact shall become effective when ratified and approved as provided in Article I. Any oil-producing State may become a party hereto by affixing its signature to a counterpart to be similarly deposited, certified, and ratified.'

"Whereas, the said Interstate Compact to Conserve Oil and Gas has heretofore been duly renewed and extended with the consent of the Congress to September 1, 1967; and

"Whereas, it is desired to renew and extend the said Interstate Compact to Conserve Oil and Gas for a period of four (4) years from September 1, 1967, to September 1, 1971:

"Now, therefore, this writing witnesseth:

"It is hereby agreed that the Compact entitled 'An Interstate Compact To Conserve Oil and Gas' executed in the City of Dallas, Texas, on the 16th day of February, 1935, and now on deposit with the Department of State of the United States, a correct copy of which appears above, be, and the same hereby is, extended for a period of four (4) years from September 1, 1967, its present date of expiration, to September 1, 1971. This agreement shall become effective when executed, ratified, and approved as provided in Article I of the original Compact.

"The signatory States have executed this agreement in a single original which shall be deposited in the archives of the Department

of State of the United States and a duly certified copy thereof shall be forwarded to the Governor of each of the signatory States. Any oil-producing state may become a party hereto by executing a counterpart of this agreement to be similarly deposited, certified, and ratified.

"Executed by the several undersigned states, at their several state capitols, through their proper officials on the dates as shown, as duly authorized by statutes and resolutions, subject to the limitations and qualifications of the acts of the respective State Legislatures.

SEC. 2. The Attorney General of the United States shall continue to make an annual report to Congress, as provided in section 2 of Public Law 185, Eighty-fourth Congress, for the duration of the Interstate Compact to Conserve Oil and Gas to whether or not the activities of the State under the provisions of such compact have been consistent with the purposes as set out in article V of such compact.

SEC. 3. The right to alter, amend, or repeal the provisions of the first section of this joint resolution is hereby expressly reserved.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TO EXTEND AUTHORITY TO MAKE FORMULA GRANTS TO SCHOOLS OF PUBLIC HEALTH

Mr. STAGGERS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 14790) to amend the Public Health Service Act so as to extend for an additional period the authority to make formula grants to schools of public health, as amended.

The Clerk read as follows:

H.R. 14790

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 309(c) of the Public Health Service Act is amended by striking out "$5,000,000 for the fiscal year ending June 30, 1968, $6,000,000 for the fiscal year ending June 30, 1969, and $7,000,000 for the fiscal year ending June 30, 1970" and inserting in lieu thereof: "$7,000,000 for the fiscal year ending June 30, 1970, $7,000,000 for the fiscal year ending June 30, 1971, $9,000,000 for the fiscal year ending June 30, 1972, and $12,000,000 for the fiscal year ending June 30, 1973".

The SPEAKER. Is a second demanded?

Mr. SPRINGER. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. STAGGERS. Mr. Speaker, this bill was reported from the committee unanimously, and provides a 3-year extension of the program which has been in effect since 1958 under which grants are made to schools of public health. This program of grants was established in order to reimburse these schools for a portion of their costs incurred in training federally sponsored students.

Under other authorities contained in the Public Health Service Act, the Public Health Service makes grants to schools of public health to pay a portion of the costs of establishing and maintaining at those schools courses of instruction which are of particular interest to the Federal Government, such as the field of public sanitation, immunizations, air pollution, and other environmental problems, and the like. In addition, the United States pay the tuition and other costs incurred by students at these schools on fellowships provided by the United States. Since tuition payments to schools virtually never cover full costs to the schools of the education furnished of the courses of study pursued, these Federal fellowships, in a sense, require that the schools use their own funds to subsidize Federal programs. This legislation is designed, therefore, to reimburse these schools for a portion of these excess costs which they incur as the result of Federal programs.

As our report points out, the number of students at these schools has increased substantially in recent years, partially as the result of this program, although we are still a long way from having adequite supplies of manpower.

At the hearings all witnesses were in favor of the objectives of the bill, the committee was unanimous in reporting it to the House, and we urge its passage.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I would ask the gentleman from West Virginia if the administration did not suggest an extension of 1 year for this program?

Mr. STAGGERS. Mr. Speaker, the answer to the question asked by the gentleman from Iowa is that, yes, they did.

Mr. GROSS. But it is being extended for 3 years at a substantially increased cost; is that not true?

Mr. STAGGERS. No, not at a substantially increased cost. But this occurred after the witnesses and others who appeared before the committee, this was the reason this was done.

Mr. GROSS. It is $7 million for fiscal 1970?

Mr. STAGGERS. That is right.

Mr. GROSS. Have not 6 months of fiscal year 1970 already gone into history?

Mr. STAGGERS. That appropriation bill has already passed the House, and I am sure that the program will be covered by that appropriation bill as finally passed. But I might say to the gentleman that most of these appropriations have not come up to this year's authorization level.

Mr. SPRINGER. Mr. Speaker, in the past when one thought about public health, if he did at all, he thought of the local doctor who carried the title of public health officer and whose job was to tack up quartantine notices. Here and there was a county nurse who roamed the countryside and helped where she could with indigents and shutins. That was public health activity—all of it. Certainly the health legislation and the new and expanding programs which have been brought into being over the last 8 to 10 years have changed that picture entirely. One example is the partnership for health program, originally called the comprehensive health program, which consolidated 16 separate and different public health activities into one integrated program which must be administered at local levels.

Now we are at long last concerned with the improvement of our environment. This will require local machinery and by the same token more and better technicians who are dedicated to and understand the broad problems of environmental improvement.

Where do we get such professionals and technicians? They do not grow on trees. They must be trained in our colleges for this work. Those training centers are known as schools of public health. Ten years ago there were 11 such schools located within some of the large universities. There were then about 1,200 students enrolled. With the modest help provided by this act enrollments have reached 3,500 and the number of schools 16.

The schools themselves have found it necessary to constantly change and upgrade curriculum as the field of public health has expanded. With urbanization and increasing population there is no doubt that demand and real need for all public health services will grow.

H.R. 14790 extends for 3 years the program to assist schools of public health with formula grants. As reported the bill provides funds for the next 3 fiscal years in the sums of $7 million, $9 million, and $12 million.

I recommend the legislation to my colleagues.

Mr. Speaker, may I say that we have a policy of no program being over 3 years, and that it is our feeling that for a program to be successful it must be extended for at least 3 years so that planning can be accomplished, and that is the reason for the 3-year program.

Mr. JARMAN. Mr. Speaker, we have before us today, H.R. 14790, the bill which I introduced to amend the Public Health Service Act to extend for an additional period the authority to make formula grants to schools of public health.

At hearings, on November 13, before the Subcommittee on Public Health and Welfare, of which I am chairman, there was unanimous agreement among the witnesses that this program should be continued. We heard of the progress that has been made, since the inception of this grant support, in strengthening the Nation's public health training resources.

Mr. Speaker, during the 10 years that this program has been in effect it has stimulated the expansion and development of schools of public health—in number, in enrollments, and in the degree of technical assistance they have rendered to their communities.

When this program was first authorized in 1958, there were only 11 schools of public health. This year there are 16. In my own State of Oklahoma a new school was accredited in 1967 at the University of Oklahoma. The most recently established school is in a neighboring State—at the University of Texas at Houston; it was accredited this year.

Enrollments in schools of public health have nearly tripled since the beginning of this program.

These support grants to schools of public health have provided an extremely important resource in assisting the schools to meet the challenge of training the professional personnel required for today's changing and expanding community and environmental health programs.

In the decade since these grants have been available, the schools have undergone extensive changes, reorienting their teaching programs to be more acutely attuned to current problems. They are revising their academic programs in keeping with new technologies and new patterns for the delivery of health services.

The schools have responded with a readiness to meet new and emerging health needs—of their communities and of the Nation.

Schools of public health prepare the majority of the graduate public health specialists for services throughout the country. More than 90 percent of graduates enter public service. They hold key posts in local, city, State, national, and international health agencies.

We can take pride in the many accomplishments under this program. Nevertheless, still greater efforts are required.

There are still critical shortages of professional public health manpower. If these shortages are to be alleviated, schools must be strengthened, expanded, and new schools must be encouraged.

The bill which we are considering today extends for 3 years—fiscal year 1971 through fiscal year 1973—the authority of section 309(c) of the Public Health Service Act for these formula grants to schools of public health to assist the schools in providing comprehensive professional public health training, specialized consultative services, and technical assistance in the fields of public health and in the administration of State or local public health programs. The bill would provide appropriation authorizations of $7 million in fiscal year 1971, $9 million in fiscal year 1972, and $12 million in fiscal year 1973.

Schools of public health must continue to improve and expand their programs to meet the tremendous demands of today's health programs.

Costs of education have been rising sharply, and the schools have been struggling under increasing responsibilities. It is likely that before the expiration of this legislation, at least two new schools of public health will be established. The increases in funding which this bill authorizes are necessary to sustain and expand the efforts of the present schools and at the same time to assist the new schools in undertaking their responsibilities.

The formula grant has proved an effective mechanism for providing the schools of public health—and hence the Nation—with the means to improve and expand public health training to meet the requirements of changing and emerging health problems.

The continuation of this program of assistance to schools of public health is important to the national effort to increase and improve the health resources of this Nation. I urge the enactment of H.R. 14790.

The SPEAKER. The question is on the motion of the gentleman from West Virginia that the House suspend the rules and pass the bill H.R. 14790, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

A motion to reconsider was laid on the table.

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent for the immediate consideration of a similar Senate bill (S. 2809) to amend the Public Health Service Act so as to extend for an additional period the authority to make formula grants to schools of public health, project grants for graduate training in public health, and traineeships for professional public health personnel.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the Senate bill, as follows:

S. 2809

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That section 309(c) of the Public Health Service Act is amended by striking out "$5,000,000 for the fiscal year ending June 30, 1968, $6,000,000 for the fiscal year ending June 30, 1969, and $7,000,000 for the fiscal year ending June 30, 1970" and inserting in lieu thereof: "$7,000,000 for the fiscal year ending June 30, 1970, $9,000,000 for the fiscal year ending June 30, 1971, $12,000,000 for the fiscal year ending June 30, 1972, $15,000,000 for the fiscal year ending June 30, 1973, $18,000,000 for the fiscal year ending June 30 1974, and $20,000,000 for the fiscal year ending June 30, 1975".

SEC. 2. Section 309(a) of the Public Health Service Act is amended by striking out "and $12,000,000 for the fiscal year ending June 30, 1971" and inserting in lieu thereof: "$15,000,000 for the fiscal year ending June 30, 1971, $18,000,000 for the fiscal year ending June 30, 1972, $21,000,000 for the fiscal year ending June 30, 1973, $24,000,000 for the fiscal year ending June 30 1974, and $27,000,000 for the fiscal year ending June 30, 1975".

SEC. 3. Section 306(a) of the Public Health Service Act is amended by striking out "and $14,000,000 for the fiscal year ending June 30, 1971" and inserting in lieu thereof: "$14,000,000 for the fiscal year ending June 30, 1971, $18,000,000 for the fiscal year ending June 30, 1972, $22,000,000 for the fiscal year ending June 30, 1973, $26,000,000 for the fiscal year ending June 30, 1974, and $30,000,000 for the fiscal year ending June 30, 1975".

MOTION OFFERED BY MR. STAGGERS

Mr. STAGGERS. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. STAGGERS moves to strike out all after the enacting clause of S. 2809 and insert in lieu thereof the provisions of H.R. 14790, as passed by the House.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 14790) was laid on the table.

HEALTH SERVICES FOR DOMESTIC AGRICULTURAL MIGRANTS

Mr. STAGGERS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 14733) to amend the Public Health Service Act to extend the program of assistance for health services for domestic migrant agricultural workers and for other purposes.

The Clerk read as follows:

H.R. 14733

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 310 of the Public Health Service Act (42 U.S.C. 242h) is amended (1) by striking out "and" after "next fiscal year," and (2) by inserting after "June 30, 1970," the following: "$20,000,000 for the fiscal year ending June 30, 1971, $25,000,000 for the fiscal year ending June 30, 1972, and $30,000,000 for the fiscal year ending June 30, 1973,".

(b) Such section is further amended by adding at the end thereof the following new sentence: "The Secretary may also use funds appropriated under this section to provide health services to persons (and their families) who perform seasonal agricultural services similar to the services performed by domestic agricultural migratory workers if the Secretary finds that the provision of health services under this sentence will contribute to the improvement of the health conditions of such migratory workers and their families."

(c) Such section is further amended by striking out "to improve health services for and the health conditions of" in clause (1) (ii) and inserting in lieu thereof "to improve and provide a continuity in health services for and to improve the health conditions of".

(d) Such section is further amended by inserting "(including allied health professions personnel)" after "training persons" each place it appears in clause (1).

(e) Such section is further amended (1) by striking out "Surgeon General" and inserting in lieu thereof "Secretary", and (2) by inserting at the beginning of such section the following heading:

"HEALTH SERVICES FOR DOMESTIC AGRICULUTRAL MIGRANTS"

The SPEAKER. Is a second demanded?

Mr. SPRINGER. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. STAGGERS. Mr. Speaker, This bill was reported unanimously by the committee, and would extend for 3 years the current program under which health services are provided to domestic agricultural migratory workers. This program has been in effect since 1962, and today covers approximately one-third of the approximately 1 million domestic agricultural migratory workers and their families.

The health needs of agricultural migrants are among the greatest of any group in the United States. In general, these Americans, as a group, have abnormally high infant mortality rates, high rates of communicable disease, high accident rates, and, in general, more health problems than almost any other group. As they follow the crops through the United States, they go from one community to another, and since they are nonresidents, do not qualify for many health programs provided by local communities but limited to residents. In addition the health facilities available in many of these areas which depend on the labor of these migrants are relatively meager. This legislation is designed to fill the gap in health services for these people, by providing grants which, in general, cover about 40 percent of the costs of providing health services for these migrants and their families.

Current law limits the services furnished to persons who are migrants; however this distinction turns out to be quite arbitrary in many cases since the status of a person as a migrant frequently shifts back and forth.

The bill, therefore, expands coverage of the program somewhat to permit the furnishing of health services to persons who are seasonal agricultural workers if the furnishing of these services will contribute to the improvement of health conditions of migrants and their families.

The bill authorizes a total of $55 million in appropriations over the next 3 fiscal years, and was supported by all witnesses at the hearings. The committee was unanimous in ordering the bill reported to the House, and we recommend its passage.

Mr. McCLURE. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman.

Mr. McCLURE. I would like to ask a couple of questions about this bill.

It seems to me there is a significant shift taking place, or at least proposed, in this measure, which if implemented could be damaging to some of the other programs now underway.

We have several different programs dealing with the same problems—some through the Department of Labor, some through the OEO, and some through HEW. Now this bill coming out of your committee dealing with Public Health Service.

Has there been an effort made or was there any testimony before the committee concerning the coordination of these various programs.

Mr. STAGGERS. There has been—yes—but this bill deals only with one phase of this, and this is the health problems involved with migratory workers.

Mr. McCLURE. I note that there has been what I think is a significant change in the language. But you are not dealing any longer simply with migratory workers, but also with these seasonal agricultural workers who are not migratory workers. Is this not a significant change?

Mr. STAGGERS. Yes, a bit, in this way, because we have found that they are all tied in together—they are migratory for a time and afterward they are not migratory, then we are going to deal with those.

We have also said that if they are migratory at this time and working in the field along side of those workers of our own or some other country, then they suffer from the same accidents and the same kinds of diseases. We put them under the same kind of help at this time.

Mr. McCLURE. Is not the concern for people who are not migratory properly the concern of the Committee on Education and Labor rather than the Committee on Interstate and Foreign Commerce?

Mr. STAGGERS. This is a health measure entirely.

Mr. McCLURE. I recognize that.

Mr. STAGGERS. When we are providing this aid, we say that they are migratory because they are working and they are moving in commerce, and at other times they are not in commerce, and they are classified in this way.

Mr. McCLURE. The bill does not say that. It says those who are seasonal migratory workers—and there are a good many seasonal migratory workers who are not migratory workers and never have been.

Mr. STAGGERS. The language, I think, is very specific in saying that the program is designed to help those who are migratory workers, in this case.

Mr. McCLURE. It is the intention then of the gentleman and his committee that the program be confined to those people who are actually migratory workers and those who are closely associated with them?

Mr. STAGGERS. Yes; that is the title of the bill and the purpose.

Mr. McCLURE. But that is not the language of the bill.

Mr. STAGGERS. I think it is. I think if the gentleman will read the bill, I believe you will see that it is and if the gentleman will read the report on the bill.

Mr. McCLURE. It is not your intention to embark upon the entire field of seasonal agricultural workers; is it?

Mr. STAGGERS. No, indeed.

Mr. McCLURE. I would like to point out two other things, if I may. That is that in a period of less than 10 years, this program has gone from $3 million annually to $30 million and we have little note taken of that fact on the floor. I think it is worthy of note.

Mr. STAGGERS. I will say to the gentleman that this involves only one-third of the migratory workers and we are going to have to do more. As my distinguished colleague knows, of course, when they are working in an area and contract a disease, it is going to be a danger to any community.

What we are trying to do is to avoid many of these situations that take place, and also to provide for these workers sanitary conditions, and we are going to see that lots of these things do not happen like accidents and disease.

Mr. McCLURE. I would assume from your statement then that in order to reach all of these, you can expect a $100 million program in a very short time.

Mr. STAGGERS. I would not say that. If we can get things under control we will not.

Mr. McCLURE. It seems to me that we have a proliferation of agencies involved in the problem of dealing with migrants and they have very real social, economic, and health problems. One hand does not know what the other hand is doing in this Government in this field.

I would point out that in my area of the country, we have a number of migrant labor camps that are run by, financed by, organized by, and supported wholly by the farmers who use those workers on their farms.

The Internal Revenue Service has undertaken to drive them out of business by making them taxable units rather than tax-exempt organizations. Just recently the Government has also cracked down on the availability of funds for the improvement of the sanitary facilities within these migratory labor camps that are not Government operated. It seems to me that while we are building up programs designed to better the lot of these people on the one hand, other agencies of Government are doing everything they can to harass and make it impossible for the private camps to continue to operate. I would hope that somewhere in this Congress, some committee, whether it be your committee or others, that are charged with responsibilities in this area would seek to coordinate the activities of the agencies of Government so that this harassment would stop and so that these camps, which are very well run and some of the best that we have, can continue to exist rather than be driven out through such actions.

Mr. SPRINGER. Mr. Speaker, since 1962 the Federal Government has been assisting local governments maintain health programs designed to meet the problems caused by the yearly influx of migratory workers. Health facilities and personnel are usually swamped by this sudden flood of people creating extraordinary demands for health services. Since starting this program with a handful of communities participating there are now 117 such projects in 35 States.

In addition to ordinary, in the field, health assistance the act was expanded to include emergency hospital services in recognition of the fact that many migrant workers will have dire need for hospital treatment and no way to get it unless it is available free or at a minimal cost. Community hospitals cannot bear the brunt of this demand alone.

In the bill now before us recognition is made of another factor which affects the whole problem and which we have not dealt with until now. Migrant workers not only have a great need for health care and tax the local facilities beyond endurance but they also bring with them in many instances diseases and other health conditions which then affect all of the seasonal workers in the area, whether migrant or local. Also a migrant worker may not always be migrant. Seasonal employment can be a way of life for many people who do not move about or at least do not move very far. When acute health problems attack seasonal workers it is not easy and probably not desirable to sort out those who will be treated under one set of rules and those who happen to arrive on a truck to be treated under a different set. H.R. 14733 allows use of funds to provide health services to seasonal—as opposed to migrant—workers when doing so will contribute to improvement of conditions for migrants.

More and more communities are coming to realize that providing health care for migrant workers is a direct contribution to the public health of an entire community. It is not easy to overcome generations of neglect combined with cultural barriers. The health standards of a large shifting group of our population must be raised gradually. It takes time but this program, which by comparison with most health programs brought here for consideration, is extremely modest and is making a significant impact on the problem. It is also one which requires community desire and community involvement if it is to succeed.

The bill before us would extend the program for 3 years and provide funds as follows: for 1971, $20 million; for 1972, $25 million and for 1973, $30 million.

I recommend the bill to the House.

Mr. ROGERS of Florida. Mr. Speaker, I rise in support of H.R. 14733, which would amend the Public Health Service Act to extend the program of assistance to the States for health services for migrant agricultural workers and to provide assistance for health services for other seasonal agricultural workers.

This legislation would extend the existing programs for 3 fiscal years at the following levels of authorization: $20 million for 1971; $25 million for 1972, and $30 million for 1973.

In addition, the scope of the present law is expanded to include persons—and their families—who perform seasonal agricultural services similar to the services performed by domestic agricultural migratory workers if the Secretary of Health, Education, and Welfare finds that such health services will improve the health conditions of migrant workers and their families.

In many instances, Mr. Speaker, the nonmigrant agricultural worker works side by side with the migrant worker. Yet, the nonmigrant often does not receive health care through the municipal, county, or State government; and likewise, he is ineligible for assistance from the Federal Government. The migrant worker and his family may receive good health care through the migrant health services program only to become exposed again to disease from the uncared for nonmigrant agricultural worker. Too, the nonmigrant may decide at the end of the season to move with the work force, as sometimes happens, thus making it difficult to distinguish the migrant from the nonmigrant.

It was the feeling of the committee that both the migrant worker and his family as well as the nonmigrant worker and his family could be served by expanding the scope of the bill and permitting the Secretary of Health, Education, and Welfare to determine when such additional health services should be provided.

We are making good progress under this program which was first enacted in 1962 as Public Law 87–692. At that time, there were only about one-half dozen isolated community programs in operation. There are now 117 single or multicounty, grant-assisted projects serving migrants in 35 States and Puerto Rico.

An estimated 325,000 migrants live in the counties served by such projects. As of June 30 of this year, 1,000 physicians were serving in the program; there were, in fiscal year 1969, 210,000 medical visits, 28,000 dental visits, and 3,600 migrants were hospitalized.

Yet, there is much more that needs to be done. We are reaching only about one-third of the total migrant population, estimated to be about 1 million. Over 600 counties where migrants live temporarily still have no grant-assisted services.

When I introduced the bill in August of this year to extend the program for 3 years, I recommended a funding authorization of $30 million for 1971; $45 million for 1972, and $60 million for 1973.

In testimony before the subcommittee, the administration indicated that it wanted only a 2-year extension of the program with an authorization of $20 million for 1972 and $25 million for 1972.

I believe we must do more, and can do more. The funding of this program has not been encouraging. As a nation we spend $250 per person per year on health care; last year, we spent $12 per migrant worker, including local support.

Although the authorization for 1970 is $15 million, the House-passed appropriation bill contains only $8 million for

this program, or about $8 for every migrant and dependent in the Nation.

The Senate Appropriation Committee has increased this amount to $15 million and I am hopeful that the Senate will keep the higher figure.

I urge approval of the legislation before the House at the present time, H.R. 14733, and I am likewise hopeful that an increased authorization for this measure can be obtained.

Mr. JARMAN. Mr. Speaker, this bill (H.R. 14733) provides for a 3-year extension of the migrant health program with an authorization level of $20 million for 1971, $25 million for 1972, and $30 million for 1973. This bill also broadens the definition of the program beneficiaries to include other seasonal agricultural workers.

In passing the Migrant Health Act, Congress recognized the obstacles faced by domestic migratory farmworkers and their families in obtaining health care. The migrant families share the health problems typical of other low-income minority groups who live in poor housing, lack education, and lack knowledge of good health concepts and practices. Added to these problems are the ones created by their mobility—lack of attachment to any one community, frequent rejection by the same communities that depend on their labor, and transiency which restricts their access to the health services made available to needy community residents. In addition, community health services are often provided at times which conflict with the migrants' work schedule and at urban centers usually far removed from the places where they work or live temporarily.

The migrant families are poor and cannot afford to purchase the medical care they need. In addition, many communities which need their labor for brief periods have meager health resources which are severely overtaxed by a periodic influx of migrants. As a result of long-term neglect, the health needs of migrants far exceed those of the general population.

The total migrant population is estimated at approximately 1 million persons including workers and their families. During each 12-month period, they work and live for several months in more than 900 of the Nation's 3,000 counties.

The migrant health projects have demonstrated that interest in meeting the health needs of migrant families exists in many communities across the Nation; and that States and communities are ready and willing to put forth effort and funds to make health services accessible to a temporary influx of migrants if they are encouraged to do so by the availability of outside financial and technical assistance in meeting a problem that no single State or community can meet alone.

These grant-assisted projects are community-based in the fullest sense of the term. The philosophy of the program is to encourage and to help the community recognize and assume its responsibility to include migrants in its planning and provision of health services, making whatever adaptations are necessary to serve them effectively. These projects are not demonstration or pilot projects. They provide urgently needed direct medical care to migrant farmworkers and their families.

Family health service clinics, serviced by nearly 1,000 physicians, are operating seasonally or year round in more than 225 locations in or near large concentrations of migrant workers and families. Last year, migrants made 210,000 visits to project physicians, and 28,000 visits to project dentists. In addition, nurses made 160,000 case-finding and health counseling visits to labor camps, other migrant home sites, schools, and migrant day-care centers. Projects have working agreements with 170 community hospitals in which over 3,600 migrants were hospitalized. Inter-project communication systems are being established to provide a capacity for continuity of care for migrant people as they move from place to place.

The program stresses flexibility in the scheduling of services to make them available at times and places where they can be effectively used. Physicians and nurses drive many miles, often over rough roads, to hold night clinics at points where migrants are concentrated. Health aides, recruited from the migrant community, work in the camps to interpret the service to those unaccustomed to seeking and using medical care.

In some localities, the number of migrants is small and they are widely scattered. In lieu of formal clinics, the project may set up a nursing program for regular camp visits for casefinding, referral of migrants to local physicians' offices, and arrangements for patient transportation, if necessary. This type of referral arrangement is often used to supplement family health clinics by providing services between clinic sessions.

Although progress is continually being made in the provision of health services to migrants, it is estimated that in the past year, health services reached only about one out of every three migrant workers. And they were reached typically for only about 3 to 6 months of the year. Even for the people with whom the program makes contact, the services are typically less than adequate. Dental services, especially for adults, remain a large area of almost untouched need. Preventive services, including systematic health evaluation of all patients seen by a project to determine evidence of hidden disease, must be given lower priority than care for immediate acute needs, and funds for support of hospitalized patients are often exhausted before the season is over.

Moreover, the overcrowded family health service clinics in some project areas testify to the need for better-staffed and more frequent clinic sessions. The family health service clinics, helpful as they have been, often operate in primitive facilities with primitive equipment. They are often understaffed and the physicians and nurses find themselves on a treadmill, treating symptoms without time or opportunity for doing much more.

From reports received from the projects, it is evident that growth in scope of service and geographic coverage are greatly needed. Local communities and States are willing and ready to assume part of the cost and the responsibility. They are beginning to find effective ways to relate the services of one project area to those in other areas where the same migrants are served, in order to provide increasing continuity of services for this population.

To meet the continuing needs of the Nation's migrants at a level more commensurate with their health problems requires continuation of the Migrant Health Act and substantially increased funds. The number of counties in which migrants have access to project services should be increased, with the expansion of geographic coverage concentrated on home-base and important "upstream" areas. More physicians and dentists should be employed for longer periods in existing and in new project areas.

Casefinding and followup care as migrants move from one county to another should be strengthened by adding more nurses and aides for field visiting to identify and bring migrants under care. The utilization of aides as intermediaries between the migrants and the professional health worker should be continued and expanded, in order to provide the migrant with greater opportunity to learn to accept responsibility for appropriate health action on his own behalf.

There is also need to extend services to other needy seasonal farmworkers and their families, who often live side by side with migrants, who share most of their handicaps except for mobility, and many of whom have migrated in the past and may again in the future. These seasonal farmworkers and their families form the core group in home-base areas from which the migrant population is drawn. There it is almost impossible to determine who is and who is not a migrant. The people themselves may decide to migrate one year and not the next.

The projects now in operation have largely been developed by careful planning and utilization of all available resources, Federal, State, and local, public and private. They are wonderful examples of community participation in planning and development of programs for health. However, the neglect of generations, cultural barriers, and the unusual problems found among the migrants cannot be overcome in a few short years. These projects are just now beginning to pay off on the investment. The bill recognizes the fact that special programs for agricultural migrants must be continued through the project mechanism if these people are not to be lost in the shuffle as they have been in the past. I, therefore, urge immediate passage of this bill as recommended by the Committee on Interstate and Foreign Commerce.

The SPEAKER pro tempore (Mr. HOLIFIELD). The question is on the motion of the gentleman from West Virginia that the House suspend the rules and pass the bill H.R. 14733.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

AUTHORIZING EL PASO AND HUDSPETH COUNTIES, TEX., TO BE PLACED IN THE MOUNTAIN STANDARD TIME ZONE

Mr. STAGGERS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 14289) to amend the act of March 4, 1921, to place the counties of El Paso and Hudspeth, Tex., in the mountain standard time zone, as amended.

The Clerk read as follows:

H.R. 14289

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the first section of the Act of March 4, 1921 (15 U.S.C. 265), the Secretary of Transportation may, upon the written request of the County Commissioners Court of El Paso County, Texas, change the boundary line between the central standard time zone and the mountain standard time zone, so as to place El Paso County in the mountain standard time zone, in the manner prescribed in section 1 of the Act of March 19, 1918, as amended (15 U.S.C. 261), and section 5 of the Act of April 13, 1966 (15 U.S.C. 266). In the same manner, the Secretary of Transportation may also place Hudspeth County, Texas, in the mountain standard time zone, if the Hudspeth County Commissioners Court so requests in writing and if El Paso County is to be placed in that time zone.

The SPEAKER pro tempore. Is a second demanded?

Mr. SPRINGER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. STAGGERS. Mr. Speaker, the bill (H.R. 14289) as amended would authorize the Secretary of Transportation to place El Paso County, Tex. in the mountain time zone if he is requested to do so by the County Commissioners Court of El Paso County.

If El Paso County is placed in the mountain time zone, the Secretary may also place Hudspeth County, Tex. in that time zone if requested to do so by the County Commissioners Court of Hudspeth County.

These two counties are the westernmost counties of Texas. They have been observing mountain standard time since 1883 even though, by the act of March 4, 1921, the entire State of Texas was placed in the central time zone. The problem arose in the two counties under the Uniform Time Act of 1966 which requires the Secretary of Transportation to obtain observance of time zones.

The Secretary of Transportation has taken the position that he cannot make this change administratively because of the 1921 act. Apparently most of the people in the two counties support this legislation.

It was reported out of the committee unanimously. I urge its passage by the House.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Iowa.

Mr. GROSS. In other words, the people in these counties in Texas do not care for the golfer's delight", or "fast time."

Mr. STAGGERS. I could not answer that question.

(Mr. SPRINGER asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SPRINGER. Mr. Speaker, when Congress passed the Uniform Time Act I am sure we all hoped that we would see the end of legislation on this subject. By giving authority to the Secretary of Transportation to adjust the boundaries between time zones and giving to the State legislatures the option of abiding by daylight time or remaining on standard time, it seemed that we had created the necessary machinery to eliminate the need for further action. It now appears that by reason of a technicality and some legislative overkill which occurred many years ago we must specifically confer some further authority upon the Secretary to avoid what appears to be an injustice.

After the Time Zone Act of 1918 which established the Interstate Commerce Commission as the body authorized to regulate time zones, the Commission placed the western portion of Texas in the mountain time zone. An effort was made to change the Panhandles of Texas and Oklahoma into the Central Time Zone. The ICC refused. As a result Congress passed an act in 1921 placing all of Texas and all of Oklahoma in the central standard time zone. This posed definite problems for El Paso and Hudspeth Counties because they not only lie at the extreme western end of the central time zone but are actually 5° within the mountain time zone. Without any further action by the Government El Paso and Hudspeth Counties proceeded to abide by mountain time from 1921 until the present.

Had it not been for this legislative action in 1921 the Secretary of Transportation could have adjusted the situation under the Uniform Time Act. Since we did not appeal or alter the previous action, he lacks authority to do so. The purpose of this legislation is to allow the Secretary if requested to place El Paso or El Paso and Hudspeth Counties, Tex., in the mountain standard time zone.

The informal arrangement which has persisted so long cannot be allowed to go on indefinitely. The Uniform Time Act contains penalties for nonconformance, and eventually the Secretary of Transportation would feel forced to require compliance.

The committee has been well aware that other situations exist which have caused local problems. The committee has resisted efforts to resolve them by further legislative action. None of these situations if they still exist would be germane to the particular bill we are considering today, and I trust that we can correct this one legislative irregularity without conjuring up all the other ghosts which have haunted this subject for the last few years.

Mr. WHITE. Mr. Speaker, the bill we are considering today is of vital importance to two counties of my district. It would apply only to the two westernmost counties of Texas, El Paso and Hudspeth Counties. It gives the Department of Transportation the same discretion in setting the time zones for these two counties which it now has with virtually every other area in the country. It adds to the uniform treatment of time zones in the United States.

This bill would simply permit the Department of Transportation to act, in its discretion, upon the petition of these two counties to be formally placed in the time zone they are now using—the only time zone they have ever used since the standard time zones were created in 1883.

This bill corrects a problem existing in the law. In 1921, Congress passed a law (15 U.S.C. 265) intended to place the panhandle and plains sections of Texas—far to the east of El Paso and Hudspeth Counties—in central standard time. However, by placing all of Texas in central standard time, Congress forgot these two westernmost counties, which are not in the panhandle or plains sections.

The reason El Paso and Hudspeth Counties have persisted in using mountain standard time is that, on mountain standard time, El Paso County is within 5 minutes of true time. The 105th meridian, the standard for the center of the mountain time zone, runs through the eastern edge of Hudspeth County. The 90th meridian, sun time for the central zone, is more than a thousand miles to the east. The entire economy of these two counties is geared to mountain standard time. The trade territory with New Mexico, which overlaps these two counties, is on mountain standard time. That is why the Interstate Commerce Commission and now the Department of Transportation have never insisted that El Paso and Hudspeth Counties observe central standard time, and all maps show them to be on mountain standard time. I took a poll recently in these two counties on the preference of the people. I received 4,720 ballots favoring mountain standard time or 98.3 percent, and 82 ballots for central standard time or 1.7 percent.

Then, why is this bill necessary now? In 1966, the Uniform Time Act gave the Department of Transportation enforcement powers concerning time zones. Under the strict wording of the 1966 act, El Paso and Hudspeth Counties could be forced to use a time zone they have never used, a time zone in which they do not belong. My bill would not affect any other part of the Nation. The Department of Transportation has endorsed this legislation, because it does not wish to continue, indefinitely, an anomaly, at variance with law and fact.

Mr. Speaker, because an hour's variation from true sun time, particularly when coupled with daylight saving time for half of the year, would cause great inconvenience and considerable hardship to residents of my district; and because passage of this bill would contribute to a more reasonable delineation of our Nation's time zones, I move that this House suspend the rules and pass House Resolution 14289.

The SPEAKER pro tempore. The question is on the motion of the gentleman from West Virginia that the House sus-

pend the rule and pass the bill H.R. 14289, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: "A bill to permit El Paso and Hudspeth Counties, Tex., to be placed in the mountain standard time zone."

A motion to reconsider was laid on the table.

PUBLIC HEALTH SERVICE HOSPITAL AT NEW ORLEANS, LA.

Mr. STAGGERS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 13448), to authorize the exchange, upon terms fully protecting the public interest, of the lands and buildings now constituting the U.S. Public Health Service Hospital at New Orleans, La., for lands upon which a new U.S. Public Health Service Hospital at New Orleans, La., may be located.

The Clerk read as follows:

H.R. 13448

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. That, subject to the provisions of section 2 of this Act, the Secretary of Health, Education, and Welfare, is hereby authorized, on behalf of the United States, to exchange with the administrators of the Tulane educational fund upon such terms and conditions as the Secretary may determine to be in the public interest, the lands and buildings comprising the United States Public Health Service Hospital at New Orleans, Louisiana, for lands upon which a new United States Public Health Service Hospital at New Orleans, Louisiana may be located, to be provided by the administrators of the Tulane educational fund at a suitable site.

SEC. 2. The exchange authorized by the first section of this Act shall not be made unless the Secretary of Health, Education, and Welfare determines (1) that the value to the United States of the property to be conveyed to it is equal to or in excess of the market value of the property to be conveyed by the United States, or (2) that the United States is to receive from the administrators of the Tulane educational fund upon conveyance of the properties to be exchanged, a sum of money equal to the amount by which the market value of the property to be conveyed by the United States exceeds the value to the United States of the property to be conveyed to the United States. Any money received shall be covered into the Treasury as a miscellaneous receipt.

The SPEAKER pro tempore. Is a second demanded?

Mr. SPRINGER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. STAGGERS. Mr. Speaker, this bill was reported unanimously by the committee, and we urge its passage. It was cosponsored by the gentlemen from Louisiana (Mr. BOGGS and Mr. HÉBERT), was supported by all witnesses at the hearings, and will benefit both the Public Health Service, the people of New Orleans, and the surrounding areas, and through improving the training programs in the health manpower areas, will provide more health manpower for the United States.

The Louisiana Legislature has created the Health Education Authority of Louisiana. This authority proposes to create a medical complex at Tulane School of Medicine.

Current plans provide for moving the Public Health Service Hospital from its present location in New Orleans to the site of this new center. The existing hospital is old and oumoded, and requires very substantial modernization. Constructing a new hospital at the site of this complex would provide better facilities for the care of patients of the service and would be of aid in the training programs of the hospital and of Tulane and other institutions in the area.

The bill would authorize the Public Health Service to exchange with Tulane the present site on which the existing hospital is located in return for land adjacent to Tulane University on which a new hospital could be constructed. If the value of the Federal property exceeds the value of the land exchanged for it, the bill provides that Tulane will reimburse the United States for that amount.

As is explained in our committee report, this authority is essential if we desire to insure that the Public Health Service be able to construct a new hospital at this complex.

As I mentioned earlier, the committee was unanimous in ordering the bill reported and we recommend its passage.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, is there a reverter clause in the bill?

Mr. STAGGERS. No. This is a complete exchange of properties. The old Public Health Service Hospital was constructed in 1932. There will have to be construction of a new hospital, and they want to put it in the new complex at Tulane University where it will do the most good. The only way they can do that is to exchange this land for that purpose.

Mr. SPRINGER. Mr. Speaker, Public Health Service hospitals and the services which they render to merchant seamen and others have been an institution in our country since before 1800. In recent years the Public Health Service has been cutting back the number of these hospitals due to changed needs in the fields in which they serve.

The New Orleans area appears to have ample justification for continuation of a Public Health Service hospital. The one located there, however, is very old and if retained should probably be completely rehabilitated and rebuilt.

Tulane University is in the process of creating a new medical complex, and it would be to the advantage of all the institutions concerned if the Public Health Service hospital could be located within that complex. By doing so the capability of Tulane to educate greater numbers of medical students and to broaden other health programs would be greatly enhanced.

Passage of this bill would allow the Public Health Service to exchange its present property for lands of equal value located near the new medical complex. It will make it possible to plan for the expanded center on a realistic basis. It does not, however, bind the Department of Health, Education, and Welfare to the continuation of a Public Health Service hospital in New Orleans if and when it might appear desirable to discontinue it.

The SPEAKER pro tempore. The question is on the motion of the gentleman from West Virginia that the House suspend the rules and pass the bill H.R. 13448.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the six bills just passed, which were brought out by the Committee on Interstate and Foreign Commerce.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

EXTENDING CERTAIN EXPIRING PROVISIONS OF LAW RELATING TO VOCATIONAL EDUCATION

Mr. PERKINS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 13630) to extend certain expiring provisions of law relating to vocational education.

The Clerk read as follows:

H.R. 13630

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 102(b) of the Vocational Education Act of 1963 is amended by striking out "and June 30, 1970," and inserting in lieu thereof "June 30, 1970, June 30, 1971, and June 30, 1972,".

SEC. 2. (a) Section 152(a)(1) of such Act is amended by striking out $15,000,000 for the fiscal year ending June 30, 1970," and inserting in lieu thereof "each of the three succeeding fiscal years,".

(b) Section 153(d) of such Act is amended by striking out "1969" and inserting in lieu thereof "1970, and on July 1, 1971."

SEC. 3. (a) Section 181(a) of such Act is amended by striking out "and June 30, 1970" and inserting in lieu thereof ", June 30, 1970, June 30, 1971, and June 30, 1972".

(b) Section 183(a) of such Act is amended by striking out "the fiscal year ending June 30, 1970," and inserting in lieu thereof "each of the three succeeding fiscal years,".

SEC. 4. Section 191(b) of such Act is amended by inserting after "1970," the following: "and each of the two succeeding fiscal years,".

SEC. 5. Section 555 of the Education Professions Development Act is amended by inserting after "1970" the following: ", and for each of the two succeeding fiscal years".

The SPEAKER pro tempore. Is a second demanded?

Mr. BELL of California. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. PERKINS. Mr. Speaker, H.R. 13630 would extend until June 30, 1972, the following vocational education programs which were first authorized by the Vocational Education Amendments of 1968. These programs are special programs for the disadvantaged under section 102–B of the Vocational Education Act of 1963.

Grants to States for residential vocational schools under section 152 of that act.

Interest subsidies for residential schools under section 153.

Vocational education work-study program under section 181.

Grants for the improvement and development of vocational education curriculum under section 191.

And teacher training provisions for vocational educators pursuant to the 1968 Amendments to the Education Professions Development Act.

The first program recited above dealing with the disadvantaged carries an authorization of $40 million for each of the fiscal years; the second program dealing with residential vocational schools, $15 million; the third program relating to interest subsidies, $5 million; the fourth program—work-study, $35 million; the fifth program curriculum development, $10 million; the sixth program involving teacher training carries an authorization for $35 million a year.

It will be recalled that these programs were authorized when the House passed last year H.R. 18366 without a single dissenting vote being cast against it. I urge my colleagues to continue to give strong support for continuing and strengthening our vocational education programs.

Mr. BELL of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 13630, the bill under discussion, would extend six existing programs of the Vocational Educational Amendments of 1968.

Although these programs do not expire until June 30, 1970, an extension by Congress at this time would permit the States much needed latitude in planning to meet their individual needs in these areas.

There are no increased authorizations in this bill.

The six programs would be extended at existing funding levels which were unanimously approved by Congress last year.

The Vice President recently spoke about the need for training American youngsters so that society can utilize their skills and talents.

Vocational education can teach every youngster—but particularly the distressed and disadvantaged youngster—a sense of his own worth.

It can show him how he can carve an important place for himself in rural and urban life.

It can help to make him feel essential to the society as a whole.

The report of the National Commission on Violence states that virtually all major crimes in this country are committed by youth between the ages of 15 and 24 who reside in cities.

Whether or not they are born in cities or move there because they can find no work in rural areas, far too many youngsters drop out of school and become outcasts from their own society.

Vocational education has helped immeasurably to reach many of these youngsters.

By stressing the creation of special programs to meet the needs of uniquely disadvantaged young people, encouraging progress is being made in schools in every one of our 50 States.

Curriculum development and teacher training are among the programs to be extended under H.R. 13630.

There is no question that they are integral systems that are mutually dependent on one another for success.

These and the other programs are necessary if the States are to develop the vocational education systems they need that relate to the problems and school age population of their States.

By extending existing authorization levels, they permit the States to modify their present plans in ample time to utilize these funds to their full effectiveness.

I urge my colleagues to join with those of us on the Education and Labor Committee who voted unanimously to provide these extensions under H.R. 13630.

Mr. PERKINS. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Speaker, H.R. 13630 sponsored by myself, extends through fiscal year 1972 six of the new programs authorized by the Vocational Amendments of 1968. These programs are: Special programs for the disadvantaged; State grants for residential schools; interest subsides for residential schools; work-study; curriculum development; and teacher training.

By extending these programs for an additional 2 years beyond their present expiration date of fiscal 1970, the Congress encourages the States to plan now for their individual needs in these program areas.

Under special programs for the disadvantaged, $40 million per year is authorized for individuals who have academic, economic, social, or other handicaps that prevent or inhibit them from achieving normal goals in vocational education programs. Our purpose in authorizing these funds is to stress the flexibility of vocational education in reaching every American youngster who is interested in learning a marketable skill.

Special programs designed to meet the specific needs of the disadvantaged in areas where there is a high concentration of unemployment reverse the treadmill of failure and rejection. By designing programs with specific individuals and specific job needs in mind, the States and businesses located in the States can benefit from full employment. I wish to stress that because Congress has such great expectations from these special programs for the disadvantaged and has, therefore, designed the program as the only one permitting the Commissioner to allow 100 percent Federal funding, we urge very careful administration of this section by the Office of Education.

The second program to be extended is that authorizing $15 million per year for grants to States for the construction and operation of residential vocational schools. This modest sum would be for students from rural and urban areas who have dropped out of school or who are unemployed and who require housing while enrolled in special vocational education training.

Third, H.R. 13630 authorizes $5 million for the first year for making annual grants to public agencies to reduce the cost of borrowing funds for the construction of residential schools and dormitories. Interest rates on loans are at an all-time high in the Nation today. These additional funds would allow greater flexibility in meeting these additional interest requirements.

Fourth, the highly successful work-study program would be extended for 2 years under this bill. Students who can support their schooling through part-time employment gain immeasurably in maturity and independence. By participating actively in obtaining their education, they learn to excel at an early age.

The fifth program—curriculum development—authorizes $10 million a year for the development and distribution of materials and information about vocational education for school systems in all 50 States There are excellent people in vocational education today with ideas and methods of instruction that should be accessible to teachers in other communities. The Federal Government encourages improvements in vocational education curricula to meet the needs of students in rural as well as urban communities by extending this important program for 2 years.

Last, and perhaps most important, H.R. 13630 authorizes $35 million a year for graduate fellowships and teacher training and retraining. Our committee studied projections estimating the need for new vocational teachers to be 170,000 by 1975. With school enrollments expanding faster than existing facilities and teaching personnel, we must place not only emphasis, but funds, on training new teachers and offering retraining in current vocational education technology to teachers who need it.

There is no question that expanded vocational education training can help to solve the problems of unemployment that exist in America today. Vocational education is no longer the stepchild of American education. It is the foundation on which we can build an equitable, productive future for all Americans.

I urge my colleagues to support the unanimous action of the General Education Subcommittee and the Education and Labor Committee in voting to extend these six essential components of the Vocational Education Amendments of 1968.

Mr. DENT. Mr. Speaker, H.R. 13630 provides for a 2-year extension of six existing programs of the Vocational Education Amendments of 1968.

These programs are scheduled to expire June 30, 1970. This action is being taken at this time—in advance of that expiration date—to allow the States some vitally needed time to pln their voca-

tional education requirements for the next 2 years.

H.R. 13630 authorizes no new funds for these programs. It merely continues them at existing funding levels. In this way the States have some target figures to work with in determining their achievable goals for the future in vocational education.

Last year the House of Representatives voted unanimously for the Vocational Education Amendments of 1968. This comprehensive, wide-ranging legislation took great care to give to the States the major responsibility of adapting existing programs to the actual needs of their cities and towns.

A major shift is taking place in American education today. Increasingly, educators, businessmen, parents, teachers, and pupils are becoming interested in making the classroom respond to the tempo of our times. This response is demonstrated in our new awareness of making education mean more to children of all ages.

Too many children fail to achieve because their time in school is largely wasted time. Denied access to subjects that can teach them some of the practical skills that will enable them to become employed, they drop out by the thousands each year and their latent skills and talents are lost to society.

The programs to be extended under H.R. 13630 provide special help to the disadvantaged and the poor. They provide for construction of residential vocational schools and they extend the life of the work-study program which stresses individual student effort to achieve a marketable skill. The bill also extends programs of curriculum development and teacher training, both of which are necessary components to any effective communication of vocational education skills.

I am happy to support these practical, eminently worthwhile programs and urge my colleagues to join in passing H.R. 13630 today.

Mr. EDMONDSON. Mr. Speaker, H.R. 13630 extends at present levels of authorization six worthwhile and necessary vocational education programs.

It is hoped that by extending these programs through fiscal 1972 at this time, the States will be given the time they need to plan effectively for the future. Too often programs are extended or cut off within days of their legislative expiration date, causing confusion on the part of those agencies responsible for administering them.

By permitting the States to know now that the programs will be extended beyond June 30, 1970, steps can be taken to insure the continuation of programs without loss of efficiency or personnel because of uncertainty.

The six programs in this bill are necessary. Special programs for the disadvantaged are essential in any realistic evaluation of the effectiveness of vocational education training in the Nation. Similarly, residential vocational education schools are important to those youngsters who must travel great distances to school or who, for one reason or another, can only succeed when they are removed from their present environments. Oklahoma State Tech, at Okmulgee, Okla., is a splendid example of such school and its success.

The work-study program, which would also be extended under this bill, provides for and encourages young people to earn their way through school by means of part-time employment. This program acquaints the youngster with the world of work at an early age and shows him how he can achieve in that world and compete on equal footing with others of his own age.

From the standpoint of taxpayers, parents, and employers who will benefit from a comprehensive vocational education training program in the schools, curriculum development, and teacher training are undeniably vital. We need more vocational educators and greater access to techniques and methods of teaching vocational education.

H.R. 13630 extends these six programs for 2 years. It provides no new funding levels. It permits the States to plan to meet their actual and differing needs under these programs.

I urge my colleagues to join in extending these programs now.

Mr. MATSUNAGA. Mr. Speaker, I rise in support of H.R. 13630, a bill to extend, through fiscal year 1972, six of the programs which were authorized by the Vocational Education Amendments of 1968.

The Vocational Education Amendments of 1968 recognized the importance and need for a strengthened program of vocational education in this country. The proposed extension of these six programs, authorized by the 1968 act, would further reflect this body's recognition of the importance of educating, through vocational training, that segment of our population which does not choose to pursue a college career.

The proposed legislation would allow the States and local school districts to plan for these programs for the next 2 school years. If enacted, the legislation we are now considering would provide for the funding of special programs for the disadvantaged; for the construction and operation of residential vocational schools; for teacher training and retraining projects, and for work-study programs, where a student might supplement his schooling with a part-time job in a public agency.

One of the programs would authorize $5 million in interest subsidies for the first year for making annual grants to public agencies to reduce the cost of borrowing funds for the construction of residential schools and dormitories.

Another program would authorize $10 million a year for the development and dissemination of vocational curricular materials, standards and surveys. This program would insure improvement of existing courses and development of new courses in emerging occupational fields.

Mr. Speaker, it is imperative that this body take positive action to extend these programs authorized by the Vocational Education Amendments of 1968. Extension of these proven programs would help prevent wasted manpower among our young people and adults. It is clear that training and retraining constitutes the key to maintaining an adequate labor force for the future. we can help to reduce unemployment and provide for the Nation's future labor needs by the extension of these provisions in the 1968 act.

Mr. Speaker, for these reasons, I urge a favorable vote on this legislation.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Kentucky that the House suspend the rules and pass the bill H.R. 13630.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. PERKINS. Mr. Speaker, I ask unanimous consent that all Members who may desire to do so may have 5 legislative days in which to revise and extend their remarks on this bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

PERMISSION FOR HOUSE MANAGERS TO FILE CONFERENCE REPORT ON S. 2917, FEDERAL COAL MINE HEALTH AND SAFETY ACT

Mr. PERKINS. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the Federal Coal Mine Health and Safety Act, S. 2917.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

VESSEL BRIDGE-TO-BRIDGE COMMUNICATION

Mr. GARMATZ. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6971) to require a radiotelephone on certain vessels while navigating upon specified waters of the United States, as amended.

The Clerk read as follows:

H.R. 6971

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Vessel Bridge-to-Bridge Radiotelephone Act".

SEC. 2. It is the purpose of this Act to provide a positive means whereby the operators of approaching vessels can communicate their intentions to one another through voice radio, located convenient to the operator's navigation station. To effectively accomplish this, there is need for a specific frequency dedicated to the exchange of navigational information, on navigable waters of the United States.

SEC. 3. For the purpose of this Act—

(1) "Secretary" means the Secretary of the Department in which the Coast Guard is operating;

(2) "power-driven vessel" means any vessel propelled by machinery; and

(3) "towing vessel" means any commercial

vessel engaged in towing another vessel astern, alongside, or by pushing ahead.

SEC. 4. (a) Except as provided in section 6 of this Act—

(1) every power-driven vessel of three hundred gross tons and upward while navigating;

(2) every vessel of one hundred gross tons and upward carrying one or more passengers for hire while navigating;

(3) every towing vessel of twenty-six feet or over in length at the water line while navigating; and

(4) every dredge and floating plant engaged in or near a channel or fairway in operations likely to restrict or affect the navigation of other vessels—

shall have a radiotelephone capable of operation from its navigational bridge or, in the case of a dredge, from its main control station and capable of transmitting and receiving on the frequency or frequencies within the 156–162 Mega-Hertz band using the classes of emissions designated by the Federal Communications Commission, after consultation with other cognizant agencies, for the exchange of navigational information.

(b) The radiotelephone required by subsection (a) shall be carried on board the described vessels, dredges, and floating plants upon the navigable waters of the United States inside the lines established pursuant to section 2 of this Act of February 19, 1895 (28 Stat. 672), as amended.

SEC. 5. The radiotelephone required by this Act is for the exclusive use of the master or person in charge of the vessel, or the person designated by the master or person in charge to pilot or direct the movement of the vessel, who shall maintain or cause to be maintained a listening watch on the designated frequency. The master or person in charge may permit the use of the radiotelephone on other authorized frequencies within the maritime mobile band whenever there is no risk of collision.

SEC. 6. Whenever radiotelephone capability is required by this Act, a vessel's radiotelephone equipment shall be maintained in effective operating condition. If the radiotelephone equipment carried aboard a vessel ceases to operate, the master shall exercise due diligence to restore it to effective operating condition at the earliest practicable time. The failure of a vessel's radiotelephone equipment shall not, in itself, constitute a violation of this Act, nor shall it obligate the master of any vessel to moor or anchor his vessel; however, the loss of radiotelephone capability shall be given consideration in the navigation of the vessel.

SEC. 7. The Secretary may, if he considers that marine navigational safety will not be adversely affected or where a local communication system fully complies with the intent of this concept but does not conform in detail, issue exemptions from any provisions of this Act, on such terms and conditions as he considers appropriate.

SEC. 8. (a) The Federal Communications Commission shall, after consultation with other cognizant agencies, prescribe regulations necessary to specify operating and technical conditions and characteristics including frequencies, emission, and power of radiotelephone equipment required under this Act.

(b) The Secretary shall, subject to the concurrence of the Federal Communications Commission, prescribe regulations for the enforcement of this Act.

SEC. 9. (a) Whoever, being the master or person in charge of a vessel subject to this Act, fails to enforce or comply with this Act or the regulation, hereunder; or

Whoever, being designated by the master or person in charge of a vessel subject to this Act to pilot or direct the movement of the vessel, fails to enforce or comply with this Act or the regulations hereunder—

Is liable to a civil penalty of $500 to be assessed by the Secretary.

(b) Every vessel navigating in violation of this Act or the regulations hereunder is liable to a civil penalty of $500 to be assessed by the Secretary for which the vessel may be proceeded against in any district court of the United States having jurisdiction.

(c) Any penalty assessed under this section may be remitted or mitigated by the Secretary upon such terms as he may deem proper.

SEC. 10. This Act shall become effective January 1, 1970, or six months after the promulgation of regulations which would implement its provisions, whichever is later.

The SPEAKER pro tempore. Is a second demanded?

Mr. MAILLIARD. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. GARMATZ. Mr. Speaker, the bill presently being considered is intended to facilitate communication between masters or pilots of approaching vessels. At the present time, the only means of communication is by prescribed whistle signals. Frequently, however, this signal system has proved insufficient to avoid collisions. Whistle signals are sometimes misunderstood. Also, under certain weather conditions, or because the pilothouse is relatively soundproof, the signals in fact have not been heard at all. As a result, during recent years there have been a number of very serious accidents resulting in the death of well over a hundred men.

H.R. 6971 is one of a number of bills that the Committee on Merchant Marine and Fisheries intends to present for consideration of the House during the present Congress, to reduce accidents in our navigable waters. They include licensing of personnel aboard diesel towboats, chiefly on our inland waterways, and a consolidation of the rules of the road to reduce the present four systems to a single system. It is to be hoped that enactment of these three bills will serve to arrest the trend toward increasing casualties on our waterways.

The present bill would provide for a radiotelephone on the bridge of vessels on our waters, with a requirement that the master or person in charge of the vessel keep communications open so as to talk to and listen to his counterpart on an approaching vessel where there is any risk of collision.

This legislation is intended only to provide for communication between the bridges of ships for the exchange of navigational information. It is not intended to replace existing radio facilities for safety or such radio officers carried aboard vessels as are required under existing law or agreements.

Within the past few years, we have seen in New York harbor, a collision and fire involving two tankers which were approaching each other without means of adequate communication. We have seen two collisions in the Mississippi River near New Orleans involving ocean freighters and oil-carrying barges resulting in the loss of over fifty lives. I submit to the House that all of these tragedies could have been prevented by adequate communication and it is believed that the system contained in the bill will achieve its purpose of increasing safety.

The interest of the committee was aroused as early as 1955 at the time of the collision of the passenger liners *Andrea Doria* and *Stockholm*, and as a result of an investigation by a group of experts on behalf of the committee, a recommendation was made that ships be equipped with bridge-to-bridge radiotelephones. This proposal is currently under consideration by the Intergovernmental Maritime Consultative Organization in London, and this bill is the counterpart nationally of its efforts internationally.

The present bill came to the committee by way of an Executive communication and during the hearings received almost universally favorable comments. In presenting this bill to the House, I am hopeful of favorable consideration because I am convinced that it is necessary to reduce the ever-increasing number of deaths and injuries on our waterways.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. GARMATZ. Yes. I am glad to yield to the gentleman.

Mr. GROSS. Is there any cost to the Federal Government involved?

Mr. GARMATZ. There is no cost whatsoever, I will say to the gentleman from Iowa.

Mr. MAILLIARD. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this bill is an important step forward in the field of maritime safety and I wish to join the distinguished chairman of our committee in urging that the House pass this bill.

Mr. Speaker, H.R. 6971 was unanimously reported by the Committee on Merchant Marine and Fisheries. I believe this legislation will close a serious gap in the ability of vessels to anticipate the intentions of other vessels which are encountered under potentially hazardous circumstances. As indicated by the distinguished chairman of the Merchant Marine Committee, there have been a number of serious collisions in congested harbor areas and on our inland waterways in recent years, which might not have occurred had the masters of the vessels involved been able to communicate by radio from their respective bridges.

The rules of the nautical road require the exchange of whistle signals between vessels which are passing or crossing. All too frequently, however, these signals are not heard because of wind conditions or because the bridge is completely closed on account of the weather. Additionally, in crowded harbor areas and on the inland waterways in the vicinity of major port areas, the volume of traffic encountered renders the exchange of whistle signals meaningless.

At the present time, the vast majority of oceangoing, harbor and river vessels are equipped with some form of radio communication equipment. This equipment is used, however, primarily for the exchange of commercial messages between the vessel and its company

headquarters and the marine exchange. Generally speaking, there is no established channel for the exchange of navigational information between vessels. Certain port areas, however, such as my own city of San Francisco and the city of New York have established voluntary systems of bridge-to-bridge communication covering at least those sections of the port where experience has shown that voice communication is essential.

A voluntary system of bridge-to-bridge communication also exists on the Mississippi River system above New Orleans, and by agreement with Canada a uniform system of radio communication has been in use on the Great Lakes since 1954. With thee exception of the Great Lakes system, however, all of the current arrangements depend upon the voluntary cooperation of the waterway users.

H.R. 6971, as introduced, would have applied only to power-driven vessels of 300 gross tons or over, vessels of 100 gross tons or over carrying passengers for hire, and dredges or other floating equipment operating in a navigational channel. The 300-gross-ton limitation would have effectively eliminated all harbor towing vessels, as well as the great majority of vessels operating on the inland waterways. The committee therefore amended the bill to require a radio-telephone on all commercial towing vessels of 26 feet or over in length at the waterline.

The second significant amendment adopted by the committee eliminated the statutory exemption for the Great Lakes and the Upper Mississippi River system. While the testimony received by the committee indicated that the bilateral agreement with Canada is being implemented satisfactorily, it does not conform to the radio frequency transmission capability specified in the bill. The Coast Guard has advised the committee that negotiations are currently underway with Canada to revise the agreement to adopt the frequency specified in H.R. 6971. When this has been accomplished, there will be no need for oceangoing vessels entering the Great Lakes to maintain a dual bridge-to-bridge radio capability.

Similarly, the voluntary system currently in effect on the Mississippi River system employs a longwave AM radio transmission system, which is not compatible with the standards called for in the legislation. Testimony before the committee indicated that a substantial majority of towing vessels on the Mississippi do, however, have the high frequency shortwave equipment.

In view of the rapid progress being made in the field of shortwave very-high-frequency telecommunications, the committee felt that it would not be advisable to grant a statutory exemption from the requirements of the act to any geographic area. The technical advantages of the very-high-frequency communication equipment will, in time, probably lead to its universal adoption.

In conjunction with the elimination of statutory exemptions for the Great Lakes and the Mississippi River system, and in order to recognize the voluntary systems now in use in certain major port areas, the Committee on Merchant Marine further amended H.R. 6971 to increase the discretionary authority of the Secretary of Transportation to exempt from the requirements of the bill areas where marine navigational safety will not be adversely affected, or areas where a local communication system fully complies with the intent of the bill but does not conform in detail. Under this authority, the Secretary may attach to this exemption such terms and conditions as he considers appropriate to insure that all vessels operating within the area covered by the local communication system have on board radio equipment which is compatible with the local system.

Accordingly, pursuant to section 7 of the bill, as amended, the Secretary of Transportation may exempt the Great Lakes, the Mississippi River system, and other areas which now have radiotelephone systems under regulations which insure that the system will function effectively. These exemptions will enable the maritime industry to move toward a uniform national system without disruption during the period of transition. The merit of this flexible approach is obvious when one considers the great number of ports and waterways which will be affected by the legislation. Local customs and procedures cannot be replaced overnight. Statutory exemptions would, on the other hand, tend to inhibit progress toward a nationwide uniform system and would not cover all areas where exemption, at least on a temporary basis, is warranted.

The significance of this legislation lies in the fact that it will give the master or pilot of the vessel a means of instant communication with virtually every ship he may encounter in American waters. The equipment will be located on the bridge readily at hand. Since it is intended for communication between vessels at close quarters, it need not have a significant range and could consist of a compact handset. Foreign vessels entering American waters normally take on board a qualified American pilot, who may bring the radiotelephone on board with him if the vessel is not already equipped.

Undoubtedly, the pilot associations of the various port and river areas which are frequented by foreign vessels will work out suitable arrangements to accommodate foreign-flag vessels as part of their overall service. Hopefully, however, the work of the International Maritime Consultative Organization will soon lead to an international radiotelephone convention which will require the presence of this equipment on all vessels in international waters.

Mr. Speaker, this bill is an important step forward in maritime safety and has been carefully reviewed and amended by the Committee on Merchant Marine and Fisheries. I join the distinguished chairman of our committee in urging its passage.

Mr. CLARK. Mr. Speaker, my experience as chairman of the Coast Guard Subcommittee of the House Merchant Marine and Fisheries Committee makes it quite obvious that we desperately need a bill such as this present one.

During the past 2 years, we have seen over 100 lives lost by reason of lack of communication between approaching vessels on our domestic waters. It is probable that most, if not all, of these lives could have been saved had this bill been effective.

It is designed to make certain that the master of an approaching vessel have clearly in mind the intentions of the other vessel so as to take necessary steps to avoid collision. This type of system is already in operation in a number of foreign ports and is presently being actively considered by the Intergovernmental Maritime Consultative Organization for adoption internationally.

We must increase safety on our waters and this is a most effective way of doing so.

The SPEAKER pro tempore (Mr. HOLIFIELD). The question is on the motion of the gentleman from Maryland that the House suspend the rules and pass the bill H.R. 6971, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

A motion to reconsider was laid on the table.

CHANGING THE LIMITATION ON APPRENTICES AUTHORIZED TO BE EMPLOYEES OF THE GOVERNMENT PRINTING OFFICE

Mr. DENT. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 9366) to change the limitation on the number of apprentices authorized to be employees of the Government Printing Office, and for other purposes, as amended.

The Clerk read as follows:

H.R. 9366

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of October 22, 1968 (ch. 3, Sec. 305, 82 Stat. 1240) (44 U.S.C. 305), is amended by deleting in the second sentence the words "nor more than two hundred apprentices at one time" and substituting therefor the words "nor more than four hundred apprentices at one time".

The SPEAKER pro tempore. Is a second demanded?

Mr. GROSS. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. DENT. Mr. Speaker, the Government Printing Office operates an apprenticeship program which is limited by law to a maximum of 200 apprentices. This law was enacted in 1924, at which time the business of the office was but a fraction of its present production, and when its employment was only slightly more than half the present force.

The Government Printing Office finds it necessary to fill approximately 250 journeymen vacancies per year. In 1968, there were 304 vacancies that had to be filled. This was necessary because of attrition due to retirements, deaths, transfers, and other causes. Under the existing law on apprentices, the office is able to graduate 50 or less of the 250 journey-

men it needs each year. The remaining 200 or more journeymen need to be recruited from commercial printing plants.

The present limitations of 200 apprentices on a 4-year apprenticeship permits an average of only 50 appointments each year. Considering the Government Printing Office's need for replacing about 200 journeymen per year over and above those completing the apprenticeship program, the program does not provide the necessary manpower.

Initially, the bill stipulated that 500 additional apprentices would be employed by the Government Printing Office. Disagreement with this proposal was expressed by the trade unions employed at the Government Printing Office. Subsequently, hearings were held September 23 and October 16, 1969. The result was a directive by myself, chairman of the Subcommittee on Printing, that the Public Printer and the trade unions hold private negotiations to resolve their differences. The agreement they reached is printed in the report on this bill.

This was done and this bill now has support of all interested parties. The bill was unanimously approved by both the full committee and the subcommittee.

Mr. GROSS. Mr. Speaker, I yield back my time.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Pennsylvania that the House suspend the rules and pass the bill H.R. 9366, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

A motion to reconsider was laid on the table.

TO PROVIDE FOR ADDITIONAL MEMBERS OF THE BOARD OF REGENTS OF THE SMITHSONIAN INSTITUTION

Mr. THOMPSON of New Jersey. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 14213) to amend sections 5580 and 5581 of the Revised Statutes to provide for additional members of the Board of Regents of the Smithsonian Institution.

The Clerk read as follows:

H.R. 14213

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 5580 of the Revised Statutes (20 U.S.C. 42) is amended to read as follows:

"SEC. 5580. The business of the Institution shall be conducted at the city of Washington by a Board of Regents, named the Regents of the Smithsonian Institution, to be composed of the Vice President, the Chief Justice of the United States, and three Members of the Senate and three Members of the House of Representatives; together with nine other persons, other than Members of Congress, two of whom shall be resident in the city of Washington; and the other seven shall be inhabitants of some State, but no two of them of the same State.".

(b) The first sentence of section 5581 of the Revised Statutes (20 U.S.C. 43) is amended to read as follows: "The regents to be selected shall be appointed as follows: The Members of the Senate by the President thereof; the Members of the House by the Speaker thereof; and the nine other persons by joint resolution of the Senate and House of Representatives.".

(c) The fifth sentence of section 5581 of the Revised Statutes (20 U.S.C. 43) is amended to read as follows: "The regular term of service for the other nine members shall be six years; and new elections thereof shall be made by joint resolutions of Congress.".

The SPEAKER pro tempore. Is a second demanded?

Mr. GROSS. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. THOMPSON of New Jersey. Mr. Speaker, this is a piece of legislation which I would say will not cost the Federal Government anything.

Mr. Speaker, the governing body of the Smithsonian Institution is a Board of Regents consisting of 14 members: the Vice President of the United States; the Chief Justice of the Supreme Court; three Members of the U.S. Senate, appointed by the President of the Senate; three Members of the U.S. House of Representatives, appointed by the Speaker; and six private citizen members appointed on recommendation of the Regents by joint resolution of the Congress.

This bill, H.R. 14213, would increase from six to eight the number of private citizens serving on the Board of Regents. This proposed increase is commensurate with the recent growth in the Smithsonian Institution's responsibilities, the national character of the Institution, and the Institution's interest in gaining greater support, both from public and private sources, throughout the Nation.

Since 1955, the Smithsonian's staff has increased from 500 to more than 2,000, and the operating appropriations from $3 million to $26 million—almost ninefold.

The number of visitors to the Smithsonian has increased from 8 million in 1957 to an estimated 19 million in 1970.

The buildings for the preservation of the national collections and for their exhibition have grown from 1.4 million square feet to 3.3 million square feet.

Congress in the past few years has substantially broadened the diversified programs of the Institution, among them:

The National Museum of History and Technology—Public Law 106, 1955;

The National Portrait Gallery—Public Law 47–443, 1962;

The National Air and Space Museum—Public Law 89–509, 1966;

The Joseph H. Hirshhorn Museum—Public Law 89–788, 1966; and

The Woodrow Wilson International Center for Scholars—Public Law 90–637, 1968.

In the face of such growth, the importance of adding new members and their additional knowledge and leadership to the Board of Regents is highly desirable.

A larger membership would free the Regents—now rather hard pressed to keep up with events in this growing organization—to concentrate more deeply and to focus more effectively upon problems facing the Institution. With a larger membership sharing responsibility for the leadership of the Institution, for example, one member might feel free—as he now really cannot—to examine the Institution's management procedures and offer valuable advice; another might devote himself to building national interest and support for the Institution and its programs.

There are other reasons, beyond mere institutional growth for the expansion of the Board of Regents. The Smithsonian, which exists for "the increase and diffusion of knowledge among men," has a national and even international mandate. This is a national establishment chartered by the Congress; the museums are national institutions which open their doors to all who would enter; and, the research programs, traveling exhibitions publications, and exchanges with other museums and scholarly institutions literally embrace the globe.

In an age of change, when new demands are being made upon educational institutions to be more responsive, to be more open, to be more democratic, it is well for us to demonstrate our willingness to broaden the leadership of the Smithsonian.

The Smithsonian is a special sort of establishment, at once public and private, authorized by the Congress to seek and accept support from private sources.

It is believed that a more broadly based Board of Regents, representing more effectively the entire country, will materially help in efforts to gain support for the Smithsonian from individuals, families, foundations, and business concerns.

Members of the Board of Regents are paid only necessary traveling and other actual expenses in attending meetings of the Board. His service as a Regent is gratuitous.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, how many warm bodies did the gentleman say this would add to the Board of Regents of the Smithsonian Institution?

Mr. THOMPSON of New Jersey. It would add two more bodies.

Mr. GROSS. And, for what reason?

Mr. THOMPSON of New Jersey. Simply to give broader representation throughout the land and make it easier for them to get a quorum. The present constituency of the Board is, first, the Vice President, then the Chief Justice of the Supreme Court, the three Members of the Senate appointed by the President of the Senate, the three Members of the House appointed by the Speaker and six private citizen members, two of whom under the existing statute come from the District of Columbia. This is to broaden the national representation.

Mr. GROSS. To add two members against a population of 200 million would give the public what kind of added representation, percentagewise? I know the gentleman does not have the exact figure——

Mr. THOMPSON of New Jersey. My

arithmetic is not very good, but I might say it would be small. I also might add that in 1846 there were fewer than 20 million people in the United States, and they had 14 Regents back then, and the country is now in excess of 200 million people, and this would increase it by only two, so it is a very small increase.

Mr. GROSS. Is it possible that this could be for the purpose of more leverage on the Committee on Appropriations for more money for the Smithsonian Institution?

Mr. THOMPSON of New Jersey. No, I do not think so, I will say to my friend, the gentleman from Iowa, because in my years here and my experience here I know of no leverage being applied by any of the Regents of the Smithsonian for more money on appropriations. Also our colleagues, the gentleman from Ohio, Mr. KIRWAN and Mr. Bow, are both on the committee, and are Regents. The Chief Justice apparently, as near as I can tell, does not go out and lobby for money, nor does the Vice President come over to this side, and lobby for more money, although he is more active elsewhere.

Mr. SCHWENGEL. Mr. Speaker, will the gentleman yield to further answer that question?

Mr. GROSS. The gentleman from New Jersey has the time.

Mr. THOMPSON of New Jersey. If the gentleman from Iowa (Mr. GROSS) has further questions, I would like to answer those questions first before I yield to the gentleman.

Mr. GROSS. Mr. Speaker, I would ask the gentleman from New Jersey what problems are there that present 14 Regents cannot solve that two more Regents can solve?

What are the problems that necessitate this?

Mr. THOMPSON of New Jersey. I would say in all candor that 14 can solve the problems which exist as well as 16, except that the availability of two more warm bodies would make it easier.

Mr. GROSS. Would make it easier? Then the present 14 want a little more comfortable way of life, perhaps? Could it be put that way?

Mr. THOMPSON of New Jersey. There is not really much comfort involved, as the gentleman might imagine, because these are mostly positions of honor, and are occupied by extremely distinguished citizens who at considerable sacrifice serve.

Mr. GROSS. Who in the executive branch asked for these additions? Or was there anyone in the executive branch that asked for them?

Mr. THOMPSON of New Jersey. The Regents from the executive branch are the ones who asked for the increase. There has been no objection from the Bureau of the Budget or anywhere else. I do not know that I could characterize these as administration requests, or executive branch requests.

Mr. GROSS. Then let me ask who wants these additional Regents?

Mr. THOMPSON of New Jersey. The incumbent Regents of the Smithsonian want them. A number of the members of the Regents, this being a very broad-based educational institution, find themselves when they come to their Regents' meetings unable to concentrate on areas that are specialties or are of special interest, and with the addition of two more members it would broaden the scope of their capability.

Mr. GROSS. Perhaps the gentleman from Iowa (Mr. SCHWENGEL) can shed more light than I have gotten so far on this. I will await his remarks, if the gentleman from New Jersey is going to yield to him. I will await with interest the comments of the gentleman from Iowa.

Mr. THOMPSON of New Jersey. I would say to the gentleman from Iowa that I would have brought a few more experts with me had I known that more illumination was necessary.

I will now yield to the gentleman from Iowa (Mr. SCHWENGEL).

Mr. SCHWENGEL. Mr. Speaker, I thank the gentleman for yielding.

First, Mr. Speaker, I want to commend the gentleman who has the floor, the gentleman from New Jersey (Mr. THOMPSON). The gentleman has explained the bill, and I agree with the gentleman completely in his observations and in his answers.

The one additional comment I want to make is this—and the gentleman from New Jersey has touched on it—that it would give the Regents a broader base, and the Regents are asking for this increase.

You notice on page 2 of the report that the Board of Regents has under its jurisdiction the National Museum of History and Technology, a magnificent new construction that reveals very much of our history and the machinery and technology available to the public free of charge; the National Portrait Gallery; the National Air and Space Museum; the Joseph H. Hirshhorn Museum, and the Woodrow Wilson International Center for Scholars.

We have these because they were given to us, and we have been the beneficiaries of tremendous gifts through the years beginning, of course, with the one from England itself, I think somewhere in the neighborhood of $400,000.

What the Regents would like to do is to have this broader base and bring these people in who could have a greater appeal to the foundations and the money to underwrite, at no cost to the Government, and widening and broadening their programs. I think it is very desirable and a modest request.

It was unanimously passed and actually there were extensive hearings and there was testimony from the Secretary and from Members.

Mr. THOMPSON of New Jersey. I thank the gentleman.

Mr. GROSS. Mr. Speaker, I yield myself such time as I may require, and I ask unanimous consent to revise and extend my remarks previously made and the remarks I am about to make.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. GROSS. Mr. Speaker, I still am at a loss to understand who wants the two additional Regents.

There are two Members of the House—no there are three on the Board of Regents, and I do not see them here supporting this proposal. They include the gentleman from Texas (Mr. MAHON) and the gentleman from Ohio (Mr. Bow), the ranking members of the Appropriations Committee.

Where, I ask again, is the great demand for the two more Regents—two more warm bodies, on this Board of Regents?

The gentleman from Iowa says that they need a broader base. I do not know what he means by a broader base—whether it is a broader base from which to exert power on the Congress to obtain better and bigger appropriations. What is this all about?

I know of no problems that the present Regents cannot solve.

Mr. THOMPSON of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I am delighted to yield to the gentleman.

Mr. THOMPSON of New Jersey. As I said earlier in our colloquy, I do not know of any problem that the present Regents cannot solve and they themselves are the initiators of the request for the enlargement of the Board of Regents. They feel the additional Regents would make them a more representative body and would put them in a position to do their work better.

One must remember that the members of the Board of Regents of the Smithsonian Institution do not get the traditional per diem that many other bodies get. They get just the actual traveling expenses. They are assigned from the Government officials, which I enumerated earlier—persons in private life.

At the time of the establishment of the institution as a part of the Federal Government, there were approximately 20 million people in the United States. Now there are 200 million people in the United States.

The testimony indicates that George Washington University here in the District of Columbia, for instance, has a board of trustees, 43 in number. There are many, many other educational institutions, and the Smithsonian is one of these that have many more than 14 or 16 members. It simply could not, I assure the gentleman, increase lobbying capability because that just will not happen.

Mr. GROSS. Why does the gentleman say that? Why will it not happen? Why cannot it happen?

Mr. THOMPSON of New Jersey. Well it never has.

Mr. GROSS. I am not too sure about that.

But let me ask the gentleman this question. Do the Regents of the Smithsonian Institution have anything to do with that cultural palace over in Foggy Bottom, at the other end of Constitution Avenue?

Mr. THOMPSON of New Jersey. Does the gentleman mean that unfinished edifice about which he and I have had so many discussions?

Mr. GROSS. The cultural white elephant.

Mr. THOMPSON of New Jersey. The Jefferson Memorial has been there for a great many years. I do not know that they have anything to do with it.

Mr. GROSS. I am talking about the cultural castle.

Mr. THOMPSON of New Jersey. Oh, you mean the Lincoln Memorial. No, they have nothing to do with that, either.

Mr. GROSS. The Smithsonian has nothing whatever to do with that?

Mr. THOMPSON of New Jersey. Housekeeping purposes, perhaps, but not in the running of it.

Mr. GROSS. Now we are getting down to bedrock.

Mr. THOMPSON of New Jersey. One has to put such an edifice on bedrock in that area because, as you know, the Tidal Basin is nearby.

Mr. GROSS. There is going to be a lot of housekeeping over in Foggy Bottom when they get that cultural palace completed.

Mr. THOMPSON of New Jersey. This has nothing to do with the State Department, I assure the gentleman.

Mr. GROSS. I am not talking about the State Department; I am talking about your cultural castle.

Mr. THOMPSON of New Jersey. Is the gentleman referring to the proposed aquarium?

Mr. GROSS. No, the gentleman knows to what I am referring, and apparently there will be a lot of housekeeping problems over there. Perhaps the need for two more Regents is to do something about the housekeeping at the cultural castle

Mr. THOMPSON of New Jersey. I do not know exactly to what the gentleman refers. I have driven by all those edifices recently.

Mr. GROSS. The gentleman well knows they are not going to have enough money to operate that so-called cultural center when they get it constructed. They are going to come back to the taxpayers, and if the Regents of the Smithsonian Institution have anything to do with it, I am sure they will be in here banging on the doors for more money.

Mr. THOMPSON of New Jersey. I might say to the gentleman that at none of the buildings operated by the Smithsonian Institution is there a charge for the public to see them.

Mr. GROSS. Will there be a charge——

Mr. THOMPSON of New Jersey. On the Terrace at the Institute of Technology, down on the Mall—there is no charge for any of them.

Mr. GROSS. The gentleman is saying, then, that when that cultural castle is completed, I can walk in as free as the wind at any time and see any of the alleged shows that will be put on. You know they are going to charge admission.

Mr. THOMPSON of New Jersey. I do not know what the gentleman is referring to, but since I enjoy his company so much, I shall be glad to buy a ticket for him and accompany him there.

Mr. GROSS. The gentleman knows they will charge for the parking of cars and admission when they get that edifice completed. Otherwise how could he stand on the floor and say they will pay off the bonds?

Mr. THOMPSON of New Jersey. I do not know what the gentleman is talking about, but, for example, in the immediate vicinity of the Jefferson Memorial there is a little tidal basin. There are boats there. I understand that for a moderate charge one may rent one of those boats by the hour, and one can buy soft drinks and popcorn nearby, flags, and other memorabilia.

Mr. GROSS. I thought I saw one of those boats stalled out on the water not so long ago, and I thought I saw the gentleman from New Jersey in it.

Mr. THOMPSON of New Jersey. Some people undertake nautical excursions with or without the proper equipment, such as oars, and so on; but in this case we are merely trying to add two warm bodies to the Regents of the Smithsonian.

Mr. SCHWENGEL. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Iowa, but I urge him to be careful.

Mr. SCHWENGEL. I would like to point out to the gentleman, who is very interested in serving the public interest, that one of the points made to us by the Secretary, a member of the Regents who appeared before the committee, indicated that by broadening the base and bringing some other influential people to the Board of Regents, they could make a stronger appeal to foundations and to business concerns.

Mr. GROSS. They can make a stronger appeal to the Appropriations Committee for more money on behalf of the Smithsonian Institution and the cultural palace. Is that what is being geared up for us here this afternoon?

Mr. SCHWENGEL. The gentleman and I were together on the cultural palace; but the Smithsonian Institution has no jurisdiction there. They have no influence. I imagine certain members of the Regents would be interested.

Mr. GROSS. The gentleman from New Jersey, who has more than a passing interest in culture, as he has demonstrated here over the years by continuing to promote that white elephant, tells us otherwise. He says the Smithsonian is interested in the housekeeping at the so-called cultural center.

Mr. THOMPSON of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from New Jersey.

Mr. THOMPSON of New Jersey. Mr. Speaker, I do not know whether a recent arrival on the floor wishes to become a part of this very constructive discussion, but I know our distinguished and great friend, the gentleman from Ohio (Mr. Bow), who is a Regent, is here. He might help me out of my present predicament.

Mr. GROSS. If the gentleman wishes to yield the time, he may do so. I do not know which side the gentleman from Ohio is on. The time on this side is reserved for opposition to this strange proposition.

Mr. Speaker, I reserve the balance of my time.

The SPEAKER pro tempore. The question is on the motion of the gentleman from New Jersey that the House suspend the rules and pass the bill H.R. 14213.

The question was taken; and on a division (demanded by Mr. GROSS) there were—ayes 15, noes 10.

Mr. THOMPSON of New Jersey. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken and there were—yeas 273, nays 119, not voting 41, as follows:

[Roll No. 328]

Mr. Abbitt with Mr. Anderson of Tennessee.
Mrs. Chisholm with Mr. Clay.
Mr. Conyers with Mr. Edwards of California.
Mr. Kirwan with Mr. Dawson.
Mr. Hanna with Mr. Nix.
Mr. Rarick with Mr. Van Deerlin.

The result of the vote was announced as above recorded.

The doors were opened.

A motion was laid on the table.

GENERAL LEAVE

Mr. THOMPSON of New Jersey. Mr. Speaker, I ask unanimous consent that all Members may have 3 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

ILLINOIS JURIST RECALLS WORLD WAR II ATROCITY

(Mr. PRICE of Illinois asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. PRICE of Illinois. Mr. Speaker, with the recent interest in Okinawa my colleagues might like to share with me the personal recollections of the Japanese surrender of the island of a close friend of mine, the Honorable James Monroe, circuit judge of Madison County, Ill. Judge Monroe then an Air Force captain was responsible for investigating atrocity cases and for serving as a legal adviser to a joint British-American war crimes unit.

I am certain the Members will find the following article from the December 8 edition of the Collinsville, Ill. Herald, for which I request unanimous consent to include at this point in the RECORD, compelling reading:

RECALLS WORLD WAR II ATROCITY: LOCAL MAN ARRESTED OKINAWA COMMANDER

With Okinawa soon to be returned to Japan and Pearl Harbor Day freshly in mind, a Madison County judge recalls his biggest case and the arrest of the Okinawa commander for war crimes.

Checking his souvenirs of the wind-up to World War II is Circuit Judge James Monroe, then Air Force captain investigating atrocity cases and legal adviser to a joint British-American war crimes unit.

General Rickichi Ando was the Japanese Okinawa commander, and Governor General over that island and Formosa, where he and his staff were taken into custody.

The arrest was at the General's villa outside Taipei, then called Taihoku under Japanese influence, as Formosa was called Taiwan. The Japanese were still there "living like kings," Monroe said, in the spring of 1946, when the investigations were completed and the arrests were made.

IT WASN'T SIMPLE

Monroe recalls how, with a team of only three Americans and five British, he had to go all the way through U.S. Army channels in Shanghai to Generalissimo Chiang Kai-Shek at Canton to get Chinese support for the arrests and for the protection and movement of the prisoners to Shanghai.

Ando and two other Japanese officers committed suicide after being flown to U.S. War Crimes headquarters in Shanghai, by taking cyanide from under their fingernails.

Monroe's team, consisting of five British officers, two Americans and an interpreter, turned up the evidence on three main war crimes:

ATROCITY CASES

1. The "jungle camp" atrocity cases against Japanese in charge of British and American prisoners of war in the island interior—where many prisoners died of starvation, disease, overwork, brutality or torture.

2. The Kinkaseki copper mine case against Japanese in charge of British and other prisoners of war forced to do war materiel work under dangerous conditions and in violation of international law.

3. The "fourteen American flyers" case, against Ando and his staff, charged with executing 14 U.S. Navy pilots shot down over Formosa and later executed, on the basis of false Japanese military court charges that the flyers had indiscriminately bombed civilians.

The Japanese interpreter at the "kangaroo court" trial, a former University of Chicago economics graduate then a Tokyo professor, gave Monroe a 20-page affidavit showing how the court martial records were forged to show "confessions" never actually made by the American flyers.

The American flyers case was tried in a U.S. War Crimes court in Shanghai, where the remaining Ando staff officers found responsible received death sentences or long prison terms.

The jungle camp cases involving mainly British victims, were tried in Hong Kong, where Monroe served several weeks in pretrial work.

LT. PETER M. HANSEN SCHOOL, CANTON, MASS.

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BURKE of Massachusetts. Mr. Speaker, I would like to take this opportunity to call to the attention of the membership of the House of Represenatives the great honor I shared in participating in the dedication of the Lt. Peter M. Hansen School to the town of Canton, Mass. on Sunday, November 30, 1969.

The Canton School Committee, working with the wholehearted support and faith of the Canton community has constructed a school that combines the best of architectural design and efficiency and overwhelmingly displays the foresight of those responsible for the needs of the Canton community in the future.

I am proud that I was allowed the opportunity to participate in the dedication ceremonies, and prouder still of the Canton residents who have given unstintingly of themselves to make the Lt. Peter Hansen School a reality.

I am pleased to submit a copy of a letter I have received from Mr. Clifford Seresky, chairman of the dedication committee and the dedication program for November 30, 1969:

CANTON PUBLIC SCHOOLS,
Canton, Mass., December 2, 1969.

Hon. JAMES A. BURKE,
Congressional Office Building,
Washington, D.C.

DEAR MR. BURKE: On behalf of the Dedication Committee and the Town of Canton, I would like to take this opportunity to express our sincere appreciation for your participation in the Dedication of the Lt. Peter M. Hansen School. The message you brought to the people of Canton is appreciated and will long be remembered.

Thank you most sincerely.

Very truly yours,

CLIFFORD SERESKY,
Chairman, Dedication Committee.

THE LT. PETER M. HANSEN SCHOOL DEDICATION EXERCISES, SUNDAY, NOVEMBER 30, 1969, CANTON, MASS.

"For God And For Country": The committee members who have contributed effort, talent and unlimited time in making this school a reality:

Robert P. Holland, Chairman; Margaret R. Brayton, Ed. D., Charles T. Brooks, Theodore J. Goodman, M.D., Henry S. Hampson, Frederick J. McCabe, Vice Chairman, M. Ruth Ruane, Clifford Seresky, Leo Thornton, and William H. Galvin, Secretary.

Daniel T. Galvin, Duncan J. Gillis, Jr., William A. Flanagan, Edward J. Lynch, and Leonard F. O'Brien.

The Dedication Committee: Clifford Seresky, Chairman; Charles T. Brooks, William H. Galvin, Duncan J. Gillis, Jr., Theodore J. Goodman, M.D., Virginia A. Hobbs, and Frederick J. McCabe.

The Board of Selectmen: Henry S. Hampson, Chairman; Richard W. Murphy, Clerk, and Harold J. Fitzgerald, Member.

The School Committee: Theodore J. Goodman, M.D., Chairman; Margaret R. Brayton, Ed. D., Guy V. Digirolamo, William Kelleher, Thomas Lane, Michael C. Loughran, Leonard F. O'Brien, M. Ruth Ruane, Ronald E. Pozzo, Secretary, William H. Galvin, Superintendent of Schools, and John A. O'Connell, Assistant Superintendent of Schools.

Program presentation by the Permanent School Building Committee of the Lt. Peter M. Hansen School to the Town of Canton, November 30, 1969, at two thirty o'clock.

Unfurling the Stars and Stripes: Color Guards American Legion and Veterans of Foreign Wars. Comdr. James R. Dowling and Comdr. William G. Vieria; David Pike C.H.S. '70; Richard Beaubein C.H.S. '70; Canton High School Band and Edward J. Beatty Post No. 24 American Legion Band.

Opening remarks: Clifford Seresky, Chairman Dedication Committee.

Invocation: Rabbi Murry Gershon, Temple Beth Abraham.

Greetings: Robert P. Holland, Chairman Permanent School Building Committee.

Presentation and acceptance: Dr. Theodore J. Goodman, Chairman of School Committee; William H. Galvin, Superintendent of Schools; Lawrence M. Walsh, Principal.

Wonderful Day Like Today (Newley): The Canton Bands, John J. Judge, Leader.

Introduction of invited and distinguished guests.

Prayer for the Nation: Rev. Leo J. McCann, Pastor St. Gerard Majella.

Introduction of members of the school building and school committees.

Address: Hon. Henry S. Hampson, Chairman of the Board of Canton Selectmen.

Gallant Men (Cacavas): The Canton Bands, John J. Judge, Leader.

Oration: Hon. James A. Burke, Member of Congress.

Unveiling: Portrait of Lt. Peter M. Hansen by Mr. and Mrs. Edward C. Callery.

Prayer for children: Rev. John Hay Nichols, Unitarian-Universalist Church.

Presentation of flag: Edward J. Beatty Post No. 24, American Legion.

March of America (Moffitt): Canton Bands, John J. Judge, Leader.

Announcements.

Benediction: Rev. James L. Babcock, Rector of the Trinity Episcopal Church.

Refreshments: Mrs. Marie Holland, Dietician and the Cafeteria Ladies.

Tour of the building.

The faculty: Lawrence M. Walsh, principal; Virginia McGagh, Anne McDonough, Gail McNamara, Patricia A. Flynn, Joan D. White, Carole Raby, Mary J. Valin, Marion Feeney, Ann O'Malley, Ann Galvin, Elaine Patsos. Joseph Trovato, Jean C. Sturdy, Marjorie Bennet, Frances Steinberg, Susan M. Cleveland, and Paul Merchant.

Health office: Nelson D. Batchelder, M.D., Harold W. Tate, D.MD., and Mildred M. Gillis, R.N.

Elementary supervisor: Margaret Sullivan.

Description: The two-story academic wing containing 24 classrooms is joined at mid-level to all shared facilities such as Cafetorium, Gymnasium, Library, Reading and Administration area. There are four special classrooms at ground level. Two of the special classrooms with self-contained toilet rooms and storage area are planned for exceptional children. The remaining two special classrooms are planned for future Kindergarten use. Storage and book rooms are distributed on both floors.

The Cafetorium is equipped with dining tables which fold into the wall to allow for easy conversion to assembly use. The gymnasium can be divided by a motorized folding partition to provide two teaching spaces. Shower and locker rooms are adjacent and provide access to outdoor play areas as well as to the gymnasium.

Finish materials have been selected to minimize maintenance. Corridors are carpeted with walls of ceramic tile and painted light weight block. Ceilings, in general, are acoustic tile. Classroom floors are vinyl tile and walls are glazed block up to chalkboard height. Coat hanging space is provided behind vertically sliding chalkboards. All controls such as clocks, speakers, switches are grouped in a panel near the entry door. Typical classroom measures twenty seven feet by thirty two feet providing an area of 864 square feet and is furnished with sink, storage units, teacher's storage unit, chalkboards and tack boards.

In addition to the Cafetorium and Gymnasium, the mid level, shared facilities include a Library flanked on one side with Librarian's Office, work room and Audio Visual area. A Remedial Developmental Reading room is located at the opposite end of the Library. In addition to the usual administrative facilities such as Principal's Office, Health and Teacher's work room an office for the Elementary Supervisor is also provided.

The building is steel framed with concrete slabs on grade, and concrete on metal decking at the upper level. A forced hot water heating system supplies heat to unit ventilators, unit heaters and convectors.

Site development includes a fenced in lighted basketball area which can be flooded for skating, a baseball field and teacher and visitor parking. A single service area has been provided for all service to the building.

Acknowledgement: In the name of Canton, the Permanent School Building Committee expresses its sincere appreciation to all who have so generously aided it in accomplishing its work.—Robert P. Holland, Chairman.

Photographs by Gerzon's Photo Studio.

Architects—Rich, Phinney, Lang & Cote.

General Contractor—J. M. Construction Company.

Clerk of the Works—Walter R. Hearn resigned in November, 1968, Paul L. Mullen.

Programs distributed by the Canton High School High School Cheerleaders.

Color Guards—Edward J. Beatty Post 24, American Legion, Canton Post 3163 Veterans of Foreign Wars.

Clifford Seresky—Presiding.

A statement of thanks from the chairman: Over the past decade, the people of Canton have placed upon the membership, past and present, of the Permanent School Building Committee serious and compelling responsibilities. To this Committee has been entrusted the formidable task of planning and building and providing the brick, the stone and all the other appurtenances which go into making the physical facilities of our excellent educational system. Faced with the staggering demands on our tax dollars, together with the sacrifices entailed therein, this Committee has come before you at many Town Meetings and requested the necessary financing with which to provide our children with these maximum modern facilities. Unstintingly, you have approved and given approbation to your Committee.

Today is presented to you the result of your financial support and the work of your Permanent School Building people. This new addition to the Canton Schools complex will stand for generations to come as a testimony of your benevolence and your contribution and your belief in the Youth of Canton.

The Permanent School Building Committee is appreciative of the opportunity given to its membership—it is thankful for the privilege of being your spokesman in the field of municipal educational facilities—and it pledges by its future work to merit your continued approval.

CLIFFORD SERESKY,
Chairman, Dedication Committee.

MYLAI

(Mr. DORN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DORN. Mr. Speaker, without question there is a diabolical, sinister scheme underway to destroy the Armed Forces of the United States. The latest is the charge against our soldiers at Mylai.

There are those who would try and convict American soldiers for trying to defend themselves in the heat of battle. The most effective way to destroy any army would be to have its soldiers subject to court-martial and retroactive charges for their every action in combat. This would paralyze and render impotent in the field the combat effectiveness of an army. There is no way to guarantee civilians will not be injured in the blinding smoke, dust, excitement, and confusion of battle. It has happened in every war, and it will happen again. Fewer civilians will be injured when maximum firepower is employed to end the struggle as quickly as possible. I shudder to think how many million American civilians will be slaughtered if we invite world war III by hamstringing our Armed Forces.

Mr. Speaker, I have observed the American soldier in the combat zones of Europe, Korea, and Vietnam. He is certainly the most humane soldier in the world. His tactics are not terror tactics such as those employed by Nazis, Fascists, and Communists. In Vietnam the American soldier has a better record in protecting and preserving the lives of civilians than any U.S. Army or any other army in the history of the world.

The combat effectiveness of the GI in Vietnam has been adversely affected by his love for children who are constantly in camp, and by his knowledge that he is fighting on two fronts—one to destroy the enemy soldier, and the other to win the people of South Vietnam when it is virtually impossible to tell friend from foe. Our men virtually have to withhold their fire until first being booby-trapped or fired upon.

I commend Congressman RIVERS for his role in halting the ridiculous Green Beret trial. I commend our beloved, dis-

tinguished, and able Chairman RIVERS for appointing a special committee from the Armed Services Committee to thoroughly investigate the Mylai charges. The Nation is heartened and encouraged by the courage of Mr. RIVERS and the dedicated members of the House Armed Services Committee who will see that justice prevails for our fighting men.

Mr. Speaker, I am confident that this special committee will take into account the scurrilous Communist propaganda. And, also, I know this committee will take into consideration the South Vietnam Government's investigation of these charges which they repudiated as Communist propaganda.

NO CURFEWS IN CHICAGO

(Mr. MIKVA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MIKVA. Mr. Speaker, it is with great sadness that I note that certain elements of the black community in Chicago have proclaimed a "dawn to dusk curfew" for whites in black areas of the city. Although a certain malaise among the blacks is understandable in light of the unanswered questions about the shootings of Fred Hampton and Mark Clark, declaration of a curfew for whites in black areas is a most unfortunate and unjustified reaction which ultimately can only work to the detriment of both blacks and whites. I hope that those black leaders involved will recognize the shortsightedness of their present course and will withdraw their declarations immediately.

When any group of Americans is denied access, either officially or unofficially, to any part of our Nation's cities because of the color of their skins then all Americans are the losers. The irony of such discrimination by those very citizens who for centuries suffered in America under the oppression slavery and later of segregation and racial discrimination should be apparent. A small minority of Americans has nothing to gain by attempting to isolate itself from the rest of our society. The members of that minority will be the worst losers of such an attempt.

Mr. Speaker, the events of the last 2 weeks in Chicago have led to increased racial tension and distrust in that city. But the leadership of our city must explore ways to ease that tension and distrust, not exacerbate it. An impartial investigation by persons who can be both dispassionate and disinterested will illuminate the facts and circumstances of the shootout at the Black Panther apartment. That is why I have called for such an investigation. I was pleased to see that Mayor Daley also urges an impartial investigation. As an advocate for strong gun control laws, I hold no brief for the stated philosophy of political violence espoused by the Panthers; but as an even greater advocate of the Constitution, I hold no brief for those who seek to sweep under the rug the unanswered questions which go to the heart of due process of law.

Likewise I deplore the violence which preceded and followed the Panther "shootout." I am saddened at the loss of two white Chicago policemen who were reportedly ambushed and killed in a black neighborhood. I am dismayed at the assaults on students and others by those who exalt violence as a philosophy or the gun as a persuader.

I believe that the fullest investigative resources of State and local police agencies must be utilized to solve such crimes; I know of no reason why such resources would not be deemed credible for these tasks; it is the fact that law enforcement itself has been challenged which requires an outside investigative force in the deaths of the Black Panthers.

All men of good will must agree that there can be no winners in a game based on the color of a man's skin. All must agree that there should be no curfews for Chicago, for blacks or whites—and that those who suggest or countenance such tactics create the very repression which unfortunately has been a part of our history but must not be a part of our future.

BILL TO ESTABLISH A JOINT COMMITTEE ON ENVIRONMENTAL QUALITY

(Mr. KLEPPE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KLEPPE. Mr. Speaker, I have today introduced a measure that would establish a Joint Committee on Environmental Quality.

It is vitally important that the Congress recognize the urgency of the quality of our environment, and that we establish a joint committee to work with the President in making the 1970's the "Environmental Decade."

I do not want to imply that we must cease our efforts after one decade, but I do feel that we will have made a good beginning toward improving this country's natural resources for our children and their children.

For far too many years, we have largely ignored the damage being done to our land, our waters, and our atmosphere. Now that the situation has reached crisis proportions, it is imperative that we attack the factors with all the human and material resources at our command.

It is time for the U.S. Congress to accept its responsibility and establish the necessary joint committee to provide the legislation and congressional support as our environmental efforts proceed.

It is not enough for us to clean up our land, our water, and our atmosphere. We must provide alternatives that will prevent the future depletion of our resources.

In this connection, I introduced legislation earlier this year that would provide farmers and ranchers with an economic alternative to drainage. The water bank bill, H.R. 11717, was designed to stop the destruction of our wetlands. Today, at least 40 percent of the Nation's inland wet lands have disappeared because of drainage, highway construction, flood control, reclamation projects, and urban and industrial sprawl.

No piece of legislation with which I have ever been assoicated has received such broad and enthusiastic support from the people of North Dakota as has the water bank bill. But it is important to note that wetlands loss is a national rather than a State or regional problem. When we destroy our wet lands, we destroy the areas where our fish and wildlife breed. Yet we are destroying them, and it is time that we stop.

CHRISTENING OF THE U.S.S. "SUMTER"

(Mr. WILLIAMS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WILLIAMS. Mr. Speaker, on Saturday, December 13, I was proud to be present at the christening of the U.S.S. *Sumter* at the Philadelphia Naval Shipyard. The *Sumter* is one of the new class of tank-landing ships known as the *Newport* class which is a greatly improved vehicle over the World War II type LST.

The sponsor of the ship who christened it on this occasion was the lovely and charming Mrs. Strom Thurmond, who performed her duties with grace and acclaim. It was a great occasion and those of us who were present were stirred by the ceremonies.

The principal speaker on this occasion was the sponsor's husband, the senior Senator from South Carolina, Mr. THURMOND. Mr. THURMOND's address on this occasion was devoted not only to the historical aspects of the name *Sumter* and the ships which preceded, but also to an assessment of the role of naval power in the missile age.

Senator THURMOND, who is the second ranking Republican on the Senate Armed Services Committee, pointed out the vast growth of the Soviet Navy and its tremendous attention to independent mobility on the seas and to submarine warfare. Senator THURMOND made a striking point when he said that the growth of these two aspects of the Soviet Navy is tied to the Soviet first-strike missile strategy. The key role of the naval power, according to the Soviet theory, is for the battle of world domination to take to the seas after the first strike has been launched.

Mr. Speaker, I would like to share with my colleagues the address by Senator THURMOND at the christening of the U.S.S. *Sumter* at the Philadelphia Naval Shipyard on December 13, 1969. It follows:

ADDRESS BY SENATOR STROM THURMOND

We are gathered here today to honor a ship named Sumter, a town named Sumter, a county named Sumter, and a patriot named Sumter. The common thread which runs through all of these is dedication to our country and to the ideals for which it stands. This ship is named after the town and county of Sumter, South Carolina. There are several counties in the South named after General Thomas Sumter, the revolutionary war hero, but Sumter, South Carolina and its county seat of the same name have the honor of being the only locale so-named in which the revered General actually dwelt. He lived in that vicinity for 67 years, until he died

at the age of 98. If nothing else, the locale must have been good for his health.

This ship, before which we stand, stands in a great tradition. She is one of a new class of tank landing ship known as the Newport class. She will have a greatly increased combat vehicular lift and landing capability over World War II tank landing ships. She and her sister ships afford the fastest and most efficient means of landing tanks, artillery and assault vehicles under combat conditions. Her normal method of unloading will be over the ramp, to pontoon causeway, then to the beach. A stern ramp is also provided for loading and unloading amphibian vehicles in deep water.

Her overall length is 522 feet, 3 inches. Her extreme beam is 69 feet, 6 inches; her full load displacement is 8,000 tons; her mean draft is 14 feet, 8 inches. Her speed is in excess of 20 knots. She will have accommodations for 32 officers and 588 men. Her armament will include two twin three inch .50 caliber guns. She is a handsome ship, as up to date as possible, and she will do the Navy proud.

This is not the first American ship named Sumter. She has been preceded by four other Sumters—two in the U.S. Navy and three in the Confederate States Navy. My arithmetic is correct, since one of them served in both navies. She was the cotton-clad Confederate Ram originally known as the General Sumter. Built in 1853 as a river tow boat, she was converted to a ram in June, 1861, with bales of cotton sandwiched between double pine planking bulkheads. She helped the Confederates defend Fort Pillow on May 10, 1862, and did yeoman service on June 6 at the Battle of Memphis, where she rammed the famous USS Queen of the West. All did not go well, however, since she was captured by Union forces a few hours later. Renamed the USS Sumter and put in Union service, she was damaged by Confederate guns off Vicksburg on July 15, and finally ran aground off Baydu Sara, Louisiana in August. Abandoned and stripped of parts, she was finally burned by the Confederates.

The second Sumter was the famous Confederate Raider that patrolled the Atlantic shipping lanes, gunning down Union ships on the high seas. Converted from the packet steamer Havana in June, 1861, she brought guerrilla warfare to the mid-Atlantic, taking 18 prizes in six months. Finally, she was blockaded by three Union ships at Gibralter. Realizing that the furious game was over, the Captain dismissed the crew, sent the officers back to the Confederacy, and sold the ship into British registry.

The third ship named Sumter was the Confederate transport built near Charleston in March, 1863. Her brief history was not quite so glorious. She was essentially a troop and munitions carrier plying the tidal rivers of South Carolina for five months. On the 30th of August she was mistaken for a Union monitor and sunk by the Confederate batteries from Fort Moultrie as she came up the channel.

The fourth ship named Sumter was the APA 52 Attack Transport of World War II. The keel was laid in April, 1942 as the SS Iverville. Delivered to the Navy a year later, she was renamed the USS Sumter after Sumter counties in South Carolina, Alabama, Florida and Georgia. Commissioned as an attack transport on September 1, 1943, she was the flagship of Transport Division 26. She served everywhere in the Pacific theater in such legendary areas as the Marshall Islands, Saipan, Guadalcanal, the Philippines, Guam and the Solomon Islands. She was decommissioned on March 19, 1946, but she had earned five battle stars to permanently assure her a place in military history.

The keel of the fifth ship named Sumter was laid on November 14, 1967, and we are about to launch her on a career which ought to be equally illustrious.

The man whose fame furnished the occasion of all these namesakes was born in Virginia in 1734 and was initiated into the Soldier's art with Braddock and Forbes in the French and Indian War. Among the Virginia troops sent to South Carolina during the Cherokee campaign, Sergeant Sumter was a tough, wiry little man who was later to become known as "The Gamecock of the Revolution." In 1765 he acquired lands in South Carolina, and two years later married Mrs. Mary Cantey Jameson, a well-to-do widow, several years his senior, and went to live in what is now Clarendon County.

Having served in the continental service as a Lieutenant Colonel, Sumter had retired in 1778 and was in retirement when the British conquered South Carolina in 1780. When Tarleton raided and destroyed his home, Sumter fled to Charlotte, established headquarters nearby, and effectively stirred up resistance. In October, he was commissioned Brigadier in command of the South Carolina militia, and was commended by Congress for his numerous exploits. Despite the fact that there was no state government in existence, Sumter undertook to raise and support a dependable force of mounted troops, enlisted for a regular period and paid in plunder from the Loyalists. He kept the largest body of militia on the field and was the first to make them stand against British regulars.

After the war, he founded the village of Statesburg, South Carolina, bred race horses, was a charter member of the Santee Canal Company and of the Catawba Company, and took out grants for more than 150,000 acres of land. In the S.C. convention to consider the Federal Constitution, he opposed ratification until Virginia could be heard from. He was a member of the First Congress, and frequently voiced his anti-Federalist feelings. In 1801, he was elected to the U.S. Senate, where he remained until 1810. Although a small man, his strength and agility were as remarkable as his longevity, and he rode horseback until the day of his death on his estate near Statesburg at the age of 98.

The General's leadership, both in war and peace, won him the undying gratitude of his fellow citizens. At the close of the eighteenth century, the S.C. Legislature united three counties of Camden District; namely, Claremont, Clarendon and Salem. On the first day of January, 1800, the new unit began to function as Sumter District, named in honor of the General, who was then serving in Congress. Sumter District was not a corporate body and could not own property or make contracts. It had no governing body for local administration. It was merely a unit for the administration of justice. The latter required a court house which was speedily built at a crossroads on a centrally located farm. The tiny village which grew up around the court house was named Sumterville. Sumter was chartered a town in 1845, and in 1887 became the City of Sumter.

Sumter District did not become Sumter County until 1868, after the fall of the Confederacy. The original area of the county, 1,672 square miles, has been reduced to 681 square miles, largely by the cutting off of Clarendon County in 1855 and of Lee County in 1902. Both county and city therefore grew up together.

The first shot in the War Between the States was fired by a Sumter youth, Citadel Cadet George E. Haynsworth, in Charleston Harbor in January, 1861, when the Star of the West attempted to bring in supplies for the Federal troops in Fort Sumter. Of course Fort Sumter was also named for our hero.

If I were to single out any particular quality of the citizens of Sumter, I would cite their historic resourcefulness in providing for the common need. As early as 1809, for example, the citizens had organized the Sumterville Circulating Library Society. In 1911, the City of Sumter became the first city in the world to adopt the city manager form of government. Or to take another example, in 1940 a group of citizens decided that Sumter County would be a good place to have an air force training base. Acting upon their own intiative, they examined sites, took options and convinced the Federal Government of the necessity of the base. The city and county then purchased the site for $180,000 in 1941 and leased it to the government at a dollar a year for ninety-nine years. By the end of the year came Pearl Harbor, and the rest is history. Shaw AFB, as it is known today, was named after Lieutenant Ervin D. Shaw, the first Sumter County pilot to die in combat in World War I.

II

But let us turn away from history for a moment. We are launching this ship at the same time when we are entering into a new period of confrontation with the Soviet Union—confrontation on the high seas. There have been dramatic changes in the Soviet naval posture, and I think that we had better pay attention to these changes, and their implications for the over-all Soviet strategy.

The two significant developments in Soviet naval power are the increased mobility of the Soviet surface fleet, and the intensive development of the Soviet submarine fleet, both in numbers and quality. Many commentators have asked what the Soviets are seeking. Some have even questioned the role of naval power in the era of massive intercontinental ballistic missile systems and suggested that the growth of Soviet naval power was the result of superior political maneuvering within the Kremlin.

In my judgment, the two-fold growth of Soviet naval power is a logical outgrowth of Soviet ambitions. The Soviets realized that their political goal of the domination of the world called for a powerful navy to support the control of the seas. Thus the Soviet Navy had to become a mighty arm of the ideological-political control exercised by the Kremlin.

At one time the Soviet navy was pretty much land-locked, ice-bound fleet that kept close to home ports. Since 1956, the Soviets have deliberately set out to acquire domination over the seas. They launched a program of building the most modern fleet in the world. It has taken them a long time to begin to come up to our standards of sophistication and engineering, but the inevitable result of their large construction program is newer ships in commission. The Russian naval fleet totals 1,575 vessels, as opposed to 894 for the United States. Moreover, 58 percent of the U.S. Navy's combat ships are 20 years old or more; but only 1 percent of the Soviet navy is that old. Another result is that the Soviets have five of the most modern shipyards in the world, three of them capable of building nuclear powered ships.

The real question, however, is not just the size of the Soviet fleet, but the strategy behind the increase in size. Historically, the Soviet navy has been hampered by the lack of warm water training cruises. The Black Sea was just too small for effective training. It was not until 1964 that the Soviets began to appear frequently in the Mediterranean. In that same year, Soviet naval vessels began to take routine long cruises, visiting European ports throughout the Atlantic and the North Sea. Today Soviet activity in the Mediterranean is a constant presence which has had an observable effect upon political developments in the Mid-East.

The most remarkable aspect of the Mediterranean cruises, as many observers have pointed out, is the constant practice in refueling and provisioning at sea. Despite base privileges in Egypt and Algeria, the Soviets have concentrated on training that keeps the fleet independent of land operations. Similarly, the Soviets have established an "un-

derway support group" in the mid-Atlantic to tend their ships at sea.

A final point in the discussion of Soviet surface fleet operations is the growing activity in the Pacific, where as many as 125 vessels often operate, including 30 armed with missiles. The massive flotilla that the Soviets sent to the coast of Korea after the Pueblo seizure, and the similar fleet sent to participate in the hunt for the U.S. EC–121 reconnaissance plane shot down by North Korea are typical of the training exercises devised by Soviet tacticians.

Although all of these training exercises which I have mentioned may be required by the lack of secure Soviet naval bases in some parts of the world, the thing to remember is that the Soviets are training their fleet to be independent of land operations. The role of the navy appears to be distinct from that of support of guerrilla operations in the so-called "national liberation struggles." In my judgment, this independent, seagoing operation is of critical importance in understanding the over-all Soviet strategy, and I will come back to it in a moment, after discussing some other considerations.

The other noteworthy aspect of Soviet naval development is the intensive program of submarine construction. We have 143 submarines; the Soviets have more than 375. We have 81 nuclear powered units; the Soviets have 65, but they are building one nuclear sub a month, and may surpass us by the end of 1970. By 1978, they may well have constructed between 100 and 150.

In connection with this massive submarine program, we have to take note of the Soviet interest in sea-borne missiles. It is estimated that over 40 of the Soviet subs are equipped with ballistic missiles capable of strategic attack against the U.S. The new Y-class submarine, comparable to our Polaris, has been observed on the high seas. In addition, over 60 Soviet submarines are equipped with 400-nautical-mile anti-ship missiles which have some capability against land targets. It ought to be noted that geography favors the Soviet position, since many of our major cities are exposed on the East and West Coasts, while the major Soviet cities are located deep within the continental land mass.

In addition, the Soviets have also mounted missiles on surface ships. Although the Soviets have chosen not to build any carriers, they have 29 missile cruisers, including 7 of the brand-new Kresta class, designed from keel up to accommodate missiles. They have about 30 missile destroyers, including 8 Kynda class destroyers of similar original design.

All of this Soviet submarine activity must be connected directly with the intensive training of its surface fleet in sea-support operations. We must conclude that the Soviets are seeking a world-wide mobility and independence of operations for its naval power.

What remains to be considered, then, is the role of this world-wide naval power in the over-all Soviet strategy. Is the role of this fleet intended to be merely an adjunct of the power politics of the Soviet Union, or does it have a unique part to play in the over-all strategic thrust of the Soviets against the United States?

Some people have argued that the ICBM systems of the two great powers provide the major deterrence against war, and that older weapons systems would be useful in local conflicts, but would not be decisive. Such thinking relegates conventional sea and land forces to a secondary role.

The Soviets do not agree. They envision the conflict with the West as a conflict of systems, carried on at all levels. They are striving for superiority of power, not merely adequacy to protect their interests. This year, for the first time, the Soviets surpassed us in the number of ICBM's, and they continue to build at a constant rate. And even if it were true that the ICBM systems had reached a technological stalemate, the Soviets are concentrating on the development of new kinds of weapons systems that will get around the ICBM stand-off.

For one thing, the ICBM stand-off depends upon the theory that no one would attempt a first-strike, since both sides have enough reserve power to destroy the other in return. Soviet military strategy does not accept such a concept. The official Soviet strategists, such as the late Marshal V. D. Sokolovsky, and others, maintain that it is possible to destroy the United States Minuteman system in its silos, before the missiles are launched. They speak of a so-called "retaliatory first strike", explaining that Soviet intelligence can detect when the so-called "imperialist aggressors" are preparing to launch a first strike. The Soviets would then launch a "retaliatory strike" to destroy the attacker's missiles on the pad. Such a strike would eliminate the ICBM threat, or at least reduce it to proportions manageable by ABM defenses.

The credibility of this strategy was given a strong boost by Secretary of Defense Melvin Laird when he revealed that the Soviets were continuing production of the super-size SS–9 missile beyond any needs recognizable under current U.S. strategies. I am now able to tell you something that could not be told at the time. The Senate Debate on the Safeguard ABM system was held in secret session last spring, but was only declassified and published in the Congressional Record a few days ago. The decisive argument which put the ABM across was the information that the Soviet ICBM's were targeted, not upon the cities, but upon our Minuteman silos. They are zeroed in with pinpoint accuracy. It appears that the super-size SS–9's are intended to penetrate our hardened silos.

To sum up, then, Soviet strategic thinking contemplates a first strike, the Soviets have the capacity to build towards a first strike, and they expect to be able to destroy our ICBM's without receiving a crippling blow in return.

This strategic thinking about the ICBM therefore centers attention upon the next line of military operations; namely, the undersea-launched missile system such as our Polaris and Poseidon. We have 41 Polaris submarines carrying 16 missiles each. The exact figures for the comparable Soviet Y-Class submarines are not available, but it is assumed that the Soviets are working to surpass us in this field if possible.

In the light of my earlier remarks, I think that the place of Soviet naval power in the over-all Soviet strategy is clear. In the case of a nuclear exchange, and nuclear devastation upon the land masses, the battle will turn to the seas. The Soviet emphasis upon self-sufficiency and sustained operations in the open seas would be most advantageous in such circumstances. The tremendous emphasis upon modern submarines and anti-submarine warfare would pay great dividends.

I say, therefore, that the Soviets regard naval power as the keystone of their missile strategy. Far from playing a secondary role in a future confrontation, Soviet sea power could be the decisive element. The navy is at the heart of their planning.

I am proud of the United States Navy. Its officers are men of spirit, and its men are brave in the line of duty. I think that this brand-new LST, with all its innovations for its class, is evidence that the Navy is forward-looking and a credit to the Nation.

However, we must study the role which the Soviet navy plays in over-all Soviet strategy. We must recognize that naval power has moved into the missile age. Technology has changed the context, but the country that dominates the seas will still dominate the world.

THE ARMED SERVICES COMMITTEE'S INVESTIGATION OF THE MYLAI INCIDENT WILL NOT BE A WHITEWASH

(Mr. STRATTON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. STRATTON. Mr. Speaker, I wish to second the remarks of the gentleman from Alabama made before the House earlier today. As another member of the investigating subcommittee of the House Armed Services Committee, and one of the four members recently named to the special panel to look into the Mylai incident in some depth, I am deeply concerned with what has obviously been a deliberate and calculated attempt on the part of some of the press to undermine in advance the investigation of our committee, and not only to misrepresent what our investigating subcommittee has already done, but to discredit in advance what this special panel is going to try to do in connection with this particular incident.

Reference was made to "bizarre" hearings by our committee in some columnist comments in the press just this morning. Let me just point out, Mr. Speaker, that the only thing that was bizarre about them was that almost uniquely in the history of our Armed Services Committee, one or more of our members have been discussing with the press confidential information that should never have been discussed outside the committee room.

At least part of the reason for these leaks, of course, is that the Mylai incident has stirred up the most persistent effort on the part of the press to find out what went on behind the closed doors of our committee that I have ever seen in my 11 years as a member of the committee.

There has been nothing bizarre about our committee hearings, Mr. Speaker, but what has been truly bizarre has been the effort of the press to provoke the chairman of our committee, the gentleman from South Carolina (Mr. RIVERS), who had been officially authorized by our committee to be the sole spokesman of that investigating subcommittee, into saying something that might look sensational in the headlines.

Actually, the only thing that Chairman RIVERS told the press was that, based on the information thus far presented to our subcommittee, there was not enough information to allow us to conclude, beyond a shadow of a doubt, that a massacre of the kind that has been described in detail in the Nation's press for the last 3 or 4 weeks had unmistakably occurred. That was an absolute fact, Mr. Speaker. We had some evidence that such a thing might have occurred, but at that stage of our inquiry the evidence was not nearly as convincing as the earlier press accounts had been that this tragedy actually occurred. This was all the chairman said, and he was speaking the truth, and every subcommittee member who heard the testimony knows it.

Now, when Mr. RIVERS said that, he was not saying that the subcommittee

had made any specific conclusion, nor was he saying that we as a subcommittee were not going to continue our efforts to get at all the facts. Most of the very vocal accusers in the Mylai case, whose statements have appeared at such length in the Nation's press, have not yet appeared before our subcommittee. Of course, we shall hear them; of course, we intend to hear anybody who can throw any light on this complex issue; most certainly we intend to get to the bottom of this whole matter, in keeping with our constitutional obligations; and we do not intend to be deterred by the attacks or even the ridicule of that segment of the Nation's press that seems to be so determined to try this issue in the headlines rather than through the traditional, constitutional methods which protect the rights of all.

Because Chairman RIVERS said what was factually accurate at that particular time was no excuse for some other member of the Armed Services Committee to rush to the newspapers with his own personal interpretation of the testimony presented. Members were under a solemn obligation not to talk, and if the press attributions are true, one or more members betrayed that responsibility as it has never been betrayed before in the long history of our committee.

Not only that, Mr. Speaker, not only did someone leak information when he was not supposed to; he did not even leak accurately. Whoever it was on our committee who leaked information did so in an effort to challenge the chairman of the committee. But he must have been asleep during much of the testimony presented to the committee, because the account he gave the press was very seriously garbled. He missed most of the key points presented with considerable care by the witness before us.

Yet this is what got into the headlines, Mr. Speaker, and it is these garbled, contradictory, inaccurate accounts that have created the impression—outside the committee room—of some bizarre, spectacular proceeding inside.

It was made clear at the outset by Chairman RIVERS that our investigating subcommittee would sit as a kind of grand jury on the Mylai case only long enough to determine whether there was enough involved in the case and its implications to merit a full, indepth study. That determination, I might point out to the House, was made by Chairman RIVERS before all of these spectacular headlines and counterheadlines appeared in the press. I was there, and I know.

A special panel, chaired by the gentleman from Louisiana (Mr. HÉBERT), and including Mr. GUBSER, Mr. DICKINSON, and myself, has now been appointed to undertake this job.

Now over the weekend we have suddenly seen an unprecedented, vicious, and totally inaccurate attack launched on this new four-man panel to discredit it in advance and to undermine, even before we start our work, our findings and conclusions. I have never seen anything quite so vicious in all my years in the House.

The four-man panel is only a coverup, we are told. It will not even do anything, another story reports; it is just a clever way to bury the whole investigation. All of the members of the panel are automatically discredited in advance, one editorial charges, because we are not publicly at war with Chairman RIVERS. We are just four patsies who will whitewash the Army and rubberstamp any conclusions the Army itself comes up with—so they say.

What fantastic and unmitigated rubbish. The truth is Mr. Speaker, that all of the members of the panel appointed by Chairman RIVERS have already demonstrated, on the public record, their ability and determination to call the facts as they see them and let the chips fall where they may.

The gentleman from Louisiana (Mr. HÉBERT) for example, was a crusading, investigating journalist long before many of the present crop of investigating journalists were even out of knee pants. He has continued and enhanced that courageous record here in this body. The gentleman from Alabama (Mr. DICKINSON) and the gentleman from California (Mr. GUBSER) have already amply demonstrated their record of independence as members of our investigating panel which made a searching inquiry into the Army tank program earlier this year and came up with a 39-page report that still has top generals and civilians smarting and resentful over in the Pentagon. I, too, served as chairman of another investigation into the sinking of the submarine *Guitarro* that made a lot of admirals unhappy. So none of the four of us is any patsy for the Defense Department and they know it. This investigation is going to be an investigation in depth. It is not going to be a whitewash. It is not going to be a rubberstamp for what the Army comes up with. And, most of all, it has not stopped. It is moving steadily ahead.

The Army officers are well aware that we are not going to rubberstamp them, and they have not been any too cooperative either, I might say. I think you will see an investigation report of which this House can be proud, when our panel reports.

Under leave to extend my remarks, Mr. Speaker, I include an editorial from the Washington Post of Monday, December 15, together with a letter I have written in reply to their totally false and unworthy insinuations:

[From the Washington Post, Dec. 15, 1969]

A PRESIDENTIAL COMMISSION ON MYLAI?

Mr. Nixon has not entirely foreclosed the possibility that he will appoint a special commission to investigate the killings at Mylai in March of 1968. At his press conference a week ago, the President said that the existence of a commission at this time might prejudice the rights of those men involved in current military court proceedings. But he added that he would consider the appointment of such a group should the judicial process "not prove to be adequate in bringing this incident completely before the public."

Meanwhile, various persons in and out of government have been urging that a commission be created. In a television interview last Sunday, for instance, Senator John Stennis suggested that the President authorize a "competent group" of individuals from "outside government, outside the military" to "determine what the facts actually are." Senator Stennis thought such a commission could provide "a more solemn and serious, deliberate development of the actual facts" than could a committee of Congress. A much broader inquiry seems to be envisaged by a group of lawyers and law professors in whose name Arthur Goldberg has called for the creation of a presidential commission on Mylai. It would investigate:

"The extent to which the war in Vietnam is being conducted in a manner consistent with the minimum humanitarian standards established by the international law of war and incorporated in the general and military laws of the United States . . . questions of policy guidelines for the conduct of military operations and the extent of our efforts to educate our troops with respect to the requirements of the laws of war . . . aspects of military-civilian governmental operations to determine whether there has been a lapse in the chain of communication and command."

Just as Senator Stennis emphasized the need for impartial commissioners, so Mr. Goldberg's group declared that any investigation would "only be credible if the body investigating is, and is seen to be, of unquestionable impartiality." Here one encounters the inescapable paradox of commissions and commission-making. Ostensibly apolitical bodies must be formed for the sake of achieving what is essentially a political end—namely, the neutralization of political conflict surrounding some issue or event, and the laying to rest of public suspicions that government is thinking or acting or speaking out on the basis of tainted, unreliable information. So commissioners tend to be chosen for their patent lack of special interest in the matter at hand, or they are chosen on the one-of-everything principle with a view to establishing a balance of special interests.

We have had better and worse luck with these commissions, and it is not unknown for a committee of Congress—amply stocked with men whose views would have been thought to disqualify them as reliable judges—to have produced the ideal commission-type result. Senator Richard Russell's investigation of the Douglas MacArthur affair some years back is an example, and when things work out this way, the findings of the committee have all the more authority precisely because of their source. In other words, the case for the appointment of a presidential commission on Mylai (or anything else) is not self-evident; it has to be made.

Events of the past few days have tended to overcome our own initial reservations concerning both the usefulness and the necessity of such a commission investigation at this time. Those reservations had to do with its possible interference with military court proceedings; the evident requirement that the court determine the facts of the matter—what happened—before others set about analyzing the implication of those facts; the preferability (if it were possible) of an in-government group conducting a thorough, fair-minded study of the events and meaning of Mylai which could be at once more powerful and more instructive (inside government and out) than the work of an independent commission.

However, Rep. Mendel Rivers, who is no Richard Russell, has in recent days utterly changed the picture and created conditions which seem to cry out for the designation of some presidential group that can preempt the Rivers sideshow and undertake a study in which Americans can have confidence. After several days of "closed" hearings of a 13-member Armed Services subcommittee marked mainly by inflammatory and conflicting reports by Rivers (and others) of what was or wasn't said, Rivers has now named a four-man subcommittee of members whose approach parallels his own to do the investigating. He has thus closed out the members with whom he is politically at

odds. Even if all this is—as rumored—an attempt to bury the hearings, they still represent a potential threat. There is nothing in the record of events so far to suggest that what follows will have any more dignity or seriousness than the escapades we have already witnessed.

We think Mr. Nixon would be well advised, therefore, to move on this matter. Of the suggestions put forth so far in terms of the composition and mandate of a presidential commission, we tend to favor, first, a relatively narrow or limited focus for the study. A commission which can tell us what happened—at Mylai and in relation to standing orders and to the chain of civilian-military command and communication—will necessarily provide larger insights and implications about the war without bogging down in an unmanageable, overly vague mandate. Second, we think there is much merit to the suggestion of Joseph Kraft, in a column last week, that any such study be undertaken by—yes—"a commission of senior and retired Army men." Among them, as he observed, are to be found the people "most determined to undo the wrongs that are shadowing the honor and reputation of the United States Army." And again: "It takes such men to examine carefully the intricate problems of command and control. Equally it takes such men to persuade the Army—and its millions of supporters around the country—that some soldiers have indeed committed wrongs and told lies."

The timetable, powers, and access to information of such a group, along with the degree of openness of its proceedings, are among the many matters that would have to be carefully worked out—especially in relation to the activities of the military court. But none of these problems is beyond resolution, and we stand to gain much in the way of knowledge and public confidence in the government's knowledge from the work of such a commission.

DECEMBER 15, 1969.

EDITOR, WASHINGTON POST:

As one of the four members of the House Armed Services Committee recently designated by Chairman Rivers to conduct an in-depth investigation into the My Lai incident, I resent your editorial implication (Dec. 15) that because we four are not "politically at odds" with the chairman there is "nothing in the record of events so far to suggest that what follows will have any more dignity or seriousness than the escapades we have already witnessed."

Surely you are not suggesting that unless the investigators are deeply opposed to our nation's policy in Viet Nam only a whitewash can emerge? Or are you? If not, then the record, which your editorial indicates you have never really taken the trouble to examine, should be instructive.

Congressman Hébert, chairman of the panel is, as Mr. Rivers has pointed out, the "most experienced investigator on the entire Armed Services Committee." His record of exposing waste, corruption, and malfeasance has been established over a lifetime, both as a top-flight investigating journalist in New Orleans 30 years ago, and a long-time chairman of the Armed Services Investigating Subcommittee.

The remaining three members, Mr. Gubser, Mr. Dickinson, and myself, were all members of a panel which earlier this year conducted a searching inquiry into the Army's Sheridan tank program and issued a 39-page report which could never give Army research and procurement officials any cause to cheer.

Earlier I chaired another investigating panel which took the Navy's materiel command to task in considerable detail for its culpability in the sinking of the nuclear submarine Guitarro while she was being completed at dockside at the Mare Island Shipyard in California.

In short, a close examination of the record you so glibly dismiss should suggest to any reasonable person, with a shred of objectivity, that there is no ground for concluding in advance that in the My Lai case we on this panel will discharge our constitutional duties with any less zeal or impartiality than we have already done in other less sensational cases.

SAMUEL S. STRATTON,
Member of Congress, 35th District, New York.

VIETNAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. CONTE) is recognized for 60 minutes.

Mr. CONTE. Mr. Speaker, to label our involvement in Vietnam a mistake, a tragic error, a misguided adventure, may well be an accurate assessment of the situation. But, at this late date, it is a meaningless exercise in polemics. We can argue at length over why we are there. That, however, will not stop the killing, and it will not heal the wounds in Vietnam or bind up the division here at home.

My position is, and has been for the past few years, that we must get out. All thinking people, I would hope, are of the same persuasion today.

The emphasis now should, indeed must, be on the question of how we get out. This should be the prime concern of the President, his administration, the Congress, and all the people. This Nation, as you well know, is aroused over Vietnam as it has not been aroused over a single issue in decades. It would be nearly impossible to reverse the deescalation.

President Nixon, when he announced his first troop withdrawal last June, made a commitment for this country to get out of Vietnam. Subsequent withdrawals have reinforced that commitment. I certainly support the President's latest announced troop withdrawal as well as his two earlier ones. I believe that this newest reduction gives evidence of Mr. Nixon's intentions and reaffirms his commitment to peace.

I have spoken out on the war many times in the past. I was an early advocate of a negotiated settlement in Vietnam, as early as 2½ years ago, when I called for an end to the bombings. Since then I have supported many other measures to halt the killing in that war-weary nation.

The policy of the Nation on Vietnam has changed considerably in the last several years. Today the official American policy is to reduce the 540,000 American troops that were in Vietnam, in an orderly and planned way, by turning over the fighting to the South Vietnamese themselves. This policy of troop replacement, or Vietnamization, will make it possible for the United States to achieve an end to the American involvement in the war, and at the same time, it will hopefully permit the people of South Vietnam to decide their own future.

We have proposed internationally supervised elections organized by joint electoral commissions. The commissions would include representatives from North Vietnam and the N.L.F., we have also announced that we are prepared to accept any government in South Vietnam that results from the free choice of the South Vietnamese themselves. Therefore, we should be doing all in our power to convince the South Vietnamese Government to make a serious effort to strengthen its position among its own people. This must be done by including in the Government representatives of the various non-Communist nationalistic political groups.

During the hearings of the Foreign Operations Subcommittee this year, I noted that religious and political rights in Vietnam have often in the past been placed in jeopardy.

I cited articles in the Washington Post, written by Father Robert F. Drinan, dean of the Boston College Law School. We have all heard, for example, of the jailing of the runner-up in the 1967 presidential elections. If the Vietnamization strategy is to be successful, the Saigon government should have as broad a base as possible, and I question whether this is the way to get it.

Likewise, I have pointed out in the past that I believed that greater emphasis should be placed on establishing a mutual cease-fire. I am aware that we have offered to negotiate a supervised cease-fire under international supervision. In fact, most of the major peace initiatives have so far been made by our side. This should not, however, deter us from trying again. If we do not, we will never know just how much meaningless death and suffering could have been averted.

Vietnam has clearly dominated the attention of America in the sixties. It has been a controversial political issue that has made some men and broken others. We have been forced to question our policy assumptions and even our values as a Nation.

Recently, we have all read about the alleged killing of South Vietnamese citizens by U.S. troops. I refer, of course, to the Mylai or "Pinkville" incident. I was greatly disturbed by these reports.

Disclosure by the press is sometimes necessary to get certain facts before the public. It does not necessarily insure, however, that the whole truth will be presented. It also, as the American Civil Liberties Union pointed out last week, may impair the rights of the accused.

Therefore, I believe that it would be in the best interests of the Army, and our society as a whole, if a special investigation were conducted into this matter. This is the purpose of a bill that I will introduce this week along with my colleague from California (Mr. COHELAN). The bill would set up a blue ribbon commission to study the Mylai allegations. It would be modeled after the Warren Commission. This measure will have my support because I believe that such a commission is necessary to satisfy the demands of the Nation for a credible explanation of the Mylai incident.

In conclusion, I would like to mention Secretary Laird's December 14 remarks on ABC's "Issues and Answers." I was most impressed by the confidence with which he defended the program of Vietnamization. He indicated that he had the highest expectations of its eventual

success. I certainly hope that he is right. Secretary Laird has my support, and I can only say that I hope Vietnamization will lead to an early disengagement of all American combat and noncombat troops.

I want to make it clear, however, that I intend to hold the administration to its announced intention of getting us out of Vietnam. This is what we must do, and I propose to see that it is done.

OIL IMPORT CONTROL PROGRAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. McCARTHY) is recognized for 60 minutes.

Mr. McCARTHY. Mr. Speaker, the Cabinet Task Force on Oil Imports should be completing its study of the industry-wide mandatory oil import control program shortly. I am taking this opportunity, before the task force report is approved, to make absolutely clear the reasons for my opposition to the present oil import control program. After 10 years of struggling to overcome its inherent contradictions, the program has proven how poorly conceived ideas result in high oil and gas prices for the consumer and other inequities, cost inefficiencies and unattainable goals. I am sure that the conclusions of the Cabinet task force will bear this out. For the task force to recommend continuation of the oil import quota would be a serious disservice to the American people.

HISTORY OF GOVERNMENT REGULATION OF THE OIL INDUSTRY

In order to understand why the oil import program was established, one must review the history of governmental regulation of the oil industry generally. Regulation began immediately after the First World War and its impact has become more pervasive with every succeeding Government action. Characteristic of all this activity has been the piecemeal approach taken by successive Congresses and Presidents alike. As a result the oil industry is now burdened with an administrative web that immobilizes its competitive spirit and completely distorts the industry role within the U.S. economic structure.

With the end of the First World War, at a time when the oil industry was becoming a major American industry, percentage depletion allowances were introduced as a tax subsidy. To encourage intensive exploration and development of oil fields, the depletion allowance originally granted a tax reduction for the total value of the oil property discovered. In 1926 the depletion allowance was reduced to the present 27½ percent level of the company's total income. Paradoxically what we now see as a failure of the depletion allowance policy was its overwhelming initial success. Exploration went forward at breakneck speed. Many speculators moved to the West and South to capitalize on the high oil profits. Production rocketed at a time when the demand for oil and petroleum products was decreasing. To bolster the falling price of oil, the Government once again came to the aid of the oil industry. Instead of removing the incentives that the depletion allowance offered industrial investors, the governments of the leading oil-producing States introduced prorating—an artificial limitation on the amount of oil that could be marketed. Like many governmental policies, the depletion allowance was retained after outliving its usefulness because it was easier to keep an existing Federal program than to dismantle it and start over again.

Prorating operates by limiting the total production of oil within each state and dividing that total production between the various producers. The result of this form of rationing is to limit the overall production of the individual States. According to most oil experts prorationing has two distinct purposes. The first is to limit production so as to eliminate the waste that results when oil is pumped from wells too quickly. The second attempts to limit production to insure that the supply of oil remains equal with demand, thus guaranteeing that the price of oil remains unrealistically high. Although the first reason for prorating has merit, the second goes directly against our basic principles of a free-market economy. According to most economists, prorating to keep prices artificially high protects the small and marginal oil producers at the expense of the highly efficient ones.

By insuring a market for the small producers, markets that would otherwise be supplied by the larger more efficient operations, the more efficient producers are forced to cut back production. Prorating results in inefficiency and pushes prices up. With prices in the United States zooming upward, competition from foreign-based producers began to threaten domestic producers. During the latter part of the 1930's foreign producers found that through more efficient operations they could produce and ship foreign oils to this country for sale at a lower price than domestic producers. Recognizing the threat of foreign imports to domestic oil producers, the Government once again took action. However, instead of the more logical removal of both the oil depletion allowance and prorating regulations, the industry sought additional legislation to counter foreign oil imports. In 1943 the Government imposed a 19½-cent barrel tariff that has remained for 26 years.

Following the Second World War, the Government sat down to review its so-called oil policy. Although aware that all was not well in the oil industry, the special committees set up to review oil policy were blinded by the web of regulations that had sustained the various oil programs for close to 40 years. Instead of calling for the dismantling of the unwieldly Government controls that were slowly making the domestic oil industry noncompetitive, these special committees recommended more restrictions. In February 1955, the Advisory Committee on Energy Supplies and Resources Policy expressed the belief that:

> If the imports of crude and residual oils should exceed significantly the respective proportions that these imports of oils bore to the production of domestic crude oil in 1954, the domestic fuels situation could be so impaired as to endanger the orderly industrial growth which assures the military and civilian supplies and an inadequate incentive for exploration and the discovery of new sources of supply.

In the interest of national defense the committee recommended that imports be kept in the balance which it had recommended and that if this could not be done voluntarily, then "appropriate action should be taken" if imports significantly exceeded the recommended balance. In 1957 a voluntary import control program was established. These voluntary controls were an utter failure and after 2 years another special committee, the Special Committee To Investigate Crude Oil Imports, recommended that voluntary import restrictions would have to be replaced.

The mandatory oil import control program was born in early 1959 as a result of Presidential Proclamation No. 3279. As administered in the greater part of the country, the mandatory program restricts oil imports to 12.2 percent of domestic production. The main reason for this program, according to the experts, was the necessity for maintaining a strong domestic oil producing industry in the interest of national security.

The establishment of the mandatory oil import control program marked the fourth time the Government had stepped into the oil industry to salvage and reform it; the three previous attempts proved unsuccessful, the fourth attempt was a debacle. Subject to unremitting criticism from all segments of the country, including the oil industry itself, the mandatory oil import quota program has proved to be, as Allen T. DeMaree stated:

> One of the most ill-conceived and ill-executed federal regulatory schemes since the abortive flight of the NRA's Blue Eagle.

The depletion allowance already had made it possible for the Nation's biggest oil companies to pay taxes of only 2 to 8 percent of their net income and the Atlantic Refining Co., despite total earnings of $410 million, to pay no taxes from 1962 to 1967. The market demand prorating regulations had kept oil producers with 1,000 barrels a day potential from producing more than 100 barrels so as to insure a place in the market for the five-barrel-a-day producers—this compares with 5,000 barrels a day in the most profitable oilfields in the Middle East. The new import controls added the final blow. An Interior Department study shows that the oil quota restrictions cost American consumers, in added gas and oil costs, between $7 and $8 billion per year.

In terms of gasoline prices alone, the cost to the domestic consumer is staggering. With the import quota removed, the price of gasoline would be decreased by 8.04 cents per gallon. Logging 25,000 miles a year, the average driver would realize a savings of more than $100 annually. This would be a 25-percent saving reduction for the cost of gasoline.

Most estimates of the cost of the quota system in terms of the inflated cost of gas and oil are incomplete. To truly appreciate the financial burden imposed by the quota system, one must look to

the impact of these high oil prices on associated industries such as petrochemicals.

I mention petrochemicals because the 39th Congressional District which I represent is recognized for and economically dependent upon some of the most progressive petrochemical firms in the country. I know their plight from both objective personal observation and from extensive conversations and discussions with many spokesmen from the industry itself. The petrochemical industry manufactures synthetic organic chemicals, fibers, rubbers and plastics that end up in thousands of everyday products. The petrochemical industry, unlike the U.S. oil refining industry, competes in a worldwide market. All costs of production for the industry are reflected in the ultimate selling price of the finished product. Those companies that can purchase the raw oil at the lowest cost can therefore sell their finished product at a cost proportionately less than their competitors.

Within the existing world oil market, petrochemical companies that purchase American oil are at a marked disadvantage.

Today, the American petrochemical companies that purchase high priced domestic oil are faced with increasing pressure from imported petrochemical products made by foreign producers from lower-cost oil. The raw materials, including oil, that go into the finished petrochemical products amount to from 5 to 14 percent of the product's selling price. The cost of raw materials directly affects profits and is enough to make or break a decision to produce new products. Faced with the problem of purchasing raw materials for their finished products at a price 60 percent higher than their foreign competition, our petrochemical industry is being threatened with destruction by a program designed to protect the oil industry.

The $7 or $8 billion financial burden resulting from increased oil and gasoline prices is therefore only part of the story. By increasing the price of crude oil, the import quota program increases by a similar amount the cost of those products that are made from crude oil. These products include everything from toothbrushes to automobile tires and sofas. In fact, when these associated price disadvantages are considered, the quota system is probably costing the American consumer $15 to $20 billion a year. In turn, our purchasing power is effectively reduced, forcing the more disadvantaged to go without consumer items that many of us take for granted.

OIL IMPORT QUOTA PROGRAM

The oil quota system has been the most recent attempt to protect and rejuvenate the domestic oil industry. It is also the most elaborate, arbitrary and inequitable. It originally called for limits on imports if they rose to 12.2 percent of domestic production. This original formula, however, is presently limited by a number of inconsistant and irrational exceptions. Beyond citizen dissatisfaction, the quota system has led to interindustry and interregional fighting for favors from Washington. As a lifetime resident of Buffalo, N.Y., I have experience firsthand the burden that the quota system has placed on my section of the country. Presently, the right to import oil is distributed among participating companies. However, oil companies west of the Rockies are not controlled by this formula because the Government has proclaimed this area an oil deficit area. East of the Rockies, the distribution of these privileges is made by the Federal Department of the Interior and is both arbitrary and inequitable.

According to the original import regulations, overland imports of Canadian crude oil are exempted from the mandatory import restrictions. The regulation, however, has been extended to this source of oil by an informal agreement between the Governments of the United States and Canada which sets up an overall level of imports for Canadian crude oil into the United States. The result of this agreement has been to limit imports to the Buffalo refineries. Strangely, at the same time there has been an increase in the imports for refineries in the Duluth and Toledo areas. Although the justification for this difference in treatment has been the inaccessability of domestic oil for these midwestern refineries, the argument is faulty because the same argument can be made for the Buffalo area refineries. Although Buffalo does have access to limited domestic supplies by way of the Buckeye pipeline, the usefulness of the supply is restricted by the antiquated nature of the pipeline.

The Canadian interprovincial pipeline serving refineries to the West, and to a limited degree the Buffalo area, can be used to pipe any variety of crude oil—the Buckeye system brings in only one type of crude—all oils being fed into the pipeline being mixed together before reaching their final destination.

Without the mandatory oil import program the justification for the informal import restriction of overland imports would no longer exist. Without the mandatory oil import program simple economics would force the domestic industry to become efficient and meet the challenge of foreign competition. Without the mandatory oil import program areas of the country which experience extended subzero winters would not be made to pay higher prices for fuel oil and actually suffer.

NATIONAL SECURITY

Why then do we retain the oil quota system when it is clear that the system is expensive, inequitable and dangerous? The reason given by the Government and oil industry alike is that national security requires it. In fact the House Interior Committee stated last year that:

> Three presidents of this Nation, beginning with President Eisenhower, and continuing with Presidents Kennedy and Johnson, together with innumerable special task forces, commissions, and study groups, as well as several congressional committees, have all been of one mind on the objective of the mandatory oil import program. Its one and only reason for being is to insure the national security of this nation by reducing the country's dependence on foreign imports by assuring a strong and vigorous domestic petroleum industry.

To this day, oil remains the only commodity that the United States does not import freely for reasons of national security. Although I admit that our national security does require an adequate source of oil, the present oil import quota in no way commends itself to this task. It is simply a question of cost and there are many alternatives that exist that would provide sufficient oil for times of national crisis that would not be nearly as expensive as the present import program. We do have sufficient oil resources. Look first at our present and potential reserves in this country. According to most experts we have around 300 billion barrels of oil underground waiting to be tapped. At the current rate of consumption of 30 billion barrels a decade, we have enough oil available to carry us through the next 100 years. This forecast does not take into account the undiscovered oil in this country or the huge supply recently discovered on the Alaskan Slope. Furthermore, it has been estimated that there is an additional 1,000 years' supply of shale oil not even touched in this country. It would appear much more economical to develop means to extract this oil cheaply in the name of national security rather than burden the taxpayer with a $7 billion financial cost in the name of that same cause.

In any event, it is obvious that our oil supplies are not threatened. With the increased dependence on nuclear powered industrial plants and electricity in automobiles the demand for oil will not rise as rapidly as in the past. And, the free flow of foreign oil into this country could only insure that our domestic supply is preserved while we take from those with greater supplies than ours.

Our national security is not being threatened by cheaper foreign markets. Our domestic producers could supply the increased demand in time of crisis if foreign imports were cut off. Recent hearings before the Senate Antitrust Subcommittee have established conclusively that our oil producers could respond to meet the increased demand. In fact, the committee hearings concluded that if the quota system was abolished, two things would happen.

First, oil prices in this country would drop by $1.25 per barrel. Second, only 5 percent of the domestic production would be lost leaving 95 percent of our present supply of oil being sold at a respectable profit. In effect, then, the oil quota system amounts to $7 billion annual subsidy to 95 percent of the industry in order to protect the remaining 5 percent. Thus, as opposed to wrecking the domestic oil industry, the removal of the oil quota system would be the greatest boon to the industry in years. It would raise the level of efficiency by replacing the marginal production wells with the oil capable of being produced by the larger more economical operations. According to Henry Steele, an economist at the University of Texas, if the inefficient wells were forced out of production, production costs would fall 46 percent in Texas and 38 percent in Louisiana.

There are other reasons showing the weakness of the national security argument for retaining the oil import quota system.

First, we are no longer threatened by World War II situations. Nuclear war would almost certainly knock out our refining facilities before destroying our supplies. In fact we would probably have a huge oil surplus as opposed to a deficit.

Second, in time of crisis short of war, it is most probable that all our supplies would not be cut off simultaneously. During the last Middle East crisis, our huge imports from South America were not influenced at all. Certainly, our imports from Canada were not threatened.

Last, and probably most important, is the security of our Canadian supplies. If we can undertake extensive military operations with our Canadian neighbors, as is the case with the ABM, we certainly can depend upon them while fighting a war for our mutual protection.

In conclusion, reason dictates that we begin to dismantle the elaborate system of governmental regulations that presently place an unnecessary burden on the American consumer. To continue to hand out such large sums of money to one of the Nation's biggest and most powerful industries is unjust. In 1967 the industry had close to $60 billion in gross sales and close to $6 billion in net profits. Surely an industry of this size can take care of itself in the marketplace. We should begin by removing the present quota system which would allow free competition in the domestic oil industry possible. By doing this the State prorating programs would no longer be necessary because the small inefficient producers who are acting as a drag on the industry would slowly disappear, leaving a strong, efficient and resilient industry. And our total economy would benefit from this move.

SCHWENGEL CALLS FOR ACTION ON CRIME LEGISLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Iowa (Mr. SCHWENGEL) is recognized for 10 minutes.

Mr. SCHWENGEL. Mr. Speaker, in late September the FBI released its latest statistics on crime, for the period January–June 1969. Would it not be gratifying to be able to say—at last—that we are beginning to make some inroads on slowing the relentless pace that crime has been setting in its march toward national disaster?

Instead, Mr. Speaker, I regret to report that the pace continues to accelerate. Violent crimes are up 13 percent over the statistics for the same period in 1968. Other crimes have increased in similar fashion.

Unlike the ordinary citizen, who in addition to the horror and shame that we all feel, must have a sense of hopelessness, we in Congress are in a position to do something about the crime situation.

Since his inauguration, President Nixon has sent us several proposals designed to give him new weapons for the control of crime. Despite their importance, not a single one has been enacted. Despite the President's message of October 13 on the urgency of the proposals here it is December and little progress has been made on them.

With the end of the current session in sight, it is apparent that we cannot afford to lose the sense of urgency which President Nixon intended to impart to us. I think it is time to refresh our recollection on the crime proposals and determine that we will take action on them.

ORGANIZED CRIME

To help him combat organized crime, the President on April 23 sent us a message in which he said:

> Today, organized crime has deeply penetrated broad segments of American life. In our great cities, it is operating prosperous criminal cartels. In our suburban areas and smaller cities, it is expanding its corrosive influence. Its economic base is principally derived from its virtual monopoly of illegal gambling, the numbers racket, and the importation of narcotics. To a large degree, it underwrites the loan-sharking business in the United States and actively participates in fraudulent bankruptcies. It encourages street crime by inducing narcotic addicts to mug and rob. It encourages housebreaking and burglary by providing efficient disposal methods for stolen goods. It quietly continues to infiltrate and corrupt organized labor. It is increasing its enormous holdings and influence in the world of legitimate business. To achieve his end, the organized criminal relies on physical terror and psychological intimidation, on economic retaliation and political bribery, on citizen indifference and governmental acquiescence. He corrupts our governing institutions and subverts our democratic processes. For him, the moral and legal subversion of our society is a life-long and lucrative profession.

Surely, Mr. Speaker, we all agree with the President that this disgraceful situation must be ended. For our part, the President did not ask for much. He asked merely for the enactment of four measures: A new broad general witness immunity law to enable the Government to gather evidence to strike at the leadership of organized crime and not just the rank and file; amendment to the wagering tax laws to enable the Internal Revenue Service to play a more active and effective role in collecting the revenues owed on wagers, and to increase the Federal operator's tax on gamblers from $50 annually to $1,000; a measure to make the corruption of police and local officials a Federal crime; and legislation making it a Federal crime to engage in large-scale illicit gambling operations.

The immunity proposal was introduced as H.R. 11157 on May 12. What have we done about these proposals? Hearings were held before a subcommittee of the Committee on the Judiciary on August 7. Although almost 4 months have passed since the conclusion of the hearings, the committee has yet to act.

The wagering tax proposal was introduced as H.R. 322 on January 3, 1969, and referred to the Ways and Means Committee. No action has been taken on it.

The corruption of officials and the illegal gambling business proposals were combined into a single bill, which was introduced as H.R. 10683 on April 29, and referred to the Committee on the Judiciary. No action has been taken.

DISTRICT OF COLUMBIA CRIME

One of the first communications sent to the Congress by the President was his message of January 31 on the crucial subject of conditions in the District of Columbia, and especially the matter of crime and the administration of justice in the District. He said:

> Responsibility begins at home.
>
> The District of Columbia is the Federal City, and the Federal Government cannot evade its share of responsibility for the conditions of life in the District.
>
> For many who live here, those conditions have become intolerable. Violent crimes in the District have increased by almost three times in the last 8 years; only a short time ago, the local newspapers carried a report that armed robberies had more than doubled in the past year alone.
>
> This evidence—raw, vicious violence, hurting most of all those who are poor and work hard—is the surface manifestation of far deeper trouble.
>
> These troubles have been long building. In part, Washington today is reaping a whirlwind sown long since by rural poverty in the South, by failures in education, by racial prejudice, and by the sometimes explosive strains of rapid social readjustments.
>
> Because its roots are deep and closely woven, crime in the District cannot be brought under control overnight. Neither can poverty be ended or hatred eliminated or despair overcome in a year. But we can begin.

He asked the Congress to amend the Bail Reform Act to enable the authorities to cope with the problem of crimes committed by persons already indicted for earlier crimes but free on pretrial release, H.R. 12806; to expand the authority of the District of Columbia Bail Agency to enable it to adequately investigate and supervise persons released pending trial, H.R. 12855; to reorganize and restructure the existing District of Columbia court system to make it more responsive to today's needs, especially in dealing with the criminal offender, H.R. 12854; and to make the District of Columbia Legal Aid Agency a full-fledged public defender system H.R. 12856.

We are doing somewhat better on the District of Columbia measures. All were submitted to us on July 11, and hearings on them were held in the Committee on the District of Columbia, H.R. 12854, 12855, 12856, and in the Committee on the Judiciary, H.R. 12806 this fall. However, none of the bills has yet to be reported out.

NARCOTICS

The President's message to Congress of July 14 urged the enactment of two measures designed to control narcotics and dangerous drugs. In sending them to us he said:

> Within the last decade the abuse of drugs has grown from essentially a local police problem into a serious national threat to the personal health and safety of millions of Americans.
>
> A national awareness of the gravity of the situation is needed; a new urgency and concerted national policy are needed at the Federal level to begin to cope with this growing menace to the general welfare of the United States.
>
> Between the years 1960 and 1967, juvenile arrests involving the use of drugs rose by almost 800 percent; half of those now being arrested for the illicit use of narcotics are under 21 years of age. New York City alone

has records of some 40,000 heroin addicts, and the number rises between 7,000 and 9,000 a year. These official statistics are only the tip of an iceberg whose dimensions we can only surmise.

In the Federal effort against the illicit narcotics trade, the administration has submitted a major revision of all Federal narcotics laws. This is the proposed Controlled Dangerous Substances Act of 1969, which was submitted to us on July 15. The draft bill was split in two: The narcotics provisions of it were introduced as H.R. 13742 and referred to the Committee on Ways and Means, and the dangerous drugs provisions were introduced as H.R. 13743 and referred to the Committee on Interstate and Foreign Commerce. No action has been taken on either bill.

To be especially noted is the fact that the administration has taken an enlightened approach on the need for differentiating between penalties for offenses involving hard narcotics and those involving marihuana. The administration recognizes that marihuana is not a narcotic drug but is rather an hallucinogenic and should be treated, in terms of regulation and sentencing, as an hallucinogenic drug. It also recognizes a need for more knowledge about the effects of marihuana, and supports a provision which will allow for a study into the causes and effects of marihuana use.

A related proposal, also submitted on July 15, was an interim measure to correct the constitutional deficiencies found by the Supreme Court to exist in the Marihuana Tax Act, in the notorious Leary case. This was introduced as H.R. 14790 and is under consideration by the Committee on Ways and Means. It has yet to be reported out.

PORNOGRAPHY

On May 2 President Nixon asked Congress: First, to make it a Federal crime to use the mails or other facilities of commerce to deliver to anyone under 18 years of age material dealing with a sexual subject in a manner unsuitable for young people, and second, to make it a Federal crime to use the mails, or other facilities of commerce, for the commercial exploitation of a prurient interest in sex through advertising, and third, to extend the existing law to enable a citizen to protect his home from any intrusion of sex-oriented advertising—regardless of whether or not a citizen has ever received such mailings.

Surely, Mr. Speaker, if there were ever legislative proposals deserving of prompt enactment by the Congress, these measures which are designed to protect America citizens from the barrages of the filth peddlers are so deserving. As the President said in his message:

American homes are being bonbarded with the largest volume of sex-oriented mail in history. Most of it is unsolicited, unwanted, and deeply offensive to those who receive it. Since 1964, the number of complaints to the Post Office about salacious mail has almost doubled. One hundred and forty thousand letters of protest came in during the last nine months alone, and the volume is increasing. Mothers and fathers by the tens of thousands have written to the White House and the Congress. They resent these intrusions into their homes, and they are asking for Federal assistance to protect their children against exposure to erotic publications.

What have we done about the proposals?

The protection of minors proposal was introduced on May 8 as H.R. 11031, and the prurient advertising measure, on the same date as H.R. 11032. The extension of the right to refuse mail is included as title II of the postal rate bill (H.R. 10877), which was introduced on May 4. Hearings have been conducted this fall on each of these measures, but none has yet been reported out of committee.

Mr. Speaker, I am confident that I will get little argument with the assertion that the legislative record we have made on the President's crime proposals is far from impressive. Imagine, not a single proposal reported out of committee. Several proposals not acted upon at all. We must do better than this. Time is running out.

VIETNAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Alaska (Mr. POLLOCK) is recognized for 5 minutes.

Mr. POLLOCK. Mr. Speaker, I want to discuss with you today a matter I feel is of vital importance to us all.

I am generally in support of President Nixon's position favoring deescalation of American participation in the Vietnam conflict.

During this past year, previous escalation of the Vietnam war has been reversed and this Nation has made substantial moves toward peace and disengagement.

But—and I feel this is very important—if we continue our deescalation, we must be absolutely certain that South Vietnam is not left defenseless and is capable of responding to any treachery on the part of the Vietcong. Otherwise, those of us who have suffered loss, injury, or death in Vietnam will have made a bitterly empty sacrifice.

Although the Vietcong and the North Vietnamese constantly fling the charge of "warmonger" at the United States, this enemy has not made one single small step toward responding to our attempts to obtain a just peace in Paris. While we negotiate in good faith in Paris, the infiltration rate from the north into the south increases. The United States, I fear, is engaged in an absolutely unilateral attempt toward peace.

Because of this bald evidence of bad faith on the part of North Vietnam, I feel that the United States must make it perfectly clear that we are capable of responding in strength to any evidence of escalation on the part of North Vietnam and that we are emotionally prepared to respond with vigor and determination should the enemy continue to escalate their aggression.

Some of us are expressing our discontent with the present war through massive demonstrations. Now I regard freedom of speech and dissent as a privilege of all Americans. But with right comes responsibility. I must oppose peace-at-any-price protestations and irresponsible attacks on an administration hard at work to arrive at a just and enforceable peace in Vietnam. I cannot regard such activity as anything other than providing comfort and aid to our enemy. To the extent we bolster the will of the enemy, to that extent we prolong the conflict and cause the loss of additional American lives. This is intolerable, and we cannot in good conscience sanction such activity.

"WITH THE BARK ON": VICE ADMIRAL KIDD'S REFUTATION OF OUR FIGHTING MEN'S CRITICS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 10 minutes.

Mr. FLOOD. Mr. Speaker, in many recent public discussions of the condition of affairs in the United States one frequently reads alarming statements, including harping criticisms of our Armed Forces.

It was, therefore, quite refreshing to read a paper by Vice Adm. Isaac C. Kidd, Jr., USN, now commander of the 1st Fleet, recently published in the Officer, the magazine of the Reserve Officers Association, in which he relates much that is great about our country and refutes those who belittle the quality of our Armed Forces.

Admiral Kidd was commissioned on December 19, 1942, shortly after Pearl Harbor. Because he is the son of a distinguished naval officer and now has two sons serving in the Navy, his remarks have the power of the dedicated professional officer of high quality.

To enable a broader distribution of Admiral Kidd's appreciation of the greatness of our country and his devastating repudiation of some of the derision currently being aimed at our fighting men, I quote it as part of my remarks:

[From The Officer, November 1969]

"WITH THE BARK ON"

(By VAdm. Isaac C. Kidd, Jr., USN)

Several years ago, during the Supreme Court fight, Vice President John Garner was called to the White House for his views. He said, "Chief, do you want it with the bark on or off?" Gentlemen, I am going to try to give you a little look into my business today with the bark on. I think you can take it and from what I read—many need it.

Few organizations can so justifiably be proud of great contributions to the fabric of American life as can you. And few can be so proud of the kind of vigilance that has characterized the patriotic devotion to the quality of Americanism today. In significant measure, you in this distinguished group and organizations such as yours can take credit for the spirit and success of a great nation determined to maintain its greatness and contribute to the cause of peace throughout the world.

So at the very beginning, I want to extend my personal thanks for your many contributions to our Navy, to a truly wonderful nation, and I want to commend you for so selflessly responding to the needs of our country.

We have much going for us in this country, and it is perhaps well to remind ourselves of this from time to time. For example, in the next year alone:

More than 195 million Americans will not be arrested;

More than 115 million individuals will maintain a formal affiliation with some religious group;

More than 2 million teachers and professors will not strike;

More than 8 million of our young men will serve honorably in the armed forces of our country—active and reserve.

A LOT GOING FOR US

Of these, three million young Americans are in uniform right now—a uniform which is a new-found target for neo-subversives who deal in discredit—our Navymen and Marines number in the neighborhood of a million. I know you will share my feelings if I say that they represent one million reasons for saying that we have a lot going for us.

Whether it is in Viet Nam, or in our outstanding Sixth Fleet in the Mediterranean, I am able to state unequivocally that we have the finest group of young people in the services today that we have ever had in our history. We ask more of them than ever before: intelligence—technical knowledge—and education. Their duties require not only skill—but great courage and stamina to do the difficult job which they perform as a matter of routine.

To me, these young men represent the most important of our national resources and this causes me to make a sobering observation. To my knowledge, for the first time in our history, American fighting men are facing challenge without the usual cheers; making the sacrifice without the usual home-front support; performing service which is being *derided* rather than *dignified*.

As active, dedicated Americans, which you are, I know these matters are of the gravest concern to all of you—as they are to me and my associates in the Navy. I recognize that "good news is no news" on many of the mass media's yardstick for events and circumstances which capture the public's attention. Bad news, too often, attracts the headlines, as do difficulties rather than achievements, and controversy rather than resolution.

GOOD FACTS IGNORED

Let me cite one of the many such examples. Some weeks ago, we saw much about the number of servicemen who chose to absent themselves in the course of a year without authority to do so. What emerged was a sensational disclosure that, in effect, American military morale was suspect—that the disenchantment resulting from Viet Nam was infecting the armed forces.

No sensational disclosure was made, however, of the unclassified and readily available facts that:

Less than five percent of U.S. servicemen ever go AWOL;

Ninety-nine point nine percent of our men in uniform do not seek asylum in Sweden;

Since September 1965 to the present, some 47,000 Navymen have volunteered for duty in Vietnam;

Since September 1966, 100,000 Navymen stationed in Vietnam have voluntarily extended their tours for six months or longer;

Thirty-three thousand of our incomparable Marines in Vietnam have done the same.

In my opinion, we sell ourselves short by the mysterious affinity we have for focusing on the bad, the bizarre and the big. The bigness of defense, as you know only too well, is a key topic at the present time. Yet, in most of what I see or hear, very little is based on what I would call a reasonable perspective. In too many instances, we hear that defense has "gotten out of hand"—that it is too large and far too costly. Maybe this is so—if you like to lose. In my business though, there are no prizes for second place.

SAME SHARE FOR DEFENSE

What is overlooked or ignored is that we are very much involved in a war—one we did not start—and that its cost is somewhere in the area of 30 billion annually. In the face of this, another fact is to be counted: Defense gets approximately the same share of the Federal budget today that it got 10 years ago. The 78-billion-dollar arms budget for this fiscal year represents 43 percent of government spending. Ten years ago (FY 1960), the arms budget was 43 billion dollars, representing 47 percent of government spending. Popular belief and lip service notwithstanding, the plain fact is that our national investment in security is 4 percent smaller than it was during a time of relative peace.

Another fact to be counted lies in the defense cut of the budget related to the gross national product. It represents about 10 percent of the total spent on all U.S. goods and services; which, coincidentally, is about the same percentage Americans spend annually on all forms of insurance protection. It might be noted that the Soviet Union spends 16 percent of its gross national product on its armed forces.

What follows here is a passing reference to the so-called existence of an evil military-industrial complex. Based on the figures just cited—and the floating Navy's declining material condition which is well-known to you—if the cabal does exist, we should undertake to fire a few people at the top. Whoever they are, they have failed to earn their keep!

CLOSE COOPERATION NEEDED

In my opinion, there is no doubt that if we didn't have this close cooperation in our country where we have free enterprise, then we would not have the capability that we have today to utilize the advancements of science for the overall benefit of our country. . . .

Curiously, in his farewell address on 17 January 1961—the one in which he warned of the military-industrial complex—President Eisenhower balanced his assessments of threats and opportunities. For example, he warned Americans of a threat to their country as follows:

". . . We face a hostile ideology—global in scope, atheistic in character, ruthless in purpose, and insidious in method. Unhappily, the danger it poses promises to be of indefinite duration. To meet it successfully, there is called for, not so much the emotional and transistory sacrifices of crisis, but rather those which enable us to carry forward steadily, surely, and without complaint"—These are your professional fighting men to whom he refers. These thoughts, in or out of context, bear repeating and reprinting as the case may be.

Another point, which to me has equal validity although it seems to remain undiscovered, was voiced by the late President in these terms:

"A vital element in keeping the peace is our military establishment. Our arms must be right, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction."

I don't propose to subject you to a reading of his address in its entirety, but I would add—for balance—one final dramatic passage concerning the same defense complex which today smarts from the wide-spreading effects of denouncements.

"Until the latest of our world conflicts," Mr. Eisenhower stated, "the United States had no armaments industry. American makers of plowshares could, with time and as required, make swords as well. But now we can no longer risk emergency improvisation of national defense; we have been compelled to create a permanent armaments industry of vast proportions."

EISENHOWER WORDS GOOD TODAY

Viewed in the climate of the time in which he made the address—and even today—the military man, the industrialist, the thinking American, should find no quarrel with any part of it. Where quarrel has been found, one might suspect the intention, integrity, or intelligence involved.

In closing, I would like to leave this thought. I have been in the Navy only 31 years, my father for 41, my sons for only five. In our years of service we have heard the owl and seen the elephant, as the saying goes. We have sailed the seven seas. We have visited many of the exotic ports of the world with shipmates, and have seen our sailormen enjoy themselves ashore. Only some of us have survived war. All have endured turbulent times short of war.

"For God and Country" is not a meaningless phrase to me, as I know it isn't to you. It is a simple statement of truth. We, the pros, have a duty to ourselves and to the likes of you that goes far beyond the simple day-to-day existence of life. Today, as almost never before, our country needs the support, assistance and the unity of all of our people.

We, your professionals, seek not accolades, but rather to be sure that you understand—and in understanding expect and demand no more than your investment in your country can guarantee. You, who have freely given much in the past, must be ready to hold the helm and steer the course that this magnificent country of ours will follow in the future.

Perhaps it would not be inappropriate to recall the words of Stephen Decatur, who proposed the toast, "Our country—may she always be right—but, right or wrong—our country."

NEW YORK CITY CONGRESSIONAL HEARING ON AUTOMOTIVE AIR POLLUTION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 20 minutes.

Mr. FARBSTEIN. Mr. Speaker, on December 8, 20 New York and New Jersey Congressmen joined me in holding an ad hoc hearing on automotive air pollution in New York City. The hearing was held at the U.S. Customs Court House in Manhattan.

There has been a great deal of evidence with respect to the issue of automobile safety to suggest an attempt on the part of the auto industry to avoid its responsibility to take the public welfare into account. The purpose of our December 8 hearing was to explore whether the industry is following this same course of avoiding responsibility with respect to cleaning up the dirty air we breathe, air polluted by the internal combustion engine.

A suit filed by the Justice Department—United States of America against Automobile Manufacturers Association, Inc., and others—the auto industry alleged that the industry had been failing to meet its responsibility to develop devices to cut down on air pollution, not only by moving slowly in the development of such devices, but also by resisting their required use. We wanted to ascertain whether this is still the case.

Detroit has been telling the American people that it is not feasible to develop cleaner alternatives to the internal com-

bustion engine. If this be the case, we wanted to learn why four entirely independent Federal panels, a Senate committee and the California State Legislature, have all come to the opposite conclusion.

We also wanted to learn why it is that when the California Legislature was considering legislation to ban all automobiles not meeting high-pollution standards, a spokesman for one of the major auto companies said that such an engine could not be built, but 5 days after the bill had been safely defeated, the same person told a press conference that this company could have met the requirements of the bill.

In other words, we wanted to determine if a credibility gap exists between the auto industry and the American public.

Testifying before our committee were auto industry critic and consumer spokesman, Ralph Nader, and the vice presidents of General Motors and Ford Motor Co. In addition to them, we also heard testimony from three experts on the effect of auto pollution on our health and from a panel of experts on auto pollution technology.

I insert at the end of these remarks my statement at the hearing, and the prepared statements of Ralph Nader; Dr. Paul Chenea, vice president, Research Laboratories, General Motors Corp.; and H. L. Misch, vice president of Engineering, Ford Motor Co. I also include brief biographies of the seven health and technology experts who also testified.

The full transcripts of the hearing will be available shortly. The ad hoc committee expects to follow up this hearing with a report making specific legislative recommendations and the introduction of appropriate legislation.

The above referred to material follows:

STATEMENT OF THE HONORABLE LEONARD FARBSTEIN (D.-N.Y) HEARINGS ON AUTOMOTIVE AIR POLLUTION, MONDAY, DECEMBER 8, 1969, U.S. CUSTOMS COURT HOUSE, NEW YORK, N.Y.

Ladies and Gentlemen, we are all agreed, I am certain, the America of December, 1969 is automobile-oriented. Because of the lack of adequate public transportation and the increase in the number of highways, and the ability of the automobile to get us where we want to go, the people of this country have come to depend upon it as the primary source of transportation. For those associated with the automobile industry, the manufacturer primarily, this has meant high profits. It has also meant the expenditure of public funds to accommodate the increased demands—thus even insuring greater profits.

But along with these benefits there is also a set of responsibilities to the public which must be recognized by the industry—responsibilities to provide a safe vehicle and responsibilities to provide a vehicle which does not make our environment uninhabitable.

With respect to the safety issue, there has been a great deal of evidence to suggest an attempt on the part of the industry to avoid its responsibility.

The purpose of our hearing today is to explore whether the industry is following this same course of avoiding responsibility with respect to cleaning up the dirty air we breathe, air pollution by the internal combustion engine.

A suit filed by the Justice Department (U.S. of America vs. Automobile Manufacturers Association, Inc., et al.) against the auto industry alleged that the industry had been failing to meet its responsibility to develop devices to cut down on air pollution, not only by moving slowly in the development of such devices, but also by resisting their required use. We want to ascertain whether this is still the case.

Detroit has been telling the American people that it is not feasible to develop cleaner alternatives to the internal combustion engine. If this be the case, why have four entirely independent Federal panels, a Senate committee and the California State Legislature, all come to the opposite conclusion?

Why is it that when the California Legislature was considering legislation to ban all automobiles not meeting high anti-pollution standards, a spokesman for one of the companies testifying here today said that such an engine could not be built, but five days after the bill had been safely defeated the same person told a press conference that his company could have met the requirements of the bill.

In other words, we want to determine if a credibility gap exists between the auto industry and the American public.

These hearings will attempt to explore this question through testimony from experts both in and out of the auto industry.

Mr. Ralph Nader is scheduled to be our first witness. He will be followed by the auto industry, whose representatives will have time in which to present statements and then answer questions from the Congressmen present. Third on the schedule is a panel of four experts on the effect of auto pollution on our health. Following them is a panel of experts on auto air pollution technology. They will discuss what can be done to clean up the current engine, as well as the desirability and feasibility of alternative systems such as steam and electric. These hearings will culminate with statements by the representatives of General Motors and the Ford Motor Company followed by questions.

I wish to acknowledge that by their presence here today. General Motors and the Ford Motor Company have demonstrated an interest in the public health. I regret that Chrysler by their absence and refusal to allow high ranking officials to testify did not demonstrate a similar concern.

Some might conclude from this that the Chrysler Corporation is more interested in profits than in helping clean up our air. I certainly hope this is not the case and that Chrysler will join with us in future efforts to end air pollution.

STATEMENT BY RALPH NADER AT A PUBLIC HEARING ON AUTOMOTIVE AIR POLLUTION CONTROL, SPONSORED BY 21 NEW YORK AND NEW JERSEY CONGRESSMEN, FEDERAL CUSTOMS COURT HOUSE, NEW YORK CITY, DECEMBER 8, 1969

Mr. Chairman, concerned members of the New York and New Jersey Congressional delegation, you have convened this hearing to bring forth a greater understanding of the seriousness of automotive air pollutants to human health and the technical and institutional remedies and changes that are required now and soon. The panels of specialists will provide the basis for much concern and presumably some hope. In addition, the auto industry's second echelon spokesmen will provide you with their unfailing presentation of invulnerable intransigence clothed with suitably decorous displays presently in their 19th year of redundant refinement.

In the brief time available, I should like to comment on several consistent behavioral patterns of the automobile industry which have, are, and, unless stopped, will continue to deceive, delay, obfuscate and conspire against men of good will, men of political power and men of technical solutions.

Pattern No. 1. The top executives of the auto companies—the Chairman of the Board and the President—have never consented to testify before any governmental forum—federal, state or local—on their air polluting companies and products. When asked to testify, as they were for this hearing, they invariably delegate to corporate officials who speak with less authority and less visibility. Some Chairmen, like Chrysler's Lynn Townsend, decline even to reply and routinely dispatch Congressional inquiries to lower strata who in turn decline to have their company represented. The refusal of top executives to testify permits them to wallow in ignorance and indifference toward air pollution while they spend their days in high finance, sales, distribution and personnel policies. Unlike Senators, Representatives, Governors and Presidents who want to and are expected to meet their constituents, top chiefs of massive corporate states (GM grosses $2.4 million an hour on the average 24 hours a day with 750,000 employees) remain in their executive suites making decisions that reverberate life and death impact on their customers' health and safety. These corporate autocrats will not begin to feel the urgency of the pollution crisis until they are touched by subpoenas, spurred by indictments and shorn of their calculated anonymity.

Pattern No. 2. By their indifference, venality, and conspiracy, the auto companies are proliferating scales of violence throughout the land that have no parallel. Apart from their unsafely designed vehicles, these companies spew forth tons of carbon monoxide, hydrocarbons, oxides of nitrogen whose silent violence attacks the health of man. Adhering to the principle that the infernal internal combustion engine is to remain eternal, the companies still maintain that there is no need to control these violent emissions, except possibly in southern California. That remains to this day their basic philosophy and explains their determination to delay and deceive with impunity. Although the case has been settled via a consent decree, the Justice Department's charges that the auto companies and their Automobile Manufacturers Association conspired since 1953 to restrain the development and marketing of auto exhaust control systems stand as a reminder of the vast potential for members of this industry *to agree to do nothing.* This is the easiest of conspiracies, and one that was so blatant that these so-called competitors were caught last year giving identical speeches on air pollution through their coordinating co-conspirator, the Automobile Manufacturers Association. The recent initiation of antitrust suits by California, New York and Illinois should bring to public light the mass of documents produced by the five year long Justice Department inquiry before that agency surrendered claim to the antitrust case of the century. In the meantime, General Motors continues to be responsible for at least one-third of the nation's air pollution by tonnage by virtue of the engines it designs and the plants it operates. This is a GM produced violence that rarely invokes the demand for law and order to replace the anarchy that its predatory power has constructed and maintained. Because the emphysema, the cancer and other diseases that build up over time in the human beings are deferred consequences of such violence, which the law has not integrated therein into a structure of accountability. This is the style of technological violence produced by executives who keep their cuff links on.

Pattern No. 3. The auto companies refuse to identify the problems and the hazards from their products. It was not the industry, but a Professor at the California Institute of Technology who made the connection between auto exhausts and photochemical smog in the early Fifties. All efforts at auto pollution control by California began in earnest from this discovery. Thus the first step in curbing any health hazard—the discovery of its existence—has not been assumed by the industry to be its responsibility. This

is true to the present time. For although the law is only considering the three pollutants—carbon monoxide, hydrocarbons and oxides of nitrogen—three other serious pollutants—lead, asbestos and rubber tires—remain unrecognized and unstudied by the industry. Why should the companies make the connections with human disease when they can gain more time by waiting for outsiders to do so. The buildup of lead concentrations in the atmosphere, especially in the cities, is alarming scientists. (See *Scientist and Citizen*, April, 1968). Asbestos is receiving much more attention recently but not by the auto companies whose clutch and brake linings release it into the air. A Litton report prepared for the National Air Pollution Control Administration (HEW) this year noted that the latent period required to develop asbestosis, lung cancer, or mesothelioma is 20 to 40 years. The report state that "Asbestos is an air pollutant which carries with it the potential for a national or worldwide epidemic of lung cancer. . . ." The auto industry has produced nothing by way of research on the risks from this pollutant and how it can be reduced. Particulate and other polluting matter from the wear or combustion of rubber tires were called possibly the most serious form of vehicular pollutant by Professor Rene Dubos of the Rockefeller University who urged immediate study of this ignored area. Neither the tire nor the auto industries have spent a dollar trying to find out.

Practice No. 4. The auto industry has practiced a policy of prevarication and deception that has lulled and blunted the ardor of many legislators. Examples could be adduced ad infinitum; let a few suffice.

On March 3, 1953, Ford Motor Company wrote Mr. Kenneth Hahn, Los Angeles Supervisor, as follows: "The Ford engineering staff, although mindful that automobile engines produce exhaust gases, feels these waste vapors are dissipated in the atmosphere quickly and do not present an air-pollution problem. . . . The fine automotive powerplants which modern-day engineers design do not "smoke." Only aging engines subjected to improper care and maintenance burn oil."

On March 26, 1953, General Motors wrote Mr. Hahn that "The information that is available to us does not indicate that carbon monoxide is present in harmful amounts in the Los Angeles atmosphere and so we have not been concerned about the imminence of a serious health problem from this source."

Moving to the present, the deception continues but becomes even bolder. With a presumption that borders on pornography, Charles M. Heinen, of Chrysler Corporation, delivered a paper before the industry-indentured Society of Automotive Engineers in April 1969, entitled "We've Done the Job—What's Next? He goes on to say:

"I stated that we've done the job. [The main battle against automotive pollution has been won.] Now, let me summarize what we have done. Starting with the 1961 model and including the 1970 vehicles, the accumulate up-to-date record will show:

1. Hydrocarbon emissions down about 80%.

2. Carbon monoxide down about 70%."

This has become the official industry line. Observe the ease with which it can be overwhelmed with refutation. First, the industry ignores the importance or necessity of four other vehicular pollutants—oxides of nitrogen, lead, asbestos and rubber tire pollutants. There is abundant evidence of harm done by the first three and abundant need to find out about the latter pollutant. Second, the Heinen approach fails to account for the projected increase in vehicles and mileage travelled. As a Senate Commerce Committee report declared: (1969)

"The present emission standards will not stabilize, much less reduce vehicular air pollution. Studies indicate that, under existing controls, automobile air pollution in the United States will more than double in the next 30 years because of the projected increase in both the number of vehicles and miles driven by each vehicle. Ironically, under present emission standards, oxides of nitrogen emissions, the main villains in photochemical smog production, will be higher than they would be if no standards existed."

Third, the industry neglects specially vulnerable individuals such as the hundreds of thousands with respiratory diseases and traffic police who must work in environments having high vehicular emissions—to name two groups. These people have necessities that connot be ignored by national pollution control policy. Fourth, vehicular pollutants destroy hundreds of millions of dollars of property—as in agriculture—and cause vast dollar damage to other property. Since others, not the auto industry, bear this cost, the billions in property losses caused by an industry that refuses to be toilet trained are ignored in the deceptively optimistic orgies that go by the description of technical reports from the auto companies. Fifth, auto pollution is receiving increasing attention as a traffic safety hazard—ranging from the effect of carbon monoxide on drivers (GM recently recalled over 2 million vehicles because of this hazard) to reduction of driver visibility from smog on highways. Sixth, auto pollutants and the dirty, ugliness that they produce constitute a nuisance and aesthetic deprivation that alone should be sufficient for their prevention. Seventh, Heinen's and others' figures about reduction of carbon monoxide and hydrocarbons knowingly ignore the degradation of performance as the mileage increases. Federal regulations require that automobile emissions not exceed specified levels for carbon monoxide and hydrocarbons. Certification procedures by the National Air Pollution Control Administration are supposed to guarantee that emissions will not exceed the maximum allowable for 50,000 miles with one major tune up at 25,000 miles. However, an undisclosed, NAPCA financed study of the emission characteristics of Hertz vehicles indicated that 53% of the autos tested failed either the carbon monoxide and/or hydrocarbon tests after only 11,000 miles on the average. General Motors' failure performance was distinctive: 68% of the GM cars surveyed failed for either carbon monoxide or hydrocarbon at an average of 12,600 miles. The Federal testing of motor vehicles for compliance with the law is a shocking story which will soon be told in a coming report.

Practice No. 5. The auto companies have applied their considerable politico-economic power to avoid having to shoulder the burden of proof for their air violence. In a society with democratic control over its technology, it would not be up to the victims to have to show that a pollutant was harmful, particularly the kind that takes years to manifest its deadly impact on human beings; it would be up to the polluting company to show that its emissions were not harmful. The new cry of the students and the environmentalists to General Motors et al will be—"You prove its harmless or get it out of our air."

Practice No. 6. Having had great success in surrounding themselves with privileges and immunities, the auto companies have been able to keep their research and development budgets tiny. During the past two years, to illustrate the sense of priority, General Motors has spent $250 million to change over its signs to read "GM—Mark of Excellence." Judging by its technical output, its lack of change, its facilities and manpower devoted to R and D, GM could not possibly spend more than $8 million a year for system solutions to its vehicle's pollution. That amounts to about 3½ hours gross revenue. Such contempt for the inalienable rights of people to breathe pure air, coupled with industry-wide conspiracy, is a crime of staggering proportions for which there is no prosecution.

Practice No. 7. The auto companies' response to growing state and federal demands for pollution control has been to sustain the perpetuation of a grossly inefficient internal combustion engine by applying tack-on "solutions." During the past four years, these tack-on, rather than systemic, approaches have been produced with *decreasing* costs to the companies and *increasing* added price increases to the motorist. In addition, the cost of maintenance of these clumsy devices increasingly accelerates with every expanded objective. While promoting the myths of how much alternatives to the internal combustion engines would cost, the auto companies are bilking millions from motorists in order that their capital commitment to the conventional engine not be disturbed. It is critical for Congress to analyze at what point on the continuation is the most efficient absorption of the cost. Engineering history has shown that that point is the design boards. For example, company representatives are now providing an idea of how much it is going to cost California motorists to meet that state's forthcoming standard. In terms of increased fuel consumption and added price increases allegedly due to added devices, it will cost California new car buyers about $600 million in the first year. These kinds of figures are rarely stacked up against the cost of basic propulsion changes back in the motorcar plants. The external costs of the present internal combustion engine—health, property, fuel, consumption, price increases, maintenance, traffic crashes etc., vastly exceed initial, fundamental changes in the propulsion changes. But the auto companies, not the people or the government, makes these cost decisions. The auto subeconomy is a classically authoritarian system in this regard. In a period of our history when spectacular advances have been made in space, automated production machinery, computers and other areas, the auto industry continues to inflict the violent internal combustion engine-fuel combination on the public. With greater technological capability and affluence, the auto industry has had a commensurately greater ethical imperative to know the knowable and apply the solutions. The enormity of its criminal behavior grows larger every year. No longer should the people in this country delay in doing what should have been done in the 1920's and 1930's. It is recommended that the following action should be taken:

1. Vigorous antitrust enforcement to dissolve General Motors and restructure the auto industry under conditions that will generate competition for quality and safety.

2. The government should use its procurement powers and research-development funding to create maximum incentives for less polluting vehicles. This would include setting up a production capacity for nonpolluting or less polluting vehicles. There is ample precedent for this move in ——— less urgent areas—e.g. maritime B and D subsidy and the outright creation of a tax-supported private atomic energy industry. Without a government supported capability, the standards process will be controlled by the product-fixing policies of a collusive industry.

3. Existing air pollution control laws must be amended to provide for effective penalties and other sanctions to deter violators, for an expeditious recall power for correction at manufacturer expense, for strong in-plant investigation and inspection powers and for ample manpower to perform these missions. At present, millions of vehicles are produced that violate the pollution control standards. There is no way for the government to ascertain that the carefully tuned, prototype vehicles submitted for

testing by the auto companies are in any way similar to production vehicles. Sanctions must apply to corporate officials, not just the companies.

4. The principle of maximum technological feasibility must become a prominent guideline for federal policy. This is in accord with a new technological ethic that the machine adapts to the man. Quickly jettisoned must be the idea that our people must await two to three decades of medical studies before the human guinea pig evidence begins to bestir the auto manufacturers.

5. Strong, long-range cut-off dates should be established beyond which vehicles with certain levels of pollution can no longer be sold. Long-range decisive deterrents and heightened public expectations are built up in this manner.

6. A criterion of corporate insanity should be developed to apply to certain levels of indifference, insensitivity or venality. Once these levels are attained for any given area of corporate decision making—in this case, pollution—the corporate institution will lose its power over that area to the people. In the alternative, there could be a federal declaration of policy that the quality of air can no longer be intruded upon by corporate or other polluters as their private sewers. This would permit interesting policies and rights to emerge—such as constitutional change pressures toward a fundamental human right to a pure environment or taxation of polluters to such a degree that the companies decide it is cheaper to adopt the control machinery.

7. Above all, a new governmental policy of meticulous investigation of the auto companies to disclose illegal practices, technology suppression and other patterns of activity that slow or block pollution control progress is needed. Disclosure is reform's first step. To continue the present permissiveness of trying to understand these generators of air violence through the contrived statements of a number of company officials is similar to trying to understand China and the Soviet Union through the utterances of Kosygin and Mao. This nation applies more investigative manpower to one bank robbery than it devotes to the auto industry's violent activities. Those of us who have followed the tortuous path of the industry over the years can be forgiven the lack of patience displayed by public representatives newly exposed to the smooth semantics of corporate publicists. For us, the auto companies' assault on the biosphere must be stopped if only for the benefit of the young and still unborn generations who will never know what a breath of fresh air can be like.

I should like to request that the attached questions be asked of the auto companies as a start toward the necessary disclosures.

Thank you.

QUESTIONS

1. Under the Air Quality Act of 1967, motor vehicle manufacturers are asked to submit prototype models for testing to assure that evaporative and exhaust emissions are controlled in accordance with the standards established by the Secretary of Health, Education and Welfare. What steps has your company taken to assure that production line models conform to these prototypes with regard to the emission of pollutants? Please describe the quality control program as it relates to this problem.

2. Why have the Presidents and Chairmen of the Boards of the automobile companies consistently refused to appear before public forums to discuss their companies' efforts—or lack thereof—in the field of air pollution control?

3. Are the automobile manufacturers at all concerned with the fact that inner city residents—black slum dwellers and others sometimes called the "silent majority"—are subjected to massively greater quantities of pollutants from automobiles than are the residents of Grosse Pointe, Michigan and other suburban communities where the automobile executives lay their heads? If so, please produce the corporate studies which reflect this concern.

4. Why have the automobile companies raised prices for each of the last three model years, each time citing the cost of air pollution control as one reason, when there has been no significant change in that equipment over this period?

5. What research have the companies engaged in relating to the efforts of air pollution from automobiles on the following: automotive safety, health; property damage, vegetation, wildlife, climate?

6. Please indicate, for each engine-carburetor-transmission combination, exactly what quantities of the following pollutants are emitted over the life of each vehicle: Carbon monoxide, hydrocarbons, oxides of nitrogen, lead, asbestos, rubber particles and gaseous matter from tires.

7. What research have the companies undertaken to study the health effects of these pollutants? If they have not engaged in such research, why not? If they have, what have they done to alert the public to the health dangers of these pollutants?

8. Aside from claiming to meet inadequate federal standards, what have the companies themselves done to reduce these dangerous emissions?

9. Do the executives assembled here today agree that automobile industry executives should be subjected to personal criminal penalties for failure to adhere to federal standards for automobile exhaust emissions?

10. How much money have the companies spent, for each of the last five years, on research relating to steam, electric and other pollution free unconventional power sources for mass produced automobiles?

11. With regard to questions 5, 7, 8, 10 and 12, please compare the amount of money spent for those activities with the following: a) the annual advertising budget of the companies. b) the amount of money spent on bonuses and stock options for corporate executives.

12. Are the companies engaged in research to develop a cleaner burning fuel?

13. What is the position of the companies (individually) on federal standards limiting the emission of oxides of nitrogen, lead, asbestos and tire-related matter from motor vehicles?

14. The newspapers recently reported that the automobile manufacturers were engaged in research relating to electrically powered lunar vehicles. Will the fruits of this research result in similarly powered vehicles for mass production on earth? If so, how soon?

A STATEMENT OF GENERAL MOTORS CORP., BEFORE THE NEW YORK, NEW JERSEY CONGRESSIONAL PANEL, NEW YORK CITY, DECEMBER 8, 1969, PRESENTED BY DR. PAUL F. CHENEA, VICE PRESIDENT, RESEARCH LABORATORIES, GENERAL MOTORS CORP.

Representative Farbstein and other Members of Congress, I am Dr. Paul F. Chenea, a vice president of General Motors Corporation and in charge of the Corporation's Research Laboratories.

I am here today in response to your invitation to General Motors to appear before this panel of Congressmen from New York and New Jersey to discuss on behalf of General Motors the effects of the automobile on the air of the metropolitan area. I am accompanied by Dr. Fred W. Bowditch, director, emission control, of the GM Engineering Staff.

I have been associated with General Motors Research Laboratories since June, 1967. Prior to that I was vice president for academic affairs of Purdue University and acting dean of the School of Science, Education and Humanities from 1961 to 1967 and was a professor and administrator in engineering and mathematical sciences at Purdue during 1952–1961. I was on the University of Michigan engineering faculty during 1946–1952.

During those years I also was a consultant to government and industry.

In response to your invitation—and in an effort also to give perspective to the discussion before this panel—our report covers three broad areas:

1. A review of progress in reducing emissions from our current production cars.

2. What we are going to develop future power plants.

3. Some comments on the automotive contribution to the metropolitan area's air pollution problem.

Mr. Chairman, as discussed with you in reaching general guidelines prior to accepting the invitation to appear here today, we are under certain legal inhibitions in discussing any subject matter related to pending air pollution litigation, including a suit in New York State.

However, we do not believe that this in any way will limit our ability to present a meaningful report that will be useful to this panel. As you know, we want to cooperate with you, and we recognize the importance of presenting our views on metropolitan New York air quality problems.

At the outset, I want to emphasize that air pollution problems are taken very seriously by General Motors. We have already made substantial progress in reducing emissions from our engines—including a number of improvements adopted by others in the industry—and we are continuing to reduce emissions each year. But most important—and I cannot emphasize this too strongly—General Motors is and will be irrevocably committed to finding a solution to automotive emission problems at the earliest possible time. And in seeking solutions we will have no hesitation in using a power source other than the internal combustion engine if it will meet the needs of our customers, at a price they can pay, and will solve the emission problem.

We are concerned about the health and safety of the public. The cars we are producing right now—not some time in the future—are in themselves evidence of our concern. Our cars emit approximately 70 per cent fewer hydrocarbons than the unequipped cars of 1960; next year it will be 80 per cent. Carbon monoxide emissions have been reduced nearly 65 per cent in the same period.

Most importantly, while emission levels of our current cars are substantially lower than emissions of pre-control vehicles, achievement of the levels now being considered for 1975—and we certainly are hopeful of achieving them—would result in reducing auto emissions even further—with hydrocarbons 95 per cent and carbon monoxide 85 per cent below uncontrolled cars of 1960.

The facts clearly demonstrate that our current model General Motors' cars greatly reduce the automotive contribution to atmospheric pollution in the metropolitan New York area and other major urban areas of the nation.

This effectiveness of emission control systems on 1970 cars was recognized recently by a most eminent public authority on air pollution, Dr. A. J. Haagen-Smit. He is chairman of both California's Air Resources Board and of President Nixon's Task Force on Air Pollution.

Dr. Haagen-Smit discovered how photochemical smog found principally in the Los Angeles Basin is formed. He said in an address[1] last month that the sum total of

---

[1] At Governor's Conference for California's Changing Environment, November 17–18, 1969, Los Angeles, California.

hydrocarbon and carbon monoxide emissions from motor vehicles on the road today are lower than they were last year.

He continued: "They will be even lower next year and the year after that. This is true even though we will have more cars each year. The decrease in total emissions will soon be true for oxides of nitrogen. The above are significant accomplishments and are ones that should not be casually accepted as having been easily accomplished."

This has been accomplished despite the number of older used cars that lack emission control equipment.

All of our air pollution work at the Research Laboratories has had three basic objectives: the understanding of the nature of atmospheric effects, the understanding of the nature of vehicle emissions, and the development of new control concepts.

We started intensive research into automotive emissions and their relationship to photochemical smog in 1952. The main effort in the beginning was to determine the nature of the problem and develop instruments needed in such research. As knowledge was gained, hardware was developed.

One of our first tasks was to develop techniques for analyzing trace components in exhaust gas. Automobile exhaust contains more than a hundred different hydrocarbons—some of which form photochemical smog a thousand times more readily than others. Some lead to eye irritation and some do not.

However, even today many mysteries remain concerning exhaust gas and the atmosphere. For example, carbon monoxide disappears from the atmosphere rather than accumulating, and the scientific community has never been able to determine where it goes. This illustrates the difficulties of the area in which we have been working.

We are participating in an $11 million, three year cooperative research program which was started in January, 1968, to find answers to such questions as to what happens to carbon monoxide. It is funded by the federal government, the petroleum industry and the auto industry.

We are also seeking answers to questions concerning the effect of pollution on plants, the causes of haze formations, the effect of low level carbon monoxide on human and animal behavior and the concentration of carboxy hemoglobin in the blood of various population groups in New York City.

Since 1952—when our intensive air pollution research program was launched—a great deal has been accomplished by General Motors. Systems have been developed to provide controls for all sources of emissions from the automobile—blowby gases from the crankcase, exhaust gases from the tailpipe and evaporative losses from the fuel tank and carburetor. These accomplishments have included the following:

1. The Positive Crankcase Ventilation control system (PCV) developed by General Motors.

2. The GM Air Injection Reactor system (A.I.R.).

3. The GM Controlled Combustion System (CCS).

4. Evaporative controls, which will become standard on our 1971 model cars.

These developments were aided immeasurably by the GM smog chamber—the first and largest privately-owned facility for laboratory simulation of actual smog formation—and the GM laboratory at El Segundo, California, to monitor exhaust emissions of the GM vehicles in the hands of the public. This was the first facility of this type in the industry.

We have taken the most productive steps first in achieving the 70 and 80 per cent reductions referred to earlier. The remaining, smaller segments will be much harder to achieve.

Regardless of what we have done so far—and whatever GM and other manufacturers may be able to do in the immediate future—we should all clearly understand a few facts as to existing problems that limit the impact of reductions achieved with new auto emissions on the total automotive pollution problem. For example:

The lower emissions of present model automobiles will not have full effect on air quality until older cars that lack effective emission control systems are eliminated from the vehicle population.

While we are working on the problem no practical system has been developed to retrofit older model cars with current, improved control systems, with the exception of PCV valves, which can be installed in pre-1963 model cars. PCV valves are available at GM dealerships, but owners of pre-1963 cars have shown little interest in having them installed.

Moreover, if there is a desire to speed up the impact of improvements on new cars, then:

Owners of cars must recognize the extreme importance of improved maintenance of emission control systems.

Changes in fuel will be needed, such as lower volatility.

Looking forward, we feel that it is our responsibility to develop the technology which, with time, can eliminate the automobile from the list of significant air pollution sources.

Reaching lower pollutant levels may require substantial technological breakthroughs in hardware and materials, or major modification of fuels—whether by alternate power plants or improved piston engines.

The required advances will be the products of research. Research is the product of ideas. Even unlimited sums of money do not assure the needed ideas.

Research is to manufacturing as prospecting is to mining. In research it is our business to explore, to learn, to know and to understand. Design for production comes later and is a different matter entirely.

In research we seek to prove that there are no laws of nature that prohibit what we wish to do. Making a production prototype is quite another matter.

The researcher makes apparatus which can be made to work in a laboratory. The production engineer strives to make devices which will not fail. An automobile, for example, which is produced in volume, not only must operate properly, but it must continue to function over a long period of time even when used under adverse conditions or not properly maintained.

To attain even lower levels of emissions of new vehicles we have intensive, parallel programs involving development of alternate forms of automotive power and improvements of the internal combustion engine.

There is no one, quick answer to the total problem. It will take contributions from many design parameters to minimize emission from any power source.

ALTERNATE POWER PLANT DEVELOPMENT AT GM

Now, let us look at the work we are doing on alternate power plants. Specifically, these include continuous combustion engines—that is gas turbines, steam and Stirling engines—as well as electric power systems and hybrids, which are combinations of two or more power plants.

Continuous combustion engines offer the opportunity for more complete, steady and, therefore, more precisely controlled combustion. They can be designed to have reductions perhaps 80 to 95 per cent below the emission level of the 1960-level uncontrolled internal combustion engine. This is an emission level to which the internal combustion engine can be reduced by further improvement.

One of the most promising continuous combustion engines is the gas turbine. Our gas turbine research dates back 20 years and has included experimental trucks, buses, and the first gas turbine automobile in the United States, built and tested in 1953.

For the immediate future, a gas turbine engine is scheduled for production by our Detroit Diesel Engine Division for trucks, buses and stationary applications. This power plant, aimed at the heavy vehicle market, will be a relative of the experimental gas turbine developed by the Research Laboratories a number of years ago. The GM turbine-powered bus will have an automatic transmission comparable to those in present buses rather than a manual shift.

While research indicates that the turbine is much better suited to the requirements of trucks and buses, we are working on designs for passenger cars, too. Disadvantages of the turbine for passenger cars in the present state of development include poor fuel economy and inadequate response in traffic.

One possible limitation on mass production feasibility of the gas turbine for passenger cars is the fact that a major required material is not available in sufficient abundance. Present turbine engine components require large amounts of nickel, perhaps more nickel than present free world availability. However, we are continuing to search for new designs and more available materials that could make this low emission engine practical for production automobiles.

As to steam engines, interest in research and development has been running high. Government-sponsored programs for the testing of steam-engine buses are underway in Dallas and San Francisco. At General Motors, we also have had a number of steam engine research and development programs in progress.

We exhibited two working steam engine test vehicles last summer at a "Progress of Power" exhibit. We are continuing to do experimental work with them.

One is a Chevrolet Chevelle, powered by a steam engine designed and installed by Besler Developments Inc. The second car, a Pontiac Grand Prix, contains an engine designed and constructed at the GM Research Laboratories.

We have found that size, cost, fuel consumption, serious lubrication problems and weight are formidable obstacles—not to mention the cold weather freezing problem.

An external combustion engine, the Stirling, is quiet, vibration free, and about twice as efficient as the steam engine.

The GM Research Laboratories have done development work on Stirling engines over the last 12 years. Our experimental hybrid Stirling-electric car, the Stir-Lec II, features a battery-powered electric drive system with the 8-horsepower Stirling engine driving an alternator for battery charging.

At its present state of development, the Stirling is bulky, heavy, complex and expensive. It requires materials not readily available in quantity, and both durability and maintainability are unknown. Our current research is directed toward designing lighter, smaller, less costly engines.

In addition to our work on petroleum-burning engines, General Motors has several active programs on electro-chemical energy converters and electric drives. We demonstrated our Electrovair II and other battery-powered cars at our "Progress of Power" exhibit. These vehicles, built as prototypes to gain more definitive answers in our research, were the products of several years of investigation into various electric drive vehicles. The Electrovair II, successor to Electrovair I built in 1963, was demonstrated in Washington in 1967 in connection with a Congressional hearing.

Our intensive investigations of the electric car have shown that the major advan-

tage of this vehicle is reduction of air polluting emissions.

We have researched and built a limited application or short range "shopper" vehicle—something between our compact-sized Electrovair II and a golf cart. Although slightly smaller than most electric cars built today, its performance characteristics are similar to those of other electric vehicles.

A vehicle of this type would be used almost exclusively for local shopping, driving to a commuter station, various short-distance community errand-type driving and other limited range transportation tasks.

A number of limitations compared to current all-purpose cars—at the present state of battery development—are imposed by this type of electric vehicle. For example:

Top speeds range up to approximately 45 miles per hour.

This poses a safety hazard if such vehicles are intermixed with larger cars on urban expressways and comparable roads where constant speeds of 40 miles and more per hour are maintained.

Besides initial cost, replacement of batteries approximately every two years could be expected to cost in the area of $200 in today's market.

Cold weather and passenger compartment heating would place heavy burdens on performance. Battery performance deteriorates in cold climates. At zero degrees Fahrenheit, a lead-acid battery will deliver only about 60 percent of the driving range and peak power that it will at 80 degrees.

A "shopper" that has a range of 40 miles on an 80 degree day would be cut back to a range of 24 miles on a zero degree day if the heater were not used, and only 12 miles if the heater were used.

In our battery work, we are faced with an age-old problem. For vehicular propulsion, a battery must deliver high power for acceleration and hill climbing, and it must offer high energy storage for traveling long distances. The lead-acid battery provides enough power but inadequate range. Fuel cell characteristics are just the opposite and the other concepts fall in between. Cost, size, weight and availability of materials represent a continuing challenge.

No one has yet produced a battery which meets all the requirements. We are continuing development work on some of the most promising contenders. One of these is the zinc-air battery, which has about three to five times the range performance of the lead-acid battery.

In addition, we are studying the lithium-chlorine cell. It has more than adequate power and the energy storage capacity is 10 to 15 times greater than a lead-acid system. However, it operates at extremely high temperatures in the neighborhood of 1200 degrees Fahrenheit. Vehicular application is still many miles down the road.

One major electric vehicle problem in the New York area is the availability of adequate power. As you know, problems related to both air and thermal pollution have limited the utilities in expanding economical power availability. Power supplies are expected to be so tight in the summer of 1971 in New York, according to a recent report in Business Week, that the utility company is said to be planning to mount emergency power generators on barges around Manhattan Island. Nationally, utility companies are expected to increase generating capacity fourfold by 1990 just to meet normal demand. This expansion does not provide for capacity that would be needed to recharge batteries of electric vehicles.

In addition to problems related to potential inadequacy of power supply in some locations, shifting motorists from present passenger cars to electric vehicles could produce side-effect problems. True, use of battery-powered vehicles would eliminate auto emissions. However, generating additional electric power to charge the batteries could result in increased pollutants emitted by stationary sources.

In summary, some of the various alternate power plants that we are investigating have more promise than others in certain respects and our development programs on these concepts will continue. However, in view of the apparent shortcoming of these alternate power plants in various respects, we have continued to work intensively on further development of the internal combustion engine. We will now review this work.

GM DEVELOPMENT OF IMPROVED INTERNAL COMBUSTION ENGINE

Our programs in General Motors to provide additional reductions of emissions from the internal combustion engine have produced most encouraging results. We have been able to obtain very low emission levels with experimental engines in the laboratory.

Exhaust manifold reactors are one of the routes to still lower emissions from the internal combustion engine. Basically, these are large volume exhaust manifolds from two to four times the size of conventional manifolds. These are devices to consume gases in the exhaust. Their effectiveness depends upon the temperature that can be maintained and how long the exhaust gases mixed with additional air can be kept at the elevated temperature.

Extremely low levels of emission compared to even the currently controlled emissions have been obtained. This effectiveness is offset by a number of problems which we are trying to solve. The principal problem is that of a material. We need heat-resistant material that is longer lasting than any available today.

Another system also involves enlarged manifolds but does not require added air and does not have the fuel economy penalties and high temperature material problems of the previously described reactors. However, these lean-fuel manifolds do not produce as low emission levels, and there are difficulties in providing satisfactory engine operation.

We have actively conducted efforts to apply catalytic control to exhaust emissions—an effort started in the middle 1950's. To date we have been unsuccessful with any catalyst if the gasoline fuel contains lead. The catalysts are rendered inert in a relatively short mileage when leaded gasoline is used.

Our work now is concentrated on catalysts for use with unleaded fuels. We have found that this approach is very effective in further reducing emissions from the internal combustion engines.

However, this success has been attained with precious metal catalysts which require material limited in availability. Problems of catalyst durability and temperature control must also be solved.

A number of other techniques for emission improvement have been developed which show promise as an aid in attaining lower emissions. These involve combustion chamber design, fuel injection, valve timing optimization and exhaust gas recirculation.

Our studies and experience with these experimental systems have indicated that an improved piston engine has the potential to provide the same very low level of emissions of carbon monoxide, hydrocarbons and nitrous oxides achievable with the gas turbine, steam or Stirling engine.

As a result, selection among these power plants for future production will be based upon characteristics other than emission level. Further, we believe on the basis of the problems yet to be solved that we will be able to achieve a production version of the improved piston engine earlier in time than any of the alternate power plants.

This makes it clear that we must continue to develop the improved piston engine if we are not to delay that advent of still lower emission level automobiles.

Considering all the relative advantages and disadvantages of the various power plants which might be used in automobiles, the internal combustion engine offers at present the best pollution control value. All of the potential power plants must be measured against each other on the basis of emission level potential and value—in all its aspects—to the owner of the car.

We would like to make it absolutely clear that General Motors has an open mind as to power plants for automobiles and will continue to explore all possible alternatives.

"PROGRESS OF POWER"

Recently, we demonstrated to many scientists and others interested in power plant development some of the latest results of our continuing investigation of various possible forms of automotive power.

We showed examples of working, experimental propulsion systems at a "Progress of Power" exhibit at our Technical Center near Detroit. These experimental designs still under investigation included both alternate power plants and improved internal combustion engines. We are continuing our work to develop these laboratory prototypes toward manufacturing feasibility.

A booklet containing copies of reports on these various power plants is submitted with this statement.

We invite you to visit the GM Technical Center to see these vehicles and, more importantly, the work we are doing in emission control research and engineering.

PROBLEMS RELATED TO LEAD IN GASOLINE

All the gasoline-burning engine approaches reviewed previously have important fuel composition requirements if we are to achieve maximum control of emissions.

The most important of these is the elimination of lead from gasoline. Lead creates several problems, such as making exhaust manifold reactors less effective and destroying effectiveness of catalysts.

Use of leaded gasoline rather than gasoline without lead may also cause greater emission control deterioration with accumulation of mileage due to combustion chamber deposits. Also, lead deposits form rapidly in some of the narrow passages which form a major part of some contemplated control system.

Recently, various government agencies have indicated interest in eventual control of particulates from automobiles. By far, the major share of such particulates are lead or lead products. If significant reduction in these particulate levels is to be achieved, lead must be removed from gasoline.

THE IMPACT OF AUTO EMISSIONS ON POLLUTION

We have talked so far about the automobile and what we have done and what we are trying to do with respect to auto emissions.

As we go further down the road, reduction of car emissions to an acceptable level would solve only the automotive emission segment of the total air pollution problem.

We are confronted with far-reaching air quality problems that will not be solved even with reduction of auto emissions to zero. This is a fact beyond question. Air pollution will not go away just by restricting auto emissions.

AUTO EMISSIONS AND METROPOLITAN AIR POLLUTION

Now let us turn to the data on metropolitan New York's atmospheric pollution problems.

There have been a variety of opinions expressed as to the sources of the metropolitan area's polluted air. Admittedly, the automobile is a contributor to the problem.

There is a tendency to measure gross tonnage and place equal value on all the various types of pollution tonnage in the atmosphere. This type of assessment is misleading.

The tonnage figures should be weighted by the potential harm to health that any given type of pollutant will produce. Even this does not give adequate recognition to time concentration or dosage.

Nevertheless, if we use assessments of the toxicity of the various types of pollutants to modify the tonnage, we obtain a more factual picture of the importance of the individual pollutants in a city's atmospheric problems.

Pollutants present in metropolitan atmospheres include hydrocarbons, carbon monoxide, nitrous oxides, sulfur oxides and particulates.

On a tonnage basis, slightly over 50 per cent of the metropolitan air pollutant volume is attributable to automobiles.

Because carbon monoxide is the largest tonnage pollutant emitted to the metropolitan atmosphere, it is often assumed that this is the principal metropolitan area pollution problem. Since most of the carbon monoxide comes from automobiles, it is further assumed that the automobile is the major cause of this area's pollution problem.

According to government figures, carbon monoxide is far less significant in terms of potential harmful health effect than are many other pollutants.

If potential health harm of these individual pollutants is considered as well as tonnage, the relative importance of present levels of carbon monoxide in the atmosphere becomes much less. Rather than being responsible for more than 50 per cent of the problem, automobile emissions become less than 10 per cent of the metropolitan air pollution problem.

We think this type of assessment is important in keeping in proper perspective the relative role of the automobile in contributing to harmful pollution. This does not mean, of course, that we believe there should be any relaxation in efforts to control emissions from the automobile, but it does mean that the government at all levels should at all times keep the total problem in mind.

Thus, it follows that regardless of the improvements in automobile power plants, air pollution will continue to be a problem and will continue to concern all citizens and governments for many years.

This is a by-product of our continuing urban growth, population growth and the proliferation of additional products that have their own role in atmospheric pollution. Just as we are dedicated to reducing auto emissions, General Motors supports all useful efforts to find solutions to other sources of atmospheric pollution. This is a big job, and all of us as good citizens must work toward the goal of cleaner air.

For our part, we have undertaken extensive projects to control emissions from our manufacturing facilities, as well as emissions from the cars we produce.

The criteria established in studies of what represents suitable air quality should become the basis for control standards with which automobile manufacturers and all other contributors would comply, taking into account both technological and economic feasibility.

The automobile industry can perform most effectively in reducing emission levels if stable standards are set sufficiently far in advance to allow time for development of an optimum approach to solution of the problem.

In closing, let me assure you that General Motors will do its part in the effort to find means to reduce automotive pollutants. We are working hard to develop alternate power plants. We believe, on the basis of our work, however, that the internal combustion engine currently is the best overall power plant in terms of all value considerations.

It is our firm conviction that auto emissions will diminish satisfactorily, and we are determined to eliminate the contribution of the automobile from the list of significant pollutant sources.

Thank you.

STATEMENT BY H. L. MISCH TO CONGRESSMAN LEONARD FARBSTEIN AND OTHER MEMBERS OF THE U.S. HOUSE OF REPRESENTATIVES FROM NEW YORK, NEW JERSEY, AND CONNECTICUT, NEW YORK CITY, DECEMBER 8, 1969

Mr. Chairman: I am Herbert L. Misch, Vice President—Engineering, Ford Motor Company, and with me today are Donald A. Jensen, Director of our Automotive Emissions Office and Ross Taylor, Assistant Chief Engineer, Ford Motor Company's engine engineering. At your request, I am here today to describe briefly the efforts of Ford Motor Company to control emissions from our vehicles, the impact of our programs on air quality, particularly in the greater New York City Metropolitan area, and to discuss what we are doing in the area of alternate power sources and their prospects for application to motor vehicles.

First of all, Mr. Chairman, we recognize the seriousness of the air pollution problem in the metropolitan New York area. That problem has been delineated in the 1967–68 Progress Report of the Department of Air Resources of New York City.[1] According to this report, the principal pollutants in the New York Metropolitan area are sulfur dioxide, carbon monoxide and particulate matter. The automobile emits two of these pollutants—CO and particulates. It also emits hydrocarbons and oxides of nitrogen. Because we are aware of no evidence that HC and NO_x pose a significant problem in this area, I will direct my remarks to the two problem pollutants—carbon monoxide and particulate matter.

To set the carbon monoxide problem into perspective, I would like to quote from the City's Department of Air Resources report. It states,

"Carbon monoxide has long been identified as one of New York City's major pollutants. It has been estimated that 1.5 million tons of carbon monoxide are emitted, on an annual basis, into its atmosphere with most of it coming from automobiles. And yet measurements over the last 10 years at the City's principal monitoring site in upper Manhattan, rarely indicated levels of carbon monoxide that could be construed to be of concern. However, data collected from 1966 to 1967 in a more detailed study showed that a number of areas in the City experienced greater than desirable levels of carbon monoxide."

I want you to know that we have already accomplished a major reduction in the amount of carbon monoxide emitted by recent model automobiles. Our 1970 model cars emit about 70 per cent less CO than did their 1967 counterparts. It should be clear that these improvements will go a long way toward elimination of the automobile's contribution to carbon monoxide levels in the atmosphere of New York City.

With respect to particulate matter, this same report states that 88.6 per cent of the particulates in the New York-New Jersey area arise from sources other than motor vehicles and it establishes that the majority of that 88.6 per cent is attributable to such sources as space heating, incineration and power generation.

With respect to the remaining 11.4 per cent attributed to mobile sources, we know that lead additives in gasoline are responsible for a part of it. But, we also know that even if there were no lead additives in gasoline, the automobile would still emit some particulate matter. My point is that we do not yet know as much about the medical, engineering and scientific aspects of this problem as we must in order to address it intelligently and, in this connection, are working to advance the state of the art.

I do not mean to underplay the role of the automobile as a contributor to the emission problem in New York City, but rather to give a balance perspective to the overall problem.

Mr. Chairman, in spite of the certitude reflected by some of the statements made this morning, there remain even at this late stage of the evolutionary process—an amazing number of unknowns relative to the atmosphere in general, the thresholds of toxicity and the synergistic effects of various contaminants of the atmosphere. In other words, we—government and industry—still do not know enough about the vagaries of the atmosphere to be certain how much of any given pollutant is "safe" or "harmful."

Although the responsibility for this definition resides primarily in the government, we are attempting to aid in this effort through, among other things, the support of a research program managed by the Coordinating Research Council. This 13 million dollar program is funded by the auto and petroleum industries and the Department of Health, Education, and Welfare.

Experts from each of these entities, totaling over 200 scientists, engineers and medical doctors organized in 32 committees, aid in the management of this program through the Air Pollution Research Advisory Council known as APRAC.

The research efforts include atmospheric studies such as plant damage by air pollution, fate of carbon monoxide in the atmosphere, origin and importance of haze formation, the source and fate of light hydrocarbons in the atmosphere, as well as study programs to measure and identify particulate matter. Medical projects include studies of the effects of low concentrations of carbon monoxide on behavior, cardiovascular activity, blood effects, and so on.

I am not here to suggest that further action on the air pollution problem should await further definition of the specific needs. However, I am sure you will agree that the more certain all of us are of the relevant facts, the better able industry will be to solve the problem and the more informed government's appraisal will be of the cost and performance relationships implicit in compliance with the new and more stringent emission standards.

Now I would like to address the remainder of my comments to the subjects about which you and the other members of Congress here today have deep concern, what Ford is doing to reduce vehicle emissions.

First, let me discuss alternate power sources.

Although we have prepared rather elaborate paper studies and carefully analyzed all publicly available literature on the subject, we have found no cause to become optimistic about the Rankine cycle engine. In a Senate Committee hearing in Washington in May, 1968,[2] I indicated that, in our opinion, the Rankine cycle was too complex and fraught with too many seemingly insoluble problems to be considered a likely successor to the internal combustion engine. We have found nothing since that time to alter our evaluation of the Rankine cycle.

Our activities in electric vehicle research were described to Senate committees in March, 1967, by Dr. Michael Ference, Vice President of Ford's Scientific Research Staff.[3]

[2] Testimony of Mr. L. Misch, Senate Committees on Commerce and Public Works, May 27, 1968.

[3] Statement by Mr. M. Ference, Jr., Senate Committees on Commerce and Public Works, March 16, 1967.

He cited the development work on a concept battery—sodium-sulfur—a zinc air battery concept, improved motors and control systems. It was pointed out that Ford Motor Company had hopes that these major advances in battery development and in control and motor technology might give the electric vehicle a good chance to succeed as a small urban-suburban passenger car and delivery or service vehicle within a decade.

Then, as now, the principal problem was to find ways to minimize the electric vehicle's disadvantages of short range, poor speed and acceleration and hill climbing and long recharge time compared with the quick refueling of gasoline powered cars.

Our position is essentially unchanged today. Problems associated with the fabrication of sodium-sulfur batteries have proved to be more difficult to solve than had been anticipated. As a result, we are nowhere near as far along at this time as we hoped we would be. Also, the hoped for short range potential of air-zinc and nickel-zinc batteries did not materialize.

Some research with lead acid batteries appears promising. This development, if successful, would permit the production of a city car with about 40 miles range in city driving. This represents a two-to-four-fold improvement over previous technology. It also has been the motivation to re-examine the hybrid engine, electric vehicle concept.

The most promising of all alternate power sources, in our opinion, is the gas turbine engine. Emission levels of hydrocarbons and carbon monoxide from gas turbines appear to be extremely low; however, there is some question as to the level to which oxides of nitrogen can be controlled.

We have been devoting an important share of our research, engineering and testing to this engine during the past 15 years. Three years ago we introduced our experimental 707 turbine, a seventh generation turbine engine designed by Ford engineers. The 707 was designed specifically for heavy duty trucks. We have tested these engines for thousands of hours on dynamometers and at our proving grounds in Michigan and Arizona. Some 18 months ago we installed the engine in a few of our own fleet trucks which haul Ford parts from Michigan to our plants in Ohio. Results have been very encouraging, but work must continue to develop adequate durability and performance.

We have extended our turbine activities beyond truck application and, earlier this year, launched a program for application for off-road uses, such as stand-by generator sets, oil well cementing, construction machinery and marine pleasure craft. We also have installed a gas turbine engine in a Continental Trailways bus which soon will be making a test run across the country.

Application to automobiles is still a bit down the road. However, preliminary analysis indicates that the use of gas turbine engines in passenger cars would entail a significant cost penalty and, in the case of city driving, high fuel costs. These cost and technical factors will have to be overcome before the gas turbine can be considered as an attractive substitute for the internal combustion engine in passenger cars.

Whether or not any of these alternate power sources ever proves to be worthy of becoming a volume-produced power plant remains highly speculative at this point. The near term improvements for vehicle emissions must be realized from the internal combustion engine system. Further, we think any objective analysis of the evidence supports our conclusion that the goal of a virtually emission free power source can be reached sooner with the internal combustion engine than with an entirely different and unproven power plant.

For these reasons a greater share of our efforts is directed toward the control of emissions from the internal combustion engine.

One very substantial program dedicated to these future improvements is what we term the Inter-Industry Emission Control Program. It is comprised of Ford and ten other companies, six of which are petroleum companies and the other four foreign auto manufacturers. The IIEC was established in April, 1967, with Ford Motor Company serving as project manager.

The IIEC utilizes the respective talents of petroleum and automotive specialists in the quest to develop a virtually emission free car. Some very ambitious goals were set. Program targets are 65 ppm hydrocarbons, 0.3 mole per cent carbon monoxide and 175 ppm oxides of nitrogen. These emission targets represents a 90–97 per cent reduction from pre-emission controlled vehicles.

We have attained these very low levels in the laboratory and now have a program involving concept cars utilizing advanced hardware and undergoing tests at our proving grounds to determine whether or not these approaches are feasible in terms of durability, operating economy and performance. We are proceeding at full speed to reach the necessary conclusions, and should these tests show promise, we will explore the adaptability of these concepts to mass production techniques.

Gentlemen, I submit that our progress to date and our future objectives which we confidently expect to attain in the control of emissions from the internal combustion engine will serve our mutual objective of providing clean automobiles and a better environment for everyone. As Mr. Henry Ford II said last Tuesday (December 2) in an address at the Harvard Business School, "It doesn't take much imagination to see that before too many years have gone by, the only market left for motor vehicles will be the market for vehicles that are virtually emission free."

In closing, let me assure you that Ford Motor Company intends to be an aggressive participant in that market.

BIOGRAPHIES OF EXPERT WITNESSES

HEALTH PANEL

Stephen M. Ayers, M.D.: Associate attending in Department of Medicine, New York Universty Medical Center; former Chairman Manhattan Action for Clean Air Committee; Member, U.S. Surgeon General's Subcommittee on Cardiovascular Aspects of Smoking and Health and the Medical Advisory Committee, New York City Department of Air Pollution Control.

William Cruce: Rockefeller University, neurophysiology studies, lectured widely in New York and testified before legislative bodies; Member Air Pollution Committee, Scientist Committee on Public Information (will be testifying as a representative of the Committee).

Austin Heller: Commissioner of Air Pollution Control, New York City.

LOW POLLUTION TECHNOLOGY

Robert U. Ayres: Vice President, International Research and Technology Corporation; former technological-environmental specialist, Resources for the Future; member Hudson Institute, former theoretical physicist.

S. Smith Griswold: President Seversky Environmental Dynamics Research Associates; former chief, abatement branch, Division of Air Pollution, Department of Health, Education, and Welfare; former air pollution control officer, Los Angeles County Air Pollution District; former president Air Pollution Control Association; member Surgeon General's Environmental Health Committee; credited with initiating Justice Department air pollution suit against auto industry.

Wolfgang E. Meyer: Professor of Mechanical Engineering and Chairman Traffic Safety Division, Transportation and Safety Center, Pennsylvania State University; panelist, motor vehicle pollution, 1962 National HEW Air Pollution Conference; researcher on the internal combustion engine and its emission levels.

Richard S. Morse: Alfred P. Sloan School of Management, Massachusetts Institute of Technology; former chairman Federal Panel on Electrically Powered Vehicles; former assistant Secretary of the Army; former president, National Research Corporation.

EIGHTY-TWO CONGRESSMEN JOIN IN CALL FOR "ENVIRONMENTAL DECADE"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 30 minutes.

Mr. REUSS. Mr. Speaker, on Friday, December 5, 1969, I was joined by Mr. DINGELL, Mr. GUDE, Mr. HICKS, Mr. MCCLOSKEY, Mr. MOSS, Mr. SAYLOR, Mr. VANDER JAGT, and Mr. WRIGHT in a call for designation of the 1970's as the "Environmental Decade" and in forwarding an action program for cleaning up our environment in the coming decade.

Since then, a bipartisan group of 73 Congressmen of all ideological persuasions have endorsed that call.

This response is testimony to the growing awareness in Congress of the environmental crisis that confronts us today, and to the need to assign the highest priority—backed up with substantial funding—to the job of cleaning up our air, land, and water in the coming decade.

The list of additional Congressmen now endorsing the call for the "Environmental Decade" and the action program for cleaning up our environment follows:

LIST OF ADDITIONAL CONGRESSMEN SPONSORING "ENVIRONMENTAL DECADE"

Lee Hamilton (D-Ind.).
Ken Hechler (D-W. Va.).
Robert Tiernan (D-R.I.).
Lester Wolff (D-N.Y.).
Donald Lukens (R-Ohio).
Jorge Cordova (D-P.R.).
Robert Mollohan (D-W. Va.).

A CALL FOR THE ENVIRONMENTAL DECADE

We today call for the designation of the decade of the 1970's as the Environmental Decade. Next New Year's Day, January 1, 1970, would be a good time for all Americans to make a New Year's resolution for the decade:

"I pledge that I shall work to identify and overcome all that degrades our earth, our skies, our water, and the living things therein, so that the end of the Environmental Decade of the 1970's may see our environment immeasurably better than at the beginning."

As Members of Congress specially concerned with the conservation of our environment, we make a special pledge to work diligenly on a broad series of fronts:

1. WATER

a. All over the country, man is running out of sources of usable water. The decade must see the development of workable desalination and recycling processes, and better methods of preventing waste by evaporation and other causes.

b. Almost every lake and stream in the Nation is becoming more and more polluted. Half-hearted standards for averting water pollution should be raised, so as to require everywhere water good enough for people to enjoy. Our present programs to eliminate pollution from municipal, industrial and agricultural sources are tragically inadequate. At least $30–$50 billion needs to be spent in the next five years for new municipal treatment works, separation of combined storm and sanitary sewers, industrial waste treatment facilities and for research and development of new anti-pollution methods. The response to the manifest need has been wholly inadequate. For example, Congress authorized $1 billion for water pollution treatment this year, but the appropriations request from both the Johnson and the Nixon Administrations has been for a ridiculous $214 million.

c. It is not enough to clean up our waters after they have been polluted. Effort must be made to find and eliminate sources of pollution before they begin. For example, the Government Operations Subcommittee on Conservation and Natural Resources will hold hearings shortly to determine why the soap and detergent industry continues to use phosphate as a leading ingredient of household detergents, when it is well known that these same phosphates are a leading cause of the eutrofication—death by overfertilization—of so many of our waters.

d. A new and alarming form of water pollution is overheating of water—thermal pollution—caused by fossil-fuel and atomic power-generating plants. Destructive overheating must be stopped.

e. Wetlands and estuaries are where land and water meet. Destroy them, and we destroy the areas where our fish and wildlife breed, and where the air we breathe gets its start. Yet destroy them we do, whether with the help of the Department of Agriculture in draining the prairie potholes or making drainage ditches out of streams, or with the help of the U.S. Army Corps of Engineers in filling countless estuaries and marshes. Filling or draining for unneeded farmland, or for apartments or expressways or airports which could be built elsewhere, goes on apace. The Government Operations Conservation and Natural Resources Subcommittee has recently heard the sad tale of speculators despoiling the estuaries of the Potomac and of San Francisco Bay; these hearings will continue. The looters of our wetlands should be told: stop it.

2. AIR

a. Air pollution brings emphysema, bronchitis, lung cancer and death. It blackens our skies, smarts our eyes, wrecks our food, clothing and shelter. It is getting worse.

The internal combustion engine, with its carbon monoxide and nitrogen oxides, is the worst single polluter. A pollution-free engine must be developed and used in vehicular movement. We must evolve forms of mass transportation which do not pollute our atmosphere.

b. Industrial and power plants, with their sulfur oxides and hydrocarbons and particulate matter, are the second worst source of pollution. They must be guided quickly into using clean-burning fuels and methods of production which do not ruin our environment.

c. One of the newest forms of air pollution is noise—by jet planes, by motor vehicles on the freeways, by building construction crews. In many cities and suburbs, we have already exceded the noise levels where mental and physical health is endangered.

3. LAND

a. The earth and the fullness thereof get less full every year. Agricultural soil erosion by wind and water costs us $1 billion annually. In the next ten years, if we go on as we have, we shall lose another 15 percent of our agricultural land values to erosion.

b. To farm erosion has now been added the bulldozer of the suburban developer and the highway engineer, silting up our streams and ponds and lakes.

c. Chemical pollution of our soil (as of our air and waters and wildlife) is growing worse. Fertilizers, herbicides, pesticides, chemicals of war threaten not just the good life, but life on this earth altogether. DDT and other persistent pesticides have contaminated meat, fish, milk, vegetables, fruit. They threaten the destruction of whole families of birds. As the Conservation and Natural Resources Subcommittee found, negligence by the U.S. Army in its handling of lethal chemical weapons at Dugway, Utah, caused the death and injury of over 6,000 sheep, and with a shift of wind could have caused the death of even more human beings. Those companies and individuals which profit by chemical pollution do not give up easily. We intend to keep after them.

d. If people are going to find land on which to live and breathe and enjoy life, we must stop the senseless carving up of our landscape by the highway engineers, the suburban developer, the jetport authority. This requires regional and national planning. It requires the building of hundreds of new towns and consideration of the garden city concept with adequate open space adjacent to densely-populated areas.

e. We must expand our programs for setting aside parks, playgrounds, wilderness areas, wild rivers and seashores, and fish and wildlife areas. Yet this year's appropriation for the National Park Service is $123 million. We must alter our priorities.

f. Our land (as well as our water and air) are about to be engulfed by solid wastes and their by-products—junked automobiles, glass bottles, steel and aluminum cans, used packaging, and other detritus. We must reconsider our tax systems so as to put some of the cost of evolving new methods of solid waste disposal on the manufacturer and user of these wasteful products, so as to encourage the development of disposable and degradable containers and wastes.

g. Litter—trash and garbage and cigarette butts—are contributions to ugliness that almost all of us make almost every day. Here is something on which every individual should be taking the pledge.

4. *Wildlife.* Due to the skill of our game and fish scientists and managers, many of our fish and wildlife populations are in better shape today than they were 30 years ago. The American bison herd, for example, is up from 4,000 to 25,000. But the pollution of our land, our waters, our air, the destruction of wetlands, the increased use of chemicals, and above all, the inexorable grab at wildlife habitat by our increasing population, pose a clear and present danger. Already 89 birds and mammals are on the list of endangered species, and man himself may not be exempt. We must preserve more wildlife habitat, and particularly we must massively assist our marine resources.

5. *Mineral and forest resources* are being rapidly depleted by our industrial technology. We must conserve our non-renewable minerals; particularly, we must recycle the wasted iron, aluminum, copper, zinc and other metals with which we now fill our dumps. Our mineral leasing policy for public lands must be updated. Our forests are endangered as we increasingly exceed the allowable cut. It will cost more money to attain better management of our timber resources. We must provide it.

6. *People.* All of these environmental resources must be preserved not only for themselves, but for the life, liberty and happiness of our people. Environment *is* for people.

a. Population—how many people, and where they reside—can affect our environment equally with what we do, or fail to do, with it. Our studies of Florida's Everglades, for example, show that too many people living at the headwaters which moisten the Everglades, could dry up and ruin this priceless national ecological marvel. In our metro-areas, where most of us live, our slums, our traffic jams, our noise, our foul air and water, our sprawling suburbs, point an ominous warning. We urge that the President's new commission on population problems takes into account the effects of population on the environment as well as on other aspects of life.

b. If the environment is for people, it is also people—mostly private citizens, not just the government—who must lead the fight to preserve our environment. Surely, the government must reorder its structure for an all-out fight during the Environmental Decade: the federal executive branch must have a top-level Council on Environmental Quality, and the Committees of Congress with which we are associated must redouble their efforts. Federal, state and local legislatures and courts must erect the framework for the battle. But citizen activity must lead the fight.

c. Among citizens, we turn to youth as the great hope for the Environmental Decade. Young people are understandably outraged by the cynicism and materialism of their older generation. We urge them to substitute

constructive impulse for negativism, and to build for future generations an environment worthy of free men and women. We hope they will conduct studies, sponsor educational forums, initiate petitions, support court suits, pressure administrative agencies, draft legislation, and do the many things needed to help protect against environmental destruction.

d. We turn, too, to the people not just of the United States but of the world. Pollution of our environment threatens to engulf not only America, but all the land and seas and air. We welcome the Environmental Conference of the United Nations scheduled for 1972, and urge the United States government to take the lead in making ours a Model Planet.

Let the 1970's, then, be preoccupied with life and the quality of life. Before we starve, or choke on polluted air, or poison ourselves with our ruined waters, let us fight all who get in the way of a decent environment. Let man in the Environmental Decade assume his proper stewardship over pure water, blue skies, and a habitable earth.

H.R. 15091 GIVES HOUSE OPPORTUNITY TO VOTE AGAINST INFLATION AND FOR MORE HOUSING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. PATMAN) is recognized for 10 minutes.

Mr. PATMAN. Mr. Speaker, tomorrow the House will have a great opportunity to go on record against inflation, against high interest rates, and for more housing, and lower interest, and for small business.

Mr. Speaker, your Banking and Currency Committee last Friday morning reported out H.R. 15091, a bill to lower interest rates and fight inflation, to help housing, small business, and employment. This bill was reported on a 21-to-11 vote with two abstentions.

This bill should be passed by the House by an overwhelming vote. It has the solid support of the Democrats on the Banking and Currency Committee and the Rules Committee. I hope we will have support from both sides of the aisle so that the American people will know that this Congress wants more housing; so that the people will know that this Congress is dead serious in its fight against inflation.

Mr. Speaker, if this bill is passed, the Members of the House can go back to their home districts over the holidays and say, "We did something about inflation. We did something for homebuilding, for the prospective homebuyer. We did something to combat high interest rates."

In addition to the bill as reported, I plan to seek restoration of sections which would reqiure the Federal Reserve to purchase at least $6 billion in housing mortgages either in the open market or directly from the Federal housing agencies. This would provide an immediate and meaningful injection of credit where it is needed most—in the homebuilding industry. I hope that I will have the support of the majority of the House in the effort to restore these sections to the bill.

This provision was originally in H.R. 15091 as introduced by 20 of the Banking and Currency Committee's 21 Democrats. All we are asking is that a small part of the Nation's credit be allocated to build homes. All we are asking is that some of the credit be allocated to the Nation's most depressed segments of the economy.

Mr. Speaker, the purchase of $6 billion in housing paper is not inflationary in any sense. The Federal Reserve can tighten up on unnecessary business lending in order to compensate for the credit allocated to homebuilding. The Federal Reserve can stop the big banks from financing gambling casinos in the Bahamas and the financing of conglomerate acquisitions so that the American people may be housed in decent and healthful homes.

Mr. Speaker, the vote to provide $6 billion in housing credit will be a clear and absolute test of the House of Representatives' will to help the homebuilding industry.

Mr. Speaker, H.R. 15091 also provides other tools to help the housing industry and to prevent run-away inflation.

The bill would provide discretionary authority to the President of the United States to authorize the Federal Reserve to control extensions of credit, both business and consumer credit. This will enable, if the President desires, specific attacks on inflationary areas and thus make unnecessary the present across-the-board super-tight money which has created such havoc in the housing market.

This section of the bill would empower the Federal Reserve, on request of the President, to prescribe the maximum rates of interest, the maximum maturity, the minimum periodic payments, the downpayments, and other terms of credit transactions. The President would be empowered to call for these controls "for the purpose of preventing or controlling inflation generated by the extension of credit in an excessive volume."

Mr. Speaker, the President of the United States—as well as the Vice President—has said much about inflation and the need to control it. Through this bill, the Congress of the United States is giving him an important tool by which he may place his words into action.

Mr. Speaker, the bill as reported also provides:

First. For Federal home loan banks to establish a secondary market operation for conventional mortgages.

Second. The imposition of reserve requirements and other controls over commercial paper and Eurodollar borrowing by commercial banks, thus calming down the inflationary boom in unnecessary bank lending.

Third. Liberalizing mortgage lending restrictions for national banks by increasing national loan limits from the now maximum 25-year maturity to 30 years and allow loans up to 90 percent of the appraised property value. Present law limits bank loans to 80 percent of value.

Fourth. For an increase in FDIC and FSLIC bank and savings and loan association insurance from the existing $15,000 to $25,000, thus encouraging deposits which can be used to make loans for housing and other necessary purposes.

Fifth. That the Small Business Administration shall be directed to make available $70 million to small business investment companies (SBIC's). Despite a congressional mandate to SBA to lend money to small business investment companies so that they may in turn invest in small businesses, the administration has refused to lend one penny, despite a $140 million revolving fund which they admit they could use by a stroke of the pen. The bill would cure this by requiring the SBA to release at least $70 million to the SBIC's.

Sixth. For the revision of insurance requirements for savings and loan institutions, freeing an additional $250 million from homebuilding.

Seventh. For the extension of the existing authority of the Federal Reserve Board and the Federal Home Loan Bank Board to establish flexible interest rates by banks and savings and loan associations on savings and time deposits. This authority expires on December 22.

Eighth. The bill also provides temporary Federal regulation of interest rates paid on savings in State-chartered thrift institutions in Massachusetts. The authority would be in existence until the State of Massachusetts adopts regulations of interest rates paid by these institutions.

DOCTOR SHORTAGE

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, the Congress has program after program designed to provide funds to encourage more medical students, build more medical schools, and ultimately attract more qualified people into the medical profession.

Unfortunately, all of the public money, and good intentions are not solving the problem or the shortage.

A highly respected and able physician in my district, Robert C. Kirk, M.D., recently put his finger right on the heart of the problem—he is an eminent cardiologist. His letter should give some real second thoughts to those of us responsible for providing solutions to these serious problems, as well as those research-oriented people that deplete the ranks of the prospective general practitioners.

Dr. Kirk's letter follows:

COLUMBUS, OHIO,
December 1, 1969.

Representative SAM DEVINE,
House of Representatives,
Washington, D.C.

HONORABLE SIR: You are going to be bombarded by the most persuasive men in American Cardiology to keep up and increase the money spent on Cardiovascular Research, probably with the threat if you don't we will all die of heart disease. Personally, I prefer that to cancer or degenerative old age, but no matter. I am writing as a cardiologist associated part time with a University for 35 years. I am Chairman of the Heart Task Force Committee of the Ohio State Regional Medical Program. I am in active private practice, and I am a concerned and aware member of our citizenry.

I am convinced that the more money available to medical research, the more jobs will

be opened and taken by promising young physicians who see in this a chance to be another Harvey or Pasteur. I doubt if one out of one hundred will make an actual substantial contribution to new knowledge. I seriously doubt the wisdom of hiring anybody who will take a job in hopes that somehow he will be a Nobel Laureate. In the last twenty years the medical schools have increased their enrollment by 15,000 doctors over and beyond their previous graduates. It is no coincidence that in the same time there have been added to the faculty of these medical schools, 11,000 new full time men—so the net gain to the private practice has been peanuts.

The vast majority of that money for increased enrollment came from the U.S. government. So they didn't get what they paid for. The only way I see to increase the men and women going into private practice is to stop subsidizing every Health Program anybody can think up, and I include the National Institute of Health and the Regional Medical Programs, thus decreasing the choices available to our medical graduates. Nearly every one of them intends to practice, but by the time they get attached to the coat tails of full time research-oriented teachers, private practice gets downgraded or basic knowledge is questioned to the place where they don't dare go "out in practice."

Ask your own doctor if this sounds phony to him, and then vote as your judgment dictates.

Sincerely,

ROBERT C. KIRK, M.D.

NEEDED: PRESIDENTIAL COMMISSION TO INVESTIGATE MYLAI MASSACRE

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, like most Americans, I have witnessed the unfolding story of the apparent massacre of women and children at Mylai, South Vietnam, with a growing sense of dismay and horror. The press reports on the incident have been voluminous, but there are many questions about the facts of the case and its implications which have not been answered satisfactorily, and probably will not be unless a high-level investigation by a panel of distinguished and respected Americans is undertaken. It is my feeling that such a high-level investigation is particularly required in this most sensitive and significant matter because none of the several bodies currently looking into it could be said to have the necessary perspective. Whatever group makes the inquiry should, for example, include persons not in sympathy with our military undertaking in Vietnam.

I have come to the conclusion that the investigation should be conducted under presidential authority, and I urge the President to appoint and convene a Presidential Commission to investigate fully the circumstances and implications of the alleged Mylai massacre and to report its findings to the Congress and the American people at the earliest possible time.

Monday's December 15 editorial in the Washington Post comes to the same conclusion. It reads as follows:

A PRESIDENTIAL COMMISSION ON MYLAI?

Mr. Nixon has not entirely foreclosed the possibility that he will appoint a special commission to investigate the killings at Mylai in March of 1968. At his press conference a week ago, the President said that the existence of a commission at this time might prejudice the rights of those men involved in current military court proceedings. But he added that he would consider the appointment of such a group should the judicial process "not prove to be adequate in bringing this incident completely before the public."

Meanwhile, various persons in and out of government have been urging that a commission be created. In a television interview last Sunday, for instance, Senator John Stennis suggested that the President authorize a "competent group" of individuals from "outside government, outside the military" to "determine what the facts actually are." Senator Stennis thought such a commission could provide "a more solemn and serious, deliberate development of the actual facts" than could a committee of Congress. A much broader inquiry seems to be envisaged by a group of lawyers and law professors in whose name Arthur Goldberg has called for the creation of a presidential commission on Mylai. It would investigate:

". . . the extent to which the war in Vietnam is being conducted in a manner consistent with the minimum humanitarian standards established by the international law of war and incorporated in the general and military laws of the United States . . . questions of policy guidelines for the conduct of military operations and the extent of our efforts to educate our troops with respect to the requirements of the laws of war . . . aspects of military-civilian governmental operations to determine whether there has been a lapse in the chain of communication and command."

Just as Senator Stennis emphasized the need for impartial commissioners, so Mr. Goldberg's group declared that any investigation would "only be credible if the body investigating is, and is seen to be, of unquestionable impartiality." Here one encounters the inescapable paradox of commissions and commission-making. Ostensibly apolitical bodies must be formed for the sake of achieving what is essentially a political end—namely, the neutralization of political conflict surrounding some issue or event, and the laying to rest of public suspicions that government is thinking or acting or speaking out on the basis of tainted, unreliable information. So commissioners tend to be chosen for their patent lack of special interest in the matter at hand, or they are chosen on the one-of-everything principle with a view to establishing a balance of special interests.

We have had better and worse luck with these commissions, and it is not unknown for a committee of Congress—amply stocked with men whose views would have been thought to disqualify them as reliable judges—to have produced the ideal commission-type result. Senator Richard Russell's investigation of the Douglas MacArthur affair some years back is an example, and when things work out this way, the findings of the committee have all the more authority precisely because of their source. In other words, the case for the appointment of a presidential commission on Mylai (or anything else) is not self-evident; it has to be made.

Events of the past few days have tended to overcome our own initial reservations concerning both the usefulness and the necessity of such a commission investigation at this time. Those reservations had to do with its possible interference with military court proceedings; the evident requirement that the court determine the facts of the matter—what happened—before others set about analyzing the implication of those facts; the preferability (if it were possible) of an in-government group conducting a thorough, fair-minded study of the events and meaning of Mylai which could be at once more powerful and more instructive (inside government and out) than the work of an independent commission.

However, Rep. Mendel Rivers, who is no Richard Russell, has in recent days utterly changed the picture and created conditions which seem to cry out for the designation of some presidential group that can preempt the Rivers sideshow and undertake a study in which Americans can have confidence. After several days of "closed" hearings of a 13-member Armed Services subcommittee marked mainly by inflammatory and conflicting reports by Rivers (and others) of what was or wasn't said, Rivers has now named a four-man subcommittee of members whose approach parallels his own to do the investigating. He has thus closed out the members with whom he is politically at odds. Even if all this is—as rumored—an attempt to bury the hearings, they still represent a potential threat. There is nothing in the record of events so far to suggest that what follows will have any more dignity or seriousness than the escapades we have already witnessed.

We think Mr. Nixon would be well advised, therefore, to move on this matter. Of the suggestions put forth so far in terms of the composition and mandate of a presidential commission, we tend to favor, first, a relatively narrow or limited focus for the study. A commission which can tell us what happened—at Mylai and in relation to standing orders and to the chain of civilian-military command and communication—will necessarily provide larger insights and implications about the war without bogging down in an unmanageable, overly vague mandate. Second, we think there is much merit to the suggestion of Joseph Kraft, in a column last week, that any such study be undertaken by—yes—"a commission of senior and retired Army men." Among them, as he observed, are to be found the people "most determined to undo the wrongs that are shadowing the honor and reputation of the United States Army." And again: "It takes such men to examine carefully the intricate problems of command and control. Equally it takes such men to persuade the Army—and its millions of supporters around the country—that some soldiers have indeed committed wrongs and told lies."

The timetable, powers, and access to information of such a group, along with the degree of openness of its proceedings, are among the many matters that would have to be carefully worked out—especially in relation to the activities of the military court. But none of these problems is beyond resolution, and we stand to gain much in the way of knowledge and public confidence in the government's knowledge from the work of such a commission.

U.S. POLICY IN THE MIDDLE EAST

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, I am profoundly disturbed by what the Israel Government has described as "the erosion" of U.S. policy in the Middle East.

On November 11, 1969, I protested by telegram the Secretary of State's report that the United States was taking the position that Israel should eventually return to the 1967 borders in the Sinai. The speech last week by Secretary of

State Rogers has now sadly confirmed these press reports.

What troubles me most about the present administration's policy as outlined in the Secretary's speech is that, while still arguing for negotiations between the Arabs and the Israelis, we have undercut the Israel bargaining position by publicly expressing our views as to some of the issues to be discussed, especially the Sinai border. While it is true that Israel's bargaining power rests to a great extent on the fact that Israel in fact now holds the land, it would be extremely difficult for the Israelis to argue for more than the United States, their only big-power friend, says they are entitled to have.

And what was the purpose of stating the U.S. view on these frontier questions publicly if it was not to say to the Arabs, "this is what you will get if you go along with our plan"? Sure the purpose was not merely to try to persuade the Arabs of the good will of the United States. We cannot effectively do that, because we are unalterably opposed to the Arabs' basic objective, which is the destruction of Israel.

A second grave flaw in the Secretary's speech is that it does not spell out the kinds of guarantees the Israelis would be given if they were to withdraw to less defensible frontiers than they now occupy. A four-power "endorsement" of the settlement would not provide long-term security against new Arab aggressions. Nor would U.N. security forces. Nor would Arab assurances. My own view is, and has been for 20 years, that the United States should provide Israel with a formal commitment of support against aggression, so as once and for all to persuade the Arabs that their dream of destroying Israel can never be fulfilled. Without adequate guarantees of the security of new borders, one can scarcely expect the Israelis to be willing to lease their present defensible frontiers.

More fundamentally, I think the present U.S. policy, as disclosed in Secretary Rogers' speech, is built on false premises and is therefore basically misconceived.

Premise No. 1, as I see it, is that the Soviets want to achieve a permanent peace settlement in the Middle East and will genuinely work to that end. My own conviction is that, while the Soviets do not want to become embroiled in a war themselves and do not especially want to see a new Arab-Israel war break out, they also do not want real peace. The present situation would seem to suit them perfectly; it gives them an excellent opportunity to extend their influence in the area, because the Arabs have to turn to them for help.

Premise No. 2 is that it is possible—and desirable—for the United States to be "Mr. Fix-it" in the Middle East; that is, to bring about an agreement between the two sides by playing a role as honest broker or mediator, by following what Mr. Rogers calls a "balanced" policy. This might be a possible role if there were some other great power prepared to support Israel as the Soviet does the Arabs. But, clearly, there is not. So we are trying both to be Israel's friend and supporter and an ostensibly impartial mediator. The two roles, I submit, are incompatible. By trying to play both, we do neither well.

Clearly we cannot abandon the role of supporting Israel. It is the effort to be a mediator that we should abandon. If we were to do that, then we would see clearly that we must do at least as good a job of supporting Israel, both economically and with military equipment, as the Arabs' friends, notably the Soviet Union, are doing for the Arabs.

Now that the Arabs have so strenuously rejected our proffered peace plan, the present would be an opportune time for the United States to make this shift in the direction of realism. We can quite properly say to the Arabs, "We have done our best to work out a plan that we believe could lead to a reasonable peaceful settlement; the Israelis do not like parts of it, but they at least are willing to go along with the basic procedures we have outlined; you, the Arab States, have rejected the whole concept; therefore, we are withdrawing this proposal and will henceforth stand on the position that the only way for the Arab-Israel dispute to be settled is through direct negotiations between the parties to the dispute. We have no intention of allowing Israel to be driven into the sea, and we intend to give Israel the aid necessary for her to defend herself. This assistance to Israel is made necessary because of the assistance you have obtained and continue to obtain from the Soviet Union."

Mr. Speaker, I believe this would represent a clear and wholly defensible policy. In the short run, Arab propagandists would rant against it. But, in the longer run, it would, I believe, lead to peace in the area and therefore to a resumption of good relations with the Arab world—good relations which the present halfway policy has failed to preserve or restore. Such a clear policy would be bound to strengthen the hand of those in the Arab world, especially among the student generation, who want to turn away from the disastrous policy of military misadventures, and turn instead to the solution of ever more pressing problems on the homefront.

In his speech of December 9, Secretary Rogers referred to the problem of the Palestine refugees as one that had been "of special concern" to the United States for over 20 years, and said:

> We are prepared to contribute generously along with others to solve this problem.

I hope that this statement means that we will begin to approach this matter with a more imaginative—and, if necessary, tougher—policy than the one we have followed for two decades, that of contributing the lion's share of the funds required to carry out the altogether unsatisfactory UNRWA program. The Arab states have wanted the UNRWA refugee camps kept in being as centers of bitter resentment against Israel, and more recently Palestinian terrorists have actually taken control of some of these camps. The continuation of the UNRWA program, as we have known it, is no kindness to the refugees who have to live in the camps year after year, and now generation after generation. But the situation will not be rectified, and no solution will be found, until the United States makes clear that its contributions to the present program are going to be phased out.

Specifically, I propose that the United States should indicate that, as it phases out its support of the camp operation, it will be prepared to "contribute generously" to the resettlement of the refugees, either in Israel—to the extent that is possible and desirable—or in Arab countries, or possibly even elsewhere, as such a program might be worked out.

Finally, I believe the Secretary's remarks about Jerusalem are unrealistic. The Government of Israel has made its position on Jerusalem unmistakably clear. In my view, that position is fully justified and should be supported by the United States. The Government of Jordan made a terrible error in joining in the 1967 war on the side of Egypt, rejecting Israel's plea that Jordan stay out. In regard at least to Jerusalem, Jordan must accept the consequences of that error. So far as the holy places are concerned, the Government of Israel has already demonstrated that there will be freer access for all faiths to the holy places than there has ever been before.

THE SPECTER OF CONCENTRATION CAMPS

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, all of us are abhorred by the atrocities committed during World War II when millions of Jews were rounded up, put in concentration camps, and systematically murdered. The inhumanity of what happened in those camps is a lesson that we must never forget.

We are also appalled by the systematic detention in camps of tens of thousands of Americans of Japanese ancestry at the outset of the war. The fact that this was allowed to happen in America stands as a stark reminder of the danger posed by a philosophy which brands all members of a minority group as dangerous and not entitled to the liberty others enjoy.

There is no place in America for concentration camps, detention camps, or camps by any other designation where large numbers of our citizens can be taken at the whim of those in power. Our heritage of freedom is too precious to allow suppression by edict.

Yet there remains on our law books a statute which would allow the same type of detention as was carried out during those dark days of World War II. Under title II of the Internal Security Act, the Attorney General can detain any of our citizens merely on the suspicion—based on membership of a particular race or nationality, or on other equally specious grounds—that such persons may conspire to commit espionage or sabotage.

Along with other Members of Congress I am sponsoring legislation to repeal this law and remove this threat to our liberty. The President has also indicated he will now support repeal of the law.

Because of the growing interest in this cause, I am pleased to insert at this point in the RECORD an article from the December 5, 1969, Honolulu Star-Bulletin which delves into this subject. The article,

"Specter of the Concentration Camp," is by Mr. Isao Fujimoto. It tells of his own experience in a U.S. concentration camp, and follows:

SPECTER OF THE CONCENTRATION CAMP

(By Isao Fujimoto)

(Note.—Isao Fujimoto, a professor of social science at the University of California at Davis, Calif., is a sometimes bitter critic of U.S. society. One reason for his bitterness is a World War II experience with Japanese concentration camps in the U.S. which he relates in this article from the Black Politician.

(While most West Coast residents of Japanese ancestry suffered similar treatment only a few of Hawaii's AJAs were arrested.

(Hawaii members of Congress have been concerned that modern-day roundups could be justified legally under Title II of the McCarran Act. The Justice Department said this week it will support repeal of this law.)

"In Germany they came for the Communists and I didn't speak up because I wasn't a Communist. Then they came for the Jews, and I didn't speak up because I wasn't a Jew. Then they came for the trade unionists and I didn't speak up because I wasn't a trade unionist. They then came for the Catholics and I didn't speak up because I was a Protestant. Then they came for me—and by that time no one was left to speak up."—Pastor Martin Niemoller.

Every generation is held accountable for what it says or doesn't say, what it does and doesn't do on moral issues. The spectre of Eichmann prompts mankind to ask the Germans: "You were alive and free when Hitler began his genocide campaigns, so what did you do?" Subsequent generations can ask this generation, "What were you doing when the police dogs lunged at Negro school children in Birmingham? What were you doing when people were napalmed in Vietnam? What were you doing when you could have shared your daily bread with starving Biafrans in Africa and Navajos, blacks, Mexican-Americans, and poor whites in America in 1968?"

Many of us were alive and aware at a time in American history when democracy faced another moral test—the wartime concentration of more than 110,000 Americans whose sole crime was their Japanese parentage. But at that time few people bothered to even ask the basic questions or even notice that democracy was on trial and found lacking. It may be argued that viewed against a background of total war the numbers affected by the wartime relocation of the Japanese-Americans do not loom large. But what does loom large is the legacy that accompanies this generation and all generations which much evaluate the merits of democracy and consider the consequences when democracy fails to live up to its meaning during the time of crisis.

I was a statistic bearing witness to this misguided experience in American democracy. I was then eight years old—too young to know my rights but old enough to realize that something was wrong. As a product of an ethnic ghetto, I've internalized the subtle ways in which the larger society reminds one to stay in his place. Like many other Japanese-Americans, I've been infused with the philosophy, "Let's make the most of a bad situation and push ahead." This diverted me from critically appraising the past, which is directly relevant to many of the issues that all of us—not just minority Americans—face today.

The years I spent is a concentration camp have become a part of my identity. When I meet another Japanese-American I invariably ask, "What camp were you in?"

I am reminded of this bond when I try to relate the situation in the camps to those who did not share the experience. Many Americans on the West Coast knew of the evacuations, but I found Americans elsewhere in the country with little knowledge of what went on—and few who tried to help.

I know of one exception. A few years ago I met Dorothy Day, anarchist, Communist, humanitarian, and founder of the Catholic Worker. She told me she had protested the Japanese evacuations and picketed one of the centers—the Portland Livestock Pavillion. I had never before met anyone who had done this. I looked at her and felt a strange bond of comradeship. My family and I had been inside the Portland center. I cared little that our political views differed. What struck me was that here was a person who knew and cared about the issues involved; who backed me up with action, not rhetoric, when the chips were down; who was on my side when it counted most.

PEOPLE LOOKED PALE

My early years were spent on the Yakima Indian reservations in the State of Washington. I lived among Indians and immigrant farmers from Japan. I didn't realize this was a rural ghetto until I started going to school. Then I saw so many people who looked different, with round eyes and big noses—people who looked so pale. And I thought it was because they didn't eat enough rice.

But even our small, closed society was affected when World War II began. About a week after Pearl Harbor, two FBI agents arrived one night and took my father away. Our family did not see him for another year and a half. He was put in a detention camp in Missoula, Mont., which he described in letters to my mother. I remember those letters more for their form than their content. They had holes in them scissored out by censors.

Because everything seemed so uncertain, my mother went ahead, had the fields prepared and planted crops for the coming year. By spring, 1942, the rumor was that all people of Japanese descent would be taken away. The U.S. Army ordered the removal of all Japanese-American aliens living within 200 miles of the Pacific Ocean. Orders replaced the rumors and notices appeared for our evacuation. Our family was sent to the Portland, Ore., Assembly Center, one of 15 makeshift centers converted from West Coast racetracks.

LIVESTOCK STALLS

The Portland Assembly Center was like a giant honeycomb. Livestock stalls were converted into family quarters. I recall visiting friends who were sitting on suitcases outside of stalls still containing fresh hay and manure. Guard towers with armed soldiers and barbed wire surrounded us. Right after internment started, our Buddhist minister took pains to impress upon us the need to respect the laws inside the camps. We were warned that children had been shot for wandering too close to the barbed wire.

All told some 110,000 men, women, and children, 70,000 of them citizens of the United States, were uprooted from their homes into inland relocation centers. There was no recourse to courts; guilt was assumed. The charge was, "They look like the enemy."

Voluntary migration inland was permitted, but Lt. Gen. DeWitt, commander of the Western Defense Command, made no attempts to prepare the way for its implementation. Although some 9,000 sought to migrate, most were turned back by armed posses at state lines, refused gas and food, and in general, intimidated. Public Law 503 closed all movements and Executive Order 9066 authorized the evacuation.

Ten of 200 possible internment sites were finally picked. They met the criteria—safe distance from military zones, location in areas which could support a large scale work program, location on federal land which would not affect private land values. These camps were located in such far flung and remote places as Poston and Gila, Ariz.; Rohwer and Jerome, Ark.; Heart Mountain, Wyo.; Minidoka, Idaho; Amache, Colo.; Manzanar and Tule Lake, Calif.; and Topaz, Utah. The evacuation orders divided the West Coast into a military jigsaw puzzle.

They scattered the Japanese American population—first into different assembly centers then again into the 10 camps. Some, like our family, were moved three times.

Now identified by a number—37205—our family was relocated first to Heart Mountain, Wyo. A three-day trip over the Rockies in a special train heavily guarded by armed soldiers brought us to a dusty treeless plateau in northwestern Wyoming.

Heart Mountain held about 10,000 people distributed into 30 blocks each with 40 to 50 families. Each block had its community mess halls, boiler rooms, laundry, and toilets between the two rows of barracks, each holding from three to four families. Both space and possessions were very limited. For the first half-year in Heart Mountain, the school I attended consisted only of benches. The playing field was marked off by two coal piles which serviced boiler rooms at opposite ends of the block.

In the process of being uprooted, many Japanese-Americans had to leave belongings behind or get for them what little money they could. Speculators offered a few dollars for household belongings which took many a lifetime to accumulate. Unscrupulous operators took over land without paying rent and confiscated equipment or waited until harvest to collect the spoils. Encouraging rumors that the government would seize all property, speculators would then make ridiculously low bids. When the Japanese refused such offers, the speculators threatened to report them to the FBI. The public remained indifferent or gave in to this hysteria of the time. They used the very act of evacuation to justify it.

FIFTH AMENDMENT FLOUTED

They reasoned: "There's something wrong with these people or the Army wouldn't have taken them under wraps. That's all I need to know." As for the government, it offered none of the constitutional liberties which are the basis of its very existence and to which all of its citizens are entitled. The stipulations of the Fifth Amendment—that no person can be deprived of life, liberty or property without due process of law—were flouted.

(About the time my father was reunited with the family, the War Relocation Authority inaugurated a program of mass registration. It was for the purposes of processing the adults for resettlement and leave clearance. In essence, this was also a loyalty test. It is ironic in that they were asking for the loyalty of the very persons to whom they originally granted no constitutional guarantees.)

Question 27 of the War Relocation Authority Leave Clearance Form concerned willingness to serve in the Armed Forces of the United States. Question 28 asked: "Will you support unqualified allegiance or obedience to the Japanese Emperor or any other foreign government, power, or organization?" To those already confused, troubled and resentful, the ambiguity of this question added further difficulty. To the Isseis, first generation Japanese born in Japan, the question was unfair and impossible to answer in the affirmative. Even had he been a veteran of the Spanish-American War, an Issei could not become a citizen of the United States. In fact, it was not until the McCarran Act of 1950, that the right of naturalization was granted to immigrants from the Orient. The question thus called the Issei to remove the only nationality he had. If he answered yes, he became a man without a country. My father chose to answer no and the family was evacuated to Tule Lake, Calif.

Like the others, Tule Lake was a maximum security camp—but even more so, with its

double roll of barbed wire and cyclone fencing and armed guards in towers spaced every 100 yards. It was the largest of the camps holding 22,000 people.

Life at Tule Lake was tense, faction-ridden, and chaotic—to say nothing of the complications wrought by people—many of them driven to extreme positions and resentful of unjust acts by a government claiming to be just. The camp was once invaded by troops reinforced by tanks, machine guns, and tear gas bombs. Such was the situation between November 1943 and January 1944, a few months before my transfer there. Just four days after our family arrived an Army sentry killed a truck driver after ordering him from the truck following an argument over a pass.

Tule Lake became the official "segregation center." Of the 5,700 internees who protested the evacuation by filing applications to renounce their U.S. citizenship, the majority of them came from the Tule Lake center.

What characterized Tule Lake from all the other camps was that life was very much oriented towards Japan. Youths were organized into squads which got up at 5 o'clock, and took cold showers, ran and sang for two miles. Some blocks outlawed the use of English. Also, there were many homemade shortwave radios which were tuned into propaganda programs from Japan. In the morning in Japanese school, the day started with all of the children assembled in the school yard and bowing towards the East. In the afternoon, I went to American school which began with all of the children standing up to pledge allegiance to the flag of the United States.

NO CRIME, NO RIGHTS

One day on the way home from American school—which was voluntary, in contrast to Japanese school which was compulsory—I spotted some non-Orientals, with the letters "POW" on their shirts, cleaning out an irrigation ditch that ran through the camp. On the bank of the ditch was an armed American soldier who I presumed was the supervisor.

I later learned that they were Italian prisoners of war captured in North Africa.

But these prisoners lived outside the confines of the barbed wires that enclosed us. Not only were we no different from the POWs but we were even more confined. We were no longer temporary refugees—we were enemies—enemies of our own country against whom we had committed no crime nor even had the opportunity to exercise the rights which we undoubtedly no longer had.

In December 1945, four years after the FBI first took my father away, our family was released from camp. Just as a prisoner leaves jail with a suit and pocket money, our family was given $50 and a job assignment. But just as a prisoner carries with him a certain stigma, resettlement reintroduced to the public the very emotional outbursts that brought on the evacuation.

In fact, the War Relocation Authority sent out teams of anthropologists to evaluate various towns as to their degree of hostility or tolerance towards the resettlement of Japanese Americans. Some of the superpatriots had publicly hoped the Nisei landowners would be killed in combat. Then they could easily lay claim to land they had been farming free all during the war. In the guise of Americanism many organizations still existing today took hypocritical stands.

When today we compare the overground with the underground sources regarding concentration camps, we find a relative vacuum in the world most of us are tuned into, the world pictured for us by the national and establishment press, television and radio.

But if we tune in to the world reported by the underground, ethnic ghetto, and hip media circulating among the minorities and invisibles—be they nonwhite, the youth, the disaffected—we get a different picture. It consistently objects to such things as the House Committee on Un-American Activities, the 1967 up-dating of the McCarran Act, the efforts of Sen. James Eastland and 19 other senators to introduce the 1968 Internal Security Act, and recommendations for additional powers for the Subversive Control Board.

ACT STILL IN FORCE

Title II of the 1950 McCarran Internal Security Act authorizes the attorney general to issue a warrant "For the apprehension of each person as to whom there is reasonable ground to believe that such persons probably will engage in or probably will conspire with others to engage in acts of espionage and sabotage." This kind of evidence can be turned in by a neighbor who dislikes you. Since the government is under no final obligation to produce a source of evidence, the burden of evidence rests on the suspected person.

To check the validity of stories about camps established under the McCarran Act, I wrote several congressmen, senators, and representatives of the Justice Department. The replies all dismissed rumors about the camps, assured me that no appropriations were allocated for the maintenance of such facilities, and that adequate precautions would be exercised before such provisions were implemented. Six detention facilities including Tule Lake were reconstituted under the Act. However, all letters I received say they were maintained only through 1957 and none exist today even on a standby basis.

However, the precedent of the Japanese experience makes all these arguments irrelevant. The wartime experience showed that the lack of camps is no deterrent to mass detention. That experience has taught us that any place that holds horses and cows can hold people.

Furthermore, all it took to bring about evacuation was an executive order. The fact that a law exists today legitimizes what many insist couldn't happen again. And the fact that the act is on the books is significant in terms of the stress Americans place on law and order.

Americans pride themselves on being law abiding citizens, but when laws such as Title II of the McCarran Act remain on the books they cannot be dismissed as some anachronism out of the McCarthy period.

Added to this dilemma is that the constitutionality of the wartime evacuation was upheld by the Supreme Court; Title II of the McCarran Act has yet to be tested. We are living in a predicament. If the law were enacted, it would be our awkward duty as citizens to abide by the law. The choice is to obey a bad law for the sake of law and order or to disobey a bad law out of concern for law and justice.

The Japanese were interned because they looked like the enemy. The threat of China entering the Vietnam War has sent rumors through Chinatowns about detention. "It happened before—will we be next" is a question not easily shrugged off as rumor. In the nonwhite ethnic ghettos, which have witnessed repression, more than rhetorical assurance will be needed to offset anxiety.

The Japanese-American experience has revelance today. The focus still is on the victim, which takes away from the major issue: Why does a free society have to have camps at all? Why do people in a free society not only obey but support repressive laws?

The victim approach misleads us from seeing the issues. It would have us attempt to understand anti-semitism by studying Jews, to seek solutions to the ghetto problems by studying the blacks, to resolve the farm labor dilemma by understanding the migrant worker.

This approach also assumes that it is the victim that needs correction and that programs be constructed that will help him adjust to society. It does not question that society itself is at fault. This insistence that society is right widens the gap between rhetoric and reality—resulting in a society of paradoxes.

TOO SELDOM BY DECENCY

We have a society wherein the rich enjoy the fruits of socialism and the poor get tossed the rhetoric of free enterprise. We have a society wherein law and order get more attention than law and justice. We have a society where, in order to "make it," you already have to "have it made"—it isn't what you know but who you know." We have a situation where education, rather than being considered a process of opening up a person to new possibilities, is seen as a system to beat, while one collects credits and units as he collects Blue Chip Stamps. We have a system whereby our commitments are limited, where we approach our challenges with our eyes downward and our palms upward.

The current mood of our society sees government as good when it protects property but bad when it tries to help people—a far cry from what Lincoln said about government doing for people what the people couldn't do for themselves. We have a democracy by deal, sometimes by dole, but too seldom by decency.

Gestures of coffee and doughnuts for repressed Japanese-Americans during the war were too little and too late—the feeble gestures of a people rendered helpless by the very system which was supposed to respond to their demands. There were too few demands for justice, too few voices of protest.

BODIES ON THE LINE

What was needed were people to put their bodies on the line—on the railroad lines—to keep the trains from moving to the camps. What was needed were leaders such as the King of Denmark who had all Danes wear the Star of David when Nazis came to round up the Jews.

The Japanese-American experience warns us of the price we pay when we abstain from our moral duty to work against forces of repression in our daily lives. This means taking action against acts of injustice—be it discrimination in our local country club; entrepreneurs who violate health laws; arbitrary stands by local school boards on issues of public appearance; or subtle racism.

Subtle racism is telling blacks and Mexican-Americans to emulate the Oriental-Americans as minorities "who have made it." The subtlety of this logic says, "Be like them—they know their place, they don't complain." This pits minorities against each other, while absolving the larger society from looking at itself. In reaction to this there has emerged Yellow Power groups, which are not a front pushing bananas for the United Fruit Co.

The Japanese American experience warns us to discard the idea that "it won't happen again and even if it does, it won't happen to me." It is not just nonwhite Americans or citizens of the underground that are concerned about concentration camps. The very fact that the government—by pressure from a few—is free to make its own arbitrary definition of subversives, makes this a matter of concern for all Americans.

We shouldn't fool ourselves into attacking the narrator because we didn't like the narration. If a fellow American—be he black, brown, yellow, or red—has endured unjust experiences by basic denials of due process, we should listen to that experience and put it in its proper context. We should not dismiss him as being bitter, biased, or disenchanted. It is not enough to expiate your guilt by using him as a token guest, or insisting that all has been done to demonstrate fairness.

The sobering lessons of the Japanese-American relocation also force us to ask, "Can civil liberties, rights of individuals, and of the minority, be tolerated, let alone protected, in a time of crisis?"

We still too often operate on the assumption that we can tell who the enemy is by looking at him. If anything, the wartime evacuation has set the dangerous precedent of overemphasizing racial and national strains in our population and using this as a criteria for discrimination.

Democracy is in theory nothing more than the determination to live peacefully and, in practice, nothing more than a continued experiment for doing so. The spirit of democracy involves integration of private convictions and public tolerance and the recognition of the will to live one's own life consistent with good will to others.

This was totally disregarded in the internment of the Japanese-Americans. It would be well to ask how much disregard for the rights of others applies today—whether the minority is the Black Panthers, the Latins for Justice, boys with long hair, girls with short skirts, or soldiers who do not want to kill.

What is at issue is the vast gap between rhetoric and action, between what is promised and what is realized, what we say can't happen and what did happen. We are in a time of crisis where neither democracy, nor we, can afford to fail.

PRIZE-WINNING ESSAYS

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, in the midst of our deliberations it is always encouraging to remind ourselves of the great values of the American system which we are constantly trying to perfect.

Such an occasion took place during Citizenship Week in Hawaii when students participated in an essay contest on the subject of "Citizenship and the Constitution." The results were indeed heartening. They showed among our young people a very praiseworthy appreciation of their national heritage.

Most eloquent were the essays by Aaron Ebata, Jean Ocheltree, and Ann Hamamoto. I insert at this point in the RECORD and commend to the attention of my colleagues their prize-winning essays:

CITIZENSHIP AND THE CONSTITUTION

(EDITOR'S NOTE.—Three winners of the essay contest entitled, Citizenship and The Constitution, were honored today by Mayor Shunichi Kimura at an awards ceremony in his office. The contest was conducted during Citizenship Week in October. Texts of the winning essays are published below.)

FIRST-PLACE WINNER

(By Aaron Ebata, Ninth Grade, Paauilo School)

We, as citizens of the United States of America, are fortunate that the Constitution provides certain privileges and duties unknown in some other countries.

There are many things that come with citizenship. People becoming citizens must take an oath that they will be loyal to the United States. Good citizens obey the laws that are given to them, they are loyal and responsible, and they do their duties and use their privileges wisely.

Our duties as citizens are many and difficult. It is our duty to love, honor, obey, preserve, protect, and defend the country we live in and our Constitution. One of our most important duties is to report crimes and to serve as jurors. Another is voting—choosing the leaders of our country, state, and county.

In return, our Constitution provides us with such rights as the freedom of speech which allows people to speak up on what they think. Freedom of religion allows us to attend the church of our choice. Citizens have a right to assemble and to petition the government for a redress of grievances. The right to bear arms is also important. Citizens have the right to privacy, to be secure in their homes, selves, papers, and other belongings against unreasonable and unlawful search or seizure, except if served by a warrant. Citizens accused of crimes have the right to a speedy and public fair trial by jury, and the right to remain silent until confronted by a lawyer, and to be free from excessive bails, fines or cruel and unjust punishment. Citizens are also able to hold public and government offices if they are qualified.

All in all, the Constitution protects a citizen's rights to "life, liberty, and the pursuit of happiness."

Citizenship in the United States demands a lot from a person. We must take care of the country, to make right laws and rules of conduct. In turn our country takes care of us by giving us the best place in the world to live, under democracy and free of fear of the government.

Citizenship should be held proudly, and I am proud to say that I am a citizen of the United States.

SECOND-PLACE WINNER

(By Jean Ocheltree, Ninth Grade, Konawaena School)

A long time ago James Bryce said, "No government demands so much from the citizens as democracy, and none gives so much back." We are taxed very heavily; our men go to war to fight and die by the thousands; we are required to participate in civil affairs; we must obey the laws or face the consequences. These and many others are our duties and privileges as citizens of the United States of America, a democratic country.

Although we are taxed heavily, many benefits are realized from this tax money. Our public roads and buildings are built with funds from this source. Health, education, and welfare programs are provided. It provides support for the defense of freedom around the world. With these funds it was possible for the United States to win the race to the moon. All government services provided are paid for with our tax money.

We are allowed participation and representation in congressional matters through the power of the vote. We must vote for what we believe in and make known to our legislative representatives what we feel best for our country. In this way our country's leaders will know what we as a nation of individuals want.

Jury duty is a privilege and responsibility. It is maintained to protect the innocent as well as to convict the guilty.

These things play only a minor part in the role of a citizen of a democratic nation such as the United States of America. They are privileges that have been provided by our forefathers who showed much wisdom in setting up the Constitution. If we do not take advantage of the opportunity to participate in civil affairs, those rights and privileges will be lost, just as an unused muscle atrophies. Only as we maintain these rights and privileges with honesty and integrity will we be able to retain them.

THIRD-PLACE WINNER

(By Ann Hamamoto, 10th Grade, Hilo High School)

I am an American citizen, and I am very proud to be one. For being an American citizen means many things; among the most important of which is having a democratic government. A democratic government can be defined as a government that is ruled by the people and not only by one man, or a set of men. Of course, it is not possible for each and every citizen to gain control of part of the government and expect to come out with a satisfactory one, to say the least, because there wouldn't be any limitations to what each has in his power. And that it the reason why the voters of our country elect a group of people who they think will represent them well in the various stages of the government. And for these elected "representatives", there must be some rules by which they must abide. That is the reason why the Constitution was written.

The Constitution is the supreme law of the land. It defends each American citizen's individual rights, liberties, and privileges. It also estabilishes the terms in office, the qualifications needed, the powers of the different branches, and various other important "rules" for the elected and the citizens which must be respected and abided. As the 1969 edition of the World Book Encyclopedia states, "It (the constitution) is the shield of democracy under which Americans govern themselves as a free people."

I am a free person, and I am grateful for it. So to you, the United States of America and the Constitution of the United States, I say thank you; thank you very much for everything you have done for the benefit of our great country!

(NOTE.—Aaron, 14, is the son of Mr. and Mrs. Kenneth Ebata of Paauilo; Jean, 14, is the daughter of Mr. and Mrs. Robert Ocheltree of Kealakekua, and Ann, also 14, is the daughter of Mr. and Mrs. Takumi Hamamoto of Hilo.)

STATUS OF CONGRESSIONAL REORGANIZATION

(Mr. SISK asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SISK. Mr. Speaker, I am sure many of the Members are anxious to know the status of the congressional reorganization, and I would like to take this opportunity to let them know.

We had hoped that our subcommittee would be prepared to report a bill almost immediately upon the opening of the second session in January, and with that in mind, we scheduled hearings so Members could have an opportunity to make their views known.

We concluded those hearings on December 5 and began our deliberations in executive session on Wednesday, December 10. Unfortunately, there are two factors that make it impossible for the subcommittee to finish its assignment prior to adjournment of the first session. These two factors are the extremely heavy legislative load of the House during the month of December, plus the desire of the subcommittee to give full attention to recommendations made by Members in testimony before the subcommittee. Many Members have offered excellent suggestions which we want to give our fullest consideration.

Accordingly, our subcommittee is in recess until the convening of the second session. This means that the time we had hoped the staff would be able to utilize during the recess in drafting a bill and a report will go by the boards and that we will not be able to meet our goal of reporting a bill in January.

Although we have no additional hearings scheduled, the record will remain open at least until the subcommittee reconvenes, and we will, of course, welcome any further statements.

LEST WE FORGET

(Mr. RANDALL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RANDALL. Mr. Speaker, I have just received a copy of the fall 1969 issue of the Jackson County Historical Society Journal through the courtesy of one of its members, George M. Hare.

In that edition there is an article which reports the annual reunion on Saturday evening, September 20, 1969, of Battery C and Battery E of the 129th Field Artillery, 35th Division of World War I.

The article is entitled "Preservation of World War I Memorabilia," and is written by Mary Salisbury Hare, wife of the Independence lawyer, George M. Hare, and the daughter of the late Capt. Spencer Salisbury, a member of Battery E.

Mr. Speaker, I take this occasion to preserve this article by asking consent to enter it into the CONGRESSIONAL RECORD because it contains some names that sound like the "Who's Who" of Independence, Mo., including a former President of the United States. Accompanying the article is a picture showing the commissioned officers of the 129th Field Artillery of the 35th Division taken at regimental headquarters at Courcemont in March 1919.

The picture contains such distinguished men as Maj. John L. Miles, who for many years was the chief law enforcement officer of Metropolitan Jackson County, Mo.; Capt. Spencer Salisbury, successful businessman; Capt. Roger T. Sermon, mayor of the city of Independence for over 20 years; 1st Lt. Edgar Hinde, postmaster of Independence, Mo., for many years; and last, Capt. Harry S. Truman who became the 33d President of the United States.

Today when there is so much discussion on the subject of patriotism with the suggestion there may be an erosion or deterioration of that fine quality among some of our younger citizens in the wake of the November moratorium, I think it would be reassuring to have the benefit of the content of a letter authored by a comrade in arms of our distinguished first citizen, former President Truman. The letter is from Sgt. Vincent Bowles, uncle of Dr. Victor Drumm Bowles, a distinguished orthodontist, written on October 21, 1918, from a dugout in France where he was fatally struck by shrapnel on November 2, 1918, 9 days before Armistice Day.

Sergeant Bowles wrote to the late Dr. H. M. McConnell in the heroic spirit of a young man in the midst of a battle with the Germans. Just prior to his death, he wrote he was proud to be an American and proud to be a member of the great 35th Division. He recognized that war was what Sherman called it but he knew that those who died were giving their lives that their country might live. In his closing paragraph, he pointed out that should he be called upon to make the sacrifice he wanted his friends to know he had made that supreme sacrifice with a smile.

I wish to pay my high commendation to the author, Mrs. Hare, for the excellent article which was written for the Jackson County Historical Journal. Reference to the guidon of Battery E and how it has been preserved by her father, Captain Salisbury, was most interesting. The portion which traces the background of a guidon back through French history is most informative.

Mr. Speaker, because of the distinguished men mentioned in this article and because of the spirit of the letter written by an unsung hero who made the supreme sacrifice in World War I, I regard it a privilege to perpetuate this historical article by making it a part of the CONGRESSIONAL RECORD. The article follows:

PRESERVATION OF WORLD WAR I MEMORABILIA

(By Mary Salisbury Hare)

As fresh American blood again hallows alien soil, it is relevant to consider an earlier doughboy and another war.

Saturday night, September 27, 1969, the 49th annual reunion of 37 veterans from Battery E and Battery C of the 129th Field Artillery, 35th Division, recalls that men of heroic stature have not been found lacking in historic Independence. Archives of the Jackson County Historical Society bear testimony to this.

Two unsung heroes, who made the supreme sacrifice, reappear in a yellowed clipping retrieved from the worn leaves of a World War I diary. This journal was kept and treasured by the late Captain Spencer Salisbury, commanding officer of Battery E, 129th Field Artillery, whose membership sounds like "Who's Who" of Independence. Cut from an Independence Examiner, dated July 16, 1921, the clipping reads as follows:

"LAST HONORS FOR BOWLES

"The largest crowd at a funeral in Independence in years turned out yesterday afternoon to the services for Sergeant Vincent M. Bowles. People filled the yard at the Bower Undertaking Home and the sidewalk for a block between 2:30 and 3 o'clock waiting for the body to be carried from the house and placed on the gun carriage that was to bear it to the cemetery.

"A long parade of motor cars turned in behind the Masons and ex-service men who had the funeral services and the ceremony in charge and went to the cemetery.

"The body was borne to the cemetery on an improvised resting place above the gun carriage of a cannon obtained from the Horn Zoological company. The usual three teams of horses drew the field piece. They were driven by George Smith, 'Sunny' Sullivan and Mr. Duncan.

"Following the cannon a horse covered with a black shroud was led saddled and bridled and ready to mount indicating the place in which Sergeant Bowles rode during his time in service.

"Kitt Sapp was grand marshal. Wallace Cameron, section chief, William Cleveland carried the guidon, Maynard Sands and Ora Meyers were color guards, Herbert McClure and Ward Johnson were color bearers while Max Prussing was in charge of an escort of 14 men wearing helmets.

"The pallbearers were Herbert Van Smith, Harry Sturges, Max Kaplan, Rolly Johnson, William E. Ragan and Powell Cook. A firing squad was furnished by the National Guard of Kansas City.

"Bert Hafer said the Masonic ceremony at the grave.

"Most of the men who took part in the ceremony were comrades of Bowles and some of them were within a few yards of him and saw him fall when he was fatally struck by shrapnel November 2, 1918.

"The American Legion spared no effort or expense in securing the necessary men and equipment for the funeral. The harness for the horses was shipped here from St. Louis. One bit of equipment that might be in Independence for such an occasion is the piece of artillery. The cannon, secured from the zoo, is said to be part of the equipment of the once famous Buffalo Bill Wild West Show.

"Sergeant Bowles died November 2, just nine days before the signing of the armistice. Three days later his friend, Dr. H. M. McConnell, received a letter which Sergeant Bowles had written on October 21.

"It was written during some of the heaviest fighting of the war, and was dated 'In a dugout in France, with the rats and cooties.' "

But the heroic spirit of the young sergeant rose above its sordid surroundings as he wrote the letter. In a recent battle the Germans had begun shelling the American positions at 5:30 a.m. before daylight.

"The exploding shell shot Sergeant Bowles' blankets and tore in two the blouse he had been using as a pillow. It turned out to be one of the hardest battles of the war.

" 'Quite a number of the boys from good old Missouri and Kansas never will see the Statue of Liberty again,' Sergeant Bowles wrote. 'A couple of the boys from Independence fell that day. Their names never will be forgotten and it will go down in history how one lone American division met and defeated four of Germany's best. I never will forget the sights I saw on the field that day. I am proud to be a member of that division, just as one the cogs of a great machine.

" 'I am glad that I am an American, and glad I live in a day when the country needs her best men. War and its hardships are what Sherman called it and then some, but we are all doing it with a smile. We are doing it for our mothers, sisters, friends, and the coming generations, and it is worth any hardships we may go through for them.

" 'I can sit here in my dugout and hear the fighting all around me and know that some one is dying every minute, giving his life that his country may live. And she will live, because we are driving the enemy back from the North Sea to the Swiss border.

" 'Well, old friend, if anything should happen, and I am called on to make the sacrifice, you can tell them that I made it with a smile.' "

One of Battery E's proudest possessions is its original guidon mentioned in the above article, which has been presented to the Truman Library for display with its 35th Division exhibit. It was taken to Europe, saw service and was returned unblemished. Its staff is still retained by Sergeant William Cleveland.

Such stalwarts as Herbert C. McClure, who was awarded the Distinguished Service Cross by the War Department, Ed S. Carroll, current president of Battery E Association or the late Dexter Perry, the "Veteran's friend," would escort their guidon from the Hare home stairwell to Battery E commemorative occasions and afterwards return it to its place of honor. Not without foresight did Captain Spencer Salisbury preserve it.

On his death in 1968 the guidon's safekeeping was assumed by Kenneth V. Bostian, who commanded Battery E at one time. The Battery E Association is in search of a permanent home for the diminishing array of company memorabilia, data and trophies. Some of these relics have been lodged temporarily in the present Independence Memorial building. Others are still in the possession of surviving individual members or their families.

The etymological background of guidon is French. Its lineal descent can be traced back to Middle French ancestry derived from Old Provencal, the language spoken in southern France. Provencal was the Romance tongue of the troubadours, who were the poets of the 1100's.

Funk and Wagnall's New Standard Dictionary of the English Language cites a passage from the Preface of Elizabeth B. Custer's "Following the Guidon" as an appropriate poetic conception:

"The guidon told the soldiers in color what the . . . bugle said in sound. . . ."

PREDICTION COMES TRUE

(Mr. RANDALL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RANDALL. Mr. Speaker, last year the House for 5 full days worked to pass a bill to control ownership of shotguns and rifles which, when finished, served to hamper law-abiding citizens in their purchases of ammunition for these guns and other weapons they own for their self-protection or for sporting purposes. This was accomplished in an emotional atmosphere bordering on hysteria.

As I announced last year, this law was a mistake. Those who supported it claimed they were striking a blow at crime. However, having done so, no further action was taken on crime control. New FBI statistics reveal that the incidence of nearly all crime continues to increase alarmingly. The tragedy of it all was and is that while the Congress thought it was doing something, actually it did absolutely nothing at all, except to inhibit law-abiding citizens in their efforts to protect themselves and hamper sportsmen in their hobbies.

In July 1968, the RECORD will show that I said passage of the gun bill would be a big lift for the do-it-yourself hobbyists. The 1968 gun law applied to guns but not to components of guns. Those with the inclination to do so and the dexterity for a few simple hand tools can still procure the parts and build their own guns.

Now the weaknesses of the gun laws of 1968 are becoming additionally apparent. It seems that importers, who were seriously limited in securing guns from foreign sources, have found out that the laws do not apply to gun components. So, now they import the parts, assemble them and put them on the market to the extent that their movement in interstate commerce has taken from their business much of the slack imposed by the 1968 laws.

The Washington Star of December 16 has a story entitled "Cheap Handguns Slipping Through Loophole in U.S. Law," which points up the importing aspect of the do-it-yourself activity in assembling gun components. Under permission granted for extension of my remarks, that article is included in the RECORD.

The law which should have been enacted and which would have gone to the heart of the problem, was the provision to impose mandatory prison sentences with no suspension and no probation for criminal offenses involving firearms. That was never passed into law. Meanwhile, criminals will continue to steal their guns and wreak their violence on a citizenry whose capacity for arming for their own protection has been crippled by unwise enactment by the 90th Congress.

The item referred to follows:

CXV——2485—Part 29

CHEAP HANDGUNS SLIPPING THROUGH LOOPHOLE IN U.S. LAW

(By Frank Murray)

The federal gun control law has missed one of its main targets—curbing the traffic in cheap handguns—because of a loophole unrecognized by Congress but exploited by importers-turned-manufacturers.

When the law went into effect one year ago today, importers quit bringing in the small caliber, $10 to $20 pistols and revolvers which police call "Saturday night specials."

Instead some firms began importing most of the parts needed to manufacture the guns. Then they assembled the guns in domestic plants. Other firms stepped up production of cheap handguns from parts made exclusively in the United States.

The net result: About the same number of cheap handguns are going onto the market today as before the law's enactment.

"It didn't occur to me" until recently that the law contained the loophole, said Sen. Thomas J. Dodd, the legislation's chief sponsor, in an interview.

"I didn't know the importers were that greedy," the Connecticut Democrat said. "We shut off the importation of this dreadful type of gun only to wake up and find out Americans are doing this. It's outrageous."

As the law's first anniversary neared, Dodd introduced a one-sentence bill that would amend the act and ban the sale or delivery in the United States of any snub-nosed gun or small automatic pistol, as well as the "junk guns" which the National Commission on Violence says are used in 50 percent of all crimes involving guns.

PANEL'S RECOMMENDATIONS

"The United States still does not have an effective national firearms policy," the commission said last week. Among its recommendations: Extension of the 1968 act to ban domestic production and sale of "junk guns."

Except for the continued problem with cheap handguns, officials say other sections of the law—such as the ban on mail orders and interstate shipments—appear to be working.

In California, for example, the sale of guns in the year ending June 30 dropped off to 146,468 from the 202,920 reported sold the previous 12 months.

The Internal Revenue Service, which polices the federal act, recommended 896 prosecutions from July through October, compared with 197 cases for the same period in 1968. Most of the violations are for failing to disclose criminal records or for using fictitious names when purchasing a gun.

DIFFICULT TO EVALUATE

But IRS Commissioner Randolph W. Thrower told a Senate subcommittee it is difficult to evaluate statistically whether the law is preventing felons, juveniles, the mentally ill or drug users from buying firearms. "We cannot tell you how many . . .," he said.

Latest FBI statistics say that guns were used to commit 65 percent of all murders and 23 percent of all aggravated assaults from January through September—precisely the same percentages as in the similar period last year.

Before the law was passed, almost all cheap handguns came from abroad. In 1967, according to government figures, 747,013 handguns of all types—cheap and expensive—were imported. In 1968, the total for all handgun imports jumped to 1,155,368. This included 317,703 handguns with an average value of $13 ordered in a two-week period of Senate hearings following the assassination of Sen. Robert F. Kennedy.

380,000 MADE IN UNITED STATES

This year, imports of handguns—all of them the more expensive type—are down to 325,373.

But the Treasury Department said companies tooled up and made 380,000 of the cheap pistols and revolvers entirely with U.S.-produced parts. In addition, parts for 408,000 weapons were imported for assembly here.

Therein lies the main loophole: A gun is not a gun until the parts are assembled. Except for the frame, all the parts can be imported. Even two-inch barrels can be imported by the thousands, although a single assembled gun with a two-inch barrel can not.

Dodd's bill would change that, applying the government's import standards to all guns sold or delivered in the United States regardless of where they are made. Small automatics and snub-nosed pistols would be banned, as would larger weapons that are unsafe, too light or so shabby they lack the accuracy for sport purposes.

The Senator said he hoped to get the bill through by early 1970, predicting, "the gun lobby will buck it."

An example of the opposition was voiced by William Ethier, general manager of Firearms Import & Export Corp., Miami, one of the major gun importers. Ethier said his firm's imports are down by half since last year, and claimed the legislative moves are discriminatory.

"I think a lot of Sen. Dodd's support comes from the gun manufacturers of Connecticut," Ethier said, "If American manufacturers can restrict the import of equal quality weapons because they are made in a country with cheaper labor, they've done themselves a service by taking a large segment of their competition out of business.

"It's just as dangerous to be shot by a gun with a two-inch barrel made in Germany as it is to get shot with a gun with a two-inch barrel made in Hartford," he added.

Dodd responded, "Discrimination is an empty word when you're talking about stopping murder and assaults. It took several tragedies to get the Gun Control Act of 1968. We may have to have more crimes to get rid of this dreadful weapon. I hope not."

Four of America's major gun manufacturers—Colt, Winchester, Remington and High-Standard are based in Dodd's home state of Connecticut.

A Treasury Department spokesman said Dodd's amendment would apply to some weapons now manufactured in the United States by such companies as Colt, which already has halted imports of a tiny semi-automatic pistol.

When the 1968 act went into effect, the large domestic companies merely dropped prohibited items from their line instead of importing parts and shifting assembly to their home plants.

C–5A AIRCRAFT

(Mr. DAVIS of Georgia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DAVIS of Georgia. Mr. Speaker, I want to devote a few moments to answering some charges that a Member of this body leveled at the C–5A aircraft—the first of which will be delivered to the Air Force tomorrow at Altus Air Force Base, Okla.

I will not attempt to answer all of the gentleman's charges point by point. First because most of them can be lumped together under the heading of misunderstanding; second, a few of them are too trivial for serious consideration, and, third, some are plain inaccuracies that require no defense.

To approach these categories in reverse order, I cite the complaint about a

defect in the pitch trim flap system. I want this body and the Committee on Armed Services to be assured that there is no defect in the pitch trim flap system—there is not even a pitch trim flap system.

But, to dwell for a moment on the trivial, I see notations to the effect that there are mistakes in the operating manual of the C–5. If an operating manual that has been superseded by later knowledge is a defect, then I fear for the operating procedures of the Air Force. I say this is because the operating manual for every aircraft is updated constantly by safety-of-flight supplements. This applies to aircraft with a long and distinguished record of operation, and to those in the production and testing stage. I doubt, for example, that any Air Force cargo plane has a more illustrious record of reliable performance than the C–47—known to servicemen as the Gooney Bird and to civilians as the DC–3. The first C–47 was accepted by the Air Force in 1938, and yet a mistake in its operating manual was corrected by a safety-of-flight supplement as late as December 4, 1969.

The C–141, which I think anyone would agree is a troop-carrying aircraft, has had 117 safety-of-flight supplements issued for it, and this aircraft was also produced by Lockheed through the same concurrent testing and production methods being used now to produce the C–5. I suspect that the same criticisms now being leveled at the C–5 would have been leveled at the C–141 during its early stages of production had it been as fashionable to criticize the military-industrial complex as it is today. And yet the record of the C–141, as well as that of many other aircraft, bears testimony to the effectiveness of testing an aircraft while it is being manufactured.

This brings us to the heart of the charges against the aircraft; the method of its production, which is to manufacture it as it is being tested. I can say that this method has the approval of the Air Force and of the committees in both Houses of Congress most directly involved in this project.

Let me return for a moment to the C–47. Despite 30 years of reliable, distinguished services, the C–47 has had—and still has—a restriction which says that the aircraft is not to be operated at an engine speed of 1,300 to 1,700 revolutions per minute.

It has been said that there is a similar restriction on the C–5. In fact, it is the kind of operational restriction placed on many aircraft in addition to the C–5 and is one which sometimes stays with them until they are retired from useful service.

Actually, this is the point to all restrictions. Every airplane has its limits of safe operation clearly defined for the protection of those who fly it. On every airplane, whether it is civilian or military, there are certain boundaries of performance that must not be crossed. So long as the aircraft is operated within these boundaries, those aboard are exposed only to the normal hazards involved in taking a giant piece of machinery and flying it. Restrictions are primarily safety instructions.

For every aircraft, of course, there are certain performance standards that are set up in the contract and these must be met before the manufacturer is paid. It is possibly true that some of these contract standards have not yet been met by the C–5. But it is also true that over half of the complaints refer to problems which neither Lockheed nor the Air Force expected to be solved at this stage of production. It is a normal and inevitable part of the process of invention, discovery, engineering, and manufacture.

I have every confidence that the first delivery date of the C–5 will set the course of future events and will prove this to be a milestone in the development of the conquering of the ocean of air, which we are accomplishing at a greater technological pace than our forebears did with the ocean of water.

OILY AID

(Mr. GROSS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GROSS. Mr. Speaker, during the debate on the foreign giveaway program on December 9, I called the attention of the House to the fact that the Agency for International Development has, incredibly, loaned oil-exporting Tunisia $3 million of the taxpayers' money to import oil.

I did not go into the details of this ridiculous transaction last week due to the length of the debate on the giveaway appropriation, but I am pleased to note that columnist Jack Anderson and his associate, Leslie Whitten, have published some of them.

I include the column for insertion in the RECORD at this point:

AID PUMPS OIL INTO OIL-RICH TUNISIA

(By Jack Anderson)

While the American motorist digs deep into his pockets every time he stops at a gas pump, the foreign aid program is pumping 12,000,000 barrels of oil into oil-rich Tunisia.

This is just one example of why President Nixon's $2.2 billion foreign aid request is being chopped by Congress. The Tunisian oil contract illustrates why even friends of foreign aid wince before they support $2.2 billion for the bumbling Agency for International Development.

And when AID combines with the hack-ridden Agriculture Department, as in the Tunisian case, the results are often dismaying for both the common treasury and common sense.

AID agreed to give Tunisia $10 million to develop its industry. The 40-year loan, at 2½ per cent, is virtually interest-free compared to what the U.S. housebuyer pays.

Tunisia decided to use much of the loan for crude oil, even though in 1968 it produced 23,503,000 barrels and only consumed 8,212,500.

AID says it was told Tunisia had plenty of high-grade oil, but needed low-grade fuel oil. Oil industry sources say Tunisia could easily make do with its own oil.

Nevertheless, AID let the Agriculture Department find the oil for Tunisia under a barter deal. Agriculture put out bids. Out of four bids, the lowest was $1.97 a barrel. The next was $2.65 a barrel.

AN $884,000 GOOF

Then came Agriculture's first nitwit decision. Instead of taking the low bid, the Agriculture Department chose to pay $2.65 a barrel, well over both the world price and the low bid.

This initial goof cost the taxpayer $884,000. The Agriculture Department explains that the extra money had to be paid to haul the oil in U.S. ships. This is absolutely contradicted by a requirement that the U.S. ships make a "fair and reasonable offer" compared with foreign vessels.

Despite the enormous differences in the bids, the Agriculture Department did not even ask for new bids, as it can do under law. Instead, with AID nodding approval, the contract was signed with the higher bidder.

As it turned out the higher bidder had promised higher grade oil. But when the U.S. examined the oil, they found it was not the high grade promised, but exactly the same grade oil as offered by the low bidder.

Startlingly, it turned out to be not only the same grade oil, but the same oil. The higher bidder, after winning the bid, talked the supplier of the low bidder into turning over his oil. The Agriculture Department, when reminded by this column of this drop in quality, promised to assess the higher bidder a penalty.

But penalty or not, the taxpayer still will have to pump out hundreds of thousands of dollars for overpriced oil going to a country that cannot even use all the oil it's producing now.

RESOLUTION BY NORTH MIAMI BEACH FOR SOCIAL SECURITY LEGISLATION

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, I am sure you are aware that all over the country there is a strong demand for increased benefits, particularly to senior citizens, as well as other beneficiaries under social security legislation. We all take just pride in the House for passing H.R. 15095 providing an across the-board increase of 15 percent in benefits to the beneficiaries of our social security program. We would all hope I am sure that we can at an early date extend much more substantially such benefits. One of the very progressive and forward-looking bills which has been introduced in the House is H.R. 14430, introduced by the able gentleman from New York, JACOB GILBERT, and known as the Gilbert bill. I am very much pleased that the mayor and the city council of one of the very outstanding cities of my congressional district have endorsed the Gilbert bill because the mayor and the city council recognized the need for the enactment of such legislation. I insert the resolution of the mayor and the city council of North Miami Beach in the RECORD immediately following my remarks:

RESOLUTION BY MAYOR AND CITY COUNCIL OF NORTH MIAMI BEACH, FLA.

(A resolution urging the U.S. Congress to pass the Gilbert Bill—H.R. 14430)

Whereas, the attention of the Mayor and the City Council has been directed to national legislation, to-wit: the "Gilbert Bill" now pending before the Congress of the United States as H.R. 14430; and

Whereas, the City of Miami Beach enjoys the residence of many individuals presently depending upon Social Security, in whole or in part, to sustain themselves; and

Whereas, this City, as most of the nation, has suffered the effects of the inflationary trend now nationally existent; and

Whereas, our citizens are burdened constantly with rising costs for food and all services; and

Whereas, reluctantly, and in order to sustain the level of service necessary to care for its citizens, the City has been unable to prevent a necessitous raise in taxes; and

Whereas, it is recognized that such rising costs and expenses of living are particularly burdensome upon individuals whose income is fixed on straight dollar figures with no opportunity for a commensurate increase in accordance with rising cost of living; and

Whereas, it has been determined by the City Council that it is important to the health, safety and welfare of a substantial and cognizable number of its citizens that additional income be made available to those of its citizens presently living, or to be living, under Social Security.

Now, therefore,

Be it resolved by the City Council of the City of North Miami Beach, Florida:

Section 1: That the Mayor and City Council of the City of North Miami Beach, on behalf of themselves and the City of North Miami Beach, do hereby urge the Congress of the United States of America to pass the "Gilbert Bill", more particularly known as HR 14430, for the reasons above stated, and commend to their Representatives and Senators in Congress, to-wit: Honorable Claude Pepper, Honorable J. Herbert Burke, Honorable Dante B. Fascell, Honorable Spessard L. Holland, Honorable Edward J. Gurney, that they move forward expeditiously and assiduously to aid in the passage of this worthy and needed legislation.

Section 2: That the City Clerk be and she is hereby directed to forward suitably certified copies of this Resolution to the Congressional Representatives and Senators hereinabove set forth.

Approved and adopted in regular meeting assembled this 2d day of December, 1969.

DAVID M. PAPLEN,
Mayor.

Attest:

VIRGINIA H. MOORE,
City Clerk.

TRIBUTE TO DICK FAGAN

(Mrs. GREEN of Oregon asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. GREEN of Oregon. Mr. Speaker, the vogue recently has been either to criticize or to defend members of the press according to how fair or unfair we judge their treatment to be. However, in doing this we sometimes forget how important to our lives are the words of the great humanists and great wits who are at the same time great journalists.

Recently in my hometown of Portland, Oreg., a journalist of much wit and warmth died after a 2-year illness with lung cancer. Dick Fagan, a writer for the Portland, Oreg., Journal and a Portland journalist for more than 30 years, was a kind of an H. L. Mencken of our Pacific Northwest community. He was not nationally known because it was not his style to attempt to make big pronouncements to influence a nation of leaders, but he was more than known and admired among his readers in Oregon. He was truly the object of great affection.

As son of an Irishman he chose to live in the Pacific Northwest where his three decades of writing covered the comical, the serious, and the ridiculous.

He had sort of a writer's Fibber McGee's closet in his "Fagan Institute for Things Not Normally if Ever Researched." Sometimes he was off on a Quixotic battle against intemperate Scottish bagpipers who constantly plagued him. He complained that he could not tell which was worse, the bagpipers or his faulty plumbing. Sometimes he was busy establishing and adorning the "Mill Ends Park, the Smallest Park in the World," a tiny postage stamp size piece of earth he luckily found one day not to have been asphalted when a traffic divider was constructed in the street below his office.

But as often as his words were entertaining they were at the same time eloquent and wise. He had a warm and enjoyable message for us all in a relaxed and familiar style which is so peculiar to the Pacific Northwest. Dick Fagan transcended popularity; he was loved by his legion of friends and readers. In his passing, Portland has lost an important figure in the life of its community.

I include in the RECORD at this point, the first column that he wrote for the Oregon Journal and one of his very last in which he talked about his illness and his coming fate.

He will be remembered in the Pacific Northwest as one of the best loved and one of the truly great.

The columns follow:

[From the Portland (Oreg.) Journal, Nov. 21, 1969]

MILL ENDS

(By Dick Fagan)

(NOTE.—Dick Fagan, writer of Mill Ends column since January 28, 1947, died at 4 a.m. Thursday. Here is his first column.)

This reporter has been asked to take a splurge in "columnizing," and so today sees the birth of Mill Ends. As you know, mill ends are those irregular, rough pieces of lumber that are left over at a lumber mill, and usually used for firewood. The "Mill Ends" will deal with rough, irregular pieces of news opinion and talk that usually can't be sized up into a news story.

George Moorad, KGW's ace foreign affairs commentator who has done his newspapering all over the world, and I were discussing the possibility of a column. He comes up with, "Well, I don't know; for a column to be well read you've got to be mean. I don't think you've got a nasty enough disposition."

He doesn't know me very well.

Shortest recent editorial was by a newsie on the corner of SW 4th and Yamhill who wuxtraed, "Only one murder in Portland today. Things are quiet."

Although always an admirer of Milton Caniff's cartooning I've never quite forgiven him for all the trouble his gal "Lace" caused me while I was sitting out the war up in Alaska. GIs will remember Lace as quite a gal, but our top brass hat up there took exception to the derogatory way she talked about "genrals" and didn't think she sported enough duds for the Alaskan climate. Every week after our "Sourdough Sentinel" came out, I, as the guy in charge, could expect a summons from the "genral," and get plowed up one side and down the other for the way Lace dressed and things she beat her gums about. I explained again and again that the guys liked her, and she wasn't my protege, but I'd jerk the cartoon out if he ordered it. He'd never order it, but once wound up with the command, "Get more lace on that woman Lace."

It looks like legislators, lobbyists, et al. are standing by for a lynching bee at the Marion Hotel in Salem with almost every one having a coil of rope in his room. Those recent tragic hotel fires gave everyone a scare, and the capital boys are taking no chances of getting caught without some way of getting out unscorched. That is not necessarily intended to have a double meaning.

An amateur bookkeeper in Los Angeles has found that the ball point pen that writes under water also is best for marking queen bees, but Larry Howes, former Vancouver scribe and now a Journal police reporter, still claims his share of honors. Howes got one of the pens. He filled his bathtub with water, stripped down, got in and wrote on the bottom of his bathtub. It wrote okeh there, but now won't write on paper.

(Then on April 23, 1968, came this word:)

A number of my friends know about it, so I guess about the best thing to do is to tell you why my voice sounds the way it does.

I have cancer in the upper left lung, which apparently affects a nerve which, in turn, affects the left vocal cord, not letting it vibrate. The chest surgeon says he can't operate on it right now because of nerve and other complications in the area, but I'm taking cobalt treatments in hopes of shrinking the cancerous tissue. Later there may be an operation.

Now, I know you're naturally sympathetic about this, just as all of us are sympathetic about all persons having ailments. And, believe me, there are hundreds all around us with a lot worse than this. But I am finding that one of the most difficult things to fight is to keep from feeling sorry for myself—"why did this happen to little old me" sort of thing. So, not too much sympathy please. It isn't good for me.

I've had 57 years of very good health, and this is something that just has to be faced logically and scientifically, hoping for the best. If the best doesn't happen, then I just have to face whatever does happen.

This is the way things developed:

About five weeks ago my voice went hoarse. I didn't think much about it, because that has happened before as it has with most everyone. After a week or so it didn't clear up any, so I went to see our family doctor. He took a look at my throat, which he said was a little red, had his nurse give me a penicillin shot on the backside (she uses the dart method) and wrote out a prescription for sulfa tablets. He said if things didn't clear up in five or six days to call him. Well, it didn't clear up so he referred me to an eye, ear, nose and throat man.

He poked his illuminated mirror down my throat, but we had quite a time of it for a while. I have a horrible gag reaction, and it must have sounded to his patients in the waiting room as if he were trying to choke me to death and I was putting up a darned good battle. Finally he froze the throat, and found that the left vocal cord was not vibrating, but the throat "clean."

He had three theories—1. I might have had a slight stroke that paralyzed this little muscle. 2. I might have a tumor in the left chest affecting a nerve or nerves. 3. He was not sure what caused it, and it might clear itself up.

However, to take things in logical order he suggested I have a chest X-ray. Our family doctor took this and confided, "It doesn't look very good. I'm going to send you to a chest man."

So I reported to the chest doctor, who took a few notes, looked at the X-rays, confirmed there was a tumor there, and advised that I should go to the hospital so he could take a look through a bronchoscope, and take out a piece of tissue (or washings) to determine if the tumor was malignant.

The bronchoscope doesn't hurt because your throat is frozen, but it is a little uncomfortable. The next day he reported that the tumor was malignant, and he couldn't operate now under the circumstances. He suggested several places that give cobalt treatment, and I selected the one most convenient.

In the cobalt treatment they pinpoint the area to be hit by the radioactive cobalt rays, and put you under a machine that looks quite a bit like an X-ray. Just as in the X-ray you get no feeling at all, not even a bit of warmth. I have to do this five times a week for at least a month, possibly more, depending on what the rays do to the cancerous tissue.

I expect to be at work more or less as usual, although the doctor warned that the cobalt treatment might take a little of the pep out of me and affect my appetite. It affects different people in different degrees, but in most cases only in a minor way.

So that's the way things are. I won't say anything more about it unless something major happens. If you want to say a little prayer, that's fine—but not just for me, but for the thousands of persons who are really suffering and have little chance of recovery or relief. I'm lucky. I have a challenge but not an impossible one.

TAKE PRIDE IN AMERICA

Mr. MILLER of Ohio. Mr. Speaker, the United States has the oldest written constitution in the world. The form and structure of our federal system of government remains essentially the same today as it was 180 years ago when the Constitution was ratified.

FEDERAL COAL MINE HEALTH AND SAFETY ACT—CONFERENCE REPORT

Mr. PERKINS submitted the following conference report and statement on the bill (S. 2917), to improve the health and safety conditions of persons working in the coal-mining industry of the United States:

CONFERENCE REPORT (H. REPT. No. 91-761)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2917) to improve the health and safety conditions of persons working in the coal mining industry of the United States, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House to the text of the bill and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the House amendment insert the following:

That this Act may be cited as the "Federal Coal Mine Health and Safety Act of 1969".

FINDINGS AND PURPOSE

SEC. 2. Congress declares that—

(a) the first priority and concern of all in the coal mining industry must be the health and safety of its most precious resource—the miner;

(b) deaths and serious injuries from unsafe and unhealthful conditions and practices in the coal mines cause grief and suffering to the miners and to their families;

(c) there is an urgent need to provide more effective means and measures for improving the working conditions and practices in the Nation's coal mines in order to prevent death and serious physical harm, and in order to prevent occupational diseases originating in such mines;

(d) the existence of unsafe and unhealthful conditions and practices in the Nation's coal mines is a serious impediment to the future growth of the coal mining industry and cannot be tolerated;

(e) the operators of such mines with the assistance of the miners have the primary responsibility to prevent the existence of such conditions and practices in such mines;

(f) the disruption of production and the loss of income to operators and miners as a result of coal mine accidents or occupationally caused diseases unduly impedes and burdens commerce; and

(g) it is the purpose of this Act (1) to establish interim mandatory health and safety standards and to direct the Secretary of Health, Education, and Welfare and the Secretary of the Interior to develop and promulgate improved mandatory health or safety standards to protect the health and safety of the Nation's coal miners; (2) to require that each operator of a coal mine and every miner in such mine comply with such standards; (3) to cooperate with, and provide assistance to, the States in the development and enforcement of effective State coal mine health and safety programs; and (4) to improve and expand, in cooperation with the States and the coal mining industry, research and development and training programs aimed at preventing coal mine accidents and occupationally caused diseases in the industry.

DEFINITIONS

SEC. 3. For the purpose of this Act, the term—

(a) "Secretary" means the Secretary of the Interior or his delegate;

(b) "commerce" means trade, traffic, commerce, transportation, or communication among the several States, or between a place in a State and any place outside thereof, or within the District of Columbia or a possession of the United States, or between points in the same State but through a point outside thereof;

(c) "State" includes a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Trust Territory of the Pacific Islands;

(d) "operator" means any owner, lessee, or other person who operates, controls, or supervises a coal mine;

(e) "agent" means any person charged with responsibility for the operation of all or a part of a coal mine or the supervision of the miners in a coal mine;

(f) "person" means any individual, partnership, association, corporation, firm, subsidiary of a corporation, or other organization;

(g) "miner" means any individual working in a coal mine;

(h) "coal mine" means an area of land and all structures, facilities, machinery, tools, equipment, shafts, slopes, tunnels, excavations, and other property, real or personal, placed upon, under, or above the surface of such land by any person, used in, or to be used in, or resulting from, the work of extracting in such area bituminous coal, lignite, or anthracite from its natural deposits in the earth by any means or method, and the work of preparing the coal so extracted, and includes custom coal preparation facilities;

(i) "work of preparing the coal" means the breaking, crushing, sizing, cleaning, washing, drying, mixing, storing, and loading of bituminous coal, lignite, or anthracite, and such other work of preparing such coal as is usually done by the operator of the coal mine;

(j) "imminent danger" means the existence of any condition or practice in a coal mine which could reasonably be expected to cause death or serious physical harm before such condition or practice can be abated;

(k) "accident" includes a mine explosion, mine ignition, mine fire, or mine inundation, or injury to, or death of, any person;

(l) "mandatory health or safety standard" means the interim mandatory health or safely standards established by titles II and III of this Act, and the standards promulgated pursuant to title I of this Act; and

(m) "Panel" means the Interim Compliance Panel established by this Act.

MINES SUBJECT TO ACT

SEC. 4. Each coal mine, the products of which enter commerce, or the operations or products of which affect commerce, and each operator of such mine, and every miner in such mine shall be subjected to the provisions of this Act.

INTERIM COMPLIANCE PANEL

SEC. 5. (a) There is hereby established the Interim Compliance Panel, which shall be composed of five members as follows:

(1) Assistant Secretary of Labor for Labor Standards, Department of Labor, or his delegate;

(2) Director of the Bureau of Standards, Department of Commerce, or his delegate;

(3) Administrator of Consumer Protection and Environmental Health Service, Department of Health, Education, and Welfare, or his delegate;

(4) Director of the Bureau of Mines, Department of the Interior, or his delegate; and

(5) Director of the National Science Foundation, or his delegate.

(b) Members of the Panel shall serve without compensation in addition to that received in their regular employment, but shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of duties vested in the Panel.

(c) Notwithstanding any other provision of law, the Secretary of Health, Education, and Welfare, the Secretary of Commerce, the Secretary of Labor, and the Secretary shall, upon request of the Panel, provide the Panel such personnel and other assistance as the Panel determines necessary to enable it to carry out its functions under this Act.

(d) Three members of the Panel shall constitute a quorum for doing business. All decisions of the Panel shall be by majority vote. The chairman of the Panel shall be selected by the members from among the membership thereof.

(e) The Panel is authorized to appoint as many hearing examiners as are necessary for proceedings required to be conducted in accordance with the provisions of this Act. The provisions applicable to hearing examiners appointed under section 3105 of title 5 of the United States Code shall be applicable to hearing examiners appointed pursuant to this subsection.

(f) (1) It shall be the function of the Panel to carry out the duties imposed on it pursuant to this Act and to provide an opportunity for a public hearing, after notice, at the request of an operator of the affected coal mine or the representative of the miners of such mine. Any operator or representative of miners aggrieved by a final decision of the Panel may file a petition for review of such decision under section 106 of this Act. The provisions of this section shall terminate upon completion of the Panel's functions as set forth under this Act. Any hearing held pursuant to this subsection shall be of record and the Panel shall make findings of fact and shall issue a written decision incorporating its findings therein in accordance with section 554 of title 5 of the United States Code.

(2) The Panel shall make an annual report, in writing, to the Secretary for transmittal by him to the Congress concerning the achievement of its purposes, and any other relevant information (including any recommendations) which it deems appropriate.

TITLE I—GENERAL

HEALTH AND SAFETY STANDARDS; REVIEW

SEC. 101. (a) The Secretary shall, in accordance with the procedures set forth in this section, develop, promulgate, and revise, as may be appropriate, improved mandatory safety standards for the protection of life and the prevention of injuries in a coal mine,

and shall, in accordance with the procedures set forth in this section, promulgate the mandatory health standards transmitted to him by the Secretary of Health, Education, and Welfare.

(b) No improved mandatory health or safety standard promulgated under this title shall reduce the protection afforded miners below that provided by any mandatory health or safety standard.

(c) In the development and revision of mandatory safety standards, the Secretary shall consult with the Secretary of Health, Education, and Welfare, the Secretary of Labor, and with other interested Federal agencies, appropriate representatives of State agencies, appropriate representatives of the coal mine operators and miners, other interested persons and organizations, and such advisory committees as he may appoint. Such development and revision of mandatory safety standards shall be based upon research, demonstrations, experiments, and such other information as may be appropriate. In addition to the attainment of the highest degree of safety protection for miners, other considerations shall be the latest available scientific data in the field, the technical feasibility of the standards, and experience gained under this and other safety statutes.

(d) The Secretary of Health, Education, and Welfare shall, in accordance with the procedures set forth in this section, develop and revise, as may be appropriate, improved mandatory health standards for the protection of life and the prevention of occupational diseases of miners. In the development and revision of mandatory health standards, the Secertary of Health, Education, and Welfare shall consult with the Secretary, the Secretary of Labor, and with other interested Federal agencies, appropriate representatives of State agencies, appropriate representatives of the coal mine operators and miners, other interested persons and organizations, such advisory committees as he may appoint, and, where appropriate, foreign countries. Such development and revision of mandatory standards shall be based upon research, demonstrations, experiments, and such other information as may be appropriate. In addition to the attainment of the highest degree of health protection for the miner, other considerations shall be the latest available scientific data in the field, the technical feasibility of the standards, and experience gained under this and other health statutes. Mandatory health standards which the Secretary of Health, Education, and Welfare develops or revises shall be transmitted to the Secretary, and shall thereupon be published in the Federal Register by the Secretary as proposed mandatory health standards.

(e) The Secretary shall publish proposed mandatory health and safety standards in the Federal Register and shall afford interested persons a period of not less than thirty days after publication to submit written data or comments. In the case of mandatory safety standards, except as provided in subsection (f) of this section, the Secretary may, upon the expiration of such period and after consideration of all relevant matter presented, promulgate such standards with such modifications as he may deem appropriate. In the case of mandatory health standards, except as provided in subsection (f) of this section, the Secretary of Health, Education, and Welfare may, upon the expiration of such period and after consideration of all relevant matter presented to the Secretary and transmitted to the Secretary of Health, Education, and Welfare, direct the Secretary to promulgate such standards with such modifications as the Secretary of Health, Education, and Welfare may deem appropriate and the Secretary shall thereupon promulgate such standards.

(f) On or before the last day of any period fixed for the submission of written data or comments under subsection (e) of this section, any interested person may file with the Secretary written objections to a proposed mandatory health or safety standard, stating the grounds therefor and requesting a public hearing on such objections. As soon as practicable after the period for filing such objections has expired, the Secretary shall publish in the Federal Register a notice specifying the proposed mandatory health or safety standards to which objections have been filed and a hearing requested.

(g) Promptly after any such notice is published in the Federal Register by the Secretary under subsection (f) of this section, the Secretary, in the case of mandatory safety standards, or the Secretary of Health, Education, and Welfare, in the case of mandatory health standards, shall issue notice of, and hold, a public hearing for the purpose of receiving relevant evidence. Within sixty days after completion of the hearings, the Secretary who held the hearing shall make findings of fact which shall be public. In the case of mandatory safety standards, the Secretary may promulgate such standards with such modifications as he deems appropriate. In the case of mandatory health standards, the Secretary of Health, Education, and Welfare may direct the Secretary to promulgate the mandatory health standards with such modifications as the Secretary of Health, Education, and Welfare deems appropriate and the Secretary shall thereupon promulgate the mandatory health standards. In the event the Secretary or the Secretary of Health, Education, and Welfare, as the case may be, determines that a proposed mandatory health or safety standard should not be promulgated or should be modified, he shall within a reasonable time publish his reasons for his determination.

(h) Any mandatory health or safety standard promulgated under this section shall be effective upon publication in the Federal Register unless the Secretary or the Secretary of Health, Education, and Welfare, as appropriate, specifies a later date.

(i) Proposed mandatory health and safety standards for surface coal mines shall be published by the Secretary, in accordance with the provisions of this section, not later than twelve months after the date of enactment of this Act. Proposed mandatory health and safety standards for surface work areas of underground coal mines, in addition to those established for such areas under this Act, shall be published by the Secretary, in accordance with the provisions of this section, not later than twelve months after the date of enactment of this Act.

(j) All interpretations, regulations, and instructions of the Secretary or the Director of the Bureau of Mines, in effect on the date of enactment of this Act and not inconsistent with any provision of this Act, shall be published in the Federal Register and shall continue in effect until modified or superseded in accordance with the provisions of this Act.

(k) The Secretary shall send a copy of every proposed standard or regulation at the time of publication in the Federal Register to the operator of each coal mine and the representative of the miners at such mine and such copy shall be immediately posted on the bulletin board of the mine by the operator or his agent, but failure to receive such notice shall not relieve anyone of the obligation to comply with such standard or regulation.

ADVISORY COMMITTEES

SEC. 102. (a)(1) The Secretary shall appoint an advisory committee on coal mine safety research composed of—

(A) the Director of the Office of Science and Technology, or his delegate, with the consent of the Director;

(B) the Director of the National Bureau of Standards, Department of Commerce, or his delegate, with the consent of the Director;

(C) the Director of the National Science Foundation, or his delegate, with the consent of the Director; and

(D) such other persons as the Secretary may appoint who are knowledgeable in the field of coal mine safety research.

The Secretary shall designate the chairman of the committee.

(2) The advisory committee shall consult with, and make recommendations to, the Secretary on matters involving or relating to coal mine safety research. The Secretary shall consult with, and consider the recommendations of, such committee in the conduct of such research, the making of any grant, and the entering into of contracts for such research.

(3) The chairman of the committee and a majority of the persons appointed by the Secretary pursuant to paragraph (1)(D) of this subsection shall be individuals who have no economic interests in the coal mining industry, and who are not operators, miners, or officers or employees of the Federal Government or any State or local government.

(b)(1) The Secretary of Health, Education, and Welfare shall appoint an advisory committee on coal mine health research composed of—

(A) the Director, Bureau of Mines, or his delegate, with the consent of the Director;

(B) the Director of the National Science Foundation, or his delegate, with the consent of the Director;

(C) the Director of the National Institutes of Health, or his delegate, with the consent of the Director; and

(D) such other persons as the Secretary of Health, Education, and Welfare may appoint who are knowledgeable in the field of coal mine health research.

The Secretary of Health, Education, and Welfare shall designate the chairman of the committee.

(2) The advisory committee shall consult with, and make recommendations to, the Secretary of Health, Education, and Welfare on matters involving or relating to coal mine health research. The Secretary of Health, Education, and Welfare shall consult with, and consider the recommendations of, such committee in the conduct of such research, the making of any grant, and the entering into of contracts for such research.

(3) The chairman of the committee and a majority of the persons appointed by the Secretary of Health, Education, and Welfare pursuant to paragraph (1)(D) of this subsection shall be individuals who have no economic interests in the coal mining industry, and who are not operators, miners, or officers or employees of the Federal Government or any State or local government.

(c) The Secretary or the Secretary of Health, Education, and Welfare may appoint other advisory committees as he deems appropriate to advise him in carrying out the provisions of this Act. The Secretary or the Secretary of Health, Education, and Welfare, as the case may be, shall appoint the chairman of each such committee, who shall be an individual who has no economic interest in the coal mining industry, and who is not an operator, miner, or an officer or employee of the Federal Government or any State or local government. A majority of the members of any such advisory committee appointed pursuant to this subsection shall be composed of individuals who have no economic interests in the coal mining industry, and who are not operators, miners, or officers or employees of the Federal Government or any State or local government.

(d) Advisory committee members, other than officers or employees of Federal, State, or local governments, shall be, for each day (including traveltime) during which they are performing committee business, entitled to receive compensation at a rate fixed by the appropriate Secretary but not in excess of the maximum rate of pay for grade GS–18 as provided in the General Schedule under

section 5332 of title 5 of the United States Code, and shall, notwithstanding the limitations of sections 5703 and 5704 of title 5 of the United States Code, be fully reimbursed for travel, subsistence, and related expenses.

INSPECTIONS AND INVESTIGATIONS

SEC. 103. (a) Authorized representatives of the Secretary shall make frequent inspections and investigations in coal mines each year for the purpose of (1) obtaining, utilizing, and disseminating information relating to health and safety conditions, the causes of accidents, and the causes of diseases and physical impairments originating in such mines, (2) gathering information with respect to mandatory health or safety standards, (3) determining whether an imminent danger exists, and (4) determining whether or not there is compliance with the mandatory health or safety standards or with any notice. order, or decision issued under this title. In carrying out the requirements of clauses (3) and (4) of this subsection, no advance notice of an inspection shall be provided to any person. In carrying out the requirements of clauses (3) and (4) of this subsection in each underground coal mine, such representatives shall make inspections of the entire mine at least four times a year.

(b)(1) For the purpose of making any inspection or investigation under this Act, the Secretary or any authorized representative of the Secretary shall have a right of entry to, upon, or through any coal mine.

(2) For the purpose of developing improved mandatory health standards, the Secretary of Health, Education, and Welfare or his authorized representative shall have a right of entry to, upon, or through, any coal mine.

(3) The provisions of this Act relating to investigations and records shall be available to the Secretary of Health, Education, and Welfare to enable him to carry out his functions and responsibilities under this Act.

(c) For the purpose of carrying out his responsibilities under this Act, including the enforcement thereof, the Secretary may by agreement utilize with or without reimbursement the services, personnel, and facilities of any Federal agency.

(d) For the purpose of making any investigation of any accident or other occurrence relating to health or safety in a coal mine, the Secretary may, after notice, hold public hearings, and may sign and issue subpenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents, and administer oaths. Witnesses summoned shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. In case of contumacy or refusal to obey a subpena served upon any person under this section, the district court of the United States for any district in which such person is found or resides or transacts business, upon application by the United States and after notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the Secretary or to appear and produce documents before the Secretary, or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

(e) In the event of any accident occurring in a coal mine, the operator shall notify the Secretary thereof and shall take appropriate measures to prevent the destruction of any evidence which would assist in investigating the cause or causes thereof. In the event of any accident occurring in a coal mine where rescue and recovery work is necessary, the Secretary or an authorized representative of the Secretary shall take whatever action he deems appropriate to protect the life of any person, and he may, if he deems it appropriate, surpervise and direct the rescue and recovery activity in such mine.

(f) In the event of any accident occurring in a coal mine, an authorized representative of the Secretary, when present, may issue such orders as he deems appropriate to insure the safety of any person in the coal mine, and the operator of such mine shall obtain the approval of such representative, in consultation with appropriate State representatives, when feasible, of any plan to recover any person in the mine or to recover the mine or to return affected areas of the mine to normal.

(g) Whenever a representative of the miners has reasonable grounds to believe that a violation of a mandatory health or safety standard exists, or an imminent danger exists, such representative shall have a right to obtain an immediate inspection by giving notice to the Secretary or his authorized representative of such violation or danger. Any such notice shall be reduced to writing, signed by the representative of the miners, and a copy shall be provided the operator or his agent no later than at the time of inspection, except that, upon the request of the person giving such notice, his name and the names of individual miners referred to therein shall not appear in such copy. Upon receipt of such notification, a special inspection shall be made as soon as possible to determine if such violation or danger exists in accordance with the provisions of this title.

(h) At the commencement of any inspection of a coal mine by an authorized representative of the Secretary, the authorized representative of the miners at the mine at the time of such inspection shall be given an opportunity to accompany the authorized representative of the Secretary on such inspection.

(i) Whenever the Secretary finds that a mine liberates excessive quantities of methane or other explosive gases during its operations, or that a methane or other gas ignition or explosion has occurred in such mine which resulted in death or serious injury at any time during the previous five years, or that there exists in such mine other especially hazardous conditions, he shall provide a minimum of one spot inspection by his authorized representative of all or part of such mine during every five working days at irregular intervals.

FINDINGS, NOTICES, AND ORDERS

SEC. 104. (a) If, upon any inspection of a coal mine, an authorized representative of the Secretary finds that an imminent danger exists, such representative shall determine the area throughout which such danger exists, and thereupon shall issue forthwith an order requiring the operator of the mine or his agent to cause immediately all persons, except those referred to in subsection (d) of this section, to be withdrawn from, and to be prohibited from entering, such area until an authorized representative of the Secretary determines that such imminent danger no longer exists.

(b) Except as provided in subsection (i) of this section, if, upon any inspection of a coal mine, an authorized representative of the Secretary finds that there has been a violation of any mandatory health or safety standard but the violation has not created an imminent danger, he shall issue a notice to the operator or his agent fixing a reasonable time for the abatement of the violation. If, upon the expiration of the period of time as originally fixed or subsequently extended, an authorized representative of the Secretary finds that the violation has not been totally abated, and if he also finds that the period of time should not be further extended, he shall find the extent of the area affected by the violation and shall promptly issue an order requiring the operator of such mine or his agent to cause immediately all persons, except those referred to in subsection (d) of this section, to be withdrawn from, and to be prohibited from entering, such area until an authorized representative of the Secretary determines that the violation has been abated.

(c)(1). If, upon any inspection of a coal mine, an authorized representative of the Secretary finds that there has been a violation of any mandatory health or safety standard, and if he also finds that, while the conditions created by such violation do not cause imminent danger, such violation is of such nature as could significantly and substantially contribute to the cause and effect of a mine safety or health hazard, and if he finds such violation to be caused by an unwarrantable failure of such operator to comply with such mandatory health or safety standards, he shall include such finding in any notice given to the operator under this Act. If, during the same inspection or any subsequent inspection of such mine within ninety days after the issuance of such notice, an authorized representative of the Secretary finds another violation of any mandatory health or safety standard and finds such violation to be also caused by an unwarrantable failure of such operator to so comply, he shall forthwith issue an order requiring the operator to cause all persons in the area affected by such violation, except those persons referred to in subsection (d) of this section, to be withdrawn from, and to be prohibited from entering, such area until an authorized representative of the Secretary determines that such violation has been abated.

(2) If a withdrawal order with respect to any area in a mine has been issued pursuant to paragraph (1) of this subsection, a withdrawal order shall promptly be issued by an authorized representative of the Secretary who finds upon any subsequent inspection the existence in such mine of violations similar to those that resulted in the issuance of the withdrawal order under paragraph (1) of this subsection until such time as an inspection of such mine discloses no similar violations. Following an inspection of such mine which discloses no similar violations, the provisions of paragraph (1) of this subsection shall again be applicable to that mine.

(d) The following persons shall not be required to be withdrawn from, or prohibited from entering, any area of the coal mine subject to an order issued under this section:

(1) any person whose presence in such area is necessary, in the judgment of the operator or an authorized representative of the Secretary, to eliminate the condition described in the order;

(2) any public official whose official duties require him to enter such area;

(3) any representative of the miners in such mine who is, in the judgment of the operator or an authorized representative of the Secretary, qualified to make coal mine examinations or who is accompanied by such a person and whose presence in such area is necessary for the investigation of the conditions described in the order; and

(4) any consultant to any of the foregoing.

(e) Notices and orders issued pursuant to this section shall contain a detailed description of the conditions or practices which cause and constitute an imminent danger or a violation of any mandatory health or safety standard and, where appropriate, a description of the area of the coal mine from which persons must be withdrawn and prohibited from entering.

(f) Each notice or order issued under this section shall be given promptly to the operator of the coal mine or his agent by an authorized representative of the Secretary issuing such notice or order, and all such notices and orders shall be in writing and shall be signed by such representative.

(g) A notice or order issued pursuant to

this section, except an order issued under subsection (h) of this section, may be modified or terminated by an authorized representative of the Secretary.

(h) (1) If, upon any inspection of a coal mine, an authorized representative of the Secretary finds (A) that conditions exist therein which have not yet resulted in an imminent danger, (B) that such conditions cannot be effectively abated through the use of existing technology, and (C) that reasonable assurance cannot be provided that the continuance of mining operations under such conditions will not result in an imminent danger, he shall determine the area throughout which such conditions exist, and thereupon issue a notice to the operator of the mine or his agent of such conditions, and shall file a copy thereof, incorporating his findings therein, with the Secretary and with the representative of the miners of such mine. Upon receipt of such copy, the Secretary shall cause such further investigation to be made as he deems appropriate, including an opportunity for the operator or a representative of the miners to present information relating to such notice.

(2) Upon the conclusion of such investigation and an opportunity for a public hearing upon request by any interested party, the Secretary shall make findings of fact, and shall by decision incorporating such findings therein, either cancel the notice issued under this subsection or issue an order requiring the operator of such mine to cause all persons in the area affected, except those persons referred to in subsection (d) of this section, to be withdrawn from, and be prohibited from entering, such area until the Secretary, after a public hearing affording all interested persons an opportunity to present their views, determines that such conditions have been abated. Any hearing under this paragraph shall be of record and shall be subject to section 554 of title 5 of the United States Code.

(i) If, based upon samples taken and analyzed and recorded pursuant to section 202(a) of this Act, or samples taken during an inspection by an authorized representative of the Secretary, the applicable limit on the concentration of respirable dust required to be maintained under this Act is exceeded and thereby violated, the Secretary or his authorized representative shall issue a notice fixing a reasonable time for the abatement of the violation. During such time, the operator of the mine shall cause samples described in section 202(a) of this Act to be taken of the affected area during each production shift. If, upon the expiration of the period of time as originally fixed or subsequently extended, the Secretary or his authorized representative finds that the period of time should not be further extended, he shall find the extent of the area affected by the violation and shall promptly issue an order requiring the operator of such mine or his agent to cause immediately all persons, except those referred to in subsection (d) of this section, to be withdrawn from, and to be prohibited from entering, such area until the Secretary or his authorized representative has reason to believe, based on actions taken by the operator, that such limit will be complied with upon the resumption of production in such mine. As soon as possible after an order is issued, the Secretary, upon request of the operator, shall dispatch to the mine involved a person or team of persons, to the extent such persons are available, who are knowledgeable in the methods and means of controlling and reducing respirable dust. Such person or team of persons shall remain at the mine involved for such time as they shall deem appropriate to assist the operator in reducing respirable dust concentrations. While at the mine, such persons may require the operator to take such actions as they deem appropriate to insure the health of any person in the coal mine.

REVIEW BY THE SECRETARY

SEC. 105. (a) (1) An operator issued an order pursuant to the provisions of section 104 of this title, or any representative of miners in any mine affected by such order or by any modification or termination of such order, may apply to the Secretary for review of the order within thirty days of receipt thereof or within thirty days of its modification or termination. An operator issued a notice pursuant to section 104(b) or (i) of this title, or any representative of miners in any mine affected by such notice, may, if he believes that the period of time fixed in such notice for the abatement of the violation is unreasonable, apply to the Secretary for review of the notice within thirty days of the receipt thereof. The applicant shall send a copy of such application to the representative of miners in the affected mine, or the operator, as appropriate. Upon receipt of such application, the Secretary shall cause such investigation to be made as he deems appropriate. Such investigation shall provide an opportunity for a public hearing, at the request of the operator or the representative of miners in such mine, to enable the operator and the representative of miners in such mine to present information relating to the issuance and continuance of such order or the modification or termination thereof or to the time fixed in such notice. The filing of an application for review under this subsection shall not operate as a stay of any order or notice.

(2) The operator and the representative of the miners shall be given written notice of the time and place of the hearing at least five days prior to the hearing. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code.

(b) Upon receiving the report of such investigation, the Secretary shall make findings of fact, and he shall issue a written decision, incorporating therein an order vacating, affirming, modifying, or terminating the order, or the modification or termination of such order, or the notice, complained of and incorporate his findings therein.

(c) In view of the urgent need for prompt decision of matters submitted to the Secretary under this section, all actions which the Secretary takes under this section shall be taken as promptly as practicable, consistent with adequate consideration of the issues involved.

(d) Pending completion of the investigation required by this section, the applicant may file with the Secretary of a written request that the Secretary grant temporary relief (1) from any modification or termination of any order, or (2) from any order issued under section 104 of this title, except an order issued under section 104(a) of this title, together with a detailed statement giving reasons for granting such relief. The Secretary may grant such relief, under such conditions as he may prescribe, if—

(1) a hearing has been held in which all parties were given an opportunity to be heard;

(2) the applicant shows that there is substantial likelihood that the findings of the Secretary will be favorable to the applicant; and

(3) such relief will not adversely affect the health and safety of miners in the coal mine.

No temporary relief shall be granted in the case of a notice issued under section 104 (b) or (i) of this title.

JUDICIAL REVIEW

SEC. 106. (a) Any order or decision issued by the Secretary or the Panel under this Act, except an order or decision under section 109(a) of this Act, shall be subject to judicial review by the United States court of appeals for the circuit in which the affected mine is located, or the United States Court of Appeals for the District of Columbia Circuit, upon the filing in such court within thirty days from the date of such order or decision of a petition by any person aggrieved by the order or decision praying that the order or decision be modified or set aside in whole or in part, except that the court shall not consider such petition unless such person has exhausted the administrative remedies available under this Act. A copy of the petition shall forthwith be sent by registered or certified mail to the other party and to the Secretary or the Panel, and thereupon the Secretary or the Panel shall certify and file in such court the record upon which the order or decision complained of was issued, as provided in section 2112 of title 28, United States Code.

(b) The court shall hear such petition on the record made before the Secretary or the Panel. The findings of the Secretary or the Panel, if supported by substantial evidence on the record considered as a whole, shall be conclusive. The court may affirm, vacate, or modify any order or decision or may remand the proceedings to the Secretary or the Panel for such further action as it may direct.

(c) (1) In the case of a proceeding to review any order or decision issued by the Secretary under this Act, except an order or decision pertaining to an order issued under section 104(a) of this title or an order or decision pertaining to a notice issued under section 104(b) or (i) of this title, the court may, under such conditions as it may prescribe, grant such temporary relief as it deems appropriate pending final determination of the proceeding if—

(A) all parties to the proceeding have been notified and given an opportunity to be heard on a request for temporary relief;

(B) the person requesting such relief shows that there is a substantial likelihood that he will prevail on the merits of the final determination of the proceeding; and

(C) such relief will not adversely affect the health and safety of miners in the coal mine.

(2) In the case of a proceeding to review any order or decision issued by the Panel under this Act, the court may, under such conditions as it may prescribe, grant such temporary relief as it deems appropriate pending final determination of the proceeding if—

(A) all parties to the proceeding have been notified and given an opportunity to be heard on a request for temporary relief; and

(B) the person requesting such relief shows that there is a substantial likelihood that he will prevail on the merits of the final determination of the proceeding.

(d) The judgment of the court shall be subject to review only by the Supreme Court of the United States upon a writ of certiorari or certification as provided in section 1254 of title 28, United States Code.

(e) The commencement of a proceeding under this section shall not, unless specifically ordered by the court, operate as a stay of the order or decision of the Secretary or the Panel.

(f) Subject to the direction and control of the Attorney General, as provided in section 507(b) of title 28 of the United States Code, attorneys appointed by the Secretary may appear for and represent him in any preceeding instituted under this section.

POSTING OF NOTICES, AND DECISIONS

SEC. 107. (a) At each coal mine there shall be maintained an office with a conspicuous sign designating it as the office of the mine, and a bulletin board at such office or at some conspicuous place near an entrance of the mine, in such manner that notices, orders, and decisions required by law or regulation to be posted on the mine bulletin board may be posted thereon, be easily visible to all persons desiring to read them, and be

protected against damage by weather and against unauthorized removal. A copy of any notice, order, or decision required by this title to be given to an operator shall be delivered to the office of the affected mine, and a copy shall be immediately posted on the bulletin board of such mine by the operator or his agent.

(b) The Secretary shall cause a copy of any notice, order, or decision required by this Act to be given to an operator to be mailed immediately to a representative of the miners in the affected mine, and to the public official or agency of the State charged with administering State laws, if any, relating to health, or safety in such mine. Such notice, order, or decision shall be available for public inspection.

(c) In order to insure prompt compliance with any notice, order, or decision issued under this Act, the authorized representative of the Secretary may deliver such notice, order, or decision to an agent of the operator and such agent shall immediately take appropriate measures to insure compliance with such notice, order, or decision.

(d) Each operator of a coal mine shall file with the Secretary the name and address of such mine and the name and address of the person who controls or operates the mine. Any revisions in such names or addresses shall be promptly filed with the Secretary. Each operator of a coal mine shall designate a responsible official at such mine as the principal officer in charge of health and safety at such mine and such official shall receive a copy of any notice, order, or decision issued under this Act affecting such mine. In any case, where the coal mine is subject to the control of any person not directly involved in the daily operations of the coal mine, there shall be filed with the Secretary the name and address of such person and the name and address of a principal official of such person who shall have overall responsibility for the conduct of an effective health and safety program at any coal mine subject to the control of such person and such official shall receive a copy of any notice, order, or decision issued affecting any such mine. The mere designation of a health and safety official under this subsection shall not be construed as making such official subject to any penalty under this Act.

INJUNCTIONS

SEC. 108. The Secretary may institute a civil action for relief, including a permanent or temporary injunction, restraining order, or any other appropriate order in the district court of the United States for the district in which a coal mine is located or in which the operator of such mine has his principal office, whenever such operator or his agent (a) violates or fails or refuses to comply with any order or decision issued under this Act, or (b) interferes with, hinders, or delays the Secretary or his authorized representative, or the Secretary of Health, Education, and Welfare or his authorized representative in carrying out the provisions of this Act, or (c) refuses to admit such representatives to the mine, or (d) refuses to permit the inspection of the mine, or the investigation of an accident or occupational disease occurring in, or connected with, such mine, or (e) refuses to furnish any information or report requested by the Secretary or the Secretary of Health, Education, and Welfare in furtherance of the provisions of this Act, or (f) refuses to permit access to, and copying of, such records as the Secretary or the Secretary of Health, Education, and Welfare determines necessary in carrying out the provisions of this Act. Each court shall have jurisdiction to provide such relief as may be appropriate. Temporary restraining orders shall be issued in accordance with Rule 65 of the Federal Rules of Civil Procedure, as amended, except that the time limit in such orders, when issued without notice, shall be seven days from the date of entry. Except as otherwise provided herein, any relief granted by the court to enforce an order under clause (a) of this section shall continue in effect until the completion or final termination of all proceedings for review of such order under this title, unless, prior thereto, the district court granting such relief sets it aside or modifies it. In actions under this section, subject to the direction and control of the Attorney General, as provided in section 507(b) of title 28 of the United States Code, attorneys appointed by the Secretary may appear for and represent him. In any action instituted under this section to enforce an order or decision issued by the Secretary after a public hearing in accordance with section 554 of title 5 of the United States Code, the findings of the Secretary, if supported by substantial evidence on the record considered as a whole, shall be conclusive.

PENALTIES

SEC. 109. (a) (1) The operator of a coal mine in which a violation occurs of a mandatory health or safety standard or who violates any other provision of this Act, except the provisions of title 4, shall be assessed a civil penalty by the Secretary under paragraph (3) of this subsection which penalty shall not be more than $10,000 for each such violation. Each occurrence of a violation of a mandatory health or safety standard may constitute a separate offense. In determining the amount of the penalty, the Secretary shall consider the operator's history of previous violations, the appropriateness of such penalty to the size of the business of the operator charged, whether the operator was negligent, the effect on the operator's ability to continue in business, the gravity of the violation, and the demonstrated good faith of the operator charged in attempting to achieve rapid compliance after notification of a violation.

(2) Any miner who willfully violates the mandatory safety standards relating to smoking or the carrying of smoking materials, matches, or lighters shall be subject to a civil penalty assessed by the Secretary under paragraph (3) of this subsection, which penalty shall not be more than $250 for each occurrence of such violation.

(3) A civil penalty shall be assessed by the Secretary only after the person charged with a violation under this Act has been given an opportunity for a public hearing and the Secretary has determined, by decision incorporating his findings of fact therein, that a violation did occur, and the amount of the penalty which is warranted, and incorporating, when appropriate, an order therein requiring that the penalty be paid. Where appropriate, the Secretary shall consolidate such hearings with other proceedings under section 105 of this title. Any hearing under this section shall be of record and shall be subject to section 554 of title 5 of the United States Code.

(4) If the person against whom a civil penalty is assessed fails to pay the penalty within the time prescribed in such order, the Secretary shall file a petition for enforcement of such order in any appropriate district court of the United States. The petition shall designate the person against whom the order is sought to be enforced as the respondent. A copy of the petition shall forthwith be sent by registered or certified mail to the respondent and to the representative of the miners in the affected mine or the operator, as the case may be, and thereupon the Secretary shall certify and file in such court the record upon which such order sought to be enforced was issued. The court shall have jurisdiction to enter a judgment enforcing, modifying, and enforcing as to modified, or setting aside in whole or in part the order and decision of the Secretary or it may remand the proceedings to the Secretary for such further action as it may direct. The court shall consider and determine de novo all relevant issues, except issues of fact which were or could have been litigated in review proceedings before a court of appeals under section 106 of this Act, and upon the request of the respondent, such issues of fact which are in dispute shall be submitted to the jury. On the basis of the jury's findings, the court shall determine the amount of the penalty to be imposed. Subject to the direction and control of the Attorney General, as provided in section 507(b) of title 28 of the United States Code, atttorneys appointed by the Secretary may appear for and represent him in any action to enforce an order assessing civil penalties under this paragraph.

(b) Any operator who willfully violates a mandatory health or safety standard, or knowingly violates or fails or refuses to comply with any order issued under section 104 of this title, or any order incorporated in a final decision issued under this title, except an order incorporated in a decision under subsection (a) of this section or section 110 (b)(2) of this title, shall, upon conviction, be punished by a fine of not more than $25,000, or by imprisonment for not more than one year, or by both, except that if the conviction is for a violation committed after the first conviction of such operator under this Act, punishment shall be by a fine of not more than $50,000, or by imprisonment of not more than five years, or by both.

(c) Whenever a corporate operator violates a mandatory health or safety standard or knowingly violates or fails or refuses to comply with any order issued under this Act or any order incorporated in a final decision issued under this Act, except an order incorporated in a decision issued under subsection (a) of this section or section 110(b)(2) of this title, any director, officer, or agent of such corporation who knowingly authorized, ordered, or carried out such violation, failure, or refusal shall be subject to the same civil penalties, fines, and imprisonment that may be imposed upon a person under subsections (a) and (b) of this section.

(d) Whoever knowingly makes any false statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained pursuant to this Act or any order or decision issued under this Act shall, upon conviction, be punished by a fine for not more than $10,000, or by imprisonment of not more than six months, or by both.

(e) Whoever knowingly distributes, sells, offers for sale, introduces, or delivers in commerce any equipment for use in a coal mine, including, but not limited to, components and accessories of such equipment, which is represented as complying with the provisions of this Act, or with any specification or regulation of the Secretary applicable to such equipment, and which does not so comply, shall, upon conviction, be subject to the same fine and imprisonment that may be imposed upon a person under subsection (d) of this section.

ENTITLEMENT OF MINERS

SEC. 110. (a) If a coal mine or area of a coal mine is closed by an order issued under section 104 of this title, all miners working during the shift when such order was issued who are idled by such order shall be entitled to full compensation by the operator at their regular rates of pay for the period they are idled, but for not more than the balance of such shift. If such order is not terminated prior to the next working shift, all miners on that shift who are idled by such order shall be entitled to full compensation by the operator at their regular rates of pay for the period they are idled, but for not more than four hours of such shift. If a coal mine or area of a coal mine is closed by an order issued under section 104 of this title for an unwarrantable failure of the operator to comply

with any health or safety standard, all miners who are idled due to such order shall be fully compensated, after all interested parties are given an opportunity for a public hearing on such compensation and after such order is final, by the operator for lost time at their regular rates of pay for such time as the miners are idled by such closing, or for one week, whichever is the lesser. Whenever an operator violates or fails or refuses to comply with any order issued under section 104 of this Act, all miners employed at the affected mine who would be withdrawn from, or prevented from entering, such mine or area thereof as a result of such order shall be entitled to full compensation by the operator at their regular rates of pay, in addition to pay received for work performed after such order was issued, for the period beginning when such order was issued and ending when such order is complied with; vacated, or terminated.

(b) (1) No person shall discharge or in any other way discriminate against or cause to be discharged or discriminated against any miner or any authorized representative of miners by reason of the fact that such miner or representative (A) has notified the Secretary or his authorized representative of any alleged violation or danger, (B) has filed, instituted, or caused to be filed or instituted any proceeding under this Act, or (C) has testified or is about to testify in any proceeding resulting from the administration or enforcement of the provisions of this Act.

(2) Any miner or a representative of miners who believes that he has been discharged or otherwise discriminated against by any person in violation of paragraph (1) of this subsection may, within thirty days after such violation occurs, apply to the Secretary for a review of such alleged discharge or discrimination. A copy of the application shall be sent to such person who shall be the respondent. Upon receipt of such application, the Secretary shall cause such investigation to be made as he deems appropriate. Such investigation shall provide an opportunity for a public hearing at the request of any party to enable the parties to present information relating to such violation. The parties shall be given written notice of the time and place of the hearing of at least five days prior to the hearing. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code. Upon receiving the report of such investigation, the Secretary shall make findings of fact. If he finds that such violation did occur, he shall issue a decision, incorporating an order therein, requiring the person committing such violation to take such affirmative action to abate the violation as the Secretary deems appropriate, including, but not limited to, the rehiring or reinstatement of the miner or representative of miners to his former position with back pay. If he finds that there was no such violation, he shall issue an order denying the application. Such order shall incorporate the Secretary's findings therein. Any order issued by the Secretary under this paragraph shall be subject to judicial review in accordance with section 106 of this Act. Violations by any person of paragraph (1) of this subsection shall be subject to the provisions of sections 108 and 109(a) of this title.

(3) Whenever an order is issued under this subsection, at the request of the applicant, a sum equal to the aggregate amount of all costs and expenses (including the attorney's fees) as determined by the Secretary to have been reasonably incurred by the applicant for, or in connection with, the institution and prosecution of such proceedings, shall be assessed against the person committing such violation.

REPORTS

SEC. 111. (a) All accidents, including unintentional roof falls (except in any abandoned panels or in areas which are inaccessible or unsafe for inspections), shall be investigated by the operator or his agent to determine the cause and the means of preventing a recurrence. Records of such accidents, roof falls, and investigations shall be kept and the information shall be made available to the Secretary or his authorized representative and the appropriate State agency. Such records shall be open for inspection by interested persons. Such records shall include man-hours worked and shall be reported for periods determined by the Secretary, but at least annually.

(b) In addition to such records as are specifically required by this Act, every operator of a coal mine shall establish and maintain such records, make such reports, and provide such information, as the Secretary may reasonably require from time to time to enable him to perform his functions under this Act. The Secretary is authorized to compile, analyze, and publish, either in summary or detailed form, such reports or information so obtained. Except to the extent otherwise specifically provided by this Act, all records, information, reports, findings, notices, orders, or decisions required or issued pursuant to or under this Act may be published from time to time, may be released to any interested person, and shall be made available for public inspection.

TITLE II—INTERIM MANDATORY HEALTH STANDARDS

COVERAGE

SEC. 201. (a) The provisions of sections 202 through 206 of this title and the applicable provisions of section 318 of title III shall be interim mandatory health standards applicable to all underground coal mines until superseded in whole or in part by improved mandatory health standards promulgated by the Secretary under the provisions of section 101 of this Act, and shall be enforced in the same manner and to the same extent as any mandatory health standard promulgated under the provisions of section 101 of this Act. Any orders issued in the enforcement of the interim standards set forth in this title shall be subject to review as provided in title I of this Act.

(b) Among other things, it is the purpose of this title to provide, to the greatest extent possible, that the working conditions in each underground coal mine are sufficiently free of respirable dust concentrations in the mine atmosphere to permit each miner the opportunity to work underground during the period of his entire adult working life without incurring any disability from pneumoconiosis or any other occupation-related disease during or at the end of such period.

DUST STANDARD AND RESPIRATORY EQUIPMENT

SEC. 202. (a) Each operator of a coal mine shall take accurate samples of the amount of respirable dust in the mine atmosphere to which each miner in the active workings of such mine is exposed. Such samples shall be taken by any device approved by the Secretary and the Secretary of Health, Education, and Welfare and in accordance with such methods, at such locations, at such intervals, and in such manner as the Secretaries shall prescribe in the Federal Register within sixty days from the date of enactment of this Act and from time to time thereafter. Such samples shall be transmitted to the Secretary in a manner established by him, and analyzed and recorded by him in a manner that will assure application of the provisions of section 104(1) of this act when the applicable limit on the concentration of respirable dust required to be maintained under this section is exceeded. The results of such samples shall also be made available to the operator. Each operator shall report and certify to the Secretary at such intervals as the Secretary may require as to the conditions in the active workings of the coal mine, including, but not limited to, the average number of working hours worked during each shift, the quantity and velocity of air regularly reaching the working faces, the method of mining, the amount and pressure of the water, if any, reaching the working faces, and the number, location, and type of sprays, if any, used.

(b) Except as otherwise provided in this subsection—

(1) Effective on the operative date of this title, each operator shall continuously maintain the average concentration of respirable dust in the mine atmosphere during each shift to which each miner in the active workings of such mine is exposed at or below 3.0 milligrams of respirable dust per cubic meter of air.

(2) Effective three years after the date of enactment of this Act, each operator shall continuously maintain the average concentration of respirable dust in the mine atmosphere during each shift to which each miner in the active workings of such mine is exposed at or below 2.0 milligrams of respirable dust per cubic meter of air.

(3) Any operator who determines that he will be unable, using available technology, to comply with the provisions of paragraph (1) of this subsection, or the provisions of paragraph (2) of this subsection, as appropriate, may file with the Panel, no later than sixty days prior to the effective date of the applicable respirable dust standard established by such paragraphs, an application for a permit for noncompliance. If, in the case of an application for a permit for noncompliance with the 3.0 milligram standard established by paragraph (1) of this subsection, the application satisfies the requirements of subsection (c) of this section, the Panel shall issue a permit for noncompliance to the operator. If, in the case of an application for a permit for noncompliance with the 2.0 milligram standard established by paragraph (2) of this subsection, the application satisfies the requirements of subsection (c) of this section and the Panel determines that the applicant will be unable to comply with such standard, the Panel shall issue to the operator a permit for noncompliance.

(4) In any case in which an operator, who has been issued a permit (including a renewal permit) for noncompliance under this section, determines, not more than ninety days prior to the expiration date of such permit, that he still is unable to comply with the standard established by paragraph (1) of this subsection or the standard established by paragraph (2) of this subsection, as appropriate, he may file with the Panel an application for renewal of the permit. Upon receipt of such application, the Panel, if it determines, after all interested persons have been notified and given an opportunity for a public hearing under section 5 of this Act, that the application is in compliance with the provisions of subsection (c) of this section, and that the applicant will be unable to comply with such standard, may renew the permit.

(5) Any such permit or renewal thereof so issued shall be in effect for a period not to exceed one year and shall entitle the permittee during such period to maintain continuously the average concentration of respirable dust in the mine atmosphere during each shift in the working places of such mine to which the permit applies at a level specified by the Panel, which shall be at the lowest level which the application shows the conditions, technology applicable to such mine, and other available and effective control techniques and methods will permit, but in no event shall such level exceed 4.5 milligrams of dust per cubic meter of air during the period when the 3.0 milligram standard is in effect, or 3.0 milligrams of dust per cubic meter of air during the period when the 2.0 milligram standard is in effect.

(6) No permit or renewal thereof for noncompliance shall entitle any operator to an

extension of time beyond eighteen months from the date of enactment of this Act to comply with the 3.0 milligram standard established by paragraph (1) of this subsection, or beyond seventy-two months from the date of enactment of this Act to comply with the 2.0 milligram standard established by paragraph (2) of this subsection.

(c) Any application for an initial or renewal permit made pursuant to this section shall contain—

(1) a representation by the applicant and the engineer conducting the survey referred to in paragraph (2) of this subsection that the applicant is unable to comply with the standard applicable under subsection (b) (1) or (b) (2) of this section at specified working places because the technology for reducing the concentration of respirable dust at such places is not available, or because of the lack of other effective control techniques or methods, or because of any combination of such reasons;

(2) an identification of the working places in such mine for which the permit is requested; the results of an engineering survey by a certified engineer of the respirable dust conditions of each working place of the mine with respect to which such application is filed and the ability to reduce such dust to the level required to be maintained in such place under this section; a description of the ventilation system of the mine and its capacity; the quantity and velocity of air regularly reaching the working faces; the method of mining; the amount and pressure of the water, if any, reaching the working faces; the number, location, and type of sprays, if any; action taken to reduce such dust; and such other information as Panel may require; and

(3) statements by the applicant and the engineer conducting such survey, of the means and methods to be employed to achieve compliance with the applicable standard, the progress made toward achieving compliance, and an estimate of when compliance can be achieved.

(d) Beginning six months after the operative date of this title and from time to time thereafter, the Secretary of Health, Education, and Welfare shall establish, in accordance with the provisions of section 101 of this Act, a schedule reducing the average concentration of respirable dust in the mine atmosphere during each shift to which each miner in the active workings is exposed below the levels established in this section to a level of personal exposure which will prevent new incidences of respiratory disease and the further development of such disease in any person. Such schedule shall specify the minimum time necessary to achieve such levels taking into consideration present and future advancements in technology to reach these levels.

(e) References to concentrations of respirable dust in this title means the average concentration of respirable dust if measured with an MRE instrument or such equivalent concentrations if measured with another device approved by the Secretary and the Secretary of Health, Education, and Welfare. As used in this title, the term "MRE instrument" means the gravimetric dust sampler with four channel horizontal elutriator developed by the Mining Research Establishment of the National Coal Board, London, England.

(f) For the purpose of this title, the term "average concentration" means a determination which accurately represents the atmospheric conditions with regard to respirable dust to which each miner in the active workings of a mine is exposed (1) as measured, during the 18 month period following the date of enactment of this Act, over a number of continuous production shifts to be determined by the Secretary and the Secretary of Health, Education, and Welfare, and (2) as measured thereafter, over a single shift only, unless the Secretary and the Secretary of Health, Education, and Welfare find, in accordance with the provisions of section 101 of this Act, that such single shift measurement will not, after applying valid statistical techniques to such measurement, accurately represent such atmospheric conditions during such shift.

(g) The Secretary shall cause to be made such frequent spot inspections as he deems appropriate of the active workings of coal mines for the purpose of obtaining compliance with the provisions of this title.

(h) Respiratory equipment approved by the Secretary and the Secretary of Health, Education, and Welfare shall be made available to all persons whenever exposed to concentrations of respirable dust in excess of the levels required to be maintained under this Act. Use of respirators shall not be substituted for environmental control measures in the active workings. Each operator shall maintain a supply of respiratory equipment adequate to deal with occurrences of concentrations of respirable dust in the mine atmosphere in excess of the levels required to be maintained under this Act.

MEDICAL EXAMINATIONS

SEC. 203 (a) The operator of a coal mine shall cooperate with the Secretary of Health, Education, and Welfare in making available to each miner working in a coal mine the opportunity to have a chest roentgenogram within eighteen months after the date of enactment of this Act, a second chest roentgenogram within three years thereafter, and subsequent chest roentgenograms at such intervals thereafter of not to exceed five years as the Secretary of Health, Education, and Welfare prescribes. Each worker who begins work in a coal mine for the first time shall be given, as soon as possible after commencement of his employment, and again three years later if he is still engaged in coal mining, a chest roentgenogram; and in the event the second such chest roentgenogram shows evidence of the development of pneumoconiosis the worker shall be given, two years later if he is still engaged in coal mining, an additional chest roentgenogram. All chest roentgenograms shall be given in accordance with specifications prescribed by the Secretary of Health, Education, and Welfare and shall be supplemented by such other tests as the Secretary of Health, Education, and Welfare deems necessary. The films shall be read and classified in a manner to be prescribed by the Secretary of Health, Education, and Welfare, and the results of each reading on each such person and of such tests shall be submitted to the Secretary and to the Secretary of Health, Education, and Welfare, and, at the request of the miner, to his physician. The Secretary shall also submit such results to such miner and advise him of his rights under this Act related thereto. Such specifications, readings, classifications, and tests shall, to the greatest degree possible, be uniform for all coal mines and miners in such mines.

(b) (1) On and after the operative date of this title, any miner who, in the judgment of the Secretary of Health, Education, and Welfare based upon such reading or other medical examinations, shows evidence of the development of pneumoconiosis shall be afforded the option of transferring from his position to another position in any area of the mine, for such period or periods as may be necessary to prevent further development of such disease, where the concentration of respirable dust in the mine atmosphere is not more than 2.0 milligrams of dust per cubic meter of air.

(2) Effective three years after the date of enactment of this Act, any miner who, in the judgment of the Secretary of Health, Education, and Welfare based upon such reading or other medical examinations, shows evidence of the development of pneumoconiosis shall be afforded the option of transferring from his position to another position in any area of the mine, for such period or periods as may be necessary to prevent further development of such disease, where the concentration of respirable dust in the mine atmosphere is not more than 1.0 milligram of dust per cubic meter of air, or if such level is not attainable in such mine, to a position in such mine where the concentration of respirable dust is the lowest attainable below 2.0 milligrams per cubic meter of air.

(3) Any miner so transferred shall receive compensation for such work at not less than the regular rate of pay received by him immediately prior to his transfer.

(c) No payment may be required of any miner in connection with any examination or test given him pursuant to this title. Where such examinations or tests cannot be given, due to the lack of adequate medical or other necessary facilities or personnel, in the locality where the miner resides, arrangements shall be made to have them conducted, in accordance with the provisions of this title, in such locality by the Secretary of Health, Education, and Welfare, or by an appropriate person, agency, or institution, public or private, under an agreement or arrangement between the Secretary of Health, Education, and Welfare and such person, agency, or institution. The operator of the mine shall reimburse the Secretary of Health, Education, and Welfare, or such person, agency, or institution, as the case may be, for the cost of conducting each examination or test made, in accordance with this title, and shall pay whatever other costs are necessary to enable the miner to take such examinations or tests.

(d) If the death of any active miner occurs in any coal mine, or if the death of any active or inactive miner occurs in any other place, the Secretary of Health, Education, and Welfare is authorized to provide for an autopsy to be performed on such miner, with the consent of his surviving widow or, if he has no such widow, then with the consent of his surviving next of kin. The results of such autopsy shall be submitted to the Secretary of Health, Education, and Welfare and, with the consent of such survivor, to the miner's physician or other interested person. Such autopsy shall be paid for by the Secretary of Health, Education, and Welfare.

DUST FROM DRILLING ROCK

SEC. 204. The dust resulting from drilling in rock shall be controlled by the use of permissible dust collectors, or by water or water with a wetting agent, or by ventilation, or by any other method or device approved by the Secretary which is at least as effective in controlling such dust. Respiratory equipment approved by the Secretary and the Secretary of Health, Education, and Welfare shall be provided persons exposed for short periods to inhalation hazards from gas, dusts, fumes, or mist. When the exposure is for prolonged periods, other measures to protect such persons or to reduce the hazard shall be taken.

DUST STANDARD WHEN QUARTZ IS PRESENT

SEC. 205. In coal mining operations where the concentration of respirable dust in the mine atmosphere of any working place contains more than 5 per centum quartz, the Secretary of Health, Education, and Welfare shall prescribe an appropriate formula for determining the applicable respirable dust standard under this title for such working place and the Secretary shall apply such formula in carrying out his duties under this title.

NOISE STANDARD

SEC. 206. On and after the operative date of this title, the standards on noise prescribed under the Walsh-Healey Public Contracts Act, as amended, in effect October 1, 1969, shall be applicable to each coal mine

and each operator of such mine shall comply with them. Within six months after the date of enactment of this Act, the Secretary of Health, Education, and Welfare shall establish, and the Secretary shall publish, as provided in section 101 of this Act, proposed mandatory health standards establishing maximum noise exposure levels for all underground coal mines. Beginning six months after the operative date of this title, and at intervals of at least every six months thereafter, the operator of each coal mine shall conduct, in a manner prescribed by the Secretary of Health, Education, and Welfare, tests by a qualified person of the noise level at the mine and report and certify the results to the Secretary and the Secretary of Health, Education, and Welfare. In meeting such standard under this section, the operator shall not require the use of any protective device or system, including personal devices, which the Secretary or his authorized representative finds to be hazardous or cause a hazard to the miners in such mine.

TITLE III—INTERIM MANDATORY SAFETY STANDARDS FOR UNDERGROUND COAL MINES

COVERAGE

SEC. 301. (a) The provisions of sections 302 through 318 of this title shall be interim mandatory safety standards applicable to all underground coal mines until superseded in whole or in part by improved mandatory safety standards promulgated by the Secretary under the provisions of section 101 of this Act, and shall be enforced in the same manner and to the same extent as any mandatory safety standard promulgated under section 101 of this Act. Any orders issued in the enforcement of the interim standards set forth in this title shall be subject to review as provided in title I of this Act.

(b) The purpose of this title is to provide for the immediate application of mandatory safety standards developed on the basis of experience and advances in technology and to prevent newly created hazards resulting from new technology in coal mining. The Secretary shall immediately initiate studies, investigations, and research to further upgrade such standards and to develop and promulgate new and improved standards promptly that will provide increased protection to the miners, particularly in connection with hazards from trolley wires, trolley feeder wires, and signal wires, the splicing and use of trailing cables, and in connection with improvements in vulcanizing of electric conductors, improvement in roof control measures, methane drainage in advance of mining, improved methods of measuring methane and other explosive gases and oxygen concentrations, and the use of improved underground equipment and other sources of power for such equipment.

(c) Upon petition by the operator or the representative of miners, the Secretary may modify the application of any mandatory safety standard to a mine if the Secretary determines that an alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard, or that the application of such standard to such mine will result in a diminution of safety to the miners in such mine. Upon receipt of such petition the Secretary shall publish notice thereof and give notice to the operator or the representative of miners in the affected mine, as appropriate, and shall cause such investigation to be made as he deems appropriate. Such investigation shall provide an opportunity for a public hearing, at the request of such operator or representative or other interested party, to enable the operator and the representative of miners in such mine or other interested party to present information relating to the modification of such standard. The Secretary shall issue a decision incorporating his findings of fact therein, and send a copy thereof to the operator or the representative of the miners, as appropriate. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code.

(d) In any case where the provisions of sections 302 to 318, inclusive, of this title provide that certain actions, conditions, or requirements shall be carried out as prescribed by the Secretary, or the Secretary of Health, Education, and Welfare, as appropriate, the provisions of section 553 of title 5 of the United States Code shall apply unless either Secretary otherwise provides. Before granting any exception to a mandatory safety standard as authorized by this title, the findings of the Secretary or his authorized representative shall be made public and shall be available to the representative of the miners at the affected coal mine.

ROOF SUPPORT

SEC. 302. (a) Each operator shall undertake to carry out on a continuing basis a program to improve the roof control system of each coal mine and the means and measures to accomplish such system. The roof and ribs of all active underground roadways, travelways, and working places shall be supported or otherwise controlled adequately to protect persons from falls of the roof or ribs. A roof control plan and revisions thereof suitable to the roof conditions and mining system of each coal mine and approved by the Secretary shall be adopted and set out in printed form within sixty days after the operative date of this title. The plan shall show the type of support and spacing approved by the Secretary. Such plan shall be reviewed periodically, at least every six months by the Secretary, taking into consideration any falls of roof or ribs or inadequacy of support of roof or ribs. No person shall proceed beyond the last permanent support unless adequate temporary support is provided or unless such temporary support is not required under the approved roof control plan and the absence of such support will not pose a hazard to the miners. A copy of the plan shall be furnished the Secretary or his authorized representative and shall be available to the miners and their representatives.

(b) The method of mining followed in any coal mine shall not expose the miner to unusual dangers from roof falls caused by excessive widths of rooms and entries or faulty pillar recovery methods.

(c) The operator, in accordance with the approved plan, shall provide at or near each working face and at such other locations in the coal mine as the Secretary may prescribe an ample supply of suitable materials of proper size with which to secure the roof of all working places in a safe manner. Safety posts, jacks, or other approved devices shall be used to protect the workmen when roof material is being taken down, crossbars are being installed, roof boltholes are being drilled, roof bolts are being installed, and in such other circumstances as may be appropriate. Loose roof and overhanging or loose faces and ribs shall be taken down or supported. Except in the case of recovery work, supports knocked out shall be replaced promptly.

(d) When installation of roof bolts is permitted, such roof bolts shall be tested in accordance wtih the approved roof control plan.

(e) Roof bolts shall not be recovered where complete extractions of pillars are attempted, where adjacent to clay veins, or at the locations of other irregularities, whether natural or otherwise, that induce abnormal hazards. Where roof bolt recovery is permitted, it shall be conducted only in accordance with methods prescribed in the approved roof control plan, and shall be conducted by experienced miners and only where adequate temporary support is provided.

(f) Where miners are exposed to danger from falls of roof, face, and ribs the operator shall examine and test the roof, face, and ribs before any work or machine is started, and as frequently thereafter as may be necessary to insure safty. When dangerous conditions are found, they shall be corrected immediately.

VENTILATION

SEC. 303. (a) All coal mines shall be ventilated by mechanical ventilation equipment installed and operated in a manner approved by an authorized representative of the Secretary and such equipment shall be examined daily and a record shall be kept of such examination.

(b) All active workings shall be ventilated by a current of air containing not less than 19.5 volume per centum of oxygen, not more than 0.5 volume per centum of carbon dioxide, and no harmful quantities of other noxious or poisonous gases; and the volume and velocity of the current of air shall be sufficient to dilute, render harmless, and to carry away, flammable, explosive, noxious, and harmful gases, and dust, and smoke and explosive fumes. The minimum quantity of air reaching the last open crosscut in any pair or set of developing entries and the last open crosscut in any pair or set of rooms shall be nine thousand cubic feet a minute, and the minimum quantity of air reaching the intake end of a pillar line shall be nine thousand cubic feet a minute. The minimum quantity of air in any coal mine reaching each working face shall be three thousand cubic feet a minute. Within three months after the operative date of this title, the Secretary shall prescribe the minimum velocity and quantity of air reaching each working face of each coal mine in order to render harmless and carry away methane and other explosive gases and to reduce the level of respirable dust to the lowest attainable level. The authorized representative of the Secretary may require in any coal mine a greater quantity and velocity of air when he finds it necessary to protect the health or safety of miners. Within one year after the operative date of this title, the Secretary or his authorized representative shall prescribe the maximum respirable dust level in the intake aircourses in each coal mine in order to reduce such level to the lowest attainable level. In robbing areas of anthracite mines, where the air currents cannot be controlled and measurements of the air cannot be obtained, the air shall have perceptible movement.

(c) (1) Properly installed and adequately maintained line brattice or other approved devices shall be continuously used from the last open crosscut of an entry or room of each working section to provide adequate ventilation to the working faces for the miners and to remove flammable, explosive, and noxious gases, dust, and explosion fumes, unless the Secretary or his authorized representative permits an exception to this requirement, where such exception will not pose a hazard to the miners. When damaged by falls or otherwise, such line brattice or other devices shall be repaired immediately.

(2) The space between the line brattice or other approved device and the rib shall be large enough to permit the flow of a sufficient volume and velocity of air to keep the working face clear of flammable, explosive, and noxious gases, dust, and explosive fumes.

(3) Brattice cloth used underground shall be of flame-resistant material.

(d) (1) Within three hours immediately preceding the beginning of any shift, and before any miner in such shift enters the active workings of a coal mine, certified persons designated by the operator of the mine shall examine such workings and any other underground area of the mine designated by the Secretary or his authorized representative. Each such examiner shall examine every working section in such workings and shall

make tests in each such working section for accumulations of methane with means approved by the Secretary for detecting methane and shall make tests for oxygen deficiency with a permissible flame safety lamp or other means approved by the Secretary; examine seals and doors to determine whether they are functioning properly; examine and test the roof, face, and rib conditions in such working section; examine active roadways, travelways, and belt conveyors on which men are carried, approaches to abandoned areas, and accessible falls in such section for hazards; test by means of an anemometer or other device approved by the Secretary to determine whether the air in each split is traveling in its proper course and in normal volume and velocity; and examine for such other hazards and violations of the mandatory health or safety standards, as an authorized representative of the Secretary may from time to time require. Belt conveyors on which coal is carried shall be examined after each coal-producing shift has begun. Such mine examiner shall place his initials and the date and time at all places he examines. If such mine examiner finds a condition which constitutes a violation of a mandatory health or safety standard or any condition which is hazardous to persons who may enter or be in such area, he shall indicate such hazardous place by posting a "DANGER" sign conspicuously at all points which persons entering such hazardous place would be required to pass, and shall notify the operator of the mine. No person, other than an authorized representative of the Secretary or a State mine inspector or persons authorized by the operator to enter such place for the purpose of eliminating the hazardous condition therein, shall enter such place while such sign is so posted. Upon completing his examination, such mine examiner shall report the results of his examination to a person, designated by the operator to receive such reports at a designated station on the surface of the mine, before other persons enter the underground areas of such mine to work in such shift. Each such mine examiner shall also record the results of his examination with ink or indelible pencil in a book approved by the Secretary kept for such purpose in an area on the surface of the mine chosen by the operator to minimize the danger of destruction by fire or other hazard, and the record shall be open for inspection by interested persons.

(2) No person (other than certified persons designated under this subsection) shall enter any underground area, except during any shift, unless an examination of such area as prescribed in this subsection has been made within eight hours immediately preceding his entrance into such area.

(e) At least once during each coal-producing shift, or more often if necessary for safety, each working section shall be examined for hazardous conditions by certified persons designated by the operator to do so. Any such condition shall be corrected immediately. If such condition creates an imminent danger, the operator shall withdraw all persons from the area affected by such condition to a safe area, except those persons referred to in section 104(d) of this Act, until the danger is abated. Such examination shall include tests for methane with a means approved by the Secretary for detecting methane and for oxygen deficiency with a permissible flame safety lamp or other means approved by the Secretary.

(f) In addition to the pre-shift and daily examinations required by this section, examinations for hazardous conditions, including tests for methane, and for compliance with the mandatory health or safety standards, shall be made at least once each week by a certified person designated by the operator in the return of each split of air where in enters the main return, on pillar falls, at seals, in the main return, at least one entry of each intake and return aircourse in its entirety, idle workings, and, insofar as safety considerations permit, abandoned areas. Such weekly examination need not be made during any week in which the mine is idle for the entire week, except that such examination shall be made before any other miner returns to the mine. The person making such examinations and tests shall place his initials and the date and time at the places examined, and if any hazardous condition is found, such condition shall be reported to the operator promptly. Any hazardous condition shall be corrected immediately. If such condition creates an imminent danger, the operator shall withdraw all persons from the area affected by such condition to a safe area, except those persons referred to in section 104(d) of this Act, until such danger is abated. A record of these examinations, tests, and actions taken shall be recorded in ink or indelible pencil in a book approved by the Secretary kept for such purpose in an area on the surface of the mine chosen by the mine operator to minimize the danger of destruction by fire or other hazard, and the record shall be open for inspection by interested persons.

(g) At least once each week, a qualified person shall measure the volume of air entering the main intakes and leaving the main returns, the volume passing through the last open crosscut in any pair or set of developing entries and the last open crosscut in any pair or set of rooms, the volume and, when the Secretary so prescribes, the velocity reaching each working face, the volume being delivered to the intake end of each pillar line, and the volume at the intake and return of each split of air. A record of such measurements shall be recorded in ink or indelible pencil in a book approved by the Secretary kept for such purpose in an area on the surface of the coal mine chosen by the operator to minimize the danger of destruction by fire or other hazard, and the record shall be open for inspection by interested persons.

(h)(1) At the start of each shift, tests for methane shall be made at each working place immediately before electrically operated equipment is energized. Such tests shall be made by qualified persons. If 1.0 volume per centum or more of methane is detected, electrical equipment shall not be energized, taken into, or operated in, such working place until the air therein contains less than 1.0 volume per centum of methane. Examinations for methane shall be made during the operation of such equipment at intervals of not more than twenty minutes during each shift, unless more frequent examinations are required by an authorized representative of the Secretary. In conducting such tests, such person shall use means approved by the Secretary for detecting methane.

(2) If at any time the air at any working place, when tested at a point not less than twelve inches from the roof, face, or rib, contains 1.0 volume per centum or more of methane, changes or adjustments shall be made at once in the ventilation in such mine so that such air shall contain less than 1.0 volume per centum of methane. While such changes or adjustments are underway and until they have been achieved, power to electric face equipment located in such place shall be cut off, no other work shall be permitted in such place, and due precautions shall be carried out under the direction of the operator or his agent so as not to endanger other areas of the mine. If at any time such air contains 1.5 volume per centum or more of methane, all persons, except those referred to in section 104(d) of this Act, shall be withdrawn from the area of the mine endangered thereby to a safe area, and all electric power shall be cut off from the endangered area of the mine, until the air in such working place shall contain less than 1.0 volume per centum of methane.

(i)(1) If, when tested, a split of air returning from any working section contains 1.0 volume per centum or more of methane, changes or adjustments shall be made at once in the ventilation in the mine so that such returning air shall contain less than 1.0 volume per centum of methane. Tests under this paragraph and paragraph (2) of this subsection shall be made at four-hour intervals during each shift by a qualified person designated by the operator of the mine. In making such tests, such person shall use means approved by the Secretary for detecting methane.

(2) If, when tested, a split of air returning from any working section contains 1.5 volume per centum or more of methane, all persons, except those persons referred to in section 104(d) of this Act, shall be withdrawn from the area of the mine endangered thereby to a safe area and all electric power shall be cut off from the endangered area of the mine, until the air in such split shall contain less than 1.0 volume per centum of methane.

(3) In virgin territory, if the quantity of air in a split ventilating the active workings in such territory equals or exceeds twice the minimum volume of air prescribed in subsection (b) of this section for the last open crosscut, if the air in the split returning from such workings does not pass over trolley wires or trolley feeder wires, and if a certified person designated by the operator is continually testing the methane content of the air in such split during mining operations in such workings, it shall be necessary to withdraw all persons, except those referred to in section 104(d) of this Act, from the area of the mine endangered thereby to a safe area and all electric power shall be cut off from the endangered area only when the air returning from such workings contains 2.0 volume per centum or more of methane.

(j) Air which has passed by an opening of any abandoned area shall not be used to ventilate any working place in the coal mine if such air contains 0.25 volume per centum or more of methane. Examinations of such air shall be made during the pre-shift examination required by subsection (d) of this section. In making such tests, a certified person designated by the operator shall use means approved by the Secretary for detecting methane. For the purposes of this subsection, an area within a panel shall not be deemed to be abandoned until such panel is abandoned.

(k) Air that has passed through an abandoned area or an area which is inaccessible or unsafe for inspection shall not be used to ventilate any working place in any mine. No air which has been used to ventilate an area from which the pillars have been removed shall be used to ventilate any working place in a mine, except that such air, if it does not contain 0.25 volume per centum or more of methane, may be used to ventilate enough advancing working places immediately adjacent to the line of retreat to maintain an orderly sequence of pillar recovery on a set of entries.

(l) The Secretary or his authorized representative shall require, as an additional device for detecting concentrations of methane, that a methane monitor, approved as reliable by the Secretary after the operative date of this title, be installed, when available, on any electric face cutting equipment, continuous miner, longwall face equipment, and loading machine, except that no monitor shall be required to be installed on any such equipment prior to the date on which such equipment is required to be permissible under section 305(a) of this title. When installed on any such equipment, such monitor shall be kept operative and properly maintained and frequently tested as prescribed by the Secretary. The sensing device of such monitor shall be installed as close to the working face as practicable. Such

monitor shall be set to deenergize automatically such equipment when such monitor is not operating properly and to give a warning automatically when the concentration of methane reaches a maximum percentage determined by an authorized representative of the Secretary which shall not be more than 1.0 volume per centum of methane. An authorized representative of the Secretary shall require such monitor to deenergize automatically equipment on which it is installed when the concentration of methane reaches a maximum percentage determined by such representative which shall not be more than 2.0 volume per centum of methane.

(m) Idle and abandoned areas shall be inspected for methane and for oxygen deficiency and other dangerous conditions by a certified person with means approved by the Secretary as soon as possible but not more than three hours before other persons are permitted to enter or work in such areas. Persons, such as pumpmen, who are required regularly to enter such areas in the performance of their duties, and who are trained and qualified in the use of means approved by the Secretary for detecting methane and in the use of a permissible flame safety lamp or other means approved by the Secretary for detecting oxygen deficiency are authorized to make such examinations for themselves, and each such person shall be properly equipped and shall make such examinations upon entering any such area.

(n) Immediately before an intentional roof fall is made, pillar workings shall be examined by a qualified person designated by the operator to ascertain whether methane is present. Such person shall use means approved by the Secretary for detecting methane. If in such examination methane is found in amounts of 1.0 volume per centum or more, such roof fall shall not be made until changes or adjustments are made in the ventilation so that the air shall contain less than 1.0 volume per centum of methane.

(o) A ventilation system and methane and dust control plan and revisions thereof suitable to the conditions and the mining system of the coal mine and approved by the Secretary shall be adopted by the operator and set out in printed form within ninety days after the operative date of this title. The plan shall show the type and location of mechanical ventilation equipment installed and operated in the mine, such additional or improved equipment as the Secretary may require, the quantity and velocity of air reaching each working face, and such other information as the Secretary may require. Such plan shall be reviewed by the operator and the Secretary at least every six months.

(p) Each operator shall provide for the proper maintenance and care of the permissible flame safety lamp or any other approved device for detecting methane and oxygen deficiency by a person trained in such maintenance, and, before each shift, care shall be taken to insure that such lamp or other device is in a permissible condition.

(q) Where areas are being pillared on the operative date of this title without bleeder entries, or without bleeder systems or an equivalent means, pillar recovery may be completed in the area, to the extent approved by an authorized representative of the Secretary, if the edges of pillar lines adjacent to active workings are ventilated with sufficient air to keep the air in open areas along the pillar lines below 1.0 volume per centum of methane.

(r) Each mechanized mining section shall be ventilated with a separate split of intake air directed by overcasts, undercasts, or the equivalent, except an extension of time, not in excess of nine months, may be permitted by the Secretary, under such conditions as he may prescribe, whenever he determines that this subsection cannot be complied with on the operative date of this title.

(s) In all underground areas of a coal mine, immediately before firing each shot or group of multiple shots and after blasting is completed, examinations for methane shall be made by a qualified person with means approved by the Secretary for detecting methane. If methane is found in amounts of 1.0 volume per centum or more, changes or adjustments shall be made at once in the ventilation so that the air shall contain less than 1.0 volume per centum of methane. No shots shall be fired until the air contains less than 1.0 volume per centum of methane.

(t) Each operator shall adopt a plan within sixty days after the operative date of this title which shall provide that when any mine fan stops, immediate action shall be taken by the operator or his agent (1) to withdraw all persons from the working sections, (2) to cut off the power in the mine in a timely manner, (3) to provide for restoration of power and resumption of work if ventilation is restored within a reasonable period as set forth in the plan after the working places and other active workings where methane is likely to accumulate are reexamined by a certified person to determine if methane in amounts of 1.0 volume per centum or more exists therein, and (4) to provide for withdrawal of all persons from the mine if ventilation cannot be restored within such reasonable time. The plan and revisions thereof approved by the Secretary shall be set out in printed form and a copy shall be furnished to the Secretary or his authorized representative.

(u) Changes in ventilation which materially affect the main air current or any split thereof and which may affect the safety of persons in the coal mine shall be made only when the mine is idle. Only those persons engaged in making such changes shall be permitted in the mine during the change. Power shall be removed from the areas affected by the change before work starts to make the change and shall not be restored until the effect of the change has been ascertained and the affected areas determined to be safe by a certified person.

(v) The mine foreman shall read and countersign promptly the daily reports of the pre-shift examiner and assistant mine foreman, and he shall read and countersign promptly the weekly report covering the examinations for hazardous conditions. Where such reports disclose hazardous conditions, they shall be corrected promptly. If such conditions create an imminent danger, the operator shall withdraw all persons from, or prevent any person from entering, as the case may be, the area affected by such conditions, except those persons referred to in section 104(d) of this Act, until such danger is abated. The mine superintendent or assistant superintendent of the mine shall also read and countersign the daily and weekly reports of such persons.

(w) Each day, the mine foreman and each of his assistants shall enter plainly and sign with ink or indelible pencil in a book approved by the Secretary provided for that purpose a report of the condition of the mine or portion thereof under his supervision, which report shall state clearly the location and nature of any hazardous condition observed by him or reported to him during the day and what action was taken to remedy such condition. Such book shall be kept in an area on the surface of the mine chosen by the operator to minimize the danger of destruction by fire or other hazard, and shall be open for inspection by interested persons.

(x) Before a coal mine is reopened after having been abandoned or declared inactive by the operator, the Secretary shall be notified, and an inspection shall be made of the entire mine by an authorized representative of the Secretary before mining operations commence.

(y)(1) In any coal mine opened after the operative date of this title, the entries used as intake and return aircourses shall be separated from belt haulage entries, and each operator of such mine shall limit the velocity of the air coursed through belt haulage entries to the amount necessary to provide an adequate supply of oxygen in such entries, and to insure that the air therein shall contain less than 1.0 volume per centum of methane, and such air shall not be used to ventilate active working places. Whenever an authorized representative of the Secretary finds, in the case of any coal mine opened on or prior to the operative date of this title which has been developed with more than two entries, that the conditions in the entries, other than belt haulage entries, are such as to permit adequately the coursing of intake or return air through such entries, (1) the belt haulage entries shall not be used to ventilate, unless such entries are necessary to ventilate, active working places, and (2) when the belt haulage entries are not necessary to ventilate the active working places, the operator of such mine shall limit the velocity of the air coursed through the belt haulage entries to the amount necessary to provide an adequate supply of oxygen in such entries, and to insure that the air therein shall contain less than 1.0 volume per centum of methane.

(2) In any coal mine opened on or after the operative date of this title, or, in the case of a coal mine opened prior to such date, in any new working section of such mine, where trolley haulage systems are maintained and where trolley wires or trolley feeder wires are installed, an authorized representative of the Secretary shall require a sufficient number of entries or rooms as intake aircourses in order to limit, as prescribed by the Secretary, the velocity of air currents on such haulageways for the purpose of minimizing the hazards associated with fires and dust explosions in such haulageways.

(z)(1) While pillars are being extracted in any area of a coal mine, such area shall be ventilated in the manner prescribed by this section.

(2) Within nine months after the operative date of this title, all areas from which pillars have been wholly or partially extracted and abandoned areas, as determined by the Secretary or his authorized representative, shall be ventilated by bleeder entries or by bleeder systems or equivalent means, or be sealed, as determined by the Secretary or his authorized representative. When ventilation of such areas is required, such ventilation shall be maintained so as continuously to dilute, render harmless, and carry away methane and other explosive gases within such areas and to protect the active workings of the mine from the hazards of such methane and other explosive gases. Air coursed through underground areas from which pillars have been wholly or partially extracted which enters another split of air shall not contain more than 2.0 volume per centum of methane, when tested at the point it enters such other split. When sealing is required, such seals shall be made in an approved manner so as to isolate with explosion-proof bulkheads such areas from the active workings of the mine.

(3) In the case of mines opened on or after the operative date of this title, or in the case of working sections opened on or after such date in mines opened prior to such date, the mining system shall be designed in accordance with a plan and revisions thereof approved by the Secretary and adopted by such operator so that, as each working section of the mine is abandoned, it can be isolated from the active workings of the mine with explosion-proof seals or bulkheads.

COMBUSTIBLE MATERIALS AND ROCK DUSTING

SEC. 304. (a) Coal dust, including float coal dust deposited on rock-dusted surfaces,

loose coal, and other combustible materials, shall be cleaned up and not be permitted to accumulate in active workings, or on electric equipment therein.

(b) Where underground mining operations in active workings create or raise excessive amounts of dust, water or water with a wetting agent added to it, or other no less effective methods approved by the Secretary or his authorized representative, shall be used to abate such dust. In working places, particularly in distances less than forty feet from the face, water, with or without a wetting agent, or other no less effective methods approved by the Secretary or his authorized representative, shall be applied to coal dust on the ribs, roof, and floor to reduce dispersibility and to minimize the explosion hazard.

(c) All underground areas of a coal mine, except those areas in which the dust is too wet or too high in incombustible content to propagate an explosion, shall be rock dusted to within forty feet of all working faces, unless such areas are inaccessible or unsafe to enter or unless the Secretary or his authorized representative permits an exception upon his finding that such exception will not pose a hazard to the miners. All crosscuts that are less than forty feet from a working face shall also be rock dusted.

(d) Where rock dust is required to be applied, it shall be distributed upon the top, floor, and sides of an underground areas of a coal mine and maintained in such quantities that the incombustible content of the combined coal dust, rock dust, and other dust shall be not less than 65 per centum, but the incombustible content in the return aircourses shall be no less than 80 per centum. Where methane is present in any ventilating current, the per centum of incombustible content of such combined dusts shall be increased 1.0 and 0.4 per centum for each 0.1 per centum of methane where 65 and 80 per centum, respectively, of incombustibles are required.

(e) Subsections (b) through (d) of this section shall not apply to underground anthracite mines.

ELECTRICAL EQUIPMENT—GENERAL

SEC. 305. (a)(1) Effective one year after the operative date of this title—

(A) all junction or distribution boxes used for making multiple power connections inby the last open crosscut shall be permissible;

(B) all handheld electric drills, blower and exhaust fans, electric pumps, and such other low horsepower electric face equipment as the Secretary may designate within two months after the operative date of this title which are taken into or used inby the last open crosscut of any coal mine shall be permissible;

(C) all electric face equipment which is taken into or used inby the last open crosscut of any coal mine classified under any provision of law as gassy prior to the operative date of this title shall be permissible; and

(D) all other electric face equipment which is taken into or used inby the last crosscut of any coal mine, except a coal mine referred to in paragraph (2) of this subsection, which has not been classified under any provision of law as a gassy mine prior to the operative date of this title shall be permissible.

(2) Effective four years after the operative date of this title, all electric face equipment, other than equipment referred to in paragraph (1)(B) of this subsection, which is taken into or used inby the last open crosscut of any coal mine which is operated entirely in coal seams located above the watertable and which has not been classified under any provision of law as a gassy mine prior to the operative date of this title and in which one or more openings were made prior to the date of enactment of this Act shall be permissible, except that any operator of such mine who is unable to comply with the provisions of this paragraph on such effective date may file with the Panel an application for a permit for noncompliance ninety days prior to such date. If the Panel determines, after notice to all interested persons and an opportunity for a public hearing under section 5 of this Act, that such application satisfies the provisions of paragraph (10) of this subsection and that such operator, despite his diligent efforts, will be unable to comply with such provisions, the Panel may issue to such operator such a permit. Such permit shall entitle the permittee to an additional extension of time to comply with the provisions of this paragraph of not to exceed twenty-four months, as determined by the Panel, from such effective date.

(3) The operator of each coal mine shall maintain in permissible condition all electric face equipment required by this subsection to be permissible which is taken into or used inby the last open crosscut of any such mine.

(4) Each operator of a coal mine shall, within two months after the operative date of this title, file with the Secretary a statement listing all electric face equipment by type and manufacturer being used by such operator in connection with mining operations in such mine as of the date of such filing, and stating whether such equipment is permissible and maintained in permissible condition or is nonpermissible on such date of filing, and, if nonpermissible, whether such nonpermissible equipment has ever been rated as permissible, and such other information as the Secretary may require.

(5) The Secretary shall promptly conduct a survey as to the total availability of new or rebuilt permissible electric face equipment and replacement parts for such equipment and, within six months after the operative date of this title, publish the results of such survey.

(6) Any operator of a coal mine who is unable to comply with the provisions of paragraph (1)(D) of this subsection within one year after the operative date of this title may file with the Panel an application for a permit for noncompliance. If the Panel determines that such application satisfies the provisions of paragraph (10) of this subsection, the Panel shall issue to such operator a permit for noncompliance. Such permit shall entitle the permittee to an extension of time to comply with such provisions of paragraph (1)(D) of not to exceed twelve months, as determined by the Panel, from the date that compliance with the provisions of paragraph (1)(D) of this subsection is required.

(7) Any operator of a coal mine issued a permit under paragraph (6) of this subsection who, ninety days prior to the termination of such permit, or renewal thereof, determines that he will be unable to comply with the provisions of paragraph (1)(D) of this subsection upon the expiration of such permit may file with the Panel an application for renewal thereof. Upon receipt of such application, the Panel, if it determines, after notice to all interested persons and an opportunity for a public hearing under section 5 of this Act, that such application satisfies the provisions of paragraph (10) of this subsection and that such operator, despite his diligent efforts, will be unable to comply with the provisions of paragraph (1)(D), may renew the permit for a period not exceeding twelve months.

(8) Any permit or renewal thereof issued pursuant to this subsection shall entitle the permittee to use such nonpermissible electric face equipment specified in the permit during the term of such permit.

(9) Permits for noncompliance issued under paragraphs (6) or (7) of this subsection shall, in the aggregate, not extend the period of noncompliance more than forty-eight months after the date of enactment of this Act.

(10) Any application for a permit of noncompliance filed under this subsection shall contain a statement by the operator—

(A) that he is unable to comply with paragraph (1)(D) or paragraph (2) of this subsection, as appropriate, within the time prescribed;

(B) listing the nonpermissible electric face equipment being used by such operator in connection with mining operations in such mine on the operative date of this title and the date of the application by type and manufacturer for which a noncompliance permit is requested and whether such equipment had ever been rated as permissible;

(C) setting forth the actions taken from and after the operative date of this title to comply with paragraph (1)(D) or paragraph (2) of this subsection, as appropriate, together with a plan setting forth a schedule of compliance with said paragraphs for each such equipment referred to in such paragraphs and being used by the operator in connection with mining operations in such mine with respect to which such permit is requested and the means and measures to be employed to achieve compliance; and

(D) including such other information as the Panel may require.

(11) No permit for noncompliance shall be issued under this subsection for any nonpermissible electric face equipment, unless such equipment was being used by an operator in connection with the mining operations in a coal mine on the operative date of this title.

(12) Effective one year after the operative date of this title, all replacement equipment acquired for use in any mine referred to in this subsection shall be permissible and shall be maintained in a permissible condition, and in the event of any major overhaul of any item of equipment in use one year from the operative date of this title such equipment shall be put in, and thereafter maintained in, a permissible condition, unless, in the opinion of the Secretary, such equipment or necessary replacement parts are not available.

(b) A copy of any permit granted under this section shall be mailed immediately to a representative of the miners of the mine to which it pertains, and to the public official or agency of the State charged with administering State laws relating to coal mine health and safety in such mine.

(c) Any coal mine which, prior to the operative date of this title, was classed gassy under any provision of law and was required to use permissible electric face equipment and to maintain such equipment in a permissible condition shall continue to use such equipment and to maintain such equipment in such condition.

(d) All power-connection points, except where permissible power connection units are used, outby the last open crosscut shall be in intake air.

(e) The location and the electrical rating of all stationary electric apparatus in connection with the mine electric system, including permanent cables, switchgear, rectifying substations, transformers, permanent pumps and trolley wires and trolley feeder wires, and settings of all direct-current circuit breakers protecting underground trolley circuits, shall be shown on a mine map. Any changes made in a location, electric rating, or setting shall be promptly shown on the map when the change is made. Such map shall be available to an authorized representative of the Secretary and to the miners in such mine.

(f) All power circuits and electric equipment shall be deenergized before work is done on such circuits and equipment, except when necessary for trouble shooting or testing. In addition, energized trolley wires may be repaired only by a person trained to perform electrical work and to maintain electrical equipment and the operator of such mine

shall require that such person wear approved and tested insulated shoes and wireman's gloves. No electrical work shall be performed on low-, medium-, or high-voltage distribution circuits or equipment, except by a qualified person or by a person trained to perform electrical work and to maintain electrical equipment under the direct supervision of a qualified person. Disconnecting devices shall be locked out and suitably tagged by the persons who performed such work, except that, in cases where locking out is not possible, such devices shall be opened and suitably tagged by such persons. Locks or tags shall be removed only by the persons who installed them or, if such persons are unavailable, by persons authorized by the operator or his agent.

(g) All electric equipment shall be frequently examined, tested, and properly maintained by a qualified person to assure safe operating conditions. When a potentially dangerous condition is found on electric equipment, such equipment shall be removed from service until such condition is corrected. A record of such examinations shall be kept and made available to an authorized representative of the Secretary and to the miners in such mine.

(h) All electric conductors shall be sufficient in size and have adequate current-carrying capacity and be of such construction that a rise in temperature resulting from normal operation will not damage the insulating materials.

(i) All electrical connections or splices in conductors shall be mechanically and electrically efficient, and suitable connectors shall be used. All electrical connections or splices in insulated wire shall be reinsulated at least to the same degree of protection as the remainder of the wire.

(j) Cables shall enter metal frames of motors, splice boxes, and electric compartments only through proper fittings. When insulated wires other than cables pass through metal frames the holes shall be substantially bushed with insulated bushings.

(k) All power wires (except trailing cables on mobile equipment, specially designed cables conducting high-voltage power to underground rectifying equipment or transformers, or bare or insulated ground and return wires) shall be supported on well-insulated insulators and shall not contact combustible material, roof, or ribs.

(l) Power wires and cables, except trolley wires, trolley feeder wires, and bare signal wires, shall be insulated adequately and fully protected.

(m) Automatic circuit-breaking devices or fuses of the correct type and capacity shall be installed so as to protect all electric equipment and circuits against short circuit and overloads. Three-phase motors on all electric equipment shall be provided with overload protection that will deenergize all three phases in the event that any phase is overloaded.

(n) In all main power circuits, disconnecting switches shall be installed underground within five hundred feet of the bottoms of shafts and boreholes through which main power circuits enter the underground area of the mine and within five hundred feet of all other places where main power circuits enter the underground area of the mine.

(o) All electric equipment shall be provided with switches or other controls that are safely designed, constructed, and installed.

(p) Each ungrounded, exposed power conductor that leads underground shall be equipped with suitable lightning arresters of approved type within one hundred feet of the point where the circuit enters the mine. Lightning arresters shall be connected to a low resistance grounding medium on the surface which shall be separated from neutral grounds by a distance of not less than twenty-five feet.

(q) No device for the purpose of lighting any coal mine which has not been approved by the Secretary or his authorized representative shall be permitted in such mine.

(r) An authorized representative of the Secretary may require in any mine that electric face equipment be provided with devices that will permit the equipment to be deenergized quickly in the event of an emergency.

TRAILING CABLES

SEC. 306. (a) Trailing cables used in coal mines shall meet the requirements established by the Secretary for flame-resistant cables.

(b) Short-circuit protection for trailing cables shall be provided by an automatic circuit breaker or other no less effective device approved by the Secretary of adequate current-interrupting capacity in each ungrounded conductor. Disconnecting devices used to disconnect power from trailing cables shall be plainly marked and identified and such devices shall be equipped or designed in such a manner that it can be determined by visual observation that the power is disconnected.

(c) When two or more trailing cables junction to the same distribution center, means shall be provided to assure against connecting a trailing cable to the wrong size circuit breaker.

(d) One temporary splice may be made in any trailing cable. Such trailing cable may only be used for the next twenty-four hour period. No temporary splice shall be made in a training cable within twenty-five feet of the machine, except cable reel equipment. Temporary splices in trailing cables shall be made in a workmanlike manner and shall be mechanically strong and well insulated. Trailing cables or hand cables which have exposed wires or which have splices that heat or spark under load shall not be used. As used in this subsection, the term "splice" means the mechanical joining of one or more conductors that have been severed.

(e) When permanent splices in trailing cables are made, they shall be—

(1) mechanically strong with adequate electrical conductivity and flexibility;

(2) effectively insulated and sealed so as to exclude moisture; and

(3) vulcanized or otherwise treated with suitable materials to provide flame-resistant qualities and good bonding to the outer jacket.

(f) Trailing cables shall be clamped to machines in a manner to protect the cables from damage and to prevent strain on the electrical connections. Trailing cables shall be adequately protected to prevent damage by mobile equipment.

(g) Trailing cable and power cable connections to junction boxes shall not be made or broken under load.

GROUNDING

SEC. 307. (a) All metallic sheaths, armors, and conduits enclosing power conductors shall be electrically continuous throughout and shall be grounded by methods approved by an authorized representative of the Secretary. Metallic frames, casings, and other enclosures of electric equipment that can become "alive" through failure of insulation or by contact with energized parts shall be grounded by methods approved by an authorized representative of the Secretary. Methods other than grounding which provide no less effective protection may be permitted by the Secretary or his authorized representative.

(b) The frames of all offtrack direct current machines and the enclosures of related detached components shall be effectively grounded, or otherwise maintained at no less safe voltages, by methods approved by an authorized representative of the Secretary.

(c) The frames of all stationary high-voltage equipment receiving power from ungrounded delta systems shall be grounded by methods approved by an authorized representative of the Secretary.

(d) High-voltage lines, both on the surface and underground, shall be deenergized and grounded before work is performed on them, except that repairs may be permitted, in the case of energized surface high-voltage lines, if such repairs are made by a qualified person in accordance with procedures and safeguards, including, but not limited to, a requirement that the operator of such mine provide, test, and maintain protective devices in making such repairs, to be prescribed by the Secretary prior to the operative date of this title.

(e) When not in use, power circuits underground shall be deenergized on idle days and idle shifts, except that rectifiers and transformers may remain energized.

UNDERGROUND HIGH-VOLTAGE DISTRIBUTION

SEC. 308. (a) High-voltage circuits entering the underground area of any coal mine shall be protected by suitable circuit breakers of adequate interrupting capacity which are properly tested and maintained as prescribed by the Secretary. Such breakers shall be equipped with devices to provide protection against under-voltage, grounded phase, short circuit, and overcurrent.

(b) High-voltage circuits extending underground and supplying portable, mobile, or stationary high-voltage equipment shall contain either a direct or derived neutral which shall be grounded through a suitable resistor at the source transformers, and a grounding circuit, originating at the grounded side of the grounding resistor, shall extend along with the power conductors and serve as a grounding conductor for the frames of all high-voltage equipment supplied power from that circuit, except that the Secretary or his authorized representative may permit ungrounded high-voltage circuits to be extended underground to feed stationary electrical equipment if such circuits are either steel armored or installed in grounded, rigid steel conduit throughout their entire length and upon his finding that such exception does not pose a hazard to the miners. Within one hundred feet of the point on the surface where high-voltage circuits enter the underground portion of the mine, disconnecting devices shall be installed and so equipped or designed in such a manner that it can be determined by visual observation that the power is disconnected, except that the Secretary or his authorized representative may permit such devices to be installed at a greater distance from such area of the mine if he determines, based on existing physical conditions, that such installation will be more accessible at a greater distance and will not pose any hazard to the miners.

(c) The grounding resistor, where required, shall be of the proper ohmic value to limit the voltage drop in the grounding circuit external to the resistor to not more than 100 volts under fault conditions. The grounding resistor shall be rated for maximum fault current continuously and insulated from ground for a voltage equal to the phase-to-phase voltage of the system.

(d) Six months after the operative date of this title, high-voltage, resistance grounded systems shall include a fail safe ground check circuit to monitor continuously the grounding circuit to assure continuity and the fail safe ground check circuit shall cause the circuit breaker to open when either the ground or pilot check wire is broken, or other no less effective device approved by the Secretary or his authorized representative to assure such continuity, except that an extension of time, not in excess of twelve months, may be permitted by the Secretary on a mine-by-mine basis if he determines that such equipment is not available.

(e)(1) Underground high-voltage cables used in resistance grounded systems shall be

equipped with metallic shields around each power conductor, with one or more ground conductors having a total cross-sectional area of not less than one-half the power conductor, and with an insulated internal or external conductor not smaller than No. 8 (AWG) for the ground continuity check circuit.

(2) All such cables shall be adequate for the intended current and voltage. Splices made in such cables shall provide continuity of all components.

(f) Couplers that are used with medium-voltage or high-voltage power circuits shall be of the three-phase type with a full metallic shell, except that the Secretary may permit, under such guidelines as he may prescribe, no less effective couplers constructed of materials other than metal. Couplers shall be adequate for the voltage and current expected. All exposed metal on the metallic couplers shall be grounded to the ground conductor in the cable. The coupler shall be constructed so that the ground check continuity conductor shall be broken first and the ground conductors shall be broken last when the coupler is being uncoupled.

(g) Single-phase loads, such as transformer primaries, shall be connected phase to phase.

(h) All underground high-voltage transmission cables shall be installed only in regularly inspected aircourses and haulageways, and shall be covered, buried, or placed so as to afford protection against damage, guarded where men regularly work or pass under them unless they are six and one-half feet or more above the floor or rail, securely anchored, properly insulated, and guarded at ends, and covered, insulated, or placed to prevent contact with trolley wires and other low-voltage circuits.

(i) Disconnecting devices shall be installed at the beginning of branch lines in high-voltage circuits and equipped or designed in such a manner that it can be determined by visual observation that the circuit is deenergized when the switches are open.

(j) Circuit breakers and disconnecting switches underground shall be marked for identification.

(k) In the case of high-voltage cables used as trailing cables, temporary splices shall not be used and all permanent splices shall be made in accordance with section 306(e) of this title. Terminations and splices in all other high-voltage cables shall be made in accordance with the manufacturer's specifications.

(l) Frames, supporting structures, and enclosures of stationary, portable, or mobile underground high-voltage equipment and all high-voltage equipment supplying power to such equipment receiving power from resistance grounded systems shall be effectively grounded to the high-voltage ground.

(m) Power centers and portable transformers shall be deenergized before they are moved from one location to another, except that, when equipment powered by sources other than such centers or transformers is not available, the Secretary may permit such centers and transformers to be moved while energized, if he determines that another equivalent or greater hazard may otherwise be created, and if they are moved under the supervision of a qualified person, and if such centers and transformers are examined prior to such movement by such person and found to be grounded by methods approved by an authorized representative of the Secretary and otherwise protected from hazards to the miner. A record shall be kept of such examinations. High-voltage cables, other than trailing cables, shall not be moved or handled at any time while energized, except that, when such centers and transformers are moved while energized as permitted under this subsection, energized high-voltage cables attached to such centers and transformers may be moved only by a qualified person and the operator of such mine shall require that such person wear approved and tested insulated wireman's gloves.

UNDERGROUND LOW- AND MEDIUM-VOLTAGE ALTERNATING CURRENT CIRCUITS

SEC. 309. (a) Low- and medium-voltage power circuits serving three-phase alternating current equipment shall be protected by suitable circuit breakers of adequate interrupting capacity which are properly tested and maintained as prescribed by the Secretary. Such breakers shall be equipped with devices to provide protection against undervoltage, grounded phase, short circuit, and over-current.

(b) Low- and medium-voltage three-phase alternating-current circuits used underground shall contain either a direct or derived neutral which shall be grounded through a suitable resistor at the power center, and a grounding circuit, originating at the grounded side of the grounding resistor, shall extend along with the power conductors and serve as a grounding conductor for the frames of all the electrical equipment supplied power from that circuit, except that the Secretary or his authorized representative may permit ungrounded low- and medium-voltage circuits to be used underground to feed such stationary electrical equipment if such circuits are either steel armored or installed in grounded rigid steel conduit throughout their entire length. The grounding resistor, where required, shall be of the proper ohmic value to limit the ground fault current to 25 amperes. The grounding resistor shall be rated for maximum fault current continuously and insulated from ground for a voltage equal to the phase-to-phase voltage of the system.

(c) Six months after the operative date of this title, low- and medium-voltage resistance grounded systems shall include a fail safe ground check circuit to monitor continuously the grounding circuit to assure continuity which ground check circuit shall cause the circuit breaker to open when either the ground or pilot check wire is broken, or other no less effective device approved by the Secretary or his authorized representative to assure such continuity, except that an extension of time, not in excess of twelve months, may be permitted by the Secretary on a mine-by-mine basis if he determines that such equipment is not available. Cable couplers shall be constructed so that the ground check continuity conductor shall be broken first and the ground conductors shall be broken last when the coupler is being uncoupled.

(d) Disconnecting devices shall be installed in conjunction with the circuit breaker to provide visual evidence that the power is disconnected. Trailing cables for mobile equipment shall contain one or more ground conductors having a cross sectional area of not less than one-half the power conductor, and, six months after the operative date of this title, an insulated conductor for the ground continuity check circuit or other no less effective device approved by the Secretary or his authorized representative to assure such continuity, except that an extension of time, not in excess of twelve months may be permitted by the Secretary on a mine-by-mine basis if he determines that such equipment is not available. Splices made in the cables shall provide continuity of all components.

(e) Single phase loads shall be connected phase to phase.

(f) Circuit breakers shall be marked for identification.

(g) Trailing cables for medium voltage circuits shall include grounding conductors, a ground check conductor, and ground metallic shields around each power conductor or a grounded metallic shield over the assembly, except that on equipment employing cable reels, cables without shields may be used if the insulation is rated 2,000 volts or more.

TROLLEY WIRES AND TROLLEY FEEDER WIRES

SEC. 310. (a) Trolley wires and trolley feeder wires shall be provided with cutout switches at intervals of not more than 2,000 feet and near the beginning of all branch lines.

(b) Trolley wires and trolley feeder wires shall be provided with over-current protection.

(c) Trolley wires and trolley feeder wires, high-voltage cables and transformers shall not be located inby the last open crosscut and shall be kept at least 150 feet from pillar workings.

(d) Trolley wires, trolley feeder wires, and bare signal wires shall be insulated adequately where they pass through doors and stoppings, and where they cross other power wires and cables. Trolley wires and trolley feeder wires shall be guarded adequately (1) at all points where men are required to work or pass regularly under the wires; (2) on both sides of all doors and stoppings; and (3) at man-trip stations. The Secretary or his authorized representatives shall specify other conditions where trolley wires and trolley feeder wires shall be adequately protected to prevent contact by any person, or shall require the use of improved methods to prevent such contact. Temporary guards shall be provided where trackmen and other persons work in proximity to trolley wires and trolley feeder wires.

FIRE PROTECTION

SEC. 311. (a) Each coal mine shall be provided with suitable firefighting equipment adapted for the size and conditions of the mine. The Secretary shall establish minimum requirements for the type, quality, and quantity of such equipment, and the interpretations of the Secretary or the Director of the Bureau of Mines relating to such equipment in effect on the operative date of this title shall continue in effect until modified or superseded by the Secretary. After every blasting operation, an examination shall be made to determine whether fires have been started.

(b) Underground storage places for lubricating oil and grease shall be of fireproof construction. Except for specially prepared materials approved by the Secretary, lubricating oil and grease kept in all underground areas in a coal mine shall be in fireproof, closed metal containers or other no less effective containers approved by the Secretary.

(c) Underground transformer stations, battery-charging stations, substations, compressor stations, shops, and permanent pumps shall be housed in fireproof structures or areas. Air currents used to ventilate structures or areas enclosing electrical installations shall be coursed directly into the return. Other underground structures installed in a coal mine as the Secretary may prescribe shall be of fireproof construction.

(d) All welding, cutting, or soldering with arc or flame in all underground areas of a coal mine shall, whenever practicable, be conducted in fireproof enclosures. Welding, cutting or soldering with arc or flame in other than a fireproof enclosure shall be done under the supervision of a qualified person who shall make a diligent search for fire during and after such operations and shall, immediately before and during such operations, continuously test for methane with means approved by the Secretary for detecting methane. Welding, cutting, or soldering shall not be conducted in air that contains 1.0 volume per centum or more of methane. Rock dust or suitable fire extinguishers shall be immediately available during such welding, cutting, or soldering.

(e) Within one year after the operative date of this title, fire suppression devices meeting specifications prescribed by the Secretary shall be installed on unattended underground equipment and suitable fire-resistant hydraulic fluids approved by the

Secretary shall be used in the hydraulic systems of such equipment. Such fluids shall be used in the hydraulic systems of other underground equipment unless fire suppression devices meeting specifications prescribed by the Secretary are installed on such equipment.

(f) Deluge-type water sprays of foam generators automatically actuated by rise in temperature, or other no less effective means approved by the Secretary of controlling fire, shall be installed at main and secondary belt-conveyor drives. Where sprays or foam generators are used they shall supply a sufficient quantity of water or foam to control fires.
